U. S. Cong. Congressional record.

Appendix

Address of the Honorable Daniel J. Flood to the General Assembly of the Christian Democratic Union of Central Europe, April 17, 1955, at the Carnegie Endowment for International Peace, United Nations Plaza, New York City

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

This evening gives me an opportunity to speak to the exiles from central Europe who have come to my country to work for the restoration of liberty in their subjugated countries. I see here my friends from Czechoslovakia, Hungary, Poland, Latvia, Lithuania, Yugoslavia, and other central European countries.

All these countries have great political and cultural histories.

More than 1,000 years ago, the ancestors of the Czechs and Slovaks of present Czechoslovakia set up the great Moravian Empire that had its continuation in the ancient Kingdom of Bohemia known throughout the world for its famous rulers and statesmen, St. Venceslas, Charles IV, and George Podebrad, and for its warriors who braved the armies of all Europe.

Already in the 11th century the great Hungarian King Stephen introduced western Christianity and with it western civilization to his people. Hungary became the bulwark of this civilization and of Christian culture. Together with the other central European states she defended them against the invader until that moment in history when the great King of Poland stopped the invasion at the gates of Vienna.

The historical record of Poland goes back to the 10th century. From the 14th to the 17th century Poland was a great power which influenced the destinies of Europe for centuries. Poland's contribution to the formation of the ideology of national freedom was especially impressive. Torn asunder in the following centuries by three powers which stifled her national life, Poland never resigned herself to defeat and battled her way in repeated uprisings, through unfavorable condtions, to a new freedom and independence.

Yugoslavia, inhabited by the Serbs, Croats, and Slovencs has a long, heroic history of struggle for freedom against foreign invaders. The defeat of Kosovo Polé in 1389 marked but the beginning of the centuries long struggles that fortified the peoples of Yugoslavia to supreme national heroism.

A cruel struggle for national survival and independence has been the fate of the Latvians, Lithuanians, and Estonians throughout the centuries. The position of these countries and nations was most difficult. There was no neighbor, who was not far more powerful and who did not covet the rich commercial centers on the Baltic Sea, and who did not attempt to break up the organized national life of the peoples of Latvia, Lithuania, and Estonia. Nevertheless, the peoples survived and lived to see their freedom restored.

The cultural contribution of your Central European states and nations is even more impressive. One hundred and fifty years before Columbus discovered America, the University of Prague was founded and soon after, the University of Cracow. Central Europe has given us such great pioneers of human progress like Jan Amos Comenius. Modern democracy also had its root in these countries. A Czech statute in 1579, which underlined the concept of the "due process of law", was the predecessor of the American Constitution.

American democracy is especially grateful to men like Thaddeus Kosciusko and Casimir Pulaski who came to our country to help us win our independence. From their long suffering homeland they brought with them an enthusiasm for liberty and showed by their deeds and sacrifices that human freedom is indivisible.

After World War I the countries of Central Europe renewed at long last their national states. They built up their internal democracies and were highly successful in their cultural and economic development. They contributed to international cooperation by their sincere support of the League of Nations and the legal system of postwar Europe.

Thomas G. Masaryk and Dr. Eduard Benes from Czechoslovakia were helpful in laying the foundations to international compulsory arbitration, disarmament, and the executive power of the world organization. In cooperation with other statesmen from Central and Eastern European countries, they created a network of international treaties which, if observed, would have stabilized Europe and guaranteed peaceful development. Unfortunately, this favorable evolution was broken off by Nazi aggression. After Austria came Czechoslovakia whose dismemberment at Munich was soon followed by the destruction of Warsaw and Belgrade and by the subjugation of the Baltic States and, in fact, of Hungary as well.

The victory of the Allies in 1940 liberated the Central European countries from the yoke of Nazi German imperialism. But their liberation was a sham. In fact, one totaliarianism, imperialism, and dictatorship was exchanged for another. And in this way ancient historic countries, the cradles of culture, the friends and allies of Western democracies that had played such an important role in the family of free nations, became captives of Soviet Russia.

We often ask how this was possible; how could it happen; what were the real causes of this so unhappy and catastrophical development. Our Congress has even investigated the background and causes that had led to the takeover and enslavement of the Baltic and Central European countries.

As in every phenomenon, this new subjugation of Central Europe may be attributed to a number of causes both internal and external. We may, for instance, speak of the errors committed by the leading statesmen of the Western democracies. We may censure them for Europe's division into military zones, agreed upon in Teheran and Yalta. We may question the Western negotiators for not realizing fully that a military zone in Soviet terminology means also a political zone and that democracy in Soviet terminology means a "people's democracy," actually the dictatorship of the Communist Party.

In this way, the central European countries, one by one, and finally Czechoslovakia became Communist captive states, the Baltic States were actually absorbed into the Soviet Union.

But it is not enough to stop at Teheran and Yalta. One must go much further in analyzing the past to discover the real cause of the subjugation of central Europe. It lies deep in the past policy of world democracy. Long before Yalta and Teheran, I would say immediately after World War I, the cause was laid which molded the conditions as they are today in central Europe. At that time, democratic Europe, born of the victory of the western democracies over the feudalistic central powers, should have been defended in time. Instead, Hitler's aggression against Austria and Czechoslovakia was not resisted by the Western Powers. Even before that came to pass, the Western Powers should have made it clear that the clauses of the peace treaty were meant seriously. An effective world organization should have been set up and all democratic states should have defended the legal system of the world and the sanctity of international treaties. But complacency set in. The slogan "Peace in Our Time" weakened the determination of the democracies and led to such an inflation of Nazi power that it could be broken only with the assistance of the Soviet Union. This unhappy development brought the Red army into the very heart of Europe, to the Elbe and the Vltava (the Czech name for Modlau).

I think it not only fair but wise to let these errors in the past be a lesson to us. The lesson is obvious. The political life of a country should be something more than the pursuing of everyday interests; it should be the implementation of a general plan based on objective thinking and moral law. Your platform of the Christian Democratic Union and the addresses of your officers emphasize this very important character of sound politics.

I am sure that if we stress logic and the moral law in political life we can avoid the errors of the past, those errors that led a considerable part of the world and within your countries to the present state of slavery. The demand for the liberation of central and eastern European countries will then be accepted as a logical consequence of a policy that is the result of both clear thinking and sound moral evaluation. For Americans this demand is Lincoln's creed on a world scale: That the world cannot be half free and half slave.

The liberation policy is, however, not only a logical conclusion of our American doctrine that the political life should be the implementation of a general moral principle, valid for all the nations and times. It is also in line with the political, economic, and strategic interests of the United States.

Our independence and our economy is closely connected with the conditions in Europe, I would say with a free Europe, in which a balance of power is maintained and economic prosperity is assured. Twice already in our generation we had to defend our political interests on the battlefields of

Europe. For us it is obvious that a Europe subjugated by a dictatorship, aspiring to world domination, is tantamount to a constant danger to our shores. And an impoverished Europe is our concern, too. For such a Europe would be a spawning ground for social upheaval leading to a victory of negative and bellicose political trends.

I conclude that the liberation policy is the strength of democracy and the only guaranty to the free world against aggression and internal subversion from a totalitarian threat. We Americans have no other choice: We must be strong if we want to save peace and our freedom. And our strength is inseparably connected with the freedom of the world. Your Congress has for its guiding motto: "Freedom—a prerequisite of lasting peace." This motto is no less true for American foreign policy. We can be free only if our friends, too, enjoy freedom. Peace, like freedom, is indivisible.

How Free Is Free Enterprise?

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. HYDE. Mr. Speaker, the following editorial is taken from the American Farm Bureau Federation's official newsletter, dated April 18, and entitled "How Free Is Free Enterprise?":

HOW FREE IS FREE ENTERPRISE?

The term "free enterprise" is an expression that is used quite often these days; but interpretation of what free enterprise really is, or what it has accomplished for America, seems to vary according to the philosophy of the individual.

That the American competitive enterprise system is a success cannot be refuted when we consider that 6 percent of the people of the world produce about as much industrial wealth as the other 94 percent combined. We own 6 times as many automobiles as the rest of the world and similar proportions of telephones, bathtubs, television sets or almost any of the many things that go into our standard of living. In addition, our economy supports more and better schools, churches and hospitals and we have more opportunity for spiritual and cultural development than any other nation in the world.

Each person in United States agriculture today, on the average, is producing 78 percent more than in 1940. And, in spite of some of the problems in agriculture that are always with us, the American farmer lives better, eats better, has better housing, sends more of his children to college and has more leisure, freedom, and opportunity than farmers in most other areas of the world.

The foundation for this unparalleled progress is the freedom, initiative, and opportunity of the individual in a society in which most property is (1) privately owned, (2) privately managed, (3) operated for profit, and (4) operated in a competitive economy.

Ours is a profit and loss system. Any time the possibility of loss is eliminated you can be as certain that the system has been destroyed as you could be if the opportunity for profit were no longer available.

In many countries the economic system appears to be similar to our own, but really is far different because competition has not been recognized as one of its basic principles. Cartel agreements, government programs, price controls, regulations, restrictive legislation—all designed to protect this group or that from the rigors of competition—have so regimented their economy that it has lost much of its vitality, its adaptability, and its competence to serve the needs of the nation.

We are constantly aware of the pressure of those individuals and groups that would destroy the basic principles upon which our economy is founded. Careful scrutiny of a number of bills in our legislature would reveal this situation. Nor is such action confined at the State level; it also is evident in our National Congress.

The most subtle and dangerous threat to our form of society is involved in the destruction of the competitive market system. It is most subtle and dangerous because it is always done with the avowed purpose of benefiting or protecting some segment of our population.

It is no accident that America has survived two world wars and a disastrous skirmish in Korea, and still has not only retained, but expanded, its productive capacity in addition to maintaining individual freedom. Only a glance at the economic and political situations in such countries as Italy, France, and Great Britain should be enough to give faith to our American competitive enterprise system. Yet there are those who would trade our system for that of the countries mentioned.

Truly the greatest war in America today is in the minds of men. When the final vote is taken will the majority be for following the path of historical success—or will it be a vote for a known system of failure? The individual still has the right to choose.

Address by Hon. William F. Knowland, of California, Before Indiana Republican Editorial Association

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD the text of an address I delivered before the Indiana Republican Editorial Association, in Indianapolis, Ind., on Saturday, April 16, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Governor Craig, Senators Capehart and Jenner, and fellow Americans, in the 10 years since the Yalta Conference of February 4–11, 1945, great advances have been made by the Communist world.

At that time there were less than 200 million people behind the Communist Iron Curtain. Today over 800 million people have lost their freedom to the most godless tyranny the world has ever known.

Despite the lessons of history, the voices of appeasement appear to be growing at home and abroad. Some suggest that Quemoy and Matsu be allowed to pass into Communist hands. It is my strong belief that such an event will be looked upon as a great Communist victory and will undermine the remaining confidence the free anti-Communist nations of Asia have in the Government and the people of the United States.

Why is it that the voices of appeasement always urge that our friends and allies be the ones to give up territory or to yield up more people to communism? Why do they not suggest that it is time for the Iron Curtain to move backward rather than forward? The fact of the matter is that Quemoy and Matsu are as important to free China as Western Berlin is to free Germany.

What military or civilian official would try to maintain that Western Berlin, a metropolitan island completely surrounded by Soviet territory, is defensible in and of itself? The fact of the matter is that our garrison in Berlin, the wives and children who accompany them, are hostages to potential Soviet aggression.

We have felt it important, however, to maintain this island of freedom in the heart of Soviet territory despite the fact that it is aggravating to the Communists because it is important to the morale of the free German Republic and it is a beacon of hope to the Germans behind the Iron Curtain that some day they too may be free.

The reason that Western Berlin has not passed behind the Iron Curtain is the fact that the Soviet Union knows that any attempt to take over the area by force would immediately involve the western allies in military action.

Though we took some grave risks we broke the 1948 Communist blockade of Berlin by the airlift. There are now indications that the Communists are again attempting to strangle the economic life of that island of freedom.

Have they been encouraged in this new action by the voices of appeasement here and abroad? These have indicated that we must placate Communist countries when they get aggravated for otherwise we may be risking armed conflict.

Does history teach us that this is the way to a lasting peace? The answer, of course, is no.

At Munich Chamberlain and Deladier succumbed to the threats and pleadings of Hitler that if they would but agree to turn over the Sudetenland area of Czechoslovakia to him that he would have no further territorial demands in Europe.

Without the consent of the Government of Czechoslovakia this sordid deal was made. To salve their conscience Great Britain and France agreed to guarantee the frontier of the reduced Czechoslavakian state.

Seven months later, Hitler's legions took over the balance of Czechoslovakia. The conscience of the two guarantors was disturbed and several speeches were made as to the immorality of such aggression.

The guarantee given 7 months before did not save the people of Czechoslovakia for by then they had lost their will to fight largely because they had lost their faith in the western allies to do anything more than to talk and to appease.

What deadly parallel does this furnish to the situation in the Formosa Straits today?

Quemoy and Matsu have never been Chinese Communist territory.

That these outposts have a military value no man can deny for they certainly make more difficult the launching of an amphibious assault out of the harobrs of Amoy and Foochow as long as the free chinese control these islands.

But equally important as their military value is their psychological value. Their loss by appeasement will bring as much despair to free China as the deal at Munich for the Sudetenland caused despair to the free people of Czechoslovakia.

It will also shake the confidence of our friends in Korea, Japan, the Philippines, Thailand, Pakistan, and elsewhere where people understand the true brutal aggressive nature of communism.

I again want to emphasize that in my opinion the morale value of Quemoy and Matsu is as high for Free China as is that of Western Berlin for free Germany.

There are some who believe that you can distinguish between a Communist assault on Quemoy and Matsu in and of themselves and Quemoy and Matsu as stepping stones toward Formosa and the Pescadores. What nonsense is this? When the assault is underway, are we to inquire through the good offices of Mr. Hammarskjold, of Mao Tse Tung and Chou En-Lai in Peiping as to whether their assault is only for the possession of these outer ramparts?

If at such a time, with tongue in cheek, the Communist leaders believe that it would be to their advantage to prevent American support going to our ally, the Republic of China, and they reply that their temporary objective is only Quemoy and Matsu will we ask them to reinforce their statement by saying: "Do you guarantee this with a cross your heart and hope to die assurance?"

In the light of the bald-faced violation of the Korean armistice and the Geneva agreement what would such an assurance be worth?

I was amazed and shocked by the speech of Adlai Stevenson on last Monday night. He not only appears to be giving the green light to the loss of Quemoy and Matsu, but he also cast reflection upon the future of the island of Formosa itself.

Less than 2 months after the Congress approved the Formosa resolution by a vote of 409 to 3 in the House and 85 to 3 in the Senate and after the ratification of our mutual defense pact with the Republic of China by a vote of 64 to 6, Mr. Stevenson stated that we should seek to get certain of our allies to line up with us in the defense of Formosa against any aggression "pending some final settlement of its status—by independence, neutralization, trusteeship, plebiscite, or whatever is wiser."

What a way to build confidence in our ally, with whom we have just entered into a mutual defense treaty.

There was no suggestion by Mr. Stevenson that there might be a plebiscite on the mainland of China to see if the Chinese are satisfied with their loss of freedom by Communist aggression supported by the Soviet Union.

Does not Mr. Stevenson know that the free people of China would look upon a United Nations trusteeship as only a form of multiple colonialism for such a trusteeship would undermine if not destroy the sovereignty of the Republic of China?

Certainly the Republic of China will not consent to a United Nations or any other type of a trusteeship over the island of Formosa.

What United Nations mouse is expected to "bell the cat"? In the first United Nations action against overt aggression in Korea only 17 members of the United Nations supplied any armed forces whatsoever. The 16 nations outside of the United States which made a contribution supplied only 45,000, whereas the United States of America contributed more than 450,000 and we rotated more than 1 million men through the Far Eastern theater during the Korean war.

Certainly neither Mr. Stevenson nor the members of the United Nations expect to have the United States of America supply the armed forces to disarm the defense forces of the Republic of China with whom we have just entered into a treaty of mutual security.

This would be such an obvious treachery that no responsible citizen of this country would tolerate it and no public official that advocated it would continue in office beyond the next election.

Would the trusteeship be established then by the United Nations members other than the United States of America? It could only be done by that organization committing an act of aggression against the Republic of China. Not only do we have a treaty of mutual assistance with free China, but does any responsible person believe that having only contributed 45,000 troops to resist Communist aggression in Korea that organization would now furnish a larger force to neutralize the approximately 400,000 who constitute the armed force of the Republic of China?

Or does Mr. Stevenson believe that India, which furnished only an ambulance unit in the Korean war, will be the one to do the job? Does he really believe that the free Chinese on Formosa would tolerate an Indian occupation of their island?

What sense does it make to on the one hand be building a collective security system in the Far Pacific and on the other giving consideration to the neutralization of one-third of the available non-Communist armed forces in that area of the world. During the early days of our Republic we had an expression "United we stand, divided we fall."

As a matter of national policy are we now to preach a doctrine for our friends abroad "Divided you stand until the Communists gain sufficient strength to make you fall?"

As one American, I get no satisfaction at all from a divided Korea, a divided Germany, or a divided Vietnam. I see nothing in either example that should want us to put our stamp of approval on a divided China which is the meaning of a so-called two China's policy.

Let's put ourselves in the unlikely position of facing the situation wherein Communist forces, by armed action supported by the Soviet Union, should be able to take over mainland America and our Government was temporarily forced to the Territory of Hawaii or Alaska. Would we accept a two-Americas policy? Would we give up the effort to restore constitutional government to our people and to our homeland? The answer is, of course, a resounding "No" on both counts.

There will never be an easy solution to the problems facing this country and the free world. Whenever a line is drawn there will be cogent reasons advanced for making it at some other time or place.

There are some who oppose the drawing of the line at Quemoy and Matsu who say that they would be willing to stand on the line of Formosa and the Pescadores, but would they really be willing to stand even there?

Will they not, like some of the British, Prime Minister Nehru, and Adlai Stevenson then being to throw doubt even upon the future of Formosa?

In a final desperate effort to avoid facing up to the realistic issue of Communist aggression, will they at that point urge that the problem be thrown into the United Nations?

There a combination of the Communist nations, neutralist powers, and some of our fair-weather friends presently tending toward a "peace at any price policy" could join forces in agreeing to a far-eastern Munich that will give to the Communists at a conference another substantial victory at the expense of the Republic of China.

The smaller nations of the world should stop, look, and listen before they join their voices to those of the other appeasers. If the Republic of China, with 9½ million people, can be sold down the river at a far-eastern Munich so then could the more than 30 independent nations having populations of less than that figure.

With the record of a quarter century of broken agreements by the Soviet Union, I have questioned the advisability of entering into another meeting of the heads of state until the Soviet Union has shown by deeds rather than words that they are prepared to respect agreements entered into.

Yalta should have been a warning signal to the American people that there is no moral right for large nations, including our own, to distribute the territory and the people of our allies such as was done with Poland and with China.

The rather dubious argument is advanced that the Soviet forces were already in occupation of Poland and would have been in a position to occupy much of China if we had not consented to their demands.

Since when has America come to subscribe to the strange new doctrine that if the bandit is in possession of the loot he should be given a clean bill of health morally and a legal title to the same?

Have we allowed international morals to fall so low that we now are prepared to accept the doctrine that might makes right?

I think not. Any public officials who in the future, regardless of the party in power, try to shackle the moral position of the American people in such chains will, in my judgment, be overwhelmingly repudiated.

Do we have a right to be concerned with the revelations of the Yalta papers? I believe we do from a constitutional viewpoint. The facts of the Yalta agreement were misrepresented to the Congress of the United States, a coequal branch of the Government, by President Roosevelt when he said in his official report to the Congress on March 1, 1945, regarding the Yalta Conference:

"Quite naturally this Conference concerned itself only with the European war and with the political problems of Europe, and not with the Pacific war."

This was a false official report.

Do we have a right to be concerned with what went on at Yalta?

The record clearly shows that the Government of the United States was first advised regarding the connections of Alger Hiss with a Soviet espionage ring as early as the fall of 1939 and at several subsequent times before the Yalta Conference of February 1945.

Those who had some share of the responsibility in permitting Alger Hiss to go to Yalta have tried to cover up their dereliction by claiming that he had little more than office-boy status and at most limited his activities to United Nations affairs.

Now for the first time in the 1945 official papers of the Government of the United States, on page 91 of the Yalta papers, we learn that:

"At the Secretary's staff committee meeting of January 10, the Secretary asked that all memoranda for the President on topics to be discussed at the meeting of the Big Three should be in the hands of Mr. Alger Hiss not later than Monday, January 15."

Does this even demonstrate a reasonable degree of caution for protecting the vital interests of this country? It was not necessary for Alger Hiss to carry on negotiations at a high level to do great damage to this Nation and to our allies. It was only necessary for the Soviet Union to have advance information as to the agreed policy positions that this Government would take, where we would stand firm, where we would be prepared to yield, and what agreements we would seek to get.

I see by the papers that former President Truman is in Washington tonight where he is scheduled to join in the attack on the Republican administration of President Eisenhower.

Perhaps he will clarify why he termed the congressional investigation of the Hiss case a "red herring."

Perhaps he will state why he wrote a letter of commendation for Harry Dexter White, another member of the conspiracy who played an important part in the pre-Yalta decisions.

Perhaps he will tell why his Secretary of State Dean Acheson in January of 1950 drew a defense line in the Pacific leaving Korea and Formosa on the outside. Many believe the Communists then determined they could take Korea without great risk.

Perhaps he will explain why the policy of his administration in 1945 and 1946 was to

put pressure on President Chiang Kai-shek urging him to accept Communists into his government when coalition with communism has been fatal wherever tried.

Perhaps he will explain why, contrary to the advice of his commanders in the field, MacArthur, Van Fleet, Clark, and Stratemeyer, he permitted the hands of our Armed Forces to be tied and the Communists to have the advantage of the Yalu River sanctuary.

Perhaps he may even explain on whose advice and why he neutralized the Formosa Straits and made it possible for the Communist coast defense troops to be safely moved to Manchuria and then to Korea where they were used against our own forces there.

Perhaps he will, but I doubt it.

Just recently I had a letter from an Air Force pilot in Formosa. Frankly, I would much rather take his view on the dangers we face than I would the views of the 1952 Democratic candidate for President of the United States. In his letter to me of February 12, this pilot wrote:

"As an Air Force jet pilot assigned to this island for the next 2 years, I am sure my interest in lasting world peace is as acute as is any American.

"The presence here of my wife and children tends to intensify my natural desire that no one toss any atom or hydrogen bombs this way.

"I am quite convinced that my best chances, as well as those of my country and the entire free world, rest with the firm stop the Communist march movement which you so forcibly represent. I have flown 400 combat missions and would rather fly 400 more than to see my kind of a world go down the drain one island or one small country at a time.

"America must wake up to the real intentions of communism and take real and purposeful steps to frustrate those intentions."

This Nation was not born nor did it grow to its position of greatness based on a policy of fear, but rather one of faith and courage.

As an American citizen and as a Senator of the United States, I am convinced that if we will only use the same faith and courage that motivated the men who sat at Philadelphia and under what I believe to have been divine guidance, gave us first our Declaration of Independence and later our Constitution, there are none of our great domestic problems which we as a free people cannot solve, and there is no foreign foe we need ever fear.

Patriots' Day

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday April 18, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell Sun, of Lowell, Mass. Patriots' Day is a legal holiday in Massachusetts. It is good to recall our history and our heritages:

[From the Lowell, (Mass.) Sun of April 17, 1955]

CONCORD'S BIG DAY

On Tuesday, our neighboring town of Concord has its big day of the year as the State observes Patriots' Day, the anniversary of that famous battle which marked the beginning of the Revolutionary War.

On the basis of present-day military actions, the battle at the North Bridge in Concord would hardly rate as a "patrol encounter," but on April 19, 1775, the shots that were fired to stem the advance of the British raiders set off the explosion that eventually brought freedom to the United States from the yoke of Great Britain.

It took a great deal of courage for the poorly armed, inadequately trained but courageous American colonists to fire that shot at Concord which "was heard 'round the world." That shot brought into action the resources of the greatest power of that time against the colonists, and the war which resulted proved conclusively that a determined and liberty-inspired "little fellow" can defeat a heavily armed but lacking in determination "big guy."

The battle on that April 19 was fought in Concord, but taking part not only were colonists from that town but from Chelmsford, Billerica, Acton, and other towns in the area—Minutemen who had heard the warning given first by Paul Revere and William Dawes and repeated throughout the countryside by a group of messengers.

People come from all parts of the country to witness the historic scenes in the Concord area. Many who live in this section where the Revolutionary War had its start drive the dozen or so miles necessary to visit the monuments and the places of interest so plainly marked in Concord.

This is the ideal time to make such a trip, and anyone in the Greater Lowell area could make it for a Sunday afternoon automibile ride. It is well worthwhile to retrace the steps of the Minutemen, even though you do it in the comfort of a modern car whereas they took them on foot, and to consider the moral of their story—that victory does not always go to the "big guy."

Such a trip should be a "must" for parents of school children, for in this manner the youngsters could relive the history which they are studying in school and at the same time drink in the clean fresh air of the countryside—that clean fresh air of freedom which the Minutemen offered their lives to protect.

In the list of holidays, Patriots' Day does not appear near the top, but to the people of Middlesex County it is a big one, as it belongs to Middlesex County and its towns as no other one does.

House Joint Resolution 153

Joint resolution authorizing the President of the United States to proclaim April 19 of each year Patriots' Day for the commemoration of the events that took place on April 19, 1775

Whereas the 19th day of April 1775 witnessed the first military engagement between the American colonists and British troops, and the fighting that then occurred at Concord and Lexington, in Massachusetts, formed the prologue to the mighty drama of the Revolution and determined the character of its first campaign; and

Whereas the significance of April 19 in the history of our country is not to be measured by the extent of the military forces that engaged in local battle in 1775, but by the direction and strength of the intangible forces then set in motion which in due course established the United States of America; and

Whereas a frequent recurrence to the events out of which this Nation arose, and a better understanding of the principles upon which our forefathers grounded their independence cannot fail to stimulate and renew that high sense of patriotism which has ever been the glory of our country: Therefore be it

Resolved, etc., That the President of the United States is authorized and requested to issue his proclamation, annually, emphasizing the significane of the events that occurred on April 19, 1775, calling upon officials of the Government to display the flag of the United States on all public buildings on April 19, and inviting the people of the United States to observe the day with appropriate ceremonies in commemoration of the patriots who laid down their lives for the cause of independence.

Watch Bandung

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks, I include an article by Carlos P. Romulo printed in the Sunday Washington Star magazine This Week, under date of April 17, 1955.

I hope that every Member of this Congress has read this article. It contains statements of facts and a very penetrating analysis of what could happen at the conference of Asian and African nations at Bandung, Indonesia.

It is extremely important to the United States and to the free world that Mr. Romulo is a delegate to this conference. Those of us who have served in the House with Mr. Romulo know of his thorough understanding that our country has no desire whatever to promote colonialism, directly or indirectly, which was conclusively indicated when in 1946 we passed the law liberating the Philippines and thereby making them a free nation.

Because of his vast experience as a member of the United Nations and influence wielded as President of the United Nations Assembly, he has a deep understanding of the problems and the outlook of the verious peoples of Asia. Very important also is that he is an Asian who has a profound understanding of the United States and its policies. He knows that we are determined to bring world peace, if possible, not only for our own welfare but for the good of all the peoples of the world. He can talk the language of and understand the viewpoint of the Asians. He understands thoroughly that communism must be checked if we are to have world peace. He also knows that the colonial system is what developed hatred in the minds of Asians and Africans against the western democracies. As he says, nothing could be more terrible and ruinous than a war between whites and nonwhites.

He could be a key figure at this conference that might bring the understanding and mutual respect between the Americans and the Asians that is needed to weld the world together in respect and understanding. The small and explosive world of today cannot take another war without consequences that are terrible to contemplate.

The article referred to follows:

This Monday my country, the Philippines, will take its seat at a high-level diplomatic conference which some of our closest friends in the West initially urged us to boycott.

Thirty Asian and African nations, Communist China among them, have been in-

vited to Bandung, Indonesia, ostensibly to promote peace and cooperation. While this may sound like a fairly routine get-together, it actually can shift the course of history. Its effects a generation from now may be catastrophic.

Why is this meeting so ominous? For two reasons:

1. Here are the makings of a dynamic new alignment of political forces—an alignment which, if it solidifies, must make more and more difficult the free world's struggle to stay the advance of communism.

2. Here, too, are the makings of a broad racial alignment—more dangerous in the long run than the political. The roster of nations invited to Bandung is pointedly overbalanced with nonwhites. The meeting may prove to be the first important manifestation of a conscious, deliberate banding together of the nonwhite world against the white. And nothing would be more terrible than wars between whites and nonwhites.

Now Bandung—a city of elegant hotels, European-style residences and native shacks in the hills of West Java—is thousands of miles from Boston and Bakersfield. And though this is exclusively an Asian-African gathering, called by the Colombo powers (India, Pakistan, Burma, Ceylon, Indonesia), it is of tremendous importance to America.

It is because of my deep concern that the import of the Bandung meeting—the political and racial dangers it raises—may not have received sufficient notice that I have sought this chance to speak to you.

Our Filipino delegation, which President Magsaysay has asked me to head, is likely to be a minority pro-Western voice at Bandung. The reason my government was advised at first not to attend was that, since we were allies of the United States and vigorously anti-Communist, we would be embarrassed at a meeting bound to be largely dominated by the Communists from Peiping, not to mention the neutralists from New Delhi.

But we in the Philippines don't look at the situation that way. We are in Asia and of Asia. Not to attend a meeting of our fellow Asians, no matter how we may differ with some of them, is to make of ourselves outcasts in Asia. Also our belief in democracy is not timid. We welcome the chance to express our views to our fellow Asians, including the delegates sent by Mao Tse-tung.

WHAT THE FILIPINOS WILL DO

We expect to be outvoted at times. But we have hopes of exercising enough influence on the proceedings to prevent, at least for the time being, the solidification of the political and racial tendencies we feel would constitute a terrible threat to peace.

Meetings of Asians and Africans are nothing new, of course. The nations of these two huge, restless, underprivileged continents have been joining forces with growing frequency in recent years to promote a variety of causes, some good, some questionable. Asian and African nations took steps in 1948 for the worthwhile purpose of helping Indonesia shake itself loose from Dutch colonialism.

At the United Nations, the Asian-African group has occasionally played a useful role in spotlighting colonial and racial oppression in Africa. But more and more, of late, a core of influential members of the group has shown a disposition to take a neutralist stand in the East-West struggle.

Now at Bandung this group is being joined by Red China—the trophy of the Indochina deal dangling from its belt, its ego inflated by the Hammarskjold visit to seek release of United States flyers, its propagandists demanding liberation of Formosa. Consequently, the former neutralist coloration takes on an anti-Western tinge.

It is India's Premier, Jawaharlal Nehru, of course, who has been the apostle of Asian-African neutralism, though he shuns the label and argues that he merely opposes the creation of blocs on grounds that they lead to war. It is Nehru, too, who engineered the invitation to Peiping to come to Bandung.

In this respect, it is easy to go along with him in rejecting the label of "neutralist." On the other hand, he would probably dispute a charge that he has been unneutral. It would be politically naive, though, to imagine that it is neutral to invite one—and only one—of the protagonists of the cold war to a conference whose avowed purpose is to promote peace. Ironically, any increase in Red China's leadership in Asia must certainly be at New Delhi's expense.

What are the main issues that trouble our fellow Asians and the Africans?

1. COLONIALISM: ASIANS HATE IT

Last fall, I wrote in This Week that, as a free Asian, I was gravely worried that what was left to free Asian might soon follow north Vietnam into the Communist orbit. I argued that the basic reason some Asians were so cold to the propaganda of democracy and so vulnerable to Communist blandishments was that the so-called democracies, in times past, had brought them, for the most part, not democracy but colonialism. Not democracy but 5-cents-a-day wages and racial barriers. I have spoken to audiences in scores of American communities, and I find that a most difficult point to put across is the intensity of the Afro-Asian hatred of colonialism.

The United States, instead of exploiting territories over which it exercised sovereignty, has generally guided them peacefully toward self-government or outright independence. When the United States governed the Philippines, it dealt with a population that was basically content because it was being openly prepared to assume sovereign control of its affairs. There is a genuine friendship between Filipino and American, and Manila is considered by the fleet probably the most hospitable port of call in all Asia.

Nowhere has the United States dealt as a nation with its population grudgingly, bitterly submitting to the yoke of empire.

The American people have not grasped the real nature of anticolonial emotionalism. But it must be grasped. Otherwise, the United States cannot formulate workable policies to keep former colonial areas from being overwhelmed by communism's new and more ruthless colonialism.

Remember this: while it is true that the colonial powers have only shreds of their old influence left in Asia, the old bitterness remains. Urged by the Western Powers to join in resisting further Communist advance, many Asian nations are understandably wary. They are not sure it is to their interest to choose sides; they are not sure they have anything to gain by lining up with the West; and they would certainly have to make sure first that their former oppressors had really reformed.

It is the Asians' sensitivity to colonialism that makes Communist prattling about American imperialism in Formosa—false as it is—logical propaganda. Asians and Africans are watching to see if the powers controlling colonies in Africa follow a more enlightened policy there than in Asia.

Britain's bold experiment in speeding self-government in the Gold Coast is a plus mark for the West. There are reassuring signs in Nigeria. But Britain wins no confidence with its nineteenth-century repression in Kenya, home of the Mau Mau. A French premier tries to put across a policy of autonomy for North Africa and—for this and other reasons—he is overthrow.

2. RACISM: "CHINESE NOT ALLOWED"

Hatred of the white man is colonialism's legacy in vast areas of the world. Starvation wages would have been reason enough for hatred of the colonial powers, if that is all colonialism had meant. But it also meant signs in Shanghai parks: "Dogs and Chinese not allowed here." It meant rules barring all natives from admission to the white man's club. Racial scars left by discrimination take years, decades, generations to fade. Most of the nations gathering at Bandung bear still-fresh scars. Racial resentment is common ground for the fashioning of alliances.

Significantly, the invitation list for the conference emphasizes the racial aspect of the meeting. South Africa, carrying policies of race discrimination to especially revolting extremes, was not invited. The Arabs are coming, but they made sure Israel did not get an invitation. It may even be significant that Russia, an Asian as well as a European power, was not asked to come.

Armageddon between whites and nonwhites is not an immediate prospect. But limited, local racial wars are going on today. The struggle in Kenya is largely racial. How long will it be before South Africa explodes? In a generation or two, if current trends are not reversed, race war on a vast scale could shake the earth.

3. ECONOMICS: WHO'LL HELP?

The masses of Asia and Africa are impoverished. They are looking desperately for help from more fortunate nations. Whoever eases their misery—democracy, communism, the political system doesn't matter—will have their friendship and their trade.

4. PEACE: NO MORE BOMBS!

At a meeting of the five Colombo powers last year, a resolution was approved calling for an end to hydrogen-bomb and atom-bomb tests. Passage of the resolution was understandable. The injury to the Japanese fishermen (one of whom later died) by the radioactive fallout from an H-bomb explosion terrified masses of people in Asia.

But while the resolution to ban tests theoretically applied equally to East and West, it unintentionally reinforced Communist propaganda. The Communists, with their superiority in manpower, have been trying for years to eliminate atomic weapons from the world's arsenals. With the West's atomic deterrent neutralized, the Communists would be ready to march. Neutral resolutions are not always so neutral as they sound.

My fellow Asians and the Africans may adopt so-called neutral policies in hopes of staving off world war or staying out if it should erupt. But protestations of neutrality will not stop Communist imperialism. The only way to insure that the Communists dare not move is to help the free world build an unchallengeable defense.

At Bandung, the Filipino delegation will urge our Asian and African colleagues—those still uncommitted—to take that course. We will do what we can to expose the fallacy of neutralism. And, taking the longer view, we will try to prevent the nurturing of a racial alliance which could develop into an enormity that would convulse the earth.

We have been working hard in recent weeks readying ourselves to answer the Communists, and the neutralists, point by point; to counter their resolutions with constructive resolutions of our own. We fully appreciate the intensity of Asian-African suspicion of the West. But we are working on the assumption that the West intends to follow through on its promises, that it will share its knowledge and wealth with the world's less fortunate people, that it will hasten the day when all people will be truly independent.

Many specific projects to counter the dangerous drift in Asia and Africa have been blueprinted. But programs do not take hold unless the people who must put them into operation are made to realize with painful clarity how urgent they are.

The Bandung conference is a measure of that urgency. It will not get the news coverage of a Tachens evacuation or a congressional resolution on Formosa. But the free world would do well to watch it with as much attention—and guide itself by what it sees.

Misrepresentations in Billions, Blunders, and Baloney

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. WILSON of California. Mr. Speaker, we have all heard a great deal about Mr. Castle's book, Billions, Blunders, and Baloney in which he strongly criticizes United States foreign policy generally and the foreign assistance and overseas information programs particularly. Mr. Castle has made a lot of noise about this book; he has promoted it through a lavish advertising campaign, and, at this opportune time, when USIA appropriations are being considered, he has sent a self-serving circular about his book to the the Members of the Congress.

Unfortunately, the charges in Mr. Castle's book have received some attention, although they are little more than an indiscriminate collection of epithets and invective. The overseas information program is just crackpot, and incredible baloney to him. The Voice of America is yackety-yak-yak; and the film program flicker foolishness. In passing Mr. Castle criticizes just about every feature of American foreign policy from both the Democratic and Republican administrations. He condemns the Democrats for losing China and the Republicans for giving away Korea with an equal hand.

Mr. Castle is against almost everything but he is mostly against the United States Information Agency. In his book he makes charge after charge to show that our information functions are ineffective, wasteful, and mismanaged and he urges that they be stringently curtailed. Mr. Castle's opinions would be worthy of more respect if he were more careful with his facts. Wherever I have been able to test the accuracy of Mr. Castle's charges I have found them wanting. Let me give a few examples.

Right at the beginning of his book Mr. Castle tells of a conversation with two Arab publishers named Amin, in Egypt. He sets forth what purport to be actual quotations of their remarks, all of which are highly critical of the USIA program in Egypt. Now, almost nothing that Mr. Castle said was accurate. First of all, he didn't even get the names of the Arab publishers right. Secondly, he said the Voice of America broadcast to Egypt comes in during the early morning so that nobody listens to it when in fact it has always come in during the best evening hours. Although Mr. Castle was ostensibly quoting actual remarks, he admitted to the Appropriations Committee that he had lost his notes of the conversation with the publishers and was relying on his memory.

And, finally, at the request of the appropriations subcommittee, a letter was obtained from the publishers in which they state flatly that Mr. Castle not only misspelled their names but their ideas, and they asked expressly that the distortion of the facts about their views be set straight.

Mr. Castle also took the United States Information Agency apart for the elaborate quarters it occupies in Europe. Yet when the charges are examined against actual facts very little remains. In Paris, for example, Mr. Castle accused the Information Agency of occupying three swank buildings—the Rothschild Mansion, the Cafe des Ambassadeurs and the Hotel Astoria. What are the facts? The Hotel Astoria is a seven-story building. The USIA library occupies a part of the ground floor. That is the only space in the building occupied by the USIA and that space is being vacated this summer. As for the Cafe des Ambassadeurs—the Agency does not now occupy this building and did so only for long enough to close down the operations housed there before it took over the information program. Except for the library, then, USIA operations in Paris are entirely housed in one building, the Rothschild house, and not three separate buildings as Mr. Castle would have it. As for the Rothschild building, it was purchased by the State Department a long time ago and was simply inherited by the USIA, which has been trying to get out of it ever since.

Another sample of Mr. Castle's charges is in his discussion of the USIA film program. Mr. Castle has some claim to being an expert on motion pictures and his opinions on the USIA film program would, therefore, seem to command respect. Mr. Castle inveighed in the strongest terms against the "flicker foolishness" engaged in by USIA and flatly asserts the ineffectiveness of this "movie madness." Yet in the recent hearing before the Appropriations Subcommittee Mr. Castle had to admit that he had only seen 1 out of some 12 or 13 of the pictures reecntly made by the United States Information Agency and which he had presumed to criticize so harshly in his book. Hard-hitting anti-Communist movies like Poles Are Stubborn People, Dance to Freedom, Rape of the Baltic, and My Latvia were dismissed by him as worthless with the same easy disregard for fact which caused him to dismiss Mr. Cecil B. DeMille's opinion on the brilliant and costly propaganda films being made by the Soviet Union. Members of the subcommittee who saw the Soviet film entitled "The Doomed Vilage" can testify to the need for a hard-hitting film program to combat effective Soviet propaganda of this kind.

In my opinion a good many of the charges in Mr. Castle's book are reckless and not founded on fact. I feel that it has been harmful to the interests of the United States.

AKHBAR EL YOM,
SHARIA EL SAHAFA,
Cairo, March 7, 1955.

DEAR MR. WEATHERSBY: We were surprised that Mr. Eugene Castle in his recently published book claimed he had interviewed us about the USIA in Cairo. He not only misspelled our names but also mispelled our ideas. The fact is that this gentleman met us for a few minutes before a luncheon given by Mr. Saba Habach in the Mena House Hotel. All what he attributed to us is what he said himself. We disagreed with him, but he insisted he was right. He said he had come to Cairo and have visited many capitals to prove what he actually was convinced of before starting off from the States.

Will you please try to use your influence and correct this distortion of facts.

Yours sincerely,

MOSTAFA AMIN.
ALI AMIN.

Public Power Program

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, there appears to be a growing groundswell of public opinion against the administration's policy on public power and protection of the people's resources.

Under leave to extend and revise my remarks, I wish to insert in the RECORD two resolutions adopted by delegates attending the 24th annual meeting of the Farmers Union Central Exchange held in St. Paul, Minn., from February 28 through March 3, 1955.

The Farmers Union Central Exchange, which serves 350,000 farmers in 6 Northwest States, states its views in 2 resolutions, as follows:

PUBLIC POWER AND PRIVATE UTILITIES

Whereas the present policy of the administration in regard to private utilities and power development is:

1. To turn over to private utilities much of the Nation's public power construction and output, contrary to customary and legally established preference policies.

2. To permit a type of power construction by private utilities which will bring about the creeping destruction of multipurpose river development.

3. To compel electric cooperatives through so-called partnership agreements to consent to the expansion of private power while public power projects are being halted.

4. To subsidize private utilities by guaranteed profits and by various devices such as are contained in the Dixon-Yates contract: Therefore be it

Resolved, That we the delegates attending this 24th annual meeting of the Farmers Union Central Exchange at St. Paul, Minn., on February 28 through March 3, do hereby go on record as fully endorsing the valiant efforts of the State and National Farmers Union leadership to block the private power policies of the present administration.

DIXON-YATES CONTRACT

Whereas the administration has seen fit to promote a contract authorizing the private power combine Dixon-Yates to provide electric power to TVA for use by Atomic Energy Commission; and

Whereas President Eisenhower ordered this contract signed over the disapproval of both the Chairman of TVA and the Chairman of AEC; and

Whereas the Dixon-Yates group was awarded the contract in spite of lower bids from other private groups, and in spite of the fact that TVA maintains that it could build steam generators and transmit electricity to AEC at a lower cost than private utilities; and

Whereas the administration has refused to present all facts to answer the charges of preferential treatment: Therefore be it

Resolved, That inasmuch as the administration's conduct in the Dixon-Yates case raised many unanswered questions and inasmuch as there are no apparent reasons justifying such a power contract, the delegates attending this 24th annual meeting of the Farmers Union Central Exchange of St. Paul, Minn., from February 28 through March 3, 1955, do hereby go on record calling upon Congress to conduct a thorough investigation of the Dixon-Yates controversy by the proper investigating committee.

Treasures Money Cannot Buy

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. CEDERBERG. Mr. Speaker, President Eisenhower has set an example for our people by his regular church attendance and by his devotion to religious principles. Furthermore, he has surrounded himself with devout men and women of various faiths.

Visitors to Washington who have had contact with members of the Cabinet and other top officials have been impressed with the religious atmosphere prevailing here.

Faith in God is something that is beyond politics. No political party nor particular sect can lay claim to a monopoly on a faith in the Almighty. Devout leaders can stimulate that faith in the hearts of others by their example. By their daily lives they can create an atmosphere that will draw their associates and their fellow men to a closer walk with the Creator.

Recently while returning to California from Washington by airplane, Arthur S. Maxwell, editor of the Signs of the Times, a widely read religious journal, found himself seated beside a charming lady who, on learning he was a minister, readily discussed "many things pertaining to the kingdom of God," as the editor put it.

That lady was Mrs. Ivy Baker Priest, Treasurer of the United States. Impressed with her deep religious devotion, Editor Maxwell told Mrs. Priest he felt sure an article setting forth the spiritual treasures that money cannot buy might be a source of great inspiration to millions, especially if written by the Treasurer of the United States.

Treasures Money Cannot Buy is the title assigned to Mrs. Priest's article, which appears in the current issue of Signs of the Times, and I commend it to your reading. It follows:

TREASURES MONEY CANNOT BUY
(By Ivy Baker Priest, Treasurer of the United States)

All the dollars in the United States Treasury taken together could not buy the dedication and devotion of people to the principles of freedom.

The irresistible, relentless progress that has given the United States the highest standard of living in the world was not purchased with money.

Money cannot buy patriotism, progress, or security. These are primarily spiritual things that live in the hearts of a people and cannot accrue to a government because of money or any material objects it gathers around it.

The price of our heritage was not money, but the ceaseless toil and prodigious efforts of those courageous pioneers who settled this land, tilled the soil, blazed the trails, extracted the minerals from the bounteous earth, and pushed the frontiers from the Atlantic to the far reaches of the Pacific. Then in their great generosity they bequeathed to the generations that followed, to us, the freedom that they purchased so dearly, the precious liberty which money could not buy.

Our American way is more than a treasure, indeed it is a treasure chest of treasures, for in truth it is composed of not one, but a multitude of related rights and freedoms, the right to worship God according to the dictates of one's conscience, the freedom to experiment, to change, to seek knowledge wherever research leads.

By material standards our system has succeeded. It is giving the greatest outpouring of material wealth that the world has ever seen and is providing the most equitable distribution system yet attained.

By spiritual standards it is an even greater success, surpassing any philosophy of government ever put into practice. The spiritual power of our way of life is derived from the Bible. Faith in God's wisdom and in our own abilities to work out our problems with divine help are deeply embedded in the great American tradition.

Belief in God gives an inner peace and contentment that is beyond the power of money to buy. Faith in the precepts and commands of God nurtures faith in man and leads to fair dealing, inegrity, honesty, and understanding among all. Understanding lays the groundwork of confidence and cooperation and encourages a striving to help those less fortunate. It gives us the humility to learn from others, and stamina and strength to make our own decisions. It teaches us patience in the face of obstacles and encourages us to be generous enough to share our good wealth with others. It enables us to turn a smiling face to cares, to preserve a buoyant, hopeful, youthful spirit, to abide by rules of virtue, to shun folly, and keep uppermost in our thoughts the eternal things of life.

Money cannot buy education or character for growing youngsters; it cannot give them a wholesome assurance, a confident ability in their capacity to meet life. Character can only be built when the aspirations of youth are lifted beyond worldly goods to lofty ideals that challenge them to be and do their best.

Money cannot buy progress, which comes from asking, seeking, knocking at all doors before us, sometimes evolving slowly from plodding, patient research into the mysteries of the unknown, and sometimes leaping into life from flashing, brilliant insights.

Truth cannot be bought with dollars. Money cannot buy the peace and contentment that come from an understanding heart. Happy homes, education, character, confidence, self-respect, kindness, generosity, and peace—these different forms of worthwhile treasures money cannot buy.

Nor can they come to those sufficient unto themselves. These treasures come only to those who look to God for leadership, who tap the inexhaustible sources of strength in the Bible.

It is because we as a people have placed our faith in God's wisdom that we are strong.

The motto, "In God we trust," long engraved on American coins, and recently engraved on postage stamps, has always been deeply engraved in our hearts. It has enabled our forefathers to stand, figuratively, on their own two feet and pull their solid weight.

If we but resolve to rededicate our lives to Christan living, the treasures money cannot buy will continue to multiply and America will be invincible and secure.

Stevenson Appeals to Commonsense and Morality

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. SMITH of Mississippi. Mr. Speaker, Gov. Adlai Stevenson's speech on April 11 was a badly needed contribution to the public discussion of the questions confronting our country as we face the possibility of war in Asia. Mr. Stevenson actually opened up for discussion a broader course of action which can be of much help for the President in making the decision that is essentially his responsibility.

It is very unforunate, but perhaps systematic of the handicaps under which the President must operate, that Mr. Stevenson's speech has been the subject of partisan attack for only two reasons: First, because he raises some questions which can help prevent our country being drawn into a war, and, second, because he is a prominent Democrat. For a fair evaluation of the impression Mr. Stevenson's speech made on the rest of the country, I include the following editorial from the Jackson (Miss.) State-Times:

WISDOM OF ADLAI STEVENSON—APPEALS TO COMMONSENSE AND MORALITY

As he so aften does when he speaks out constructively on a national issue, Adlai Stevenson has appealed to the commonsense and the moral precepts of America's President and public in consideration of the Formosan Strait situation. His thoughtfully worded and calmly spoken broadcast of Monday evening was completely in keeping with the loyal-opposition tradition, offered not for political gain but to serve the natianal interest.

The President, in the great loneliness of his office, has the sole responsibility for making the ultimate decision whether to defend certain Chinese coastal islands against an expected Communist attack, Mr. Stevenson said, "Yet in a democratic community he is entitled not only to the support but to the informed judgment of his fellow countrymen."

There was no suggestion of appeasement in the Stevenson address. He suggested at least one avenue to a peaceful solution and said if the Reds reject all such efforts, "then

at least it would be clear to everyone who the aggressors were." If they are bent on force, "then we would have no alternative but to meet force with force."

What he raised in a most pointed way were the questions which have been troubling so many Americans in recent weeks: Are Quemoy and Matsu islands, the nearest less than 5 miles from the mainland, of real strategic value to the United States? Are they the place for the stand, backed by arms, which could result in the catastrophe of world war III? Are they worth the risk of such a conflict, particularly when we stand alone in even considering them so?

The weight of the argument as to their worth to the Chinese Nationalists and thus to us as Chiang Kai-shek's guarantors is on the negative side. Their value is primarily psychological with some elements of worth as listening posts thrown in. They could not be used by the Communists as stepping stones in an attack on Formosa, since there still remains the 100 miles of open water between them and the big Nationalist-held island.

We have already pledged our might to defend Formosa. That is the main consideration in the area, and if defense of that last stronghold of the Nationalists becomes necessary, we had better possess all the strength we can muster for the test. To consolidate our position is sound military strategy; in this case, it is a virtual necessity if we are to retain support of our friends.

The division of the allies over the islands, Mr. Stevenson said, "the weakening of our grand alliance of free nations pledged to stand together to defend themselves is in my judgment a greater peril to enduring peace than the islands themselves." He is right, of course, for should war come—as it might, given the spark of conflict—"the maintenance of our alliances and the respect and good will of the uncommitted nations of Asia will be far more important to us than the possession of these offshore islands could ever be."

Mr. Stevenson suggests a firm and united stand by the Western nations on a basis for settlement for the situation, with Russia invited to declare its position. Only then will there be force potent enough to enforce an agreement.

Certainly, the issue is grave enough, the potentialities sufficiently terrifying, to warrant every possible effort for a peaceful settlement. And America's strongest position is that to be found in the company of its allies.

Family Farm Policy

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the RECORD a resolution adopted by delegates attending the 24th annual meeting of the Farmers Union Central Exchange in St. Paul, Minn., from February 28 through March 3, 1955.

The Farmers Union Central Exchange, I wish to point out, is a cooperative wholesale organization serving 350,000 farmers in six Northwest States.

There has been long a feeling on the part of the Nation's family-type farmers that the Congress of the United States should adopt a statement of policy with respect to family-type farmers. Bills have been introduced on this matter. The resolution adopted by the Farmers Union Central Exchange delegates expresses the views of farmers on the need for such legislation.

Following is the full text of the resolution which I recommend to my colleagues:

Whereas a bill has been introduced in the United States House of Representatives by Representative JOHNSON of Wisconsin (H. R. 2000) and sponsored in the Senate by Senators HUMPHREY, of Minnesota, and MURRAY, of Montana, entitled the Family Farm Policy Act which sets forth the family farmers' bill of rights as a guide and standard for farm legislation and agricultural policy. This bill of rights embodies and enumerates the principles of the family-size farm and security, opportunity, and parity of living for farm families: Therefore be it

Resolved, That we, the delegates in attendance at this 24th anual meeting of the Farmers Union Central go on record in support of the principles of this legislation.

Surplus Grain and Jobless Miners

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Roanoke (Va.) Times of Wednesday, April 6, 1955.

This editorial is in support of my efforts to supply our needy people in various sections of this country with flour and meal for bread through the milling of a portion of our surplus grains.

I wish to call the attention of the House to this editorial and to the need of legislation to see that this grain is used for our needy miners and others who are jobless:

SURPLUS GRAIN AND JOBLESS MINERS

Representative W. PAT JENNINGS, freshman Democratic Congressman from Virginia's coal-mining Ninth District, is putting up a fight for those of his constituents left nearly destitute by the depression in the coalfields. Associated with him are Congressmen representing districts in Kentucky, West Virginia, and Pennsylvania similarly hard hit.

To Mr. JENNINGS, it seems foolish, even cruel, to allow the continued deterioration of millions of tons of Government-owned grain, purchased under the price-support program and stored anywhere and everywhere that space can be rented, while many thousands of Americans lack bread through no fault of their own. He points out that 8,500 people in 6 coal counties of his district, deprived of regular means of livelihood by the shutting down of coal mining operations and by technological changes in the industry, were largely dependent upon surplus foods in March to stave off the specter of hunger.

He is asking that some agency of the Federal Government arrange for the milling of this grain and its distribution along with butter, shortening, beans, rice, dried milk, and cheese so that mine families can make bread.

"Perhaps if my district would secede from the Union and then make application for foreign aid," the young Congressman says pointedly, "the request would be approved."

The remedy proposed here by Mr. JENNINGS and his colleagues is at best a temporary one. Obviously, breadlines and other forms of emergency relief provide no long-range solution to the economic problems of the coalfields, but that does not render them any the less necessary when thousands of families are unable to earn an independent living and feed themselves. Mr. JENNINGS has faith in the ultimate revival of the coal industry, a faith which is shared by the Norfolk & Western Railway and many others close to the matter. He recognizes that other steps must be taken to establish new industry, to retrain or relocate those miners permanently displaced by technological changes.

In the meantime, he points out that "a hungry child can think only about his hunger, but the well-nourished child stands ready to understand and absorb the meaning of our American tradition of freedom and democracy."

We can understand the fears of Agriculture Department and Commodity Credit Corporation officials that their agencies might be plunged irrevocably into the relief and welfare business. This, however, is no more than a technical objection. The same applies to the contention that the distribution of flour and meal would put the Government in competition with commercial milling concerns, for the people who would benefit are not now in the market for these products for the simple reason that they have virtually no income.

The processing and distribution of the stored grain would simply be an extension of the present surplus food-disposal plan. It presents some difficulties, but these should not be insurmountable. The grain is there; the Government wants to get rid of it; American citizens because of a situation they cannot control need it desperately in the form of flour and meal to feed their families.

Congress should direct that the appropriate Federal agencies launch a temporary emergency program to put this food into the surplus distribution channels.

Problems of Communism

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. WILSON of California. Mr. Speaker, I have just read a copy of a United States Information Agency magazine that is practically unknown in this country, but overseas, in the past 2 years, it has gained tremendous prestige.

The magazine is called Problems of Communism. It is published bimonthly in English, French, and Spanish, and monthly in Japanese.

Recent editions include articles such as:

Collectivization in China: A Story of Betrayal, by Richard L. Walker, No. 1, 1955.

Soviet Cinema: A History and an Elegy, by Dwight Macdonald, No. 1, 1955.

Poland After the Death of Stalin, by Jean Malara, No. 2, 1955.

Of this publication, Ost Europa, a magazine published in Stuttgart, recently said that it has "acquired a distinguished position among organs concerned with East European affairs," proving that "political orientation is compatable with factual treatment and high scholarly standards." In other words, the increasing prestige of Problems of Communism is proof that a highbrow magazine can have tremendous political weight if it adheres strictly to facts.

In further tribute to this United States Information Agency publication, several members of the French and British Parliaments recently requested that their names be put on the mailing list. Government officials throughout the free world have commented on its value in the fight against international communism. This little publication is proving important ammunition in the fight freemen everywhere are making to keep freedom alive in the world.

Incidentally, Problems of Communism is beginning to win recognition in the United States. Herbert A. Philbrick, of the New York Herald Tribune, recently congratulated the editors, declaring that "of all the material which I read and study concerning communism, problems of Communism is one of the most valuable sources of information available today."

In a letter to the editor, Fortune magazine called it "a most impressive set of documents from an impressive panel of authors."

The United States Information Agency, of course, has not made any effort in this country to build up circulation for the magazine. It is, however, available through the Superintendent of Documents, Government Printing Office, at 35 cents a copy or $1.50 per yearly subscription. As Theodore Streibert, Director of the Agency, sees its job, it is strictly an overseas operation. The purpose of the entire program is to make friends of overseas for the United States and to influence people in other lands, not the United States.

Problems of Communism illustrates another point seen as important by the Agency. The Agency does not have, and does not expect to have the resources to compete with the Communists in volume of operation. It must concentrate on targets where its efforts will be the most effective. Problems of Communism, which numbers among its contributors scholars, specialists, topnotch political analysts and journalists, both American and foreign, that is, Lazar Volin, Soviet specialist at the Department of Agriculture; Merle Fainsod, famous Harvard University authority on Russia; Hugh Seton-Watson, British authority on Eastern Europe; Raymond Aron, distinguished French political analyst, and so forth, is written for opinion molders. It goes to Government officials, writers, educators, and, yes, students. This, as I see it, is intelligent. Unless we plan to put billions into our overseas information program we must operate on this theory.

I might add that the coeditor of Problems of Communism, Abraham Brumberg, writes with firsthand knowledge of his subject. In 1941, he fled from the Soviet occupied city of Vilma, Poland. Coming to the United States, he served first in the Army. Later, he studied at Yale University, where he received an M. A. in Russian studies. Mr. Brumberg has edited the magazine, in cooperation with Miss Therese Thompson, for the past 3 years. The lady is an expert in the field of Communist affairs and in stylisitic editing.

Speaking of his work with the United States Information Agency, Mr. Brumberg told me:

> I believe that there are many people throughout the world who have been misled by the promises and appeals communism has been offering over a period of years. It is our aim to reach these people with facts and irrefutable evidence, to point the gap between Communist promises and performances, myth and reality.

Mr. Brumberg came to Washington in 1952. Problems of Communism was then only an infant. It was taking its first faltering steps. It took the new coeditor only about a year to put the publication on its feet. Today, it is going places.

The Late William Sebastian Jacobsen

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. GATHINGS. Mr. Speaker, while on a short visit to Arkansas I was grieved to learn that a close, dear friend of mine—and a friend of the Congress—former Representative William Sebastian Jacobsen, of Iowa, had passed on.

Only the week before I left to visit in Arkansas I had received the tragic news of the passing of his sainted mother, and I had written to Bill expressing the sorrow of my family at his loss. Bill had continued to correspond with me after he had retired to Iowa from the Congress to resume his work as owner and operator of a radio station along with other extensive business enterprises.

When Representative Jacobsen came to the Congress for the first time, I had the pleasure of meeting him. He was familiar with the workings of the Congress because his father, the late Bernard M. Jacobsen, had served in the Congress. Indeed, Bill took his father's seat in the Congress.

Thus, through many sessions of the Congress, the fine people of the Second District of Iowa were represented by noble men of the Jacobsen family. Both gentlemen made outstanding records of public service.

Those of us who had the honor and privilege of serving with Bill Jacobsen will miss his friendship and his counsel. He was a fine man and one whose friendship I was proud to have. Iowa has been most fortunate in the fine men who have represented her interests in the Halls of the Congress, and Bill Jacobsen will take his honored place in the ranks of those whom Iowa will long remember.

To the present delegation who represent Iowa in these Halls, may I express my sorrow and sympathy in your loss.

The Career Compensation Act of 1955

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. WILSON of California. Mr. Speaker, on a recent trip to my district in San Diego County, Calif., I found a great amount of enthusiasm for the recently enacted Career Compensation Act of 1955. Some of the predictions made about this bill seem to be bolstered by the favorable attitude of service personnel and by editorials and articles such as the following from the Navy Times of April 16, 1955:

LOOK LONG BEFORE LEAPING

The grass probably never was more green than it is in the Navy pasture this spring. What's more, the recent upsurge in reenlistments after the low point of last year is evidence that an increasing number of Navy men are aware of the advantages of service in this post-Korean Navy.

To those not so aware, a few reminders and some less-well-known facts—are perhaps in order.

The first obvious statement is that there has been a pay raise, effective from April 1. It is a substantial raise.

Almost as obvious is the fact that this raise will increase the already substantial reenlistment bonuses which Congress voted last year.

And most Navy men know that the raise also will show up in retired pay. Even under the old rates a man would have to put about $65,000 into annuities over a 30-year period to get what the Government will pay a serviceman from the day he retires after 20 years until his death. The new rates will further increase the value of retired pay. Another recent law, the Contingency Option Act, makes it possible to continue payment of part of retired pay to survivors after the serviceman's own death.

There has been talk of late that civilian industry has been adding fringe benefits which equal those which the services historically have offered. In some respects this is true, but no civilian retirement plan begins to approach the military plan in value. Apart from the fact that most civilian plans are contributory while the serviceman pays nothing, no civilian plan offers an annuity at anything close to 20 years.

As for fringe benefits, the unprecedented speed and unanimity with which the service-pay bill went through Congress is evidence that the legislators as a whole realize that the curtailment went too far. The benefits are substantial now. Prospects for future additions—in dependents' medical care and in more housing—are bright.

Dependent medical care even now, though spotty, is still better than civilians get. As for care of the worker himself there simply is no comparison.

It is amazing to hear protests on the one hand over the closing of commissaries and protests on the other that there is no real saving in buying at commissaries and exchanges. Only one of these protests can be valid. Both the exchanges and commissaries have figures to prove that their prices on the range of merchandise are lower. Of course, you can go downtown and find a few cheaper items. So what?

As for promotions, there's a terrible row on because a Navy cutting back in personnel has restricted advancement to the top two enlisted grades in some specified ratings. A study of the Navy's grade situation proves conclusively that the prospects of retiring as a chief petty officer are splendid.

For those few rates—and they aren't as many as the temporary freeze would indicate—which will be overcrowded for some years to come, the Navy is offering retraining. That's more than is available in most civilian industries with their innumerable blind alleys.

Of course, in a curtailed Navy, there is a surplus of chiefs. Many first-class petty officers immediately lament that they will have to retire as E–6's. And juniors fear they won't even get E–6 before retirement.

Here are the facts: On September 30, 1954, there were 47,800 chiefs. All but 5,023 had more than 12 years' service. Which means more than 40,000 of the chiefs are going to retire within the next 10 years.

Only 2,729 of the 47,700 had more than 22 years. That indicates—despite another fear of those below—that relatively few chiefs do stay on for 30. Right behind these 2,729 are 1,708 with 20 and 21 years and 26,375 with 14 to 19 years. The latter group includes 6,000 who are going to be out within the next 2 to 4 years.

Why, only 203 of the 57,434 first-class petty officers have 18 or more years in, and only 2,103 have 16 or more. There will be vacancies for practically all of these before they reach retirement.

And all along the line, the hump in each grade is far enough behind the hump in the next higher grade, to insure vacancies. It also should be remembered that extra credits have been given to enable the more senior man, if he can pass the tests, to be promoted.

Now we come to the last great gripe: Too much sea duty and too much rotation. It was the great turnover in personnel which required trained men to be shifted to fill vacancies. As the Navy stabilizes in size and as the proportion of career men increases, you can look for a remedy of this situation too. And the man who is at sea is going to find his ships increasingly more habitable.

All of these things should be studied well by a man who has a cruise or two behind him before he makes a decision he may come to regret exceedingly.

MAIL CALL—COUNT YOUR BLESSINGS

U. S. S. *K–1*: I have seen letters in Mail Call recently from some pretty good gripers.

They point the small, minor, inconsequential items that affect them personally. Then, they infer, these are the reasons men are going out.

Certainly, locker space is inadequate on some ships. Sure passageways are too narrow. I'll agree that some so-called specialists have to stand sentry duty.

These are real hardships. Did these men ever live out of a sea bag? Swing a hammock on a can or carrier? Sleep on a cot or torpedo skid on a sub? Are they a special class that they have no military duties?

Shipmates, you chose the Navy. The Navy didn't choose you. We are supposed to be the best damn fighting organization in the world. Let's keep it that way.

Naval architects today are planning ships the way your mother planned your bedroom. However, if that broad passageway decreases the fighting efficiency of your ship, it's your neck, not theirs. If that extra large locker blocks the ammo passer, look out. The enemy doesn't care if you can fix that plane. He just doesn't want you to be able to shoot back.

For putting up with these so-called hardships, the Navy offers you plenty in return.

You get: The best food money can buy, better than you'd buy at home. A place to sleep on clean sheets; it's up to you how clean. Pay day twice a month. The chance to obtain a college education for $2. Free schooling and training to advance yourself. Free medication and no loss of pay while hospitalized. A pension plan that would cost you $162 a month. Check with the insurance companies, if you can find one that will write the policy.

Check your buddies on the outside and see them paying income tax on their gross. They can't deduct food and lodging expenses. Money spent for schooling. Look around, shipmate. Think before you leap.

Remember that your last duty and your next one are always the best.

While you're patting yourself on the back for getting out, think of how many guys you've run into that have said, "Boy, you're in a good outfit; wish I'd stayed in. I could have retired by now."

Ask yourself, "Will I be one of those guys in a few years?"

Then make an honest appraisal of yourself. Just how good are your chances? Just what prospects do you have? Who'll take care of your family when you're sick, out of work, out on strike, or just too old to work?

If you don't have to worry about all these then, "Good luck to you." Your prospects are so good and have improved so much in the past 4 years it's unbelievable.

In 1960 I shall be able to retire and live on the returns of a $65,000 investment. I'll put up with the minor hardships, duties, sea cruisers, etc. But I'll be repaid. Will you?

JAMES WELBY,
TM1 (SS).

Pennsylvania's Wealth Can Be Multiplied

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. VAN ZANDT. Mr. Speaker, the following article written by Mr. Paul Albert, of DuBois, Pa., is of special interest because it discusses the importance of water as a natural resource and is based on the personal observations of the writer, who is an industrial engineer with the Osborn Machine Co., DuBois, Pa., and one of Jensylvania's most ardent sportsmen:

PENNSYLVANIA'S WEALTH CAN BE MULTIPLIED

We in America are using up all of our resources at such a tremendous rate that time will eventually tell a story. Coal is taking a breathing spell at the present time on account of the production of gas and oil. Atomic power may help oil, gas, and coal eventually.

Among the metals iron, from which steel is made, and iron which along with coal has been the backbone of our great industrial economy will, in not too many years, be gone. High grade iron ores within the United States are just about used up now and it will be necessary to process low grade ores at a terrific rate to maintain our world position in war or peace. Canadian and South American ores could be cut off from us.

WATER

We never consider water as a resource, but after all the other resources are gone, we will find that water is the most important to sustain life. Human and animal life as well as vegetable life depends on water and the purer the water, the purer the life, physically, mentally and spiritually. Today we ruin our water the same as we are ruining all other resources.

Having lived in Pennsylvania for 57 years, I am naturally more concerned about the water that falls in Pennsylvania soil. Practically all water that falls can be conserved and put to use and a good share of the cost of the water conservation plan could be made to pay for itself.

As a youngster I saw some of the tail end of Pennsylvania's original natural beauty, and having been born in Clearfield County of parents whose ancestors settled there in the early 1800's, I have always had a love for the streams and forests. I have roamed over a great portion of the watersheds of the west branches of the Susquehanna and the Allegheny Rivers and have spent many days fishing on streams that are fast losing their original beauty. I have hunted over high plateau and basin lands on the divides and have noticed that good timber doesn't thrive there anymore. I began to notice the nature changes about 15 years ago and being selfishly concerned about trout fishing, I wondered if nature could be helped. She can be helped and we can all benefit.

We have all read and heard news items, accounts and statistics, etc. of floods. Likewise, we have read and heard accounts of droughts and water shortages. Many areas of Pennsylvania have experienced these conditions and they can be corrected.

I recall that fresh water springs, which used to abound throughout our countryside, are diminishing and disappearing. A clean fresh water spring could be found from a quarter to a half mile apart at any time of the year in my home locality about 30 years ago. The best one of these springs has survived but it is losing flow. Various conditions have caused this situation and many arguments about the causes could be had without solutions. The denuding of our land of the evergreens, etc., can account for some of the conditions. Has the thought ever occurred that other forms of vegetation, that took the place of the evergreens, dissipate more moisture than the evergreens? The evergreen carpet surely held more water in the ground than the leaf carpet does. However, the evergreens are gone but could be bountifully revived.

The removal of coal, gas, and oil from our ground has caused the lowering of subterranean water levels. Bear in mind that water always finds a level.

Our complex living of today demands that we alter or correct conditions that cause us trouble. Water causes us trouble in the form of floods, therefore, we do everything to get rid of it, then we don't have any and we hope and pray for rain. Creeks and steams have been straightened to hasten runoff and the building of highways has certainly helped to get rid of water. The major portions of highways are built along streams in valleys and are ditched, graded or sewered to put the water into immediately. No wonder we have flash floods, but we must have highways.

We spend money to advertise our State as a vacation land, but what is a vacation without water? Our streams are dry during the vacation months.

Let us keep water in our streams and take care of the floods. This can easily be done in many areas of the State.

While enjoying days on the streams and days of hunting on the high tablelands in the hills, I have studied the contours and noticed that there are hundreds of natural basins atop the mountains. A great number of these basins used to be more or less swampy, but now they are dry. These basins were formed by erosion and glacial action centuries ago and vary in size from about 10 acres to possibly 500 acres or more.

Many of these basins extend to the brow of a range of hills and are drained by a gulley down the side of hills to streams below. Many of the basins have a relatively narrow outlet that could easily have a dam breast constructed across them, making tiers of dams, if necessary, to hold water to an average depth of 3 feet with a dam-breast height of possibly 10 to 14 feet. These breasts could be easily constructed with bulldozers, shovels,

etc., and should be so built that from the maximum rainfall the water would never run over the top of the breast of the dam.

Various means, depending on ground contour, could be used to effect seepage from these dams. The seepage features would be simple but important to the operation of the system of water conservation and control, and are as follows:

1. Plateau basins which extend to the rim of a valley have gulleys through which they drain. Dam breasts, built across the drainage side of the basins at the head of the gulleys, could be built. A series of holes could be drilled back of the breast line to a depth of approximately 80 feet paralleling the slope of the valley sides beyond the dam breast. Charges of nitroglycerine put down the holes and exploded to loosen the earth strata would effect seepage. Some water would naturally seep through the earth, as our alternate seepage holes could also be drilled into the earth on the dam-breast line and the holes connected with pipe extending from the drilled holes to a suitable point within the dam to allow water to enter the pipes and then into the drilled holes. The breast of the dam would be constructed after seepage is prepared. Erosion of the dam breasts would be reduced by the above means of seepage. Earth-boring tools capable of boring 800 feet of 6-inch-diameter holes in 8 hours in most Pennsylvania earth are available.

2. Where the contour of the earth below the breast of a dam would be too flat to allow seepage by deep-drilled holes, seepage lines similar to the principle of septic-tank dissipation could be used. A syphon system could also be employed.

Any of the dams could be drained by using cast-iron pipe drains through the breast. The size and quantity of the pipes would be governed by the size of the dam so that water collected in the dams would drain out slowly. None of these drain pipes should be placed at the lowest point in the dam so that some water should always remain within the dam. Masonry should be placed around the pipe on the inside face of the dam breast. Flat stones or concrete splash surfaces should be prepared under the discharge end of the drain pipes.

Water held in these basins, with proper seepage, would produce springs and maintain a normal flow of water in our streams year by year.

The drainage area surrounding a basin could possibly be 5 to 10 times greater than the maximum dam area so that a dam area of 100 acres could serve a drainage area of possibly 500 to 1,000 acres. The water held here is going to do more towards flood control than our present methods, as it is my opinion that the water coming out of gulleys which drain mountain-top basins is what finally puts streams over their banks.

If the basins are dammed, the hillsides are left to drain into the streams. Naturally, the water running off a hillside is uniform in flow, but from a basin it builds up into a stream and from what I have seen in hundreds of gulleys off the mountains in Bennetts Valley, First Fork of Sinnemahoning Creek, the West Branch of Sinnemahoning Creek, and other large streams, after a hard and prolonged rain it amazes me that we don't have greater floods. Remember, we are helping the runoff.

The water held on the tops of the mountains should produce more evaporation which would result in rainfall somewhere and as a result, there would be cleaner air, which the Creator meant that we should have. We pollute our air, and this could help clean it. As I mentioned, the basin dams would supply a normal flow of water, which would dilute the pollution from industrial waste and sewage and should mean better health. Towns, whose reservoirs go low in the summer, would be able to count on a good water supply. Industry should be pleased to have more and better water to work with.

I know of a town whose sewerage is discharged into the stream running through the town, but downstream from the town itself the neighboring town, 4 miles downstream, has an almost unbearable odor condition through the hot, dry summer months when the stream is low.

Imagine having to keep your home closed tight for weeks when the air moves from the wrong direction. A normal flow of water would improve this situation and may correct it. This condition exists in many areas of the State.

Evergreens on the hillsides below the basin dams would grow to such an extent that in 40 years the cost of the dam above could be paid for in good pine timber. Property values along good streams would multiply to such an extent that the taxes from real estate would bear a great share of the cost of the dam construction.

It may be possible to create a State or Federal authority to launch a water conservation and timber plan that would pay for itself.

The State of Maine took a venturesome step years ago in barring stream pollution. They lost some industry but gained much more in tourist and vacation trade. Pennsylvania could do this job and gain industrially and develop a tourist and vacation trade second only to Ontario, Canada, whose largest industry is vacationing. I have just about given up fishing in Pennsylvania and go to Ontario every year along with 5 or 6 other men, where we usually leave about $1,000 every year. There are many, many men and their families from Pennsylvania doing this every year because of the water. I have been doing this for the past 13 years. Pennsylvania could develop something better to offer in time but it would take some action.

I can picture people buying land, building tourist accommodations and serving tourists by the thousands but we need water. My selfish scheme for lots of water for fish would be satisfied and we could truly advertise our State as a great vacation land and build up a tourist trade to equal any State in the Nation, but we do need the water, and we can have it.

Coal and minerals naturally lay under some of these basin areas but the State owns enough land to work with. I have never seen good timber growing in any of the basin areas, and if a question is raised about mosquitos, they can be controlled. Fill these basin dams with lily pads and we can stock moose 50 years from now.

I feel that the same amount of money that is spent for flood control dams could accomplish better results floodwise and give us a great return for our money from a vacation and timber angle, as well as better health from sewerage dissipation. The whole Delaware watershed could be treated in the above manner for the benefit of the Delaware Valley and Philadelphia and the New York reservoir's watersheds likewise.

It would take time but would be an investment to hand down to our future generations.

Timely Observations

EXTENSION OF REMARKS

OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. HULL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an article by Arthur V. Burrowes, editor of the St. Joseph News-Press, St. Joseph, Mo. The News-Press is an outstanding newspaper in the Midwest, and Mr. Burrowes, the author of this article, is one of the prominent civic leaders in Missouri. Not only is he active in community affairs, but he is a prominent Catholic layman and an outstanding Christian gentleman, who puts into daily practice his great faith in Christianity. I sincerely believe that this article, published on Good Friday, is appropriate to the title of the column in which it appears, Timely Observations:

When Jesus therefore had received the vinegar He said, "It is finished," and He bowed His head and gave up the ghost. It is consummated. The work for which Jesus Christ came to this earth was accomplished. And today the Christian world in reverence commemorates once more the story of Calvary. This is Good Friday, climax of the life of Christ, Who suffered under Pontius Pilate, was crucified, died, and was buried. This is Good Friday everywhere from the tomb itself in the Holy Land to the tiniest church and kirk in northwest Missouri.

The story of that Jesus is 2,000 years old. But forever new. The beloved disciple, last of the apostles was John. He was the only one of the true 12, not to die a martyr. He opens his gospel with magnetic words. Those words have held the mind and the heart of learned theologians and poor peasants—of the mighty and the little. "In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by Him and without Him was nothing that was made."

This is Good Friday of 1955 of Holy Week when Britain's greatest Prime Minister resigned. That Prime Minister once said he did not become the king's first minister to liquidate the empire. People of Britain and all continental Europe, of Asia where the great religions were born, and of the New World, turn from world affairs this day. They turn to contemplate the climax to the most tragic trial in all world history. Christianity is older than Britain or her premiers. And that same Christianity shall outlive that magnificent empire on which it once was said the sun never sets.

A television speaker recently told of that trial of Jesus. Prefacing his recital, he named other famous trials, Socrates, in Greece; Alfred Dreyfus, the Frenchman; Robert Emmet, the Irishman; and Aaron Burr, the American. All dwindle into insignificance to the trial of the Son of God. That Word born as all Christians truly believe, of the Virgin Mary, through the omnipotence of Almighty God.

And today in the Holy City, old Jerusalem, pilgrims from north, east, south, and west, visit those 14 stations, the Way of the Cross. Each reverently prays at the sacred spots: Jesus is condemned to death, Jesus takes up His cross, Jesus falls the first time, Jesus meets His blessed mother, Veronica wipes the face of Jesus, Simon of Cyrene helps Jesus carry His cross, Jesus falls the second time, Jesus meets the women of Jerusalem, Jesus falls the third time, Jesus is stripped of His clothes, Jesus is nailed to the cross, Jesus dies on the cross, Jesus is taken down from the cross, Jesus is laid in the tomb. Via Dolorosa that leads to Heaven's gates.

From the sixth hour to the ninth hour, that is from noon to the hour of three, Jesus was hanging on the cross. He spoke not too much. But His Father in Heaven permitted His Divine Son to retain consciousness. So that all the suffering necessary for the redemption of mankind would be visited on Him. A God had been affronted. Only a God could save mankind. It is the old, old story that has sent holy men to seminaries and theological schools, some Presbyterian, some Catholic. Yes, sending forth men of all creeds to God's ministry to keep men on

the right path. To a blessed eternity with Him.

Few were the words on the cross. "I thirst" said He. He committed His mother to John the beloved, and charged John to prize his charge. He gave us on the cross our knowledge of one great act of true penitence. And its reward. That was when He promised the thief: "This day thou shalt be with Me in Paradise."

That the terrible sense of His sacrifice might be given Him, God let that Son utter those words that have mystified theologians for centuries. "My God, My God, why hast Thou forsaken Me?" What sermons could be preached on those few words. Then "Father, into Thy hands I commend My Spirit." As He died, the skies darkened, the earth quaked, graves mysteriously opened, and the dead appeared to many. Even the Roman soldier there as guard, cried aloud, "Indeed this was the Son of God."

From that blackest Friday of all time to this very day men and women have not had to see the miracle the Roman soldier saw. There have been millions who without seeing have believed. And the life and death of Jesus today is the greatest single event in time's long annals. From the very antiquity of ages, buried eons before man could leave a record, to this day of modern science. The story is in the Bible. And that Bible remains the world's greatest book. As it must forever.

The McCarran Act

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. CHELF. Mr. Speaker, I sincerely believe that the following article by George Sokolsky on April 15, 1955, in the Washington Post is a good one. It is reasonable and fair:

THESE DAYS
(By George Sokolsky)
THE M'CARRAN ACT

The Corsi affair again brings to public attention the McCarran-Walter Immigration Act and the Refugee Relief Act which have to do with immigration into this country. This is an emotional issue over which there is bound to be controversy because involved is the question of racial, national, and religious equality before the law. No group is willing to agree to a formula which makes it less acceptable than any other group.

From a strictly American standpoint, the basic question is whether there is to be an unlimited or a limited immigration. No one proposes a system that stops all immigration. If it is to be a limited immigration, no one has ever proposed a formula for limitation which has had universal approval.

The McCarran-Walter Act undoubtedly requires some revision to remove whatever inequities experience with it has disclosed. Senator Pat McCarran once told me that he saw some points that could be improved upon. That is a function of Congress.

Opposition or support of these laws generally does not answer the fundamental question as to whether or not the American people want to increase the population of this country by taking in the surplus populations of other countries. Premier Mario Scelba of Italy made the interesting observation that the difference between the United States and Soviet Russia is that everybody wants to come to the United States and nobody wants to go to Russia.

But the United States cannot take in everybody. There was a long period in American history when this country needed population, when industrial companies sent agents to European countries to recruit immigrants. We were then short of labor.

That day is gone. The United States has a population of over 160 million people and by the present rate of increase, it will not be many decades before we shall have a population of 200 million.

Along with the increase of population, we have developed a remarkable method of production by labor-saving devices, to a degree that automatic or semiautomatic methods prevail. While in the past, it was held that machines made jobs, we may be approaching a period when new types of production will not make new jobs.

When that point is reached, the United States will have a surplus population; that is, more men and women than can be profitably employed. Whereas during the depression years that situation was regarded as abnormal and was met by putting part of our population on the dole; what are we to do about it should, let us say, between 3 million and 5 million employees be permanently unemployed and therefore surplus population?

This is the essential problem in immigration. It is not so much who gets in and who stays out, as how many are to come in and what kind of people.

Those who push these arguments aside can only answer that large numbers of people who are unhappy where they are want to come here. They would be more unhappy here, with our high cost of living, if they were unemployed because the United States suffered from a surplus population.

The questions then are: How many people can the United States employ; how many can we afford to admit as immigrants during the next decade; what is a better formula than the present quota system to determine who comes in and who has to stay out? These are not questions for a curbstone or prejudiced opinion.

Our National Security

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. VAN ZANDT. Mr. Speaker, the following address titled "Our National Security" was delivered by Adm. Arthur Radford, United States Navy, Chairman, Joint Chiefs of Staffs, before the annual meeting of the Macon (Ga.) Chamber of Commerce, April 6, 1955:

Tonight, I should like to discuss with you one matter that is most important to all of us: The security of our country. I hope that you will join with me in considering some of the important problems of security—and some of our hopes for the future.

First of all, why do we want security? The answer is: We want to live in freedom and truth. Such an answer goes back to the ideas brought to the eastern seaboard by our adventurous forefathers—and to the principles upon which our country was founded.

Later, these ideas were set forth for all to know, in our Declaration of Independence. The purpose of the Declaration, said Thomas Jefferson, was "not to find out new principles * * * but to place before mankind the commonsense of the subject."

Then, once the shooting phase of the American Revolution ended, General Washington and the Congress set about building the Nation and providing for its future safety. There seemed to be two fundamental ambitions in their hearts and minds:

First, they wanted to perpetuate freedom and preserve a large degree of individual liberty.

Second, they wanted to build a strong nation, able to withstand aggression from outside and factionalism from inside.

This Nation lives today as a testimonial to the foresight and wisdom of those early American patriots who realize that freedom and strength would have to march hand in hand if our Nation were to long endure.

Today, we have strength—great national strength. The President outlined some strengths in his state of the Union message at the beginning of the year—natural resources, a growing economy, good health, and national defense.

The President also pointed out in this same report to the Congress, that foremost among the broad purposes of government is our support of freedom, justice, and peace.

Yes; our overall national purpose is to provide for the welfare and security of the United States through peace—not war. This is a national decision, based on our entire national experience, and is worthy of our best national efforts.

Everything we are doing—our treaties with other nations, our current defense program, our assistance to other countries—is the result of our determination to work for peace and security.

But it is harder and more dangerous than we would like it to be because of the apparent refusal by two large nations to carry out the spirit and principles which must underwrite a real and lasting peace.

One is the Soviet Union. It is abundantly clear that Moscow schemes to create one Communist world with all that it means—one giant Red world with slavery and subordination for all.

The other is Red China. Red China wants one completely Red Asia, one which includes Formosa and the Pescadores. They have so stated, not once, but many times.

And the danger is made more acute because of the alliance these two countries have with one another.

This danger of which we speak is not theoretical. It occupies space and derives its power from the resources of that space.

From the military viewpoint, the spectacular aspect of Communist strength is its combination of a vast land area, a huge supply of people, and very large armed forces—including an increasing strength in air forces and nuclear weapons. Their massive military machine is an important part of their continuing effort to dominate and intimidate free nations on their periphery.

This in no way, however, describes the full scope of the Communist threat. Subversion, infiltration, persuasion, indoctrination, and nonviolent techniques of control also are important tools of the Kremlin. These more silent weapons can be just as lethal as cannon.

The result is that free nations are faced with a very real threat. The threat is many-sided. It is clearly a global problem. And because of the provocative attitude of the Chinese Communists, it seems somewhat more threatening than in previous years.

All in all, their evil forces have applied great internal and external pressures against all things we hold right. In 1949, the Chinese Communists conquered China. In 1950, they openly invaded North Korea with large forces; and in 1951, they seized Tibet. For years, they have supported guerrilla operations and sabotage in Indochina and Malaya, and have sworn to seize Formosa. And they may be expected to try to infiltrate other countries in southeast Asia.

It is useful, I think, to remind ourselves that the major purpose of Communist strategy appears to be to break apart ties with allies, isolate free nations from each other, and prevent us from moving ahead to build

collective strength on which our safety depends.

Communists like to pick off free nations, one by one. They do that to build up the idea that the march of communism is irresistible. They think if they can spread fright and hopelessness, then we will become rattled, and some free nations will move in one direction while we move in another.

As it has happened before, so can it happen again. The creeping militant expansion of communism backed by guns and bombs and several millions of troops—unrestrained by a solemn agreement, or moral restraint—is the primary long-term challenge to every one of us.

Now, in such a world, there is much that we in the United States can do to meet the challenge. The conduct of foreign affairs is of course a civilian responsibility, and the role of the military is to give advice on defense matters. However, our foreign policy and our military policy have certain common basic undertakings.

First, and this is our foremost line of action—we can protect and maintain our freedom, our form of government, and our way of life against any challenge. On this point, we recognize no limitation of expenditures or exertion.

Why do I put a strong defense of freedom first in priority? Because in my judgment, it is fundamental to our way of life. All other lines of action flow from it. Our natural resources, our prosperous economy, and our way of life could go for naught if we did not have the burning, fighting faith to protect them from danger.

Francis Bacon said this rather well in his essay on the Greatness of Kingdoms and Estates:

"Walled towns, stored arsenals and armories, Goodly Rases of Horses, Charriots of Warre, Elephants. * * * Artillery and the Like. All this is but a Sheep in Lion's skin except the Breed and Disposition of the people be stout."

I wish it were possible for me to tell you whether or not another shooting war will be forced upon us; and if one is, exactly where, when, how, and in what form it would take place. If I knew—my own job would be less difficult.

Obviously, our country does not want war, as our enormous patience clearly attests. We will not provoke a war against anyone. And we will not wage a so-called preventive war—even against an enemy. But neither will we surrender the principles which made our country great.

Unfortunately, another aggression could be initiated secretly almost any place, anytime—by a handful of men whose only allegiance is to themselves, and who have no Christian standards to govern their actions.

This being the case, then what should be the pattern for our Armed Forces?

Well—we do not pretend to have all the answers, but it certainly looks as if we must have Armed Forces which are ready for tremendous counteroffensive blows in event of a global war; and also ready for lesser military actions when and as directed by our Government.

Accordingly, based on these requirements, and the current world situation, the President decided that our defense program should be geared to the provision of a flexible but sturdy military posture—one which could be maintained over an extended period of time—and one which would take advantage of technological developments.

If we should be confronted by hostile aggression, naturally it would not make sense to let the enemy pick only those battle conditions and weapons which are best suited to him.

Consequently, in defense planning, we consider it important to have a capacity to retaliate—to counter an aggression—at the proper place by whatever military means are best suited to the situation at the time. One of the best safeguards for peace is the possession of such power that a would-be aggressor knows his aggression will be countered, and that he will receive far more devastation than he gives.

This is not a new defense policy this year. Nor is it a policy that commits us to atomic retaliation against all forms of aggression. It is not a "solve-all" nor is it a "do-everything" answer to the Communist menace. Nor has it ever been.

Sometimes one hears the question: Are we concentrating unduly on a certain weapon or type of warfare?

Here, I might take just a moment to emphasize, as I did in an address a year ago this month, that: Our military planning does not subscribe to the thinking that we can rely exclusively on one weapon, or one service, or that we can anticipate just one kind of war.

Actually, undue reliance on one weapon or preparation for only one kind of warfare simply invites an enemy to resort to some other. No one form of military action could be considered sufficient to meet all our modern security needs.

As time passes, changes do take place in our Armed Forces. We would not prepare to fight a next war with exactly the same weapons and methods as the last. Nor would we prepare to fight a next war with "wonder" weapons alone. We cannot base our defense on pushing a button, and then dreaming that the menace has vanished.

Instead, our program for defense is based on a realistic and continuous assessment of the world situation. It is based on the maintenance of forces which could be used in a variety of situations whenever and wherever required. And should there be some fundamental change in the situation, for better or for worse, then military requirements for security probably would change too.

It is my personal conviction that our present defense program—the one submitted by the President to the Congress—provides the right combination of forces and facilities. The program maintains a flexible combination of land, sea, and air forces with a wide variety of weapons and capabilities, including nuclear.

Today, we have strategic air forces and carrier task forces which are unmatched by any other nation, and we are going to keep them strong. Our country is particularly well suited for providing these two vital elements of the free world's capacity to counter an aggression.

We also have modern jet tactical air forces which can carry either high explosives or atomic bombs, depending upon what the target requires. We have naval forces which can clear the sea lanes, and Army and Marine Corps forces which can do their part toward the accomplishment of military decisions when and where required. We have armored, airborne, amphibious, and other modern forces, all of which are important to our national defense.

In fact, the United States forces we plan to maintain are the most powerful forces, individually by service and collectively as a team, that our Nation has ever undertaken to maintain during a period when we were not actually engaged in a shooting war. The fact that we have these ready forces, and that we have them with flexible nuclear capacities, should make it possible for free peoples everywhere to sleep a little safer at night.

At the same time, accelerated emphasis is being given to continental defense measures, to improving the readiness of our Reserve forces, and to continuing close cooperation with our friends to strengthen collective allied defense arrangements overseas.

Speaking of allied strength, it would be the greatest folly for us to drift back into weakness and disunity. Now is the time to pull together. Our great American poet, Mr. Longfellow, once wrote:

> "All your strength is in your union
> All your danger is in discord."

These words are true today; for when bound together in a pact, individual nations gain strength from close ties.

Gentlemen, just as in many aspects of business, we never seem to reach a point where we can feel sure we have all the answers. We do know, however, that the basic ideas of freedom are right and they are definitely worth defending.

The crux of the problem for free nations is that we are confronted with a large Communist menace whose aggressions should not be rewarded, ignored, or appeased. Communism would control all of us if it could.

Therefore, collectively we must have an inner strength and unity, and with this must go unselfish solidarity. We must never be afraid to fight intelligently and purposefully for life and honor against the vicious, ruthless enemies of freedom.

When all is said and done, one unassailable fact remains: Now, as never before, real preparedness is vital.

Truman and Rayburn

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. YOUNGER. Mr. Speaker, the attached editorial from the Washington Post and Times Herald of April 18, 1955, is so diametrically opposed to its usual treatment of anything concerning former President Harry Truman that I thought it should be made a part of the RECORD:

TRUMAN AND RAYBURN

In paying his tribute to Speaker RAYBURN on Saturday night, former President Truman said: "Your place in history is secure, not only because you have served longest as Speaker of the House of Representatives, but because you never yield to partisanship on the basic issues affecting the welfare of the Nation." When Mr. RAYBURN arose to speak, he underlined the Truman compliment by the tone of his remarks. "We Democrats," he said, "have conducted ourselves with the highest repsonsibility toward the President in his direction of the country's international relations." Then speaking pointedly about the gravity of the times, he continued:

"I would, therefore, beseech Democrats and Republicans alike to conduct themselves with a becoming restraint in all those things that pertain to war and peace, since they pertain also to the life and death of all men. Let us guide our debates with wisdom and inform our hearts with righteousness, lest we fall into shame and so into oblivion."

Before Mr. RAYBURN had had a chance to demonstrate his statesmanship anew, however, Mr. Truman lashed out at the Eisenhower administration and at the press in the unrestrained manner that became so familiar when he was in the White House. He accused his successor of playing political tricks with the grave and serious issues of both foreign and domestic policies. He went so far as to accuse the press of distorting the facts so that no Democratic adminis-

tration could do right and no Republican administration could do wrong and said there is no sense in having the press free under the Constitution and not having it free in fact.

Allowance must be made, of course, for the fact that the former President was speaking at a great Democratic rally. But this does not excuse his reckless and unwarranted attack on the press, which, in many instances, has been more alert in pointing out mistakes of the administration than the Democratic Party has been. Nor does it explain why a former President, who might wield a powerful influence in the role of a sage elder statesman, prefers to rant and throw bricks in the most delicate area of national policymaking, even when the campaigns are more than a year away. His attitude stands out in sharp contrast to that of Speaker Rayburn, Senator George, and Adlai Stevenson. Unfortunately, it cannot be said of him that he has never yielded to partisanship on the basic issues affecting the welfare of the Nation.

Hookup for Industrial Logistics

EXTENSION OF REMARKS
OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, with permission to extend my remarks in the RECORD, I wish to include an article on industrial mobilization.

This subject is very pertinent at this time, and I am sure it will be of interest to many people.

This article is an extract from the January-February issue of Signal, by Mr. J. Lewis Powell:

THE HOOKUP FOR INDUSTRIAL LOGISTICS

(By Mr. J. Lewis Powell)

Are you a manufacturer, technician, or member of the Armed Forces? In event of war, what you do, and what you do it with, depends largely on lists of items known as the preferential planning list or departmental lists. Attention was focused recently on the preferential planning list when an article appeared in the New York Times of December 10. Business papers and trade journals have regularly talked about the list, yet few people are familiar with its use.

The formal preferential planning list of the Department of Defense and the informal departmental lists of the Army, Navy, and Air Force spell out the military items on which industrial mobilization planning is being concentrated.

Collectively these lists are all working parts of the revised production allocation program of the Department of Defense. (This program was drastically revised on January 26, 1954, by Department of Defense Directive 4005.6. This directive, which corrected the errors of Korean planning, is just now beginning to be felt by industry.

The production allocation program, as revised, is the principal plan by which the Army, Navy, and Air Force plan our industrial backup in the event of war. The logistics of modern war demands that military might and industrial might be synchronized for defense.

For obvious security reasons the preferential planning list and the departmental lists are classified, and detailed information about them is not readily available. However, in broad terms every present or potential manufacturer of military items should know how the lists affect him. Similarly, commanding officers should know how the lists will affect their supply lines in an emergency.

Just as the strongest man is not necessarily the best boxer, the nation with the greatest industrial strength is not necessarily the nation best prepared to defend itself. The boxer must have the skill and coordination to suddenly translate his strength into punches. The nation must have the mobilization plan that will quickly translate its industrial might into weapons for its armed forces.

Never again will there be time to bungle it through, to have too little, and be too late, yet win; the days, when we could mobilize, using trucks as make-believe tanks, and brooms marked rifles, have gone with the wind of the H-bomb.

Modern weapons eliminate time and space as the outer bulwarks of our defense. We may not have time to mobilize while the battle line is held at some distant outpost. These same weapons which destroyed our get ready time have multiplied tenfold our dependence on communications and electronics. If war comes, we must be prepared to produce an avalanche of modern equipment.

War, like fire, is a disaster. Just as we remain prepared to fight the fire which we hope will never happen, so we must be prepared to fight the war which we hope will never happen.

In case of fire your town immediately uses its domestic water supply as a weapon against fire. In the same manner an industrial nation must be able to quickly change mass production lines, into war production lines.

Just as you can't organize a volunteer fire department after the siren sounds, it is too late to organize war production after the shooting starts.

For years on shipboard in the Navy every sailor has had an assigned battle station. In an emergency he knows where he is to go and what he is to do. The same kind of commonsense now dictates that potential defense production plants should also have battle stations. These plants should always know what they are supposed to do in event of war. They need to know what they are to make, whom they are to make it for, how much and how fast.

COMBINED KNOW-HOW

Under the production-allocation program, as revised, each day more of industry learns its probable production assignment in event of war. Daily, key personnel of the Army, Navy, and Air Force meet with industrial executives as teammates. Working together they combine production know-how and military logistics to develop tentative orders for production if war threatens. These tentative mobilization production schedules represent stockpiled know-how, ready for defense. In an emergency these preplanned schedules can trigger our production lines in to all-out production immediately.

Here is how it's done. Semiannually the Department of Defense (Army, Navy, and Air Force) publishes for its internal use a book in three volumes known as the Alphabetical Register of Planned Wartime Materiel Suppliers. These volumes are the who's who of industrial mobilization, currently they list approximately 34,000 manufacturing plants. The Army, Navy, and Air Force select facilities with whom production schedules will be developed. This selection is based on the nature and quantity of the plant's potential output, plus the capability and know-how of its management.

PROGRAM IN ACTION

When a firm is selected with whom planning is not already in progress, the following steps are taken. First, the military agency wishing to plan requests the Assistant Secretary of Defense (Supply and Ligistics) to register the firm. This request results in the firm's being listed in the Alphabetical Register and in the assignment of an Armed Service Procurement planning officer. These men are commony called ASPPO's by both military and industrial personnel. Actually, an ASPPO is the commanding officer of a military office having industrial mobilization planning responsibility. As ASPPO, however, he represents all of the Armed Forces (Army, Navy, or Air Force) regardless of the service to which he personally belongs. When acting as an ASPPO he is, in effect, a field representative of the Assistant Secretary of Defense (Supply and Logistics) office.

His function is to act as liaison between industrial management of the plants assigned to him and all of the Armed Forces. In this way all of the bureaus of the Navy, all the technical services of the Army and all of the offices of the Air Force have equal access to industrial management. But this access is on a coordinated basis which prevents management from being burdened by repetitious requests for similar information.

As soon as an ASPPO is appointed, he or his principal assistant for planning arrange a meeting with industrial management to intiate planning. At this meeting industrial management is asked to designate one of its members as industrial preparedness representative. This member of management serves as an opposite number to the ASPPO. He represents the firm's management in the same way that the ASPPO represents all of the armed services. Working together the ASPPO and the preparedness representative assure that planning is sound and realistic both from a logistical and a production standpoint.

One of the first things they do is to prepare a survey of the plant. They list its machine tools and production equipment, describe its location and facilities, and summarize its potential capabilities as well as its present operations. The fact that this plant is now listed in the Alphabetical Register of Planned Wartime Suppliers is a signal to all military offices of the Army, Navy, and Air Force that a plant survey is, or will soon be available for their use, and that this firm wishes to plan.

Usually the first military agency to respond to the plant survey is the service which originally requested registration of the plant. This service and all other interested military agencies develop and submit for plant management consideration proposed tentative mobilization production schedules for the manufacture of specific military items in event of war. These schedules are submitted through the ASPPO to plant management.

When the proposed schedule has been worked into practical form by the plant representative and the ASPPO it is returned to the military agency that originated it for final consideration. If the revised schedule is then satisfactory to both the military and plant management, it is made out formally as a tentative mobilization production schedule.

As evidence of good faith this formal document is signed both by the representatives of management and industry. In event of a war emergency production of this item could start. There would be no need for the manufacturer to hunt a military customer or for the military agency to search for a producer. It is important that this production schedule has resulted from across-the-table planning between the consumer and the manufacturer. They were both talking about definite scheduled quantities of a specific military item for which plans and specifications were available.

ASPPO's are usually appointed from the military office nearest to the plant which has technical familiarity with the item being planned. Thus while a textile plant might

have an ASPPO from the Quartermaster Corps of the Army, a shipyard in the same city might have an ASPPO form the Navy, and a producer of communications equipment would probably have an ASPPO from the Signal Corps. The important consideration is that the ASPPO be familiar with the industry and its nomenclature. Any firm in the program may request any branch of the service that is planning with it to act as its ASPPO.

While a company with only one plant needs only one ASPPO, multiplant corporations sometimes need more than one ASPPO. The Department of Defense will appoint as many ASPPO's as necessary to service a corporation. It will parallel the operation pattern of the management of the company, appointing ASPPO's on the basis of individual plants, manufacturing divisions or one ASPPO for the entire corporation if that is appropriate.

Three points to remember are:

1. ASPPO's should be appointed so as to parallel the operating management pattern of the corporate structure.

2. The ASPPO represents all of the armed services and is their liaison for planning with your organization.

3. After a company is registered, ASPPO responsibility may be transferred, at the firm's request, to any branch of the military service that is planning with the firm.

REGULATING CRITERIA

Production allocation planning is primarily concerned with manufactured or assembled items which are made to the military specifications. Under revisions now going into effect, mobilization planning under the production allocation program, is now being limited to carefully selected items which meet the following criteria:

1. No production allocation planning will be done for items which "are solely for the purpose of comfort, convenience, or morale."

2. Except as modified by 3 and 4 below, no production allocation planning will be done for all other common shelf-type items which do not present difficult production problems or which can be procured on the open market without undue delay.

3. Production allocation planning procedures will be limited to items which in war are necessary for:

(a) Survival and retaliation.
(b) Maintenance of health.
(c) Combat efficiency.

4. In addition, items must meet one or more of the following criteria:

(a) Require either a long lead time or involve a long manufacturing cycle.
(b) Are not currently in production or will be required in quantities for in excess of peacetime production.
(c) Require the conversion of any industry or of a number of plants within an industry.
(d) Involve materials or techniques essentially different from those in current use.
(e) Involve items on which industry does not have production experience.

RECENT DIRECTIVE

Items meeting this criteria are divided into two groups. Thousands of items which are approved at the individual level of the Army, or Navy, or Air Force are placed only on the respective list of the military service which approved the item. These lists are known informally as "departmental lists." Planning for items on a departmental list is optional with each of the military services.

On the other hand a highly selected group of approximately 1,000 items considered particularly critical and important from a planning standpoint are placed on a formal list known as "the preferential planning list." Items on this list are the aristocrats of planning. They take precedence and priority over all other planning. A manufacturer scheduled to produce items on the preferential planning list is a member of the first team.

Planned producers are regularly invited to bid on peacetime procurement, and specific considerations are applicable to aligning current purchasing practice with schedule mobilization production. (See Defense Mobilization Order VII–7 as amended, and Department of Defense Directive 3005.3, dated December 7, 1954, which applies to items on the preferential planning list.)

Mobilization planning eliminates unnecessary wartime competition for production capacity by the Army, Navy, and Air Force. As a result of this planning, military stockpiles of munitions are backed up by alerted production lines ready for conversion to war production. In the event of war this means continuity of logistical support to the military and continuity of operation to management.

What should a manufacturer do to find out where he fits in the scheme of industrial readiness? If he is making or has the capacity to make important military items in event of war, he should follow this suggested program.

First, find out if his plant is listed in the Alphabetical Register of Planned Wartime Materiel Suppliers. He does this by going to the nearest Army, Navy, or Air Force procurement office. These offices are located in principal cities throughout the country. There he identifies himself and his official status with his company, after which the industrial mobilization staff of that procurement office will advise him if his firm is listed in the register. If it is listed, they will tell him who has the ASPPO responsibility for his firm. (Although the alphabetical register is a classified document, properly identified representatives of management may be shown the entries pertaining to their own firm.)

REVIEW NECESSARY

Once he knows that his firm is listed the manufacturer should contact his assigned ASPPO for further information. He should review the listing with the ASPPO in order to determine if it is accurate. He should reconcile his firm's records with those of the ASPPO to see if both their files are complete and currently accurate.

On the other hand if a firm finds that it is not listed in the register, it should reevaluate its war production potential to determine if it could produce military items needed by the Army, Navy, and Air Force in a war emergency.

The firm that can produce military items in significant quantity should bring this potential to the attention of industrial mobilization planning officers. Here is how it's done. The firm should obtain from the Superintendent of Documents, Government Printing Office, Washington, D. C., 2 very helpful pamphlets for 25 cents each. The pamphlets are known as How To Sell to the Department of Defense, and Purchasing Items and Purchasing Locations of the Department of Defense. (Remember, Department of Defense means Army, Navy and Air Force.) In other words, these books tell you which military office buys what items. The office which buys is the office which plans. By using these booklets a manufacturer can tell whom to contact regarding either current business, or future business in event of war.

Once the manufacturer knows whom to contact, it is up to him to sell the desirability of planning with his firm. The manufacturer should bring to the attention of the planning officers the advantages of his facilities, he should state succinctly what his plant can do, he should outline its capacity, the kinds of tooling and equipment it has, the kinds of work it has done, and demonstrate why he thinks planning with his company would strengthen industrial preparedness. If the manufacturer successfully demonstrates the wartime value of his plant with respect to specific items, the planning officer can then have the firm entered in the alphabetical register and an ASPPO appointed, as described earlier in this article.

Production allocation planning should not be confused with the industry studies being made under the sponsorship of the Business Defense Services Administration. Those studies are primarily concerned with component production capacity. They deal with overall ability of a total industry to meet the combined essential military and civilian wartime demand, for categories of common components. Production allocation planning is consumer-producer planning with a direct across-the-table relationship between the potential buyer and the potential seller. It is concerned with the ability of a specific individual manufacturer to meet an agreed on mobilization production schedule for a specific item. This item may be an end-item, subassembly or peculiar component for a particular military purchaser.

Industry studies made by the Business Defense Services Administration and specific mobilization production schedules developed under the production allocation program are complementary to each other. Each deals with an equal, but different, aspect of industrial readiness. Both are part of the pattern of preparedness.

Just as our colonial ancestors lived with the constant threat of surprise attack by marauding Indians, we of this era have to face the threat of surprise attack by marauding aggressors bent on world conquest. Just as the village blacksmith turned from shoeing horses to forging weapons, the modern industrial plant must be ready to turn from making peacetime products to wartime necessities.

Commonsense requires that the technology of the engineer, and the production know-how of the American industrialist must be among the weapons stored in the arsenal of democracy.

A Leader Who Leads

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News and Observer, Raleigh, N. C., of April 16, 1955:

A LEADER WHO LEADS

The Democratic Party will tonight pay well-deserved honor to Speaker SAM RAYBURN.

The Speaker, however, will not merely listen to the nice things that will be said about him. And he will not content himself with responding to compliments with pleasantries.

Speaker RAYBURN has a definite and affirmative philosophy of government. He is expected to expound that philosophy and relate it to the situation in which this country now finds itself in his address. Those who attend the dinner will be well rewarded, as will those who listen on their radios.

Mr. RAYBURN has been in Congress for 42 years and has served the last 19 years as either Speaker or floor leader. During all that time he has been a leader who led, and his speech tonight will be that of a leader worthy of a post of leadership.

Speech by Hon. George S. Long, Member of Congress, Eighth District of Louisiana, Over Radio Station KSYL, Alexandria, La., April 4, 1955

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Friends, this is your Congressman, GEORGE S. LONG, speaking. I would like to thank this station for making it possible for me to bring you this message at this time.

I have been your Congressman for almost 3 years. I feel that I can say with pardonable pride that I have done a good job. I have one of the best voting records of any Member of Congress of the United States House of Representatives.

The record of my first session was 99 percent. During the second session I had to make a campaign and that voting record was not so good, but it was better than 85 percent. This time I expect to make it 100 percent.

May I say that I am on the job all of the time; that you have no trouble reaching me at any time, either at my office or at home. I have a telephone at home and can be reached there during the night if anyone cares to call me. I earnestly invite each and every one of you, if and when you come to Washington, to call me, come by and give me the benefit of your advice. If it is at night, do not hesitate to call me at home. I am always glad to hear from anyone from my district.

Many years ago the Congress wisely provided its Members with the franking privilege. One important reason for this was to afford Members of Congress a measure of protection against those who would mislead the public regarding their activities in Congress. Another reason was to insure that the public had correct information on activities and issues of interest and of importance to the people.

By distorting statements, twisting meanings, omitting pertinent parts, etc., it is possible to change the meaning of a comment or statement into something it was not intended to be. Some newspapers, either through carelessness or through deliberate intent, all too often present misleading and distorted information to the public. After all, it is well to remember that the voice of a newspaper is actually the voice of a single individual and not the infallible consensus of an informed group. The issues of a newspaper are just as much subject to personal and individual opinion, to bias, to display of that individual's likes and dislikes as the views of any individual. The main difference is that they have the advantage of using their newspaper to serve as their personal sounding board—to circulate their personal views.

As pointed out above, the Congress wisely afforded the public a measure of protection against those who misrepresent and distort the views and policies of Members of Congress, which are issued for the information and enlightenment of their constituents. No apologies are necessary in connection with the franking privilege for by its use can we more completely insure real freedom of speech and a well informed public. By use of a Member's frank his position on matters affecting the welfare and best interests of his constituents can be presented without distortion and misrepresentation.

The Alexandria evening newspaper complained of my sending out so many speeches under my franking privilege. Had I not mailed out these speeches to you, you would not have had the truth because this newspaper so distorted what I had to say that you could hardly recognize it.

I am only sorry that I have not been able to send you more speeches and official information about the doings of Congress, but my secretarial staff only permits me to send a limited number each year. But you may rest assured that I promised you when I went to Congress that you would hear from me and when you receive one of my speeches or information from my office, it means that I am carrying out the promise I made—that you would hear from me.

This same newspaper carried an article recently branding as socialistic prospective government participation in a hoped-for project which would be of immeasurable benefit to many of our citizens. Is the effort to secure a fair share of Government benefits for our taxpayers to be branded socialistic? Would it brand as socialistic the policy of the Government to help the aged and the needy through our fine and humanitarian welfare program? Would it brand as socialistic the participation of the Government in our highway program, our agricultural conservation program, our flood control and drainage program, and the many other useful and beneficial programs which return to the people something worthwhile for the taxes paid? The possible utilization of portions of Kitsatchie National Forest for worthwhile purposes has merit and fits into land development and reclamation which are important to our citizens and to our Nation.

That same article was critical of a delayed-payment plan. Is the financing of your home or automobile or electrical appliances in any way un-American? Such installment-plan financing makes possible many necessities and conveniences which otherwise would be financially impossible to many.

Further, that writer, who has the earmarks of being antisocial and contrary to the betterment of the individual, appears opposed to a realistic tax reduction which would reach every taxpayer. About taxes there has has been much said, and the load has increased through the years. The relief so far afforded has gone to the big man. The proposed $20-per-person exemption is exactly what it says—it will provide $20 relief for every person. Thus a family of 5 would benefit by $100 tax relief. Most of us consider $20 to be $20, and $100 to be $100. If that much relief can be obtained from the tax load, it will help all by that sum.

The public should understand that through the years everything changes. For example, insofar as a Member of Congress is concerned, the scope of his activities has broadened to the extent that he is called upon to perform many functions beyond the field of legislation. This is as it should be, and in order for a Member to do a creditable job certain expansions and improvements must be worked out.

Outlined below are certain items which accrue to every Member of the United States House of Representatives, 435 Members in all. Recently the evening newspaper criticized me because of what they called the trimmings I am receiving. These extras do not accrue to your Representative alone, as this newspaper would have you believe. They said, if I remember rightly, that I get 2,700 minutes per year for long-distance telephone calls in order that I may talk to my constituents on official business, if necessary. That is right. That I get 1,800 words per year for telegraph service; that is true. That I get $900 per year district office rent. I do. That I get $1,200 yearly for stationery allowance. That is right. That I receive $200 per year airmail and special-delivery stamp allowance. That is so. An office is furnished each Member, with sufficient furniture and equipment to enable his office to function properly. Your Representative maintains a staff of competent employees, both in Washington and his district, to enable him to fully care for your requests and interests. But, my friends, all this they complain about does not increase my salary or the money that I take home one dime. Nor will it increase any of the salaries of the 435 other Members. All Members of Congress receive exactly the same salary and benefits that this newspaper has complained that I receive.

It is my aim to always fight for progress and reform; never to tolerate injustice or corruption; to always oppose privileged classes and public plunderers; to never lose sympathy with the poor; always to remain devoted to public welfare; never to be satisfied with merely printed news; always to be drastically independent; never to be afraid to attack wrong.

I have said in many of my speeches and I repeat here that I wanted to be elected to Congress, and it was my purpose to speak on the floor of the Congress and elsewhere when opportunity permitted for those who have no one to speak for them. This pledge I am carrying out to the best of my ability.

The Farming Situation

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include four editorials:

[From the New York Times]

HOW FARES THE FARMER?

A cheering note was sounded by Agriculture Secretary Benson in his recent testimony before a Senate Appropriations Subcommittee. This year the Secretary envisages considerable stability in farm income as compared with last year's 10-percent decline. To Senator RUSSELL, of Georgia, however, this was not cheering, for, he charged, the farmer's income is being stabilized "while he's at the bottom of the well." Since the specter of rampant poverty on our farms is being used as an argument for rigid price supports and against flexible price supports, it is worth while seeing whether the farmer actually is "at the bottom of the well." Let us look at the facts.

In 1935, when some recovery from the depression had occurred, net cash income from farming amounted to about $3,100,000,000. In that year our total farm population was over 32 million persons, so that per capita income from farming was about $95. In 1953 net cash income from farming was over $11 billion, while farm population had declined to 25 million persons or less. Per capita income from farming in 1953, therefore, was about $440. This is roughly a fivefold increase. Even allowing for the rise in prices since 1935, these data can hardly be held to support the notion that the farmer is "at the bottom of the well."

The truth would seem to be instead that our farm economy is still prosperous, as measured by any long-term historical standard, though not as prosperous as in the boom

years during and immediately following World War II. The adherents of high rigid support prices are pursuing a delusion if they think such means will guarantee permanent boom prosperity for farmers. Such rigid supports mean rather intensified Government control over farmers, the accumulation of ever more burdensome surpluses at great cost to our Government, and the reduction of consumption for farm products over what would be possible with more flexible, lower price supports.

For the longer run, a victory for the farm bloc could well be pyrrhic since it might lead to such a national revolt against the exhorbitant cost of high support prices—a cost paid by all of us through our taxes and in our grocery bills—that the whole fabric of price supports might be ended. It is the long-run interests of our farmers and our Nation as a whole which President Eisenhower and Secretary Benson have in mind when they back retention of the flexible support program for farm prices.

[From the Washington News of March 28, 1955]

THE HARVEST COMES IN

As a taxpayer, you own a big share of a great hoard of farm products. Altogether, United States taxpayers have an investment of more than $7 billion in this hoard, and by summer Agriculture Department officials think the investment will reach $8.5 billion.

And that isn't all.

Judging by crop estimates for this year, as against expected consumption, the Government hoard of farm products may run even higher. The danger of this is so great that the Government's Commodity Credit Corporation, which handles these surpluses, may have to ask Congress to raise the $10 billion ceiling on how much it can invest.

In the natural law of things, of course, there is only one objective of production, whether it is agricultural or industrial. That objective is consumption.

Yet, for many years now, the Government by law has been promoting farm production for storage. The Government, of course, pays the storage costs—which means the taxpayers pay them. That, by itself, is a tidy little item of around $700,000 a day.

One of the painful harvests of this kind of political-economic monkey-business is the current slump in farm prices. American farm products, for instance, have been priced out of the export market. Exports of the crops the Government subsidizes have dropped off almost a third in the last 3 years.

It's the same way here at home. If we had the same per capita milk consumption, for example, we had in 1945, we wouldn't have any surplus of dairy products.

Yet, in the face of all this, there is an insistent bloc in Congress which wants to keep right on piling up farm surpluses. They are the advocates of the same kind of high, fixed Government subsidies which brought on the present plight in agriculture.

It is the old, deluding theory that the cure for a hangover is another spree—even if it merely leads to a worse hangover.

COTTON COMMENT—EASTLAND IS FIRST TO SPEAK OUT FOR NEED OF COMPETITIVE PRICES FOR COTTON AT HOME AND ABROAD—RAYON AND FOREIGN GROWTHS TAKING MARKETS

(By Gerald L. Dearing)

Senator JAMES O. EASTLAND, Democrat, of Mississippi, is the first of the Cotton States Senators or Representatives to have the courage to speak openly against the present high, rigid price support program.

In his talk before the American Cotton Manufacturers Institute in Florida last Saturday he recounted the ills that have fallen upon cotton. He detailed the increase in production of foreign growths. He elaborated on the growing competition of rayon. He suggested sale of surplus stocks at world prices for a short-term program, but had an entirely different view of the long-term need.

Speaking of the situation he said:

"Let me tell you where the trouble lies. Long-standing policies of the United States Government are at the root of the problem."

PRODUCE FOR CONSUMPTION

"In the long run, farmers can produce only so much as is consumed in this country or sold abroad. Any farm program that is based solely on price with complete disregard of its attendant effect on consumption is doomed at the outset. When farmers lose their markets, they lose their farms, just as you will lose your mill when you lose your customers. Just as you must, farmers must meet squarely their competition on three fronts: price, quality, and sales promotion. They cannot stand on any 1 or 2 of these factors, any more than they can stand on a 2-legged stool. Eventually they are bound to go down unless they compete on all three fronts."

There has been a growth of thinking along the line expressed by Senator EASTLAND in recent months.

SAYRE EXPRESSES VIEWS

Only the day before Senator EASTLAND spoke, Dr. C. R. Sayre, president of Delta & Pine Land Co., Scott, Miss., made a similar representation before the convention of the Southern Cotton Shippers Association in Memphis. While Senator EASTLAND suggested only that prices must be made competitive with foreign cotton abroad and with rayon at home, Dr. Sayre had some specific recommendations on how the reduction could be brought about. He suggested a cut of as much as 20 percent in price over a 5-year period. Like Senator EASTLAND, he urged the same of present surplus stocks at world prices.

There is another recent talk that has much the same view taken by Senator EASTLAND and Dr. Sayre. Don Paarlberg, assistant to the Secretary of Agriculture, spoke before Texas Cotton Association less than a month ago. He, too, stressed that cotton must compete in price, in quality, and in sales promotion. He indicated, however, that the Department favored the flexible price-support program as a means of determining the price factor.

It is interesting to note that all three are agreed on the need—their differences being in the matter of adjusting prices.

[Agricultural letter No. 295 from the Federal Reserve Bank of Chicago]

The imbalance between production and consumption of milk has been popularly labeled the dairy problem. For the past 3 years, gains in consumption have not kept pace with production. The surplus gap has narrowed somewhat, however. Consumption of dairy products has increased 2 percent since 1953 while milk production has recently been running slightly below last year's record pace.

Lower milk prices and income have caused many farmers to reexamine their dairy business. In the heart of the corn belt the number of milk cows declined as much as 6 percent during 1954. On many farms in this area, cash grain, hogs, and beef cattle offered more attractive alternatives.

However, in the main dairy belt the alternatives typically are less profitable than milking cows even though milk prices have declined. In this circumstance farmers have intensified their search for cost-cutting techniques.

Better cows and improved feeding have increased output per cow and reduced costs of producing milk. Output per cow has been boosted about 15 percent since the end of the war, and further increases are being made due in part to the wider use of good sires and artificial breeding.

Roughage consumption per cow has been increased by about one-fifth, and the composition of the forage fed has changed substantially. In 1945 about 40 percent of the hay fed was classed as alfalfa; last year the proportion was nearly 60 percent. These changes also have worked in the direction of lower costs.

Mechanization, to increase the amount of work a man can accomplish, is also playing an important role. The installation of barn cleaners, bulk handling equipment for milk and improved forage handling equipment has either displaced high-cost labor or has made it possible to handle more cows with the same labor force on many farms.

In 1950, 77 percent of the farms milking cows in Wisconsin had fewer than 20 cows; in Michigan, 95 percent. The shift toward fewer and larger herds has no doubt already changed this pattern substantially, and the shift will probably continue in the future.

One study shows that, if recent trends toward larger herds and increased output per cow continue, 3 percent fewer cows and 15 percent fewer dairy farms would be needed in 1965 than now. It is expected that the reduction in number of dairy farms would come largely in the Corn Belt where other alternatives are attractive and through the consolidation of small units to gain the benefits of cost-cutting techniques.

If milk consumption is to be increased significantly, additional changes within the industry will probably have to be made. The National Grange recently released a report in which they cite a number of "obstacles to increased milk consumption."

They note, for example, that "a set of man-made barriers is interfering with increased milk consumption"—some of these are in the form of regulations, laws and ordinances, others in the form of attitudes toward milk and milk marketing.

Weak merchandising is tagged as "one of the most important of all impediments to increased consumption." In some instances, according to the Grange, "resistance to change" has contributed to the continued production of products in forms not desired by consumers. It is noted that milk fat continues to be emphasized in the pricing of milk at farms while consumers are showing more interest in fluid milk and nonfat milk products.

In some areas, sanitary regulations "have been adopted that go beyond the need for protection of the public health," the Grange reports, and semi-monopoly conditions that restrict the milk supply and the adoption of more efficient marketing procedures have probably caused consumer prices to be higher than would otherwise have been the case.

Restoration of balance within the dairy industry will not occur easily. Adjustments on the production side leading to increased efficiency point toward larger and more specialized dairy farms. On the consumption side, the removal of any real "obstacles to increased milk consumption" would also help achieve the desired balance.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. NEUBERGER. Mr. President, one of the finest appraisals of Franklin Delano Roosevelt on the tenth anniversary of his death was written by Jonathan Daniels for the New York Times, and also appeared in his own news-

paper, the Raleigh (N. C.) News and Observer.

The Daniels family, through a distinguished career in our Government spanning two generations, has had an opportunity to measure the greatness of Franklin D. Roosevelt. Josephus Daniels, Secretary of the Navy under Wilson, was F. D. R.'s first boss in the Federal Government when he served as Under Secretary of the Navy. Jonathan Daniels, his son, served as administrative assistant both to F. D. R. and President Harry Truman.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an appraisal of F. D. R. by Jonathan Daniels from the editorial page of the News and Observer for April 12, 1955, the tenth anniversary of the death of Franklin Roosevelt, as reprinted from the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPRAISAL OF F. D. R. A DECADE LATER

Ten years after his death on that warm April afternoon in 1945, all that is left of Franklin Roosevelt is off the main traveled roads. Much traffic which used to go by—and often stop at—the library, the home, and the grave on the old Albany Post Road has been diverted to the Taconic Parkway to the east and the New York Thruway across the Hudson on the west. Not so many people come now as at the beginning of the decade when new grief was combined with the first relaxation of gas rationing. Some like to see in that a sign that the man is almost as forgotten now as the gas rationing—or the grief. And others are sure that so little real change has been made in the New Deal and the new internationalism that they now seem less the policies of a man than the normal, fixed directions of America. Certainly the alterations in America which Roosevelt attended seem today too deep-rooted to be related to a grave only 10 years old.

Ten years is a long time in the remembrance of man. It is a short time for the growth of the lasting image of any hero in history. The covenants of recollection grow as slowly as national monuments. George Washington had been nearly 90 years dead before his shaft, which rises higher than any other in the Capital of the Republic, was opened to the people. Jefferson had been dead well over a century before his memorial was completed. Even Lincoln had fallen—in an April of victory, too—nearly three score years before the classic marble building around his realistic statue was dedicated under Warren G. Harding in 1922.

It will take more than 10 years to fix the meaning of Franklin Roosevelt in either memory or marble. It is a characteristic of Americans, however, that they want as early information as possible on the judgments of history or the outcome of a horse race.

I am a poor one, it seems to me, to try to measure the Roosevelt meaning to a continuing America on this 10th April anniversary. I was where I could see him best before he died and I was among those most surprised when the incredible news came. Of course, I should not have been surprised. In retrospect now I can count his dying clearly, not from April 12, 1945, but from a time weeks before when the Army Signal Corps flew back photographs it had taken of him at Yalta. The Yalta pictures look as tragic in terms of the man as the disintegration of the victory which his enemies have since charged that he let take place there.

It was my job to screen those pictures and to release to the press only those least marked by the deadly, haggard weariness of the Commander whose face, like his voice, had so long been a symbol for confidence in depression and war, and for the future, too. I held back the most shocking pictures. And certainly I should have been warned by them. I was not. I had, as I think all those close to him had, even when they worried most about him, almost a sense of his immortality. I may be mistaken once again. But 10 years after his death I am confident that his memory will be eternal—though not entirely sure what that eternal memory will be.

It does not seem to me 10 years since that dark Thursday afternoon in April. Such periods always pass swiftly. It may help to compare it with another such decade after the death of another President who died in April at the end of another war in which the central question was whether democracy could endure. Such a comparison, of course, cannot presume the approximation of Roosevelt's greatness to Lincoln's. It does point the similarities and the difference in two meaningful Americans in two not so different American centuries.

Certainly it must have seemed to those who spent it a very short, crowded time from the assassination of Lincoln (almost 4 score years to the day before Roosevelt died) to the 10th year thereafter when, with Lincoln's greatest general in the White House, the divisive forces were already gathered to produce the fears of a new civil war over the bitterly contested Hayes-Tilden election the following year.

Federal troops then were still quartered in the Southern States to uphold Republican governments—and some hoped to teach Yankee know-how to the recent rebels. Lincoln's last hope that all vindictiveness might be laid aside and the southern people leniently treated was as long dead as Lincoln himself. It was not until the 10th year after he died that the image of his life began to be creatively put together by John George Nicolay and John Hay, who not only knew him well but brought remarkable talents to his remembrance.

Roosevelt's remembrance has been less well served. He was not made a martyr by an assassin. There was in Washington when he died in 1945, when lilacs were blooming again, no such minor bureaucrat as Walt Whitman to put his grief and his commander into such poetry as "When Lilacs Last in the Dooryard Bloom'd."

In the case of both there were the swift biographies and books of recollection. But the 10 years after Lincoln's death were not over before Robert Lincoln had broken with his father's law partner, William Henry Herndon, because of Herndon's efforts to keep Lincoln a human individual and save him from uncritical legend making.

The transition from Lincoln's liberalism to the long rule of those who knew what they wanted for themselves took place within Lincoln's own party, which piously preserved his legend while it perverted it. The good image of Lincoln was served by the succession of the hated Johnson and the corrupted Grant. Harry Truman, who undertook to carry out Roosevelt's program, was tougher or luckier than Andrew Johnson. President Eisenhower has preserved the halo of his military glory in civilian office a good deal more successfully than Grant did.

Yet, strangely, even with the change of political parties, Roosevelt's programs have been kept more intact and in practice than the purposes for a reunited America which Lincoln outlined to his Cabinet on the last day he lived. Roosevelt's New Deal has the often-spoken scorn of many of those who hold the power in the Government today. But it has certainly not been abandoned by a new President who urges the extension of reciprocal trade, the broadening of the base of social security, the increase of minimum wages. That new President, indeed, has been charged within his own party, and by the wing of it which hated Roosevelt most, of going further to the left in a similar period than Roosevelt did.

Undoubtedly a new isolation grows in some quarters. The old notion of staying at home has been advanced by some to a proposal to go it alone far from home, too. But Roosevelt's present successor in the White House has upheld his United Nations. Even the stern policy with Russia was shaping before Roosevelt died. The strange line of his critics is that his tactics betrayed us while he created the policies, the instruments and the programs upon which we depend—and in terms of both the effective democracy we rely on at home and the devices of security which he organized in the world.

In such a situation the 10-year-old image of Roosevelt is as controversial as was the living man. And the image is the more confusing because I suspect that many of the changes which have taken place in the details of the Roosevelt policies would have been as great if Roosevelt had not died and the American people had maintained their established habit of re-electing him. He would still have been 8 years younger than Churchill, who alone of World War II's big three survives, or than Herbert Hoover, who remains the embodiment of faith in discarded policies which he is sure Roosevelt and America should not have altered.

It needs to be remembered that Roosevelt himself once said that it was time to dismiss Old Doc New Deal. He later hoped to be able to permanently dispense with young Dr. Win-the-War. As was his habit with many officials, he probably never would have got around to actually firing either of them. He was a man whose emphases would have changed with the times. That certainly may add to the difficulty of evaluating him for eternity.

But evaluation begins. Personal jealousies and private profits among the inheritors of the Roosevelt tradition may forever prevent the creation of such a team in memorabilia as that of Nicolay and Hay. It is almost a comic item in the decade since Roosevelt's death that, while no such official biographers appeared, a young, unknown history teacher at Vassar, Dr. Frank Friedel, drove down the road to Hyde Park, casually began the job, and has become the standard biographer of the dead President.

His volumes have deserved the respect they have received. Even Friedel's scholarship, however, is too slow for some who want swift, precise appraisal.

This year we have one answer to the demand, specifically asked and provided for by a Philadelphia businessman, one J. Brooks B. Parker, who in 1951 left $25,000 to finance a contemporary appraisement of the influence Roosevelt had upon his time without fear, favor, or prejudice of any kind whatsoever.

Some Roosevelt friends may feel that such objectivity could hardly have been expected from a director of the Herbert Hoover Library, Dr. Edgar Eugene Robinson, who was chosen. Dr. Robinson, however, spews no prejudices. Neither has he abandoned the philosophy of Robinson in the evaluation of Roosevelt. He concludes that Roosevelt did incalculable harm to the American people.

That harm, however, he says, was done with the consent and approval of the American people who even now are probably not prepared to admit that their decisions and directions were divergencies even if Dr. Robinson thinks they were wrong. In effect, his appraisal of Roosevelt amounts to an identification of Roosevelt with their democracy.

And that, I think, Roosevelt would have been the last to disavow.

"It is clear," says Dr. Robinson, "that the identification of the leader with the people had reaped its natural harvest. The level of national responsibility, of national life in general, was that of a majority of the American people."

I suspect that identification of the leader with the people in the case of Roosevelt, as of Lincoln, is as firm a basis as exists for the immortality of the hero. Aloofness does not generally seem to be the firmest basis of legend. Also it is a strange thing how the lasting legends and the durable heroes are not generally created by those who most dutifully guard their ashes, but by those who examine them with something less than piety. Herndon's reports added much more to the humanity of Lincoln than his son, Robert, did by hiding many of his papers from 1865 to 1947.

Those who defend Roosevelt's fame from the possibility of fault are equaly foolish. He prided himself on his sense of history. He wished it to remember him well. As a collector or hoarder for history, he saved not only papers and a 40-foot iceboat, but items which he could not have felt would preserve any impeccable portrait of an impeccable man.

He industriously collected and preserved the evidences of his own human frailties—much better than the energetic Herndon did after Lincoln's death. And, as in the case of Lincoln, they will help make his identification with the far from perfect people more complete—and more appealing.

It is, of course, much too soon to measure Roosevelt's greatness in terms of his policies. He himself liked to quote Woodrow Wilon as saying to him, "Ninety-nine out of one hundred matters which appear to you and me today as of vital administration policy will be completely overlooked by history, and many other little things which you and I pay but scant heed to will begin to be talked about 100 years from now."

His New Deal may be not merely whittled away but finally and forthrightly rejected. On the other hand, he may come to be regarded, as the brusque, radical O. K. Bovard, famous managing editor of the St. Louis Post-Dispatch, in his lifetime called him, as merely the Kerensky of the American Revolution.

His New Internationalism, as embodied in the United Nations, may be a failure—even a menace, as some say now. It could be the instrument he hoped to make it when he clearly wanted to become its first director as well as its designer. He felt then as Lincoln felt when he said that he hoped the kind of reconstruction he sought might grow from the first postwar State governments in the South: "Concede (that they are) as the egg is to the fowl. We shall sooner have the fowl by hatching the egg than by smashing it."

One thing about Roosevelt will be remembered: He was the man whose boldness, extravagant readiness with the country's cash, and easy fascination with fantastic ideas brought about the practical development of the power in nuclear physics.

That might give him only bitter remembrance among the ruins. It could mean a place for him as the activator of a new, glorious age on earth. One or the other will be remembered longer—if man lasts to remember—than the fact that he once wanted to get some old men off the Supreme Court bench, or that he tried to purge some pestiferous politicians in the Senate, or even that he seemed a traitor to his class.

In America the certainty is that those who want him to be forgotten earliest labor most enregetically to make certain that he will be remembered longest. In order to prove the damage he did to American tradition in the past, they have secured a constitutional amendment requiring that he remain unique in the future as the American President whose identification with the people, by the people, will, lasted longest.

It is illegal now for any American to receive the repeated approval of the people as many times as Roosevelt did. That may affect contestants for greatness in the future. It emphasizes by constitutional amendment the preeminent popularity of Roosevelt in the history of the Republic.

Ten Aprils are still too few to fix the image of Roosevelt which will attend the already obvious long remembrance of Franklin Roosevelt. In many ways the future and not the man will determine that. And certainly in the complexity of his character, in both the playfulness and the implacability of his personality, in the petty things to which he gave concern and in the great causes to which he devoted his life, there are materials for the making of many legends—or almost any legend—about him.

The only inescapable item in all of them will be the strange but certain identification of the man with the people in the long dozen years in which he was the unquestioned leader of America who became the almost equal leader of the world.

In that identification of man and people on the 10th anniversary of Roosevelt's death, the question which most needs answer by his grave and on this earth is not that of his dimensions in history. History will answer that. The greater question after 10 Aprils involves the dimensions and the image of the people he led. A dead hero can wait for history. The remembrance of Roosevelt's compelling leadership will not hurt the people who must make history now.

JONATHAN DANIELS.

Address by Hon. Barry Goldwater, of Arizona, Before Society of Business Magazine Editors

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Society of Business Magazine Editors in Washington, D. C., on April 7, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen, tonight with your kind indulgence, I should like to talk about the American economic way of life—and the deadly peril it faces.

Before I conclude, I hope to arouse in each of you the evangelistic fervor so badly needed to persuade millions of Americans their greatest hope for the Good Life lies in our competitive private enterprise system.

It is a marvelous machinery when you stop to think of it—delicate and sensitive to change—yet remarkably strong and sturdy. It is not perfect by any means, but it is far superior to any other system yet devised by man to satisfy his wants and needs and still allow him to call his soul his own.

You and I already know all this—or we wouldn't work where we do. We'd be with the ADA'ers and the Walter Reuthers, and with the rest of the left-wing pack now hotly fighting tooth and nail to destroy the very system which has made America at once the marvel and the envy of the world.

Whether we like it or not, those who would build a new social order based on the iron fist of Big Government have gained considerable ground through a calculated campaign of deceit and demagoguery. Already they have enlisted millions of gullible folks in the battle to overthrow the economic freedom we all enjoy and the political freedom that goes with it.

Make no mistake, gentlemen, this is a life-and-death struggle between two ways of economic life as different as night and day.

Under the private competitive system, the amount and kinds of goods produced are determined in the marketplace by the decrees of fluctuating consumer prices. Countless individuals decide what they will buy and what they will pay. Government acts as referee to prevent excesses on the part of any one group at the expense of other groups. Government itself avoids excesses of power.

Under the Reuther-Keyserling system, Government decrees determine the amount and kinds of goods produced. Herein consumers are economic captives—and likewise political prisoners. Government no longer is the referee. Government is the boss.

In essence, this is what the battle today is about.

Old stuff, you say?

Gentlemen, I submit that it is as new as tomorrow's headlines. And the consequences of the proposed social reforms are as potentially devastating as the hydrogen bomb.

As a matter of cold reality, the battle is already upon us. Enemy snipers man the firing lines 24 hours a day, 7 days a week. Only a few weeks ago, they came close to winning a major contest. I refer to the recent tax fight in Congress.

There is no neutral ground in this battle. There are no innocent bystanders.

If you sincerely believe—as I do, with all my heart—in the fundamental rightness of the private competitive system, you must be willing to fight for it.

You may recall that following the Constitutional Convention, Benjamin Franklin was questioned about the results. "What have you given us?" someone asked.

"A Republic," he replied, "if you can keep it."

Gentlemen, we of this generation were given another precious inheritance—the private competitive system. The question is, "Can we keep it?"

Before we can launch a counterattack to keep our way of life, we must first size up our enemies.

Strong in numbers, they are firmly entrenched in powerful associations—political parties, some labor organizations, some farm groups, the egghead clans, and in the press. They are well-financed and even now are fattening their war chests. Clever and unscrupulous, they wage relentless war—day and night, Sundays and holidays—under the rules of jungle warfare: No holds barred and no quarter given.

Nevertheless, there is one thing in our favor—they telegraph their punches. We have advance notice of their intentions.

Less than a month ago in Washington, D. C., Americans for Democratic Action penciled out their blueprint for America. After much clackety-clack about preserving the free-enterprise system, they outlined their domestic policy recommendations, which, if actuated, of course, would torpedo the free-enterprise system.

Less than 1 week ago the United Automobile Workers, under Walter Reuther, convened in Cleveland and went down the line for a program that is a dead ringer for the ADA plan.

What the Keyserling-Reuther boys advocate is prosperity through greater Government spending, coupled with lower personal-income taxes for the poor, and higher taxes

for the rich. They demand heavier taxes on so-called excess profits and surplus savings of business and people.

They want more Federal ownership, more Federal development, more Federal operation, more Federal bureaucracy, more Federal debts and taxes, and more Federal controls.

This is the same eyewash that was peddled to the country in the thirties and forties. It wasn't good for us then, and, I submit, it isn't good for us now.

Starting in 1932 the New Deal spent billions of dollars to increase purchasing power, and Federal bureaucrats pulled the strings in every major field of endeavor. Yet in 1937 the country was down to 1932 levels. In 1939 there were 9 million unemployed. And that doesn't count the part-time unemployment, which Mr. Keyserling now insists on using to exaggerate present unemployment.

The butterfly economists struck out time and again. But they are still in the game pitching, anticipating another turn at bat.

They, and their political-empire-building brethren, have just staged a grandstand play in the Congress. The Reuther-Keyserling wing of the Democratic Party tried for a double play, votes for Democrats at $20 a head and a black eye for Republicans who opposed that kind of tax relief at this time. It was a close play, but the majority umpires in Congress called them out.

This is not ancient history, gentlemen, this is now.

On the floors of Congress, the Nation was told that the way to economic health was to increase purchasing power of low-income people, who in turn would spend most of the tax cut. This would stimulate demand for consumer goods, which would increase production and employment and eventually factories would expand and new jobs would open up.

This was called the percolate-up theory.

The trouble with the percolate-up theory is that you keep adding water to the bottom of the pot, but you don't put coffee in the top.

At the same time, we were urged to kill off tax policies which encouraged people to risk their savings in business investments so production can expand and new jobs result.

The policies that would prevail should the Reuther-Keyserling crowd run the Government were never more clearly revealed than in the political, hypocritical tax proposals submitted to the Congress this year.

Despite the existing Federal debt, despite an anticipated deficit for the current fiscal year, despite the danger of inflation, per capita tax cuts were proposed without offsetting revenues to pay for them.

To make up the loss in revenue, the Government would have to borrow money and pay the interest charges.

So what the Democrats really proposed was increased purchasing power for consumers achieved with borrowed money, printing press money.

Well, if this is valid for a small increase in purchasing power, why not let the Government borrow without limitation, print a lot of money and increase consumption even more?

Obviously, no nation can long endure by this process. Yet this is what the left-wingers proposed.

The per capita tax cuts were not only unsound and irresponsible, they were vicious in their impact. Instead of being based on ability to pay, they were across-the-board reductions. Had the proposal been to increase taxes by a flat amount, there would have been howls of anguish heard around the world.

Incitement to class warfare marked the impassioned speeches of tax-cut sponsors. "Soak the rich" was an underlying theme. But elementary arithmetic shows it can no longer be done. Taxes have already squeezed all but the last remaining drops of juice out of this source. The Tax Foundation says that if Uncle Sam grabbed 100 percent of everyone's income over $10,000, he would collect less than $5 billion—not enough to run the Government for a month.

No, the great middle-income class in this country is the only remaining source for substantial tax revenues. And that is already heavily tapped.

Certainly, no one today will argue that our tax laws have not whittled down the upper-income classes.

Are the middle-income classes to be likewise whittled down and eventually destroyed through oppressive taxes?

In these wonderful United States, we have managed to avoid division of our people into two income groups—the very rich and the very poor—a characteristic of many other nations of the world and one which we do not wish to acquire here.

Instead of yawning chasm between the immensely rich and the poverty-stricken in the United States of America there is a strong, broad bridge of middle-income families. The Commerce Department tells us more than 40 percent of American families earn over $5,000 a year. Fifty-five percent of the families in the United States have incomes of $4,000 or more a year.

These are the people who keep this country going—who run the factories, who till the soil, who sell the goods—who buy what is produced—and who pay the taxes that support the Government.

And these are the people—the Reuthers and Keyserlings notwithstanding—who own shares in American business.

Available studies disclose some 6 to 7 million individuals hold stocks in publicly owned corporations; some 3 million individuals, in personal holding corporations. How many own both types, we do not know, but undoubtedly there is some overlapping.

In addition to individual stock ownership, institutions also hold shares. The extent of institutional stock ownership is not available, but there are at least 1,000 such institutions. Through them, untold millions of Americans have an interest in stocks as a result of their equities in life insurance policies, pension plans, and the like.

What happens when the power to tax is used to wipe out the middle class? The wheels of industry stop turning, and Government steps in to manage the economy.

This is not idle speculation. Just a few years ago Mr. Truman seized the steel mills, claiming he had inherent power to grab private property. If the Government can seize business property, it can also take individual property. The social reformers have shown their hand—there can be no doubt as to their intentions should they regain power.

Socialism never worked in other countries and was a miserable flop when tested in the United States.

Why then can the Reuthers and the Keyserlings continue to capture ground with this proposition?

Why indeed?

In the first place, of course, they disguise their proposals in sheep's clothing. The wolf fangs don't show to the uninitiated.

And that's where you and I, and everybody else who recognizes the Reuther-Keyserling scheme for the hoax that it is—have fallen down on the job.

We have failed even to get this simple message across. If it is true that Government should have more responsibility—in other words, more control—over the economy so people can have more freedom, then those pitiful masses of humanity behind the Iron Curtain should be the freest in the entire world.

We have failed to convince the workers of America of their personal stake in our system of private ownership and production where opportunity beckons to those willing to work to progress.

We have failed to rally our forces in every walk of life to spread the golden gospel of opportunity for all.

Opinion Research Corp., at Princeton, N. J., conducted a poll of high-school seniors in 86 communities throughout the country. When asked "Is the theory 'from each according to his ability, to each according to need' a valid basis for an economic system," 55 percent replied "Yes."

Over half the high school seniors—the citizens of tomorrow—accepted the very theory that is the basis of Marxism.

Sixty-one percent said the profit motive is unnecessary to the survival of our system. Think of that.

Sixty percent said owners get too much of the profits.

Eighty-two percent of the pupils said we do not have competition in business. Do you people here in this room thing there is no competition in your business?

Seventy-six percent believed that owners get most of the gains from new machinery.

Sixty percent said a worker should not produce all he can.

This, gentlemen, gives an idea of what we are up against.

How fertile is the soil for the Reuther-Keyserling propaganda.

Well, how shall we counterattack?

Let's steal a page from the enemy's book. Let's live our convictions in everyday life. The enemies of freedom seize every opportunity to discredit our sytem—let us seize every opportunity to lambaste theirs.

We can begin in our own homes with our own children to extol the virtues of private ownership of property and to explain the benefits of competition. There are countless examples of everyday products and services used in the home which, because of competition, have increased in quality while dropping in price. Television is an outstanding example.

In our daily work we can spread the gospel and at the same time expose the Reuther-Keyserling hokum that is bewitching and bewildering our people. We should constantly show up the concept of more personal freedom under more Government control as a hoax—a snare and a delusion.

Every day in every way we should cite chapter and verse where socialism—the real name for the Reuther-Keyserling program—has failed.

The greatest socialist experiment in world history is Soviet Russia. It is a gold mine of examples to turn our people away from the honey-poison ideas of the Reuthers and Keyserlings and the other leftwing socialists. Russia is first and foremost the Union of Soviet Socialist Republics. It should be so identified to our people who think of it only as a Communist political government.

Should the Reuther-Keyserling socialist movement win out in the United States, business editors would soon go the way of Russian writers—urging the poor devils on the production line to greater efforts, rationalizing the inevitable failures under the socialist system, and rewriting history to suit the purposes of political ruling bosses.

We can bend every effort to get business people to set aside a portion of their advertising budgets to preach the gospel of the free, competitive way of life.

Enlightened management is already moving in that direction. Every now and then I notice an advertisement in a national magazine dedicated to informing workers and consumers how the profit system benefits them. But so far we are using only BB guns—when the battle demands heavy artillery.

We need spokesmen who understand our system and can explain it to the man on the street. At the same time, they must also counteract the Reuther-Keyserling pol-

son that has already infected a great body of people. We need advocates for our cause on radio and television programs, on discussion panels in church and educational groups. We need writers in our newspapers and magazines who will help us carry the ball. We must make meaningful to various groups in the country—the teachers—the miners—the farmers—the factory workers—the college students—the big stake they have in the private economic system—and what they stand to lose under Socialist schemes so ardently and artfully peddled by enemies of economic freedom. How many union members realize that when Government operates business, the right to strike evaporates. By law Government employees are forbidden to strike.

It is not enough just to talk with each other. We must reach those who are falling for the Socialist line because they know not what they do.

The big showdown will come in November 1956.

What will be decided is not just the future of the Republican Party and the Democratic Party.

The free way of life as we have known it is at stake. The system which offers the greatest opportunity for individual advancement according to ability and the greatest rewards for effort is under attack by enemies who are playing for keeps. Their burning arrows have already set the house afire.

I for one am not going to stand idly by and let it burn to the ground.

Report From Washington

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. LEHMAN. Mr. President, on last evening, April 17, I made a broadcast over station WMCA, of New York City, on 2 subjects which in my opinion are of the utmost importance to the people of the United States. First and foremost is the question of Quemoy and the Matsu Islands, the question of war or peace. Second is the case of Edward Corsi. I ask unanimous consent to have my remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LEHMAN

The past month, since I last reported to you, has been another eventful one. There has been no great activity here in Congress. We had a 10-day recess for Easter. But there has been no recess on the world front—no recess in the Formosa Straits. And there has been no recess in developments of national political interest.

Two subjects have been the main objects of attention in Washington: First and foremost, the question of Formosa, of Quemoy and the Matsu Islands—the question of war and peace, and second, the case of Edward Corsi.

President Eisenhower has often referred to his administration and to his Cabinet as a team. If they are a team, it is the strangest team in history because it seems to make plays which have no relationship to the signals being called, in public, by the quarterback. President Eisenhower makes fine public statements, with many of which I agree, but his team continues to act as if they had never heard these statements. The Eisenhower team seems to be playing on a different field, in a different game, under a different set of rules, than President Eisenhower himself. For this he must be credited with full responsibility. It is his team.

The 1A test example of incredible conduct on the part of the Eisenhower administration is the case of Ed Corsi, former industrial commissioner of the State of New York, former Republican candidate for the United States Senate, and until very recently, Special Assistant to the Secretary of State on Immigration Matters.

As everybody knows, Mr. Corsi was fired by Secretary of State John Foster Dulles—kicked out of his job—because we was trying to do a job—the job he was assigned to do.

Mr. Corsi took the job at the request of the White House, to try to unsnarl the red-tape and to clean up the mess involving the refugee relief program. Under this program, enacted in 1953, the United States was going to admit 209,000 escapees and refugees from Europe and elsewhere into the United States. Well, to date, almost 2 years later, about 1,000 actual escapees and refugees have been admitted, along with a number of relatives. The entire program has turned out to be a fraud and a failure.

So the White House called in Mr. Corsi, who has a considerable reputation as an administrator, and who is known as a friend of immigration. Corsi's job was to break the administrative logjam. He was to see to it that as many refugees and escapees as possible were admitted into the United States in the remaining months during which the Refugee Relief Act is still in effect.

But in Washington, Mr. Corsi made a critical mistake. He took his job seriously. He pushed, he scolded, he insisted that the red-tape be cut and that refugees be admitted into the United States. He even spoke out against the racist and discriminatory McCarran-Walter Act and urged its drastic amendment.

In Congress, powerful elements committed to the discriminatory principles of the McCarran-Walter Act attacked Mr. Corsi. They went over his past with a fine-toothed comb. They made veiled allusions to vague organizations he had belonged to 20 or 30 years ago. The witch hunt was on.

Secretary Dulles, Mr. Corsi's boss, reacted to the attack against his subordinate by beating an inglorious, shameless retreat. He announced publicly that Mr. Corsi was being investigated for security, and that anyway, Mr. Corsi was in Washington on a temporary 90-day appointment only.

This was news to Mr. Corsi, who had come to Washington prepared to stay and see the refugee program through.

Secretary Dulles had more news for Mr. Corsi. He announced subsequently that Mr. Corsi was no longer to be special assistant for immigration problems. In short, he was fired.

It was not a question of Mr. Corsi's loyalty, Secretary Dulles said. It was just that Mr. Corsi was such a poor administrator.

Mr. Corsi has accused Secretary Dulles of lying. Secretary Dulles has suggested that Mr. Corsi is not telling the truth.

In the light of this development, and of these charges and countercharges, I felt a congressional investigation would be a good thing. I urged that such an investigation be instituted. It is now in progress. I trust and hope that the facts will be brought out.

There is one fact, however, which is perfectly clear without further investigation. That is the fact that the refugee relief program has been a tragic disappointment and a dreadful failure.

You may be interested to know that I am preparing to introduce a set of amendments to the Refugee Relief Act. Those amendments would eliminate the unwise and unsupportable provisions of the present refugee law. My amendments would make the refugee relief program easier to administer. My amendments, if enacted, would make it possible to admit most, if not all, of the 209,000 refugees and escapees authorized to be admitted under the basic terms of that law.

But, no matter how good a law, its purposes can be totally frustrated by unsympathetic and obstructive administration of the law. In reverse, even a bad law can be made to work by liberal, sympathetic, and intelligent administration of it.

I do not know whether we can get this kind of administration of the Refugee Relief Act from the present regime in Washington, even if my amendments to the law are adopted. Mr. Corsi tried, and you know what happened to him.

The question of Mr. Corsi is not the only one troubling Secretary Dulles and the Eisenhower administration these days.

There is a far more explosive problem to be dealt with—and far more important for the United States. That is the question of Formosa, of Quemoy, and Matsu.

Quemoy and Matsu are, of course, those little islands directly off the coast of China, within the very tidewaters of the Chinese mainland. The administration has half-committed the United States to defend those islands, which are now occupied by Chiang Kai-shek, if the Red Chinese attack them.

Maybe we will defend those islands. Maybe we won't. One week we hear in Washington that the administration is prepared to go to war over those islands. The next week we hear that the administration definitely will not go to war over those islands. It is a war of nerves. The chief victims of this war, however, are the American people and the people of the free world.

The chief of naval operations, Admiral Carney, is reported to have predicted that Red China would attack Quemoy and Matsu by April 15, and that by that date we would be in war.

Admiral Carney has denied that he made the prediction. It was another incident in the war of nerves.

But make no mistake about it. The experts in and out of Washington are agreed—they have no doubt—that the Red Chinese are planning to attack Quemoy and Matsu, and are only waiting for the most opportune moment.

What will we do then, when and if an attack is launched, against these islands which have always belonged to the Chinese mainland and are part of the Chinese mainland?

Military experts tell me that there is no way to defend these islands except by bombing the Chinese mainland. There is little question of what would happen then. That would mean all-out war with China. Would it be an atomic war? I do not know. I suspect it would. Red China may not have atomic bombs, but Red Russia has. Are we going to risk atomic war, with all its frightful, world-shattering implications, for the defense of islands which we have no legal right to defend under international law?

Let us not deceive ourselves. In such a war we would fight alone. Alone in the world, with not a single major ally at our side.

We are, of course, committed—I do not question that commitment for a moment—to defend Formosa against a Communist attack. That is what we should be concentrating on—the building up of strength and free-world solidarity for the defense of Formosa. We should be trying, with all the means at our disposal, to associate as many allies as possible with ourselves for the defense of Formosa against aggression. We cannot, and should not, try to do it or go it alone.

A united world front in defense of Formosa against aggression will surely deter the

Red Chinese, if anything can deter Red China.

Let us ask ourselves: What is Red China really after? Is it Quemoy and Matsu or Formosa? No; these are only tidbits—means to an end. What Red China really wants is the domination and control of all Asia.

Quemoy and Matsu offer Red China such an opportunity, if we defend them. The masses of the people of Asia are convinced that Quemoy and Matsu should belong to Red China. They believe Red China would be justified in taking possession of these islands by force if necessary. And this same view is held by the vast majority of the peoples and governments of Europe, too.

If we, the United States, undertake to defend these islands against a Red Chinese attack, and thus initiate a war with Red China, and possibly with Russia, too, it will be a war under the best conditions for the Communists, and the worst for us. If we make it an atomic war, we may win temporarily in China, but we will lose permanently in the rest of the world.

We dare not contemplate this prospect. On the contrary, we should make clear, immediately, that we have no such thought in mind. We must make clear that we not only seek peace, but we seek to avoid war.

Formosa represents a point where we can rally the free world; yes, even the peoples of Asia.

I am not trying to run the foreign policy of the United States. That is President Eisenhower's responsibility. But he shall have my views when I honestly differ with him, as I do now, and my support when he is following what I consider the right road.

This is an obligation I owe to you, the people of New York State, whom I represent in the Senate, and to my country. It is an obligation I owe to my conscience.

Thank you, my friends, for listening to my latest report from Washington.

The Conquest of Polio

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in regard to a recent great accomplishment of international value, namely, the development by Dr. Jonas E. Salk of the antipoliomyelitis vaccine. The editorial appeared in the Minneapolis Morning Tribune of April 13.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONQUEST OF POLIO

The report on the Salk poliomyelitis vaccine presents the world with one central fact of overwhelming importance: Man now has in his hands the weapon that will conquer polio the killer, the crippler. There is every reason to believe that this weapon will be used well, and that the conquest will come swiftly.

Achievement of an effective polio vaccine is a triumph with many facets. It is, of course, a great personal victory for Dr. Jonas E. Salk, the modest and dedicated man who took the final step. His labors have won him an enduring place in medicine's Hall of Fame.

Dr. Salk would be the first to point out, however, that his research, brilliant and painstaking though it was, merely brought the work of others to fruition.

The fight against polio has been going on for decades. But one needs to go back only to 1949 to show how the work of each man has been a stepping-stone for those who followed. In that year a group working at Harvard University propagated polio virus in nonnervous tissue after countless previous efforts had failed. This meant that if a polio vaccine was developed it could be produced safely in large quantities.

Two years later, teams of researchers at four universities had narrowed the search for a vaccine by finding that only three types of virus cause polio. By 1952, scientists at Yale and Johns Hopkins had learned that the disease can be attacked in the bloodstream. Then a worker at the University of Pittsburgh demonstrated that antibodies formed under stimulation by the virus actually would protect against polio.

Dr. Salk's development of a workable vaccine is based on those previous discoveries. His work would not have been possible without them.

The conquest of polio, in short, beautifully illustrates the scientific method. It is a classic example of the way in which numerous researchers, working in widely separated laboratories, can pool their knowledge and make a concerted attack on problems that confront mankind. At a time when the scientific community has been under attack from various quarters, this success is a reminder that science is man's most effective tool for mastering his environment.

Achievement of the polio vaccine also is a heartening reminder of what can be done through the cooperative effort of ordinary citizens. They, millions of them, poured out the flood of dimes and dollars that enabled the National Foundation for Infantile Paralysis to finance both medical treatment and research.

The vaccine is a triumph for Dr. Salk and those others who have hunted dread polio to its lair. In a larger sense, it is a triumph for the community of man.

State of Israel Bond Drive

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. LEHMAN. Mr. President, on Saturday, April 2, our able and distinguished colleague, the Senator from Michigan [Mr. MCNAMARA] made a speech at a trade-union dinner in the interest of the Israel bond drive. It was a most interesting and thought-provoking speech. It was a heartening speech to those interested in the welfare of Israel. I feel that the Senator's speech should be widely read. It should certainly be made a part of the RECORD of the United States Senate. Therefore, I ask unanimous consent that the address be printed in the appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATE OF ISRAEL BOND SPEECH AT TRADE UNION DINNER BY HON. PAT MCNAMARA, OF MICHIGAN, SAN FRANCISCO, CALIF., APRIL 2, 1955

Mr. Chairman, distinguished guests, officers, brothers, and sisters in the trade-union movement, fellow Americans, this is the first time since the voters of Michigan decided the time had arrived to send a member of organized labor to the United States Senate that I have had the pleasure of addressing a large gathering of the representatives of labor—A. F. of L., CIO, and independent unions—all together in one place. It is a very great privilege indeed to be here and to know that this meeting is symbolic of the unification of organized labor that is now in process.

This gathering is of special interest to me, for if it had not been for the strongly concerted efforts of practically all groups of organized labor, I would not be addressing you tonight as the Senator from Michigan. Let me point out that I am only the third Democrat in the history of Michigan to be elected to the United States Senate. It is clear that the allegiance to the GOP of that rock-ribbed Republican State is crumbling.

How did this happen? It happened because Michigan has become an industrial as well as an agricultural State; it happened because the workers of Michigan rebelled against the reactionary policies of the Republican Party; it happened because the working people of Michigan joined with the disillusioned farmers and the disappointed business people to send to the Congress a Senator who would do his best for all the people. They had become tired of seeing their State represented by Senators who consistently voted wrong. Today, they have at least one Senator who tries to see their problems as a whole and who votes according to his conscience in what he sees as the best interests of the entire State.

I must confess that there are times in Washington when I feel somewhat frustrated. But this is part of the process of democracy; many times we must make haste slowly. But we must make sure that we are going forward, not backward. I see it as my job to keep trying for better things for all our people, and that's what I am endeavoring to do.

You will forgive me, I hope, for discussing politics a little in my remarks, because, I am sure, you have wondered how it happened that PAT MCNAMARA, from the pipefitting trade, reached the United States Senate. It was improbable, but it happened—not because of the particular merits of myself, but because the times are changing, and people are changing with them.

In addition, I can say honestly that my campaign for election was, in my belief, one of the cleanest campaigns in the Nation. There were no personalities. My opponent, the chairman of the Republican policy committee, ran on his record, and I attacked his and his party's record up and down the State. We fought it out on the issues, and the Democrats won.

I have a Jewish friend back in Michigan who used to say he had his own definition of a Jew. He told me: "PAT, I'm going to give you an answer that an Irishman will understand. The Jews are that branch of the human race who just won't take 'no' for an answer." The more I hear about Israel and its people, the more I can see the truth in my friend's remark.

I want to tell you a little about the story of Israel, not just because I want you, as Americans, to further the sale of Israeli bonds, but because I want you, as Americans, to understand how I see this business of refusing to take no for an answer.

Here we are gathered, you and I, in this important meeting of organized labor. I am here because of my position as a Senator of the United States—but my position as a Senator of the United States is due to a lifetime in the ranks of organized labor. You and I know why we are here. We are here because all along the line of bitter opposition to labor unionism, there were men who wouldn't take no for an answer. I thank that almost every man is here because in the battle for human dignity and workers' rights, each of us refused to take no for

an answer. That refusal to take no for an answer built America; it brought the workers who built America into a movement that will build America into something far greater than anyone has ever dreamed.

If there is one place in the world where that same spirit exists and permeates the life of the country and its people to an even greater degree than in the United States, that place is the land of Israel.

It took us generations of struggle and education to forge the mighty organizations which are our labor unions. It took determined effort and bitter conflict to gain for organized labor its rightful place in this country, and this is the remarkable thing about Israel that should make each of us feel a sense of partnership with that country and its people—they founded their country on the principles that we still are struggling for in America. Their labor organizations are the dominant economic and political forces of Israel, operating through the great Histadruth, their central labor organization. They have proven that the desert can be made to bloom, that the swamp can be drained, that men can accomplish the impossible where men have the will and faith to accomplish the impossible. Believe me, my friends, if Israel had the resources that America has, in the same proportion, there would not have to be the struggle or the threat of struggle to achieve the reasonable aims of its people.

What they have accomplished in Israel and what they are now accomplishing in the face of great hardship must arouse the admiration of every man who knows the meaning of struggle against odds. Even if we were not informed Americans, recognizing our kinship with them for their democratic ideals; for their indomitable courage; for their role in history past, present, and future; we would, just as good sports who like to see a man get an even shake, rise and cheer them on.

My friends, that is just what we are being asked to do. Israel is small, a little guy, fighting nature, fighting enemies, racing against time to build up an economy based on equity, learning his job while he is producing, welcoming the stranger and sharing his crust with him—such a guy needs friends. He needs friends as America needed friends during the Revolution. This little guy saw 6 million of his brothers and sisters wiped out in the world. He has memories of his people burned and stabbed and plundered in many parts of the Old World. Without allies, he has only himself and his eternal faith in God. He must do today at all costs what dare not be left for tomorrow. I tell you, my fellow Americans, it would be a poor kind of American who wouldn't admire that little guy and who wouldn't be cheering him on in his fight against such odds.

We are being asked to lend him some of our strength. America was in that same position during the Revolution. Abroad, we went to France for help. At home, that great American Jewish patriot, Haym Salomon, a Philadelphia banker, bankrupted himself in the cause of the independence of the United States. In our own wars, we go to our own people for assistance to our country through bond purchases. Israel, with its limited resources, must have outside help. I do know this: Every American who, whether through sentiment or for hardheaded business reasons, invests in State of Israel bonds has a fine, sound investment. Whether you are investing in a private business or in a country, your investment is safest when it is made with people who won't take no for an answer. And you are asked to invest—not in war bonds—these are bonds for peace. Jews are not a warring people.

Imagine a little country with half a million people at the end of a struggle for independence absorbing over a million refugees within a few short years. It was impossible—but they did it. Imagine a tiny nation having to break the soil and establish industries while fighting for independence. It was impossible—but they did it. So now you have a million and a half people, today neither at war nor at peace, building frantically because they know that events in the world may soon make it necessary to bring in another million refugees whose very lives are at stake in other parts of the world. It seems impossible—but they are doing it. Whole new industries are springing up. A vast chemical industry, construction, cement, plastics, machinery, roadbuilding, consumer goods, agriculture, shipping, aviation—these and many more are making the land of Israel throb with the urgent vitality that is so characteristic of America. It is only a question of time before their example revitalizes the whole Middle East and helps millions of the Arab peoples make progress in the civilized world.

But time is on the side of the people of Israel only if we give the people of Israel what they need to work with—right now and in adequate measure. The chemical and other industries which are needed cannot be built on a piecemeal basis; you cannot build part of a chemical plant today and another part the year after next. If you are going to build at all, you must build that plant all at one time. The same thing goes for all the other industries that have to be created right from the ground up. The people of Israel must have the tools they need—now. Otherwise, the year after next may find them worse off than they are today.

We are told that it took 6 days for the creation of the world, and only after it was all done were man and woman created to inhabit it. But in Israel the people are already there, and a new world is being created around them while they must be fed, clothed, and educated. It is this new miracle of creation under most difficult conditions that has earned the awe and respect of the other people of the world. It is in this miracle that we are being asked to invest.

You see, my friends, it is not just Israel you are investing in. You are making an investment in civilization itself. You are investing in the human spirit. The same people who, a thousand years ago, carried to the rude medieval Christian countries of Europe the first philosophy and learning and devotion to democracy and freedom nurtured in the eastern world, have now returned to the east, bearing with them the science and the productive arts of living of the 20th century west.

These are not just bonds for Israel—they are our bonds with Israel. One could not understand America without understanding the part that the Jewish idea of one God, through the teachings of Christianity, has played in the founding and the history of America. Ours is not just a debt to repay, not just an acknowledgement of spiritual kinship. This is an act by which the common man in America declares to Israel and to all peoples of the whole world: "Wherever men fight the good fight for political and economic democracy; wherever men struggle to raise the levels of living and dignity of the common man; wherever men, against whatever odds, refuse to take no for an answer—to that place and to those men the people of America will send their private help, their personal encouragement, their ringing message of the unity of all good men in a good cause."

In conclusion, my friends, let me say that there could be no more fitting group than this to give emphasis and leadership in the bonds for Israel campaign. You represent the working people of the San Francisco area. You are asking your people and your friends to make possible the success of a democratic working community far away in the Middle East—so that from their toil and their sweat they may make for themselves a prosperous and free homeland; and so that their success may shine as a beacon and an ideal for all the oppressed and poverty-stricken and disease-ridden and hopeless people who are their neighbors—as well as creating in that vast desert country an oasis of democracy, with kinship for all the freedom-loving nations of the world.

So, the beachhead is well established. I am sure you here tonight will want to see it expand, not only that a great people may find refuge from oppression but also that future generations will, with God's help, have a chance for life, liberty, and the pursuit of happiness which is man's rightful heritage.

Competition in the Rubber Industry

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated March 25, sent by Mr. George J. Burger, vice president of the National Federation of Independent Business, to Mr. Paul W. Litchfield, chairman of the board of the Goodyear Tire & Rubber Co. I want to clearly associate myself with Mr. Burger's comments.

It is my intent to watch with keen interest the activities affecting private management of the synthetic rubber plants, in order to determine whether small business and free enterprise will have an opportunity to develop.

As all Senators know, this subject was of deep concern to many of us when we voted on the question of disposal of the Government-owned synthetic rubber plants; and I am deeply concerned lest some of the aspects of competitive enterprise may have been damaged by the action taken by Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 25, 1955.

Mr. PAUL W. LITCHFIELD,
Chairman of the Board,
Goodyear Tire & Rubber Co.,
Akron, Ohio.

DEAR MR. LITCHFIELD: I read with considerable interest the announcement of your company over your signature appearing in the New York Times of today, "An announcement by Goodyear of importance to every manufacturer of rubber products."

I have reviewed your statement very carefully and it is our hope and trust that, for the good of our Nation's welfare, the pledge enunciated in the statement will be carried out to the fullest degree. I was especially interested in your statement: "Today a new and stimulating ingredient—free enterprise—is added." That has been our position in all messages we have sent to Congress, not to oppose private operation of the synthetic rubber plants, but rather fearful that after the plants went into private ownership a squeeze play might take place.

You also state: "It is a challenge in that it provides the opportunity to prove again the advantages of private enterprise." This will, we sincerely hope, come true because if it doesn't private enterprise in the big brackets will be on trial.

A very important declaration by you, of great importance to all small users of synthetic rubber, is your statement that "Through the sale of a sufficient portion of our production to ensure free and fair competition within the rubber industry" is how you propose to meet your new obligations. Our position is that we will expect free and fair competition in the sale of synthetic rubber and that the smaller users of this product will get a fair and equal break with all other customers of the owners of these plants.

Finally, when the day arrives in which free and fair competition enters the rubber tire industry, it is my belief that such action will maintain the present efficient independents in that industry, particularly in the distribution field, and will offer an attraction to youth to enter this industry which offers great opportunity for individual ownership in the distribution field.

Having close to 50 years of experience in the industry, it is my hope that for the good of the industry itself, this pledge will be carried out in full, not alone by your company but by all other new owners of these Government plants. If this is done, there will be no complaint from small business of this Nation, but it is a safe conclusion that from this moment on the Congress will be watching all developments in the private ownership of these plants. Of this we are certain.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Thanks From an Italian Immigrant

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. CURTIS. Mr. President, I want to offer to my colleagues an unsigned letter which recently appeared in the Public Pulse column of the Omaha (Nebr.) World-Herald. This heartwarming tribute to the United States comes from an Italian immigrant who achieved the full fruition of American citizenship. His letter is a challenge to all of us to pause a moment and reflect on our blessings. It is a directive to those who serve here to preserve our great institutions and freedom of opportunity, in order that succeeding generations of Americans may be equally rewarded.

Mr. President, I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO THE UNITED STATES, THANKS

OMAHA.

I want to say "Thanks to the greatest country in the world, the United States, and one of the finest companies in that country, the Union Pacific Railroad."

In 1913, as a man of 24, I came from Italy and settled in Omaha. Two days after I arrived I started work at the Union Pacific. After more than 40 years of service, I was retired.

Words cannot express how much these years in this country and with this company have meant to me. My four children are now grown and have unlimited opportunities available to them. I can enjoy my retirement as would not be possible anywhere else in the world.

Only in a democracy, such as we have, could an uneducated man like I was, come in as a stranger and be welcomed to live a life of freedom and accomplishment.

A. L.

The Colonels' Report

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, the so-called Colonels' Report has an important bearing upon the incredible Yalta papers. Although this document, which was prepared by G–2—Military Intelligence—prior to the Yalta Conference, was published as a part of the Senate Armed Services Committee hearings, yet it has not had general attention. It is a complete answer to the argument advanced that our delegates to the Yalta Conference were not apprised of the military point of view.

Mr. Speaker, under leave to extend my remarks, I am including the so-called Colonels' Report as it appeared in Human Events of April 2, 1955:

The Colonels' Report: The almost incredible Yalta papers as now published do not include one highly illuminating document, which we reproduce below. It may serve as a warning, just at this juncture, of the carelessness of statesmen who rushed into a Big Four conference and appeased an arrogant foreign power, without weighing decisions in the light of professional military advice.

The document was known in G–2 (Military Intelligence) as the Colonels' Report, for it was prepared by a group of veteran intelligence officers, most of them Regular Army colonels. Preparation was started about the time the Four Bigs set out for the famous Black Sea conference. It reads as follows:

"INTELLIGENCE REPORT

"1. The entry of Soviet Russia into the Asiatic war would be a political event of world-shaking importance, the ill effect of which would be felt for decades to come. Its military significance at this state of the war would be relatively unimportant.

"2. Many military experts believe that the United States and Great Britain without further help possess the power to force unconditional surrender upon Japan, or to occupy the islands and mainland possessions.

"3. It may be expected that Soviet Russia will enter the Asiatic war, but at her own good time and probably only when the hard fighting stage is over.

"4. The entry of Soviet Russia into the Asiatic war at so late a moment would shorten hostilities but little, and affect only a slight saving of American lives.

"5. It is not believed that any diplomatic action we either take or fail to take, or any concessions we make now or in the foreseeable future, will influence Soviet Russia to speed up or retard entry into the Asiatic war.

"6. Strong enough to crush Japan ourselves, the United States should make no political or economic concessions to Soviet Russia to bring about or prevent an action which she is fully determined to take anyway.

"7. The entry of Soviet Russia into the Asiatic war would destroy America's position in Asia quite as effectively as our position is now destroyed in Europe east of the Elbe and beyond the Adriatic.

"8. If Russia enters the Asiatic war, China will certainly lose her independence to become the Poland of Asia; Korea, the Asiatic Rumania; Manchukuo, the Soviet Bulgaria. Whether more than a nominal China will exist after the impact of the Russian armies is felt is very doubtful. Chiang may well have to depart and a Chinese government may be installed in Nanking which we would have to recognize.

"9. To take a line of action which would save few lives now, and only a little time—at an unpredictable cost in lives, treasure and honor in the future—and simultaneously destroy our ally, China, would be an act of treachery that would make the Atlantic Charter and our hopes for world peace a tragic farce.

"10. Under no circumstances should we pay the Soviet Union to destroy China. This would certainly injure the material and moral position of the United States in Asia.

"11. It should be reiterated that the United States Army is by no means united in believing it wise to encourage the Soviet Union to enter the Asiatic war.

"12. The President of the United States would be well advised, before he made any commitments to Russia in Asia which would clearly have dire political and moral consequences for the United States, to consult that particular American field commander who is steeped in every phase of the Asiatic war and in the political background of that struggle.

"Recommendation: General MacArthur should be summoned to Washington immediately. The President should consider the all-important matter of Soviet Russia's entry into the Asiatic war with General MacArthur eye to eye. All other political and military personages should be excluded from the conferences."

The above document is, and has been for almost 4 years, a part of the published record of the Senate Armed Services Committee hearings, and was introduced into the record by Senator STYLES BRIDGES in June 1951 (vol. 4, pp. 2916–2917 of the hearings of that committee, known as the MacArthur hearings, since the group heard testimony from General MacArthur (following his dismissal by Truman) on his conduct of the war in Korea).

This report was prepared and written by Cols. Joseph Michela (leader of the group), Truman Smith, Harvey Smith, Edmund Delaney, Hugo Kenyon, Ivan Yeaton, Peter Vischer, and other area specialists of Military Intelligence. The report was dated April 12, 1945, over 2 months after Yalta, although it had been under preparation for some months previously. The secret agreement made at Yalta to bring Russia into the Asiatic war was not known to G–2 at the time, and indeed was only revealed in 1947.

The motive behind the preparation of the document was a desire to put before the high level a realistic view of the developing Asiatic situation. From about September 1944 and increasingly as the months went by, the colonels felt that Japan was beaten and that the only practical course was to try to arrange an unconditional surrender or some other diplomatic means to take Japan out of the war. The colonels were appalled at the prevalent view of the high level that it was necessary to get Russia to enter the Asiatic war in order to finish the conflict against Japan. If they had been consulted by the high level before Yalta, the above advice would surely have been given—according to those members with whom Human Events has talked.

Colonel Michela presented the report to General Marshall in April and briefed the Chief of Staff on it. Marshall reportedly said little, but discouraged Michela's hopes that action along the above lines would be taken.

Tomorrow's Leaders

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend by remarks, I should like to include a most interesting article by Mr. Carroll Kilpatrick entitled "Tomorrow's Leaders," which appeared in the April 1955 issue of Nation's Business.

The fine work being done by the National War College, situated not far from Capitol Hill, is perhaps not sufficiently publicized. I feel sure that this article will be of considerable interest to my colleagues:

TOMORROW'S LEADERS—THE NATIONAL WAR COLLEGE, LITTLE KNOWN BUT VITAL IN OUR SECURITY PROGRAM, GROOMS CANDIDATES FOR TOMORROW'S TOP MILITARY AND CIVILIAN POSTS

(By Carroll Kilpatrick)

Every tourist in Washington knows the location of the White House, the Pentagon, and the Capitol. But not many know where the National War College is located or the part it plays in their own security.

In spite fo this anonymity, the college is one of the country's most impressive and important institutions. There are a number of proposals to expand it or to use it as a model for the creation of similar institutions.

The National War College is one of the youngest educational institutions in the world. Here each year 130 of the most promising men in the foreign and military services are trained for top command and ambassadorial posts.

The military has long understood the need for such advanced training.

A plaque on the wall at the National War College says that in 1927–28, when the building was occupied by the Army War College, D. D. Eisenhower, major of infantry, received instruction in advanced concepts of war. One of his instructors was G. C. Marshall, Jr., lieutenant colonel of infantry, on assignment from the Army's War Plans Division.

President Eisenhower, in addition to his training at West Point, is also a graduate of the Infantry Tank School, the Command and General Staff College, and the Army Industrial College. Other generals have had similar advantages. Our success in World War II was the direct result of this intensive schooling.

But similar training was not available for civilians.

Among the men who saw this as a national weakness were the late James V. Forrestal, Adm. William F. Halsey, and Vice Adm. Harry W. Hill.

It was Admiral Hill who, in February 1946, asked General Eisenhower, then Army Chief of Staff, to turn the building of the Army War College at Fort Leslie J. McNair in the District of Columbia over to a new school for training of civilians as well as military men.

General Eisenhower knew from his own experience the value of such adult education. While Admiral Hill was still in his office, he telephoned Adm. Chester W. Nimitz, Chief of Naval Operations, to make sure of his approval since the new school was to operate under the Joint Chiefs of Staff.

Admiral Nimitz was enthusiastic, and General Eisenhower promptly ordered the building which had housed the Army War College to be turned over to the new institution. The Army War College was moved to Carlisle Barracks, Pa., and the first class of the National War College was enrolled in August 1946. It had distinguished leadership. Gen. A. M. Gruenther, now NATO forces commander, was deputy commandant and George F. Kennan, later to be Ambassador to Russia, was deputy for foreign affairs.

The purpose of the college is to prepare military and diplomatic officials for high policy and command and staff functions, to train them for strategic planning duties, to promote the development of understanding of the agencies of government, to survey the factors of power that are essential to a national war effort, and to show how the strengths of the Nation may be harnessed to achieve a desired end. Its purpose also is to train the various armed services to work with each other and with the civilian agencies as they must do in the National Security Council, in a foreign embassy, or at an important military base overseas.

There is no longer any sharp dividing line between military and civilian responsibility. A commander of an American airbase in north Africa is in a real sense an American ambassador also. The director of the military assistance program in Spain must be an expert in business as well as in diplomacy.

Military students at the college—mostly Army and Air Force colonels and Navy captains—are introduced to the complexities of national policymaking. Their daily contacts with civilians, and the civilians' daily contact, with them, make for broader appreciation of each other's duties, needs, and thinking. One naval officer in this year's class has had almost nothing but submarine duty, but he has obvious qualities of leadership and the War College will give him a needed opportunity to broaden his outlook by study and association with men of varying points of view.

The year does much to bring the three services together. Friendships are formed which are invaluable in solving day-to-day problems. John D. Hickerson, now Deputy for Foreign Affairs, tells how, when he was Assistant Secretary of State, a problem arose involving the Army: "One of my assistants said, 'I know Colonel Smith, who was with me at the War College; I am sure he can help.' Colonel Smith was not involved in this particular problem, but in a matter of hours these two men worked out a difficult matter to everyone's satisfaction.

Each year's students are carefully chosen because they show potentialities of leadership. There are approximately 30 officers from the Army, 30 from the Navy (including 6 Marines and 1 Coast Guardsman), 30 from the Air Force, 30 from the State Department, 3 from the Central Intelligence Agency, and normally 1 or 2 each from Treasury, Commerce, Budget Bureau and Foreign Operations Administration.

Their term is for 10 months—from August to June. The faculty is composed of about 15 officers, some of whom are graduates of the college, and 5 or 6 civilians, some of them university professors on leave. Lt. Gen. Howard A. Craig of the Air Force is commandant—the third since the college was founded. He serves for 3 years, and the commandant's position rotates between the Army, Navy and Air Force. Under General Craig are two deputy commandants—Maj. Gen. Clovis E. Byers of the Army and Rear Admiral Chester C. Wood of the Navy (a graduate of the college)—and Mr. Hickerson.

Since in Government work the heavy load of detail and administrative responsibility makes serious reading and study almost impossible, the chief object of the course is to start the students thinking about the overall problems of national policy. Every effort is made to jar them loose from stereotypes peculiar to their particular branch of service.

The first step, therefore, is to create an easy and informal atmosphere. Car pools are encouraged so that the students have opportunity for informal discussion while riding to and from their homes. Service identifications are lost when the student dons civilian clothes—required except for members of the faculty. Social and sporting events are encouraged.

The college does not offer courses of study in the usual sense, because these men are assumed to have had a good education already. Rather, every effort is exerted to stimulate the students' interest, imagination and intellectual curiosity by making available the best books, lectures, films and study materials.

"The administration of the college," the outline of work this year says, "tries to place on each individual student the burden of responsibility for his own development. Guidance and advice are offered but are not forced. Encouragement and stimulation are always present but what each individual takes away from the college will almost entirely depend upon what he himself has put into the group effort."

The result is much cross fertilization. The average age of students is 42 years and many are experts in several fields already. During the uprising last winter in Costa Rica a student just back from service there was able to explain the political and military situation in detail. When a lecturer spoke on military problems in the Mediterranean area, he was cross-examined by several men who had served in Turkey, Greece or Italy and knew the political and military problems at first hand.

A number of the officers and several of the diplomats now enrolled served in Korea during the fighting and are intimately acquainted with problems facing the United Nations command.

The 10-month program is divided into 2 semesters of the school.

The first is devoted to a study of contemporary international affairs and American responsibilities and commitments. In 1954–55 this included work on the sources and elements of national power, the United Nations, problems of international law and military forces. There followed a series of area studies—on the Soviet Union, the British Commonwealth, Africa and the Middle East, the Far East, and the Western Hemisphere.

Emphasis in the second semester is on the development of a national security policy in accord with current realities and the development of the military, political, and economic policies necessary to support it.

At the end of the year, the school is divided into four groups for flying trips overseas. One group this year will go to the Middle East, another to northern Europe, a third to Latin America, and the fourth to the Far East. The trips take 3 weeks, and the students visit military installations, American embassies and other points of interest. Since the men making these trips have spent the preceding months carefully studying the military and diplomatic problems of the area, they are well equipped to profit from on-the-scene visits. The trips are an appropriate climax of the year's study.

After the return home, the last few days are devoted to comparing notes and discussing the lessons learned from the overseas visits.

The normal day at the college begins at 8:30, with the first half hour set aside for reading the New York Times or the Washington Post and Times Herald. Newspaper reading is essential because only by following news developments can a student take part in daily discussions.

At 9 o'clock students and faculty attend a 45-minute lecture. Here the speaker may

be a member of the faculty but usually is a visitor. This year's list has included the British and Dutch Ambassadors in Washington; James Burnham, the author; Prof. F. S. C. Northrop, of Yale; Senator John J. Sparkman, of Alabama; David Lawrence, editor; Charles Burton Marshall, former State Department policy planning officer; Harry Schwartz, New York Times specialist on Russia; Allen Dulles, Director of the Central Intelligence Agency; Clare Booth Luce, Ambassador to Italy; James B. Conant, Ambassador to Germany; the members of the Joint Chiefs of Staff and most of the Cabinet officers. The lectures are off the record to encourage frank speaking. At the end of his remarks, the speaker submits to questions from the floor for about 30 minutes. Since some of those in the audience are almost as expert on the subject as the speaker, a lively debate often develops.

After the question period, the students are divided into 11 discussion groups to continue a probing of the lecture subject. These are informal discussions over coffee led by faculty members with the visiting lecturer usually attending one of them.

Before the lecture, the student has prepared himself by reading assignments and using the excellent maps, graphs, and other illustrative material the college provides. The visual aids branch may also prepare charts and maps for the lecturer's use, and sometimes illustrative films are shown. An Army lecturer, for example, might show secret films on guided missile experiments.

True to good military tradition, the physical side is not overlooked. From 11:30 to 12:30 there is a break for sports. Each student is encouraged either to play golf on the nine-hole course surrounding the college building, or squash or handball in the basement gymnasium. Tennis courts also are available, or the student may sit on a bench by the river and think.

All persons assigned to the college have the privileges of the Fort McNair officers' club and most of the staff members and students go there for lunch.

Afternoons allow some time for reading in the excellent library but the major criticism of the college is that it does not leave the student enough time for reading and research of his own. Students read at home at night and on weekends but nearly all of them have the usual family demands on their time. Opportunity for leisurely reading in the library is limited.

Part of the afternoons is taken up with committee work. The student body is divided into 20 committees with the services equally represented. Each committee has its own room and a specific assignment. As a unit, it prepares a "position paper" of about 4,000 words every 3 weeks. This joint effort of the group deals with some important foreign or military policy.

For example, one committee recently was told to assume that it was the staff of Chou En-lai and was responsible for preparing him for talks on Formosa at the United Nations. Another committee prepared a briefing paper for Russia's Molotov, another for the British and another for the French representatives. Other committees prepared papers for use by the United States delegate.

There is much banter over what an unsuspecting FBI agent might think if he found in someone's brief case these carefully prepared papers for Chou or Molotov. But the college knows that only when the opponent's point of view is appreciated and ably stated can the American case be argued persuasively.

After the faculty studies these papers some of them are read before the student body and criticized.

Every 3 weeks the committees are reshuffled so that, in the course of a year, each student has a committee assignment with almost every other member of his class.

In addition to the committee papers, each student is required to submit by the end of the year an individual thesis of approximately 20,000 words on some subject of his own selection relating to a national security problem. These are similar to a university thesis submitted by candidates for a master's degree and each student makes an oral presentation to a faculty group on the subject of his thesis.

The War College is not concerned with the mechanics of staff operations, tactics, or routine history or geography courses. The three services all have their schools for tactics and strategy. The National War College emphasis is on grand strategy, or national strategy, and the object is to force men to think critically about the basic problems facing the United States. It is training men for jobs that require statesmanship as well as technical skills.

According to this year's outline of study, the class is asked this basic question: "Accepting the world condition in which we live, what are the national objectives of the United States and how can we best achieve them?"

From the beginning the college has insisted on absolute freedom of discussion. There would be no difficulty here in debating whether the United States should recognize Red China—or whether preventive war would be desirable. Indeed, there is no place in Washington where the atmosphere is freer or where men are more deeply committed to a search for truth without regard to prevailing prejudices.

One of the chief faculty members in uniform said he would rather see the school closed than to retreat 1 inch from the position of complete freedom of discussion and inquiry. This is part of the tradition that has been developed in the 9 years that the college has been operating.

The very location of the school away from the center of the city helps create the academic atmosphere necessary for objective study. Elihu Root, Theodore Roosevelt's Secretary of War, was the real creator of the Army War College and of the fine building that housed it from 1907 until the National War College took over in 1946. The lobby has a plaque telling the story:

"Because of the special interest of Elihu Root, Secretary of War, creator of the General Staff of the Army, this building for the Army War College was authorized by acts of Congress approved June 30, 1902, and April 23, 1904. Cornerstone laid February 21, 1903, building occupied June 30, 1907."

The building stands at the south end of the parade ground at Fort McNair, formerly Fort Humphreys. It is on a peninusula at the junction of the Anacostia and Potomac Rivers. The fort is the home of the Army Band and is used for training of officers and men who guard the Washington area and participate in ceremonial functions. There are homes for faculty members on the fort but students live in their own or rented homes in various parts of Washington.

One of the oldest buildings on the fort—a red brick house near the center of the parade ground—was the scene of the trial of the Lincoln conspirators. Mary Surratt and three others were hanged in the yard of this house, then a military prison, on July 9, 1865. The body of John Wilkes Booth was brought here and buried under one of the cells until removed to Baltimore.

The need for "a governmental school of foreign affairs for civilians in government which would develop men and women capable of insuring civilian domination in the conduct of our foreign relations," has been stressed by many people, among them John J. McCloy, now chairman of the Chase National Bank, former Assistant Secretary of War and High Commissioner to Germany. "Some form of institutional training should be edvised to stimulate the qualities needed by our Foreign Service officers," Mr. McCloy has said. "The breadth of thinking in political matters at the National War College is impressive. But the State Department ought to have a similar institution where the primary emphasis is civilian and to which the future generals may repair to receive training in political and economic studies."

Great Britain established its war college nearly 2 decades before the United States did. The Imperial Defense College, started in 1927, is the prototype of the National War College and of similar institutions on the continent and in Canada.

Another proposal has come from Eugene Zuckert, former member of the Atomic Energy Commission, who has drawn an extensive plan for a National Administrative College similar to Britain's Administrative Staff College at Henley-on-Thames. Mr. Zuckert wants an institution near Washington "for improving the management of our large Federal Government by improving its managers and potential managers."

To this institution he would send top-level civil servants below the rank of Presidential appointment, military men of general and flag rank, a few Members of Congress and a group of businessmen who might be called on for Government service in an emergency.

The gravest shortcoming at present in the view of many Washington officials and of the Wriston committee which studied the State Department for President Eisenhower, is in the training of Foreign Service officers. As former Under Secretary of State Walter Bedell Smith said, the training of special aptitudes for the Foreign Service, such as languages, has "reached a sort of all-time low," and the service in general is "a little below rock bottom."

An improved Foreign Service Institute, which gives technical training on the level of the Armed Forces tactical colleges, and a new higher institution on the model of the National War College would improve morale and help prepare civilian leaders for the long cold war that seems to face the Nation.

The National War College has pioneered in this field.

It has given 130 men a year an opportunity to study and think about the policies which our peace and security demand.

Miss Ouida Pattison, Public-School Teacher

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. THURMOND. Mr. President, many of our public-school teachers across the Nation are making outstanding contributions in the field of education. Too often, however, their deeds go unrecorded and without the proper recognition. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Edgefield Advertiser, of Edgefield, S. C., dated April 6, 1955, praising one of these deserving teachers, Miss Ouida Pattison. Miss Pattison, with her diligent work and untiring devotion, is rendering an outstanding service for her community in the field of musical education.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TINY, TALENTED MISS OUIDA TAKES THE BOWS OF EDGEFIELD PEOPLE

Miss Ouida Pattison is deservingly taking the bows of the people of Edgefield for the performance of superb merit last Friday evening at the Edgefield High School auditorium.

Tiny Miss Ouida, without what most of us consider, in this stepped-up age, the indispensable automobile, and without what by any measure would be called rewarding compensation, but with diligence and courage and devotion, with a wonderful ambition for her pupils, with love for her community, and a very deep appreciation of her subject, goes and comes from school to home, early and late.

Miss Ouida works very hard and imparts to her pupils that determined quality so necessary in the career of music.

She pursues advanced studies regularly in the country's most noted schools of music, and this section is most fortunate to have one of her outstanding attributes connected with its public-school system.

A wonderful well done, Miss Ouida.

City of Los Angeles Asks Congress To Provide Legislation That United States Government Pay Assessments Levied Against United States Property in Connection With Local Improvements

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to the attention of you and all by other distinguished colleagues the text of a letter and resolution received by me from the city of Los Angeles. A small portion of the great 23d District, which I represent this my ninth year in this great legislative body, extends over into the city limits of this great city of Los Angeles. In fact, it extends to within about 20 blocks of the city hall of that great city.

The text follows:

CITY OF LOS ANGELES, CALIF.,
April 12, 1955.

Representative CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR SIR: At the meeting of the Council of the City of Los Angeles held April 12, 1955, resolution was adopted that the Senators and Representatives of the State of California again be requested to initiate Federal legislation to provide that the United States Government will assume and pay assessments levied against United States property in connection with local improvements.

A certified copy of said resolution is enclosed for your information.

Yours very truly,
WALTER C. PETERSON,
City Clerk.
By A. M. MORRIS,
Assistant City Clerk.

RESOLUTION

Whereas the United States Government refuses to pay assessments levied against property owned by it in connection with local improvements made adjacent to said United States property, and

Whereas by the Federal Government refusing to contribute its share of the cost of said local improvements, an undue burden is placed upon the remaining private property in the improvement district: Now, therefore, be it

Resolved, That the Senators and Representatives of the State of California again be requested to initiate Federal legislation to provide that the United States Governmen assume and pay assessments levied against United States property in connection with local improvements.

Pro and Con of Proposed Bricker Amendment

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1955

Mr. JOHNSON of California. Mr. Speaker I note that Senator BRICKER is again proposing a constitutional amendment which might affect the matter of treaties, executive agreements, reciprocal trade agreements, and in fact any dealings we might have with foreign countries, no matter what their purpose or intent might be.

The Commonwealth Club, of California, is an organization that studies controversial governmental problems, including national as well as State and local problems. It not only studies these problems, but it takes a stand on the problem by a vote of its membership.

Under leave granted to me, I shall include certain statements which might be helpful to Members in trying to decide what to do about the Bricker amendment should it be submitted to the House after passage by the Senate.

The first comment is an introductory statement of the general problem the proposed amendment poses. It was written by the editor of the Commonwealth, the official publication of the club. It follows:

BRICKER AMENDMENT: PRO AND CON

Has the power of the President over foreign affairs so expanded that some constitutional curb is today needed? Is there danger that domestic law in this country will be radically changed by international agreement without the approval of the people's elected representatives? Are the actions and proposals of our new world organization—the United Nations—and its sub-groups threatening the American Bill of Rights? Does the development of the U. N., something our Founding Fathers of course could not foresee, warrant a new look at the protections they endeavored to write into our Constitution?

These are perhaps the questions on which the campaign for the Bricker Amendment is based—issues on which proponents and opponents of the amendment are certainly in diametric disagreement. Other questions, too, are asked: Are these chimeras, rather than real dangers? Would the Bricker amendment alter the checks and balances fundamental in our Constitution? Would its provisions prove troublesome in conducting international relations?

To examine these great questions and correlative issues, the international relations section of the Commonwealth Club of California, under the distinguished leadership of the Honorable Addison E. Southard—lifetime diplomat and former Minister to Ethiopia—some 18 months ago opened a series of meetings in which foremost exponents of both sides were heard. The section's thoroughgoing report from all sides was presented to the club's report meeting of January 19, 1955. With the arguments pro and con presented to that meeting as condensed by the editors, the report appears in the following pages. We urge that every member read both sides at once, for a club vote will be taken almost immediately.—THE EDITOR.

THE CASE FOR THE BRICKER AMENDMENT

(By Edward A. Hogan, Jr., vice dean, Hastings College of Law)

The United States Constitution is called a flexible document. Its purpose is to secure the fundamental rights of American citizens. To better carry out the purposes for which it was framed, its authors provided for change. Thus it becomes necessary, from time to time, to reexamine the Constitution to determine the need for amendment. The record of 165 years of existence discloses 22 amendments. One principal reason for amendment has become obvious. The general and beautiful language of the Constitution is not always adequate to protect, in times of crisis, the fundamental rights of Amercans.

The Bill of Rights, the first 10 amendments, was adopted when the fresh strength of the Federal Government was newly asserted. The 13th and 14th amendments, outlawing slavery and more specifically defining due process, followed the war in which certain States engaged in a contest of strength with the Federal Government. The 22d amendment recently was adopted so that no future crisis could demand that an American president serve in that exacting office for more than 2 normal terms.

The recent demand for precise language in the Constitution which limits the tenure of office of the President may indicate that Americans believe that more precise limits should be placed on the President in his conduct of foreign affairs. Today's thinking puts more emphasis on the language of the Constitution than it does on its underlying and unrevealed spirit.

Even the opponents of the Bricker amendment acknowledge the existence of an undercurrent of feeling that the language of the Constitution is too general for present world conditions. Arthur Dean, in a splendid article in the 1954 Stanford Law Review, although an opponent, recognizes three causes for popular dissatisfaction with the present state of the Federal Constitution on the subject of treaties: (1) The change in international affairs, even in so short a period as the last 25 years. Scientific assaults on time and space have diminished the size of the world and increased the importance of the United States. The United States is now a member of 75 different international organizations and an even greater number of councils and commissions which emerge from these organizations. (2) The broadened use of the executive agreement on such subjects as the Yalta Pact, among others, has raised a question of the adequacy of the restraints which the American system of Government imposes upon the President. (3) Developments within, and proposals arising out of, the United Nations suggest the possibility that foreign methods of government, particularly in judicial activity, will replace traditional American practices.

DEMAND FOR CHANGE

The broad question, therefore, is: Should our Federal Constitution limit more specifically the power of the President in international relations? The term "Bricker amendment" is a symbol of the demand for a

change. In this discussion there will be omitted any reference to the language difficulties related to the proposed amendment because the many revisions of Senators KNOWLAND, GEORGE, and others will ultimately result in verbiage appropriate to their thinking.

The three proposed more specific limitations to be placed in the Constitution are these:

1. On a conflict between the provisions of a treaty and the Federal Constitution, the Federal Constitution must prevail.

2. The internal law of the United States will not be altered by treaty, unless appropriate legislative action is taken within the United States.

3. The executive agreement will be subject to the control of Congress as well as the constitutional limitations imposed upon the treaty power.

My task here today is to review briefly those matters which have created a belief that the treaty provisions of the Federal Constitution may not be adequate to safeguard the integrity of other provisions of that Constitution.

IS COMMERCE CLAUSE SUBJECT TO SEIZURE POWER?

My first reference will be to the so-called steel seizure case, *Youngstown Sheet & Tube Co.* v. *Sawyer*. In that case the President of the United States ordered the seizure of strike-threatened steel plants in order that international commitments, to which he believed that he was bound, might be fulfilled. The President chose to disregard existing acts of Congress which appeared to have relevancy to the problem and relied entirely on his powers as Chief Executive for authority to seize. So far as is known, none of the so-called international commitments were formal treaties or implementations of acts of Congress. Through many anxious days, Americans awaited the opinion of the courts of the United States as to the authority of the President to solve, by international agreement, a problem of labor relations in interstate commerce. The Constitution in article I, section 8, has expressely placed the commerce power in Congress. The majority of the Supreme Court called the Presidential order an unconstitutional order but the vigor of the dissent leaves a possibility that the case could well have been decided the other way. The case does not answer the question whether the President would have been acting constitutionally if a formal treaty was the source of his international commitment. It is still possible that the commerce clause may be subject to and be subordinated to the treaty power.

AGRICULTURAL ACT OVERRULED BY EXECUTIVE AGREEMENT

There is before the Supreme Court at this very moment a case which involves the right of the President, by executive agreement, to disregard the Agricultural Act of 1948 in regard to the importation of potatoes from Canada. The President, in disregard of the provisions of the Agricultural Act, authorized the importation of seed potatoes from Canada. The question before the Supreme Court is whether a court of appeals is correct in its ruling that the President acted unconstitutionally. The omission from the Federal Constitution of express language on executive agreements leaves in doubt the meaning of acts of Congress, enacted under their constitutional powers.

During the prohibition era, President Coolidge exempted British vessels from the rigors of the 18th amendment through a treaty with Great Britain, the effect of which was to permit those vessels to carry liquor stores, under seal, into United States ports, American merchantmen hurt by this type of competition, tried in vain to litigate the constitutionality of this treaty. Perhaps more specific language on the treaty power would have left unimpaired the express language of the 18th amendment.

DIFFERENCE BETWEEN TREATY AND AGREEMENT

The difference between a treaty and an executive agreement appears to be less wide as a result of judicial decisions of recent years. The Senate once was known as the graveyard of treaties when all important international agreements were submitted to that body for approval. But a change of practice by the President, following important judicial decisions, has transferred out of the Senate much of its power to commit international agreements to the graveyard. Today most international agreements are produced by Executive agreement. The U. S. News & World Report for February 5, 1954, has a chart which shows the change of practice. In the 150 years between 1789–39 there were 800 treaties and 1,200 published executive agreements. In the 15-year period from 1939 to 1954 there have been 200 treaties and 1,400 executive agreements. Secretary of State Dulles is credited with a statement that unpublished executive agreements since World War II have run into thousands. In the light of this changed practice and increased involvement in international affairs, including secret agreements, those sympathetic to the Bricker point of view are asking for a revision of the constitutional provisions on treaties.

NEW YORK LAWS OVERRULED

The law on executive agreements has developed suddenly in a way most favorable to unrestrained executive action. In *United States* v. *Pink*, the Supreme Court approved an executive agreement with Soviet Russia by which the assets of a privately owned Russian insurance company were recognized as collectively owned—contrary to the law of the State of New York as found by the New York Court of Appeals which had been declared to forbid an expropriation of private property by a decree of a foreign government. The power of the President, by executive agreement alone, to make applicable the treaty provision of article VI, or the supremacy clause of the Constitution, was thus established.

NO SEPARATION OF POWERS IN FOREIGN AFFAIRS

The view of the Supreme Court in the Curtiss-Wright case that the President, in international relations, is as free of the effects of the doctrine of separation of powers as was the King of England at the time of the American Revolution, must offer great encouragement to a strong executive but arouses the fears of lawyers who subscribe to the constitutional theory of a government with checks and balances. These lawyers seek, through the use of more precise language in the Constitution, to restore or establish, as the case may be, some checks on the President in international relations.

Judicial language, not necessarily majority opinion in State court decisions, has plainly indicated that the treaty power may be used to eliminate alien land laws, restrictive covenants, restraints on miscegenous marriages, succession to property by alien heirs, admission to the professions which had hitherto been reserved to citizens and other so-called social advances which would never be granted by local legislatures. The legislature of California on June 4, 1951, requested the United States Senate to propose an amendment to the Federal Constitution in view of what it supposed was a threat to its alien land law through the treaty power.

WILL U. N. ADHERENCE CAUSE FREEDOM OF SPEECH SUSPENSION?

Our adherence to the United Nations may cause, although the state of the existing treaties does not require it:

1. a suspension of the guarantee of the first amendment to the Constitution through the Covenant on Human Rights in that the covenant provides for restrictions on freedom of speech, press, and assembly as are necessary to protect public safety, which may turn into a form of peacetime censorship;

2. through the Genocide Convention, by establishment of an International Criminal Court, the guarantees of the fourth, fifth, and sixth amendments may be suspended by provisions of the convention which eliminate trial by jury, trial in the vicinage and may well eliminate the provisions against unreasonable search and seizure, confrontation of witnesses and assistance of counsel;

3. through treaties or agreement similar to the Migratory Bird Treaty, an invasion of rights reserved to the States under the 10th amendment. Although the effect of the Migratory Bird Treaty is to give jurisdiction to the Congress when the Constitution has not done so, the principles of the Federal Constitution may be as much subverted by a transfer of power to the Congress, when the power was not meant to be there, as when similar power is transferred to an international organization;

4. more formal agreements than those which the President made at the time of Korea may threaten the provisions of the fifth amendment on the taking of property without due process of law as Chief Justice Vinson and two associates were prepared to say to the steel industry in *Youngstown Sheet & Tube Co.* v. *Sawyer*.

The changed condition of the world in the past quarter century, the judicial opinions so favorable to the use of the executive agreement in international affairs, the development of the United Nations and related international organizations, the doubt that exists as to whether express provisions of the Federal Constitution may be canceled through international commitments, the doubt as to whether State rights are as secure as they were before the decision in *United States* v. *Pink* made the rule that the supremacy clause applies to executive agreements—are a few of the reasons why the principles of the Bricker amendment are entitled to your serious consideration.

THE CASE AGAINST THE BRICKER AMENDMENT

(By Prof. Joseph Walter Bingham, professor of law, emeritus, Stanford University)

Although the argument on the Bricker amendment is essentially political, the real question is juristic and should be free from politics.

I sympathize with many of the distressful feelings of Bricker amendment proponents for what has gone on in government in the last 25 years, but I do not believe you can curb the political tendencies of the American people by writing nuisance clauses into the Constitution.

PROHIBITION SHOULD HAVE TAUGHT US BRICKER FOLLY

The old American tradition that if you don't like a thing, you solve it by passing a law against it, is thoroughly unsound. We had a recent experience of that sort. We wrote into the Constitution a provision against the traditional habits of the American people in consumption of intoxicating liquors. That experience should have taught us that any such attempt as that being made by Bricker amendment advocates to write their views of political policy into the Constitution, is bound to be mischievous.

There is a very small percentage of professional advocates of the Bricker amendment who are both honest and have a measure of competence on the subject. Almost all the men who know this field, who have worked in it for their professional lives, are centered in associations like the Inter-American Bar Association, the American Society of International Law, the International Law Association, and similar organizations in New York City, in Washington, and the professional teachers of the subject throughout

the universities of America. Not more than 10 percent of those men are not earnest opponents of the amendment, a fact assiduously concealed in the propaganda.

What I say does not apply to such men as Dean Hogan but to the kind of argument as expressed in the story of the Bricker amendment by Frank E. Holman, an ex-president of the American Bar Association, which is the official pamphlet of the organization supporting the Bricker amendment.

PRO-BRICKER ARGUMENTS TERMED LEGALLY INCOMPETENT

I have written a past president of the American Bar Association a letter in which I have said that the Bricker amendment propaganda is a black disgrace to the American legal profession, both because of the legal incompetence displayed in the arguments for it and in the incompetent drafting of the proposed amendment.

There is not a single point in the Bricker amendment proposals that is not unqualifiedly false. I think Dean Hogan has made an argument as free from prejudice as possible, but the cases he brought up have been misconstrued insofar as their application to this argument is concerned.

YALTA WOULD NOT HAVE BEEN AFFECTED

The Yalta agreement is brought forward. If the Bricker amendment had been in the Constitution, the Yalta agreement would not have been affected by it, nor will any similar agreements in the future be affected.

The case of treaty agreements with France and Japan concerning the respective jurisdictions of American military administration and the local courts with respect to our armed personnel are outside the scope of the Bricker amendment. Yet those treaties are offered as cogent reasons for adopting the Bricker amendment.

Without these treaties, France and Japan would not consent to our troops being stationed there. They don't affect the internal law of the United States at all. Yet they're prime arguments advanced for the Bricker amendment.

NO ENCROACHMENT ON STATES' RIGHTS UNDER TREATY POWER

The argument has been made that, by recent decisions, there has been an encroachment under the treaty power on States' rights, as preserved by the Constitution. That is an unqualified falsehood.

In the Constitution, as framed and intended by the founders, exclusive jurisdiction over foreign affairs was handed to the Federal Government and expressly denied to the States. And the prime purpose of the clause in article 6 respecting the "supreme law of the land" was to do exactly what the Bricker amendment people say is contrary to the original intent of the founders—that is, to make treaty law supreme and effective against State law in the range of international affairs over which the Federal Government has supreme and exclusive control. If you read the clause, that is quite evident. It provides:

"This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

SALIENT PART OF CLAUSE OMITTED

The purpose of that provision is careful omitted by Bricker amendment advocates. To give a false impression they omit the salient part of it which reads, "and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

Obviously, the purpose of that clause was not to put the Constitution and congressional acts and treaties on an equal basis. It was to put all forms of Federal legislation, especially in the international field, supreme over conflicting State laws and judicial decisions.

Anyone can read that and see it. Still it is denied by Bricker amendment advocates.

There is nothing more reprehensibe professionally than that grabling of article 6 in the arguments for the amendment. Any lawyer who acted that way in a case in court would be called to account at once, and if he repeated it, would be guilty of contempt of court, and if he made a habit of doing it, movements for his disbarment would be at once in order, on the ground either of professional incapacity or dishonesty in conduct of his profession.

CIVIL WAR DECIDED ISSUE

Not only have advocates of the amendment gone so far as to cut off the last part of the provision in their arguments, but they also in some instances quote only that "treaties are the supreme law of the land," thereby closing up their argument that treaties are superior to the Constitution.

We had a Civil War over the question of superiority of the national Government as against the States and the decision was directly against some of the arguments of Bricker amendment advocates.

They also complain that treaties become internal law without the consent of the House of Representatives. It is only the self-operating parts of treaties that are internal law. Furthermore, a treaty requires the assent of two-thirds of the Senators present. If you can get two-thirds of the Senate in favor of a contested treaty, it will be a rare case when the House would be unwilling by a majority to support the treaty. Almost all important treaties require congressional implementation. The House of Representatives has to appropriate money or take some other action. Any treaty may be overruled by congressional legislation. If a treaty is objectionable, a maximum of 6 years will suffice to carry the question to the people and get a Congress and an administration to nullify the treaty.

Nevertheless, I am in accord with Bricker proponents to this extent. I think it would be a great improvement if we required for confirmation of a treaty a majority of the Members of each House of Congress. That would get rid of the argument that treaties may make internal law without the consent of the House of Representatives.

Resolution of City of Manchester, N. H.

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a resolution memorializing the Congress of the United States to vigorously oppose restrictions regulating the importation of residual fuel oil and crude petroleum into the United States, which was passed to be enrolled by the Board of Mayor and Aldermen of Manchester, N. H., on March 15, 1955:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO VIGOROUSLY OPPOSE RESTRICTIONS REGULATING THE IMPORTATION OF RESIDUAL FUEL OIL AND CRUDE PETROLEUM INTO THE UNITED STATES

Resolved by the Board of Mayor and Aldermen of the City of Manchester as follows:

"Whereas the restriction of importation of residual fuel oil and crude petroleum would work to the disadvantage of the city of Manchester and the State of New Hampshire, both by increasing the cost of fuel oil for industrial purposes, besides causing injury to nations which are a good customer for New Hampshire products; and

"Whereas domestic refining processes are providing a decreasing supply of residual fuel oil: Now, therefore, be it

"*Resolved*, That the Board of Mayor and Aldermen of the City of Manchester wish to be recorded as opposing vigorously any proposal to freeze at present levies the importation of residual fuel oil and crude petroleum or any other action which would tend to limit the supply of or increase the cost of fuel for Manchester, N. H.; and be it further

"*Resolved*, That the city clerk be, and he is hereby, directed to forward a copy of this resolution to the members of the New Hampshire delegation in the Congress of the United States.

"*Resolved*, That this resolution shall take effect upon its passage."

JOSAPHAT T. BENOIT,
Mayor.

Relief From Active Duty of Reserve Officers

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "ROA Asks Burgess To Delay Reserve Officer Forceouts," published in the Army Times of April 2, 1955. The article deals with the relief from active duty of Reserve officers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROA ASKS BURGESS TO DELAY RESERVE OFFICER FORCEOUTS

(By Steve Tillman)

WASHINGTON.—Deeply concerned about the steady drop in morale of Reserve officers being relieved from active duty, and about their uncertain status, Col. C. M. "Count" Boyer, of the Reserve Officers Asociation, has written Defense Assistant Secretary Carter L. Burgess asking that the scheduled release of officers by April 30 be held up pending reconsideration of the problem. These officers are scheduled to be dropped if they are 55, for lieutenant colonels or below, and 58 for colonels. They also will go if they cannot make retirement under title II of Public Law 810. This calls for 20 years' active duty, 10 years of which must have been served on active duty as a commissioned officer.

Some of the officers have been relieved from active duty within a few months of qualifying for retirement. The Reserve Officers Association letter is in protest against this callous treatment.

Colonel Boyer told Secretary Burgess that his organization was not asking that mediocre officers—Regular or Reserve—be retained on active duty. But if it takes the Army 19 years and some months to find out that any specific individual is mediocre, and that officer has only a few months to go to retirement, there is certainly something radically wrong with the Army's handling of its officer personnel.

Boyer also pointed out that the matter of the readjustment pay for involuntarily separated officers has been under study by the Department of Defense since last June.

"But as of this date," he said, "this bill has not been introduced in the Congress and it is doubtful whether we will be able to get it on the statute books before the April 30 deadline.

"The proposed readjustment bill however does not relieve the Army, or the other services from their responsibility when they take 12 to 17 of the best years of a man's life and then arbitrarily relieve him from active duty at an age when it is very difficult for him to reestablish himself in the civilian economy."

SOME ARE STAYING

A reevaluation of the records of 260 Army Reserve officers scheduled to be dropped April 30 has resulted in 50 of these officers being scheduled for retention.

It is whispered at the Pentagon that the others actually will be dropped because they do not measure up to the standards expected of an officer. To be polite about it, Army will say that the elimination is due to other reasons.

CONGRESS KNOWS

The policy of the Army in dropping Reserve officers from active duty after as much as 17 years of active duty or when they are within a few months of completing the required 10 years' active duty—has not passed unnoticed by powerful Members of the Senate and House.

The officer being eliminated could be within a few months of eligibility to retirement, say as a lieutenant colonel.

Because of his elimination he must wait until he has completed either 20 years' active duty and 10 additional years in the Reserve, or a total of 30 years of active duty, and then be advanced on the retired list to the officer grade that he held prior to June 1946. This probably would be in the grade of captain.

One result of this policy is that Members of Congress are giving serious consideration to amending title III of Public Law 810 to provide immediate retirement for most of these officers.

The present law requires that the officer be 60 years of age before he can qualify for Reserve retirement. The proposal under discussion would lower the age to 55 for all officers involuntarily separated from active duty or from the Ready Reserve.

In discussing the proposal, Senator LISTER HILL, Democrat, Alabama, one of the more powerful Members of the Senate, told me that he was "deeply interested in seeing reservists accorded equitable consideration in regard to retirement provisions," and that he is going to discuss the matter with Senator RICHARD RUSSELL, Democrat, Georgia, and other members of the Senate Armed Services Committee.

Senator HILL added that he was "advised that the Armed Services Committee continually seeks to study the effects of the retirement law' and that he would, in this connection, 'urge the committee's earnest consideration of the proposed amendments.'

Developments in the Nation

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. CURTIS. Mr. President, a few days ago I received from a constituent a most interesting letter which might well be termed an essay on self-reliance. I should like to offer to my colleagues an opportunity to study this thought-provoking message. Therefore, I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EDGAR, NEBR., *April 2, 1955.*

SENATOR CARL CURTIS: I am an American. How I wish I could have written that as proudly as I proclaimed it to all and sundry in bygone days. I was born in Dawson County, Nebr., on March 15, 1893. My parents were sturdy, free, and independent pioneers who taught me things which youngsters are apparently no longer taught.

At the age of 15 (5 feet 11 and 168 pounds) I went to Enid, Okla., and followed the grain harvest and threshing through to Canada. I worked, as did all the harvest followers, 10 to 14 hours a day for wages ranging from $1.50 to $2.50 per day. It was hard work. Perhaps you have tromped a header barge, shocked barley, or pitched bouquets of wheat at the sun. But what did we care? We were eating fried chicken, etc., doing all right for ourselves and helping to make a great Nation greater.

Not one man in hundreds of us but would have gladly dropped his pitchfork to shoulder a gun for his country if need arose. He would have done it without a draft and for $15 a month—nor would he have expected his country to transport his family to wherever he was sent and supply their needs also. Had the United States become entangled in war with hell, he would have carried Old Glory into the nether regions to plant it on the smoking slag—knowing that if he fell one of his comrades would have finished the job.

Moreover, Senator, every man would have gone into the campaign confident that if he was captured and held in a satanic prison as a hostage after hostilities ended the President would have promptly sent an ultimatum, "Pvt. John Doe alive or Lucifer dead." And the ultimatum would have been delivered by sufficient of his country's might to enforce it. But that was then.

In those days, Senator, labor was not considered degrading. The hired man might—and frequently did—marry the daughter of his boss. We made, each for himself, an agreement with the boss and lived up to it. We hired to do what the boss wanted done—not to run his business. We did not join organizations dedicated to that end. This was because every one of us knew that he could, if he so desired, become a boss by the simple method of working and saving. If you doubt this, check up on what we migratory workers did to the IWW bums who tried to sabotage our jobs in the Dakotas.

We believed in strikes, certainly. One-man strikes. If you don't like your job, quit—and let any man who wants it have it. If you don't like working for somebody else, save your money and go into farming or some other business for yourself. Of course, Senator, in those days the Government did not grab a large portion of our wages for income and other taxes and social security. We secured our own futures—or thought we did. More later about that. Now back to the harvest trek.

I returned from the harvests in October. I had left Nebraska without baggage and with $3 in pocket. I came home with a new blue serge suit ($12.50 in Minneapolis), a bull hide suitcase, and $219. I was affluent. Mind you, that money was all mine. I could do as I pleased with it and need not make out forms in triplicate concerning how I earned it or what I did with it. I was getting along toward becoming a boss.

I strutted my stuff around home for a fortnight. Then, like thousands of others, I went out to husk corn. That year we were paid 2 cents a bushel and board. Days were short in cornpicking time. The boss never had to wake us up; we awakened him. We frequently got to the field with 5 or 10 minutes to wait until it was light enough that we could find the ears. We scooped off our final load of each day by lantern light. Nuts to 8-hour days and 5-day weeks. There was corn to get into the crib before snow buried the field. We got it in. We worked hard. We played hard. Did you ever drive 20 miles to a dance and get home the next morning just in time to put your buggy horse away and hitch up your work team to the husking wagon before you went to breakfast?

But we were free men—independent men—engaged in private enterprise. We sought charity from nobody—and would have spurned it if offered. No burdensome or unjust taxes were imposed upon us. Congress would not have dared. Government began where it should—at home with the town and township boards. Those fellows were our neighbors. We knew how to quiet them down when they needed quieting.

I could elaborate further, but it would not be news to the majority in Congress. However, Senator, mine eyes have seen the glory. So have yours. If I have any hope of ever seeing it again, that hope is exceedingly dim. What became of the glory? Who destroyed it? I think you Members of Congress know. If you don't, ask me for details.

I shall devote the rest of this to what mine eyes see now. In the land of which I was once so proud, I see millions of once sturdily independent men and women reduced to a state of bewildered and involuntary dependence. These people range in age from the 60's to the 90's. The dollars they earned at the rate of two or less by long days of hard work and put away in amounts that should have assured them comfort and ease in their declining years are gone. Why? Because each of those dollars has long since become worth 20 cents or less.

Do not answer that with statistics, Senator. You must know that a statistician can be as big a liar as any other man or woman—especially when his fat job depends upon providing figures to please bureaucrats and professional politicians. Here are facts. During my teens and early 20's, I could buy for one thin dime the pound ring of baloney that now costs 57 cents. A box of crackers which now costs 30 cents was then priced at a nickel. My father, now 86, has the first dollar he ever earned. He had better have spent it when it would have bought a pair of overalls and a work shirt. Or it would have then bought 20 pounds of pork ribs or a dozen nice hens.

If you doubt my word on this, Senator, I will direct you to newspaper files for verification. The point is that these people have been betrayed into penury and dependence by their Government. What are you gentlemen going to do about that? Don't answer, Senator. We are pretty sure we know.

What else do my sad eyes see, Senator? I behold a land in which the old axiom of every tub on its own bottom has been forgotten. I see a people trained by bureaucrats and politicians to believe that they are entitled to—and can—expect to live off the Government. Have they forgotten who is the Government? If we all live off the Government, who is going to supply the funds—and who is going to produce something to be bought with those mythical funds? Let all who believe this theory have a lusty try at lifting themselves by their bootstraps.

I could go on at length, Senator, but if what I have written thus far does not cause some of you in whom we have placed our trust to think our gray matter is ossified any further effort would be useless.

Hopefully,

SVEN ANDERTON.

Resolutions Passed by the Wisconsin Society, Daughters of the American Revolution, 59th State Conference

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a series of resolutions adopted by the Wisconsin Society of the Daughters of the American Revolution at its 59th State Conference in Milwaukee, Wis., on March 24, 25 and 26:

Resolutions passed by the Wisconsin Society, Daughters of the American Revolution, 59th State Conference, Milwaukee, Wis., March 24–26, 1955:

BRICKER AMENDMENT

Whereas the Constitution and the Bill of Rights are the highest peak of human accomplishment in mankind's struggle for freedom; and

Whereas treaties and executive agreements may override the Constitution and cut across the freedoms guaranteed by the Constitution and Bill of Rights; and

Whereas unlimited treaty power poses a continuing threat to the Constitution, this threat having been recently augmented by the fact that four Justices of the Supreme Court of the United States actually held that the U. N. Charter—a ratified treaty—supersedes our Constitution: Therefore be it

Resolved, that the Wisconsin Society, Daughters of the American Revolution, in convention assembled, reaffirm its previous support of the Bricker amendment (S. J. Res. 1) and petition the Wisconsin State Legislature to submit a resolution recommending to the Congress of the United States the adoption of this legislation.

REVISION OF THE U. N. CHARTER

Whereas revision of the United Nations Charter is presently under consideration; and

Whereas efforts are being made, through suggested amendments, to convert the United Nations into a world government from which there would be no escape; and

Whereas the United Nations Charter cannot be amended without the consent of the United States so long as the veto power is retained: Be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, opposes surrender of the veto power in the United Nations, and reaffirms its previous opposition to any revisions or amendments which will enable the U. N. organization to usurp any part of the individual sovereignty of member nations or lead to any form of world government.

NATO STATUS OF FORCES TREATY

Whereas the NATO Status of Forces Treaty to which the Senate of the United States gave its advice and consent on July 15, 1953, deprives American servicemen and their dependents when stationed abroad of the rights guaranteed them by the Constitution and the laws of the United States; and

Whereas our boys in uniform, many of whom have been drafted and are stationed without their consent in approximately 40 foreign countries for the first time in American history are subjected to criminal procedures, punishment and penal conditions radically different from those provided for in the Uniform Code of Military Justice and thus are stripped of the protection of the Bill of Rights; and

Whereas on the same date, July 15, 1953, the Senate of the United States advised and consented to two treaties granting sweeping immunities and privileges to foreign diplomatic personnel and experts assigned to NATO and to its military headquarters: Therefore be it

Resolved, That the Wisconsin State Society of the Daughters of the American Revolution, in convention assembled, do again earnestly petition the Members of Congress to rescind this treaty provision.

AMERICAN CAPTIVES IN RED CHINA

Whereas an unknown number of American servicemen are being held captive in Red China; and

Whereas any individual who enters the Armed Forces and is willing to make the supreme sacrifice should be enttiled to the full protection his country is able to give: Be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, urge Congress to take all possible steps to procure the release of these servicemen.

RED CHINA AND THE UNITED NATIONS

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, reiterate their unalterable opposition to the recognition of Red China by the United States, and to the admission of Red China to the United Nations; and be it further

Resolved, That if Red China is seated in the United Nations, we urge that serious consideration be given to the withdrawal of the United States from the United Nations organization.

SUBVERSIVE ACTIVITIES LEGISLATION

Whereas the National Society, Daughters of the American Revolution, recommends promotion and passage of antisubversive legislation at a State level; and

Whereas Wisconsin as a State government does not have an agency which legally can collect facts and prosecute subversives; and

Whereas the State Assembly Judiciary has introduced bills to create a permanent committee to investigate subversive activities: Be it

Resolved, That the Wisconsin Society, Daughters of the Revolution, in convention assembled, urge the State legislators to pass suitable legislation to control subversive activities in Wisconsin.

M'CARRAN-WALTER IMMIGRATION ACT

Whereas as a result of 3 years of intensive study and hearings, in which the visa and passport divisions of the State Department, and the Department of Justice participated, the McCarran-Walter Immigration Act became the law of the land December 24, 1952; and

Whereas a campaign has been organized to misinterpret this law in an improper, and even false manner toward the end that it be literally destroyed: Be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, reaffirm their approval of Public Law 414 and urge Congress and all patriotic Americans to resist any change, weakening amendments, or private bills which would destroy its effectiveness.

GATT

Whereas under the Constitution, Congress is charged with the responsibility of regulating tariffs; and

Whereas the General Agreement on Tariffs and Trade, an international organization known as GATT, allows for the review, revision, and exploitation of United States tariff laws and policies, thus giving foreign powers the right to indirectly regulate our industries; and

Whereas the avowed objectives of such international organizations are to divide the resources of the world among all people, which policy would ultimately impoverish this Nation: Therefore be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, urge the Congress of the United States to enact legislation which will prevent this country from participating in multilateral trade agreements within the framework of GATT or any similar international organization.

ATLANTIC UNION

Whereas there is a formidable body of opinion which supports the contention that the North Atlantic Treaty, to which the United States is a party, now authorizes NATO to merge the economic, defense, and foreign policy of the United States with the other countries of NATO, and

Whereas on February 9, 1955, Senate concurrent Resolution 12 was introduced into the Senate favoring Atlantic Union, and calling upon the President to call a convention of the member nations of NATO for the purpose of exploring the possibilities of uniting the countries of NATO "federally or otherwise," and

Whereas, there is no veto power in the North Atlantic Treaty, and the creation of a super Atlantic Community Agency to merge the economic, defense, and foreign policies of the United States with other countries would be a surrender of our sovereignty and would destroy our Constitution: Be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, reaffirms its previously stated opposition to Atlantic Union.

UNIVERSAL MILITARY TRAINING

Whereas the as yet unimplemented Universal Military Training and Service Act calls for peacetime conscription of American youth for national military or civilian service as the President may prescribe; and

Whereas this act will destroy the militia and National Guard which are protective forces of the individual States as provided for in our Constitution and our Bill of Rights; and

Whereas such conscription tends to regiment, not only the bodies but the minds of our youth; and

Whereas by giving the President such exceptional powers, we are opening the door to possible military dictatorship: Now, therefore, be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, go on record as opposing the furtherance of the Universal Military Training and Service Act.

FOUNDATIONS

Whereas the excellent work of the Reese committee has brought to light the questionable uses to which the funds of some large American tax-exempt foundations are being directed into fields of world government and the promotion of collectivism: Be it

Resolved, That the Wisconsin State Society, Daughters of the American Revolution, go on record as commending the work of the Reese committee and urge that the findings of this committee be used as a basis for legislation to encourage these organizations to promote our American way of life.

MOTION PICTURES

Resolved, That the Wisconsin Society, Daughters of the American Revolution, go on record to urge the motion-picture industry to produce more films containing true and accurate historical and patriotic backgrounds to the end that the American people be better informed regarding our past history and that loyalty to our country be further stimulated.

CONSTITUTION DAY

Whereas observance of September 17 as Constitution Day was abolished during the Truman administration, and the name changed to Citizenship Day, and

Whereas this action tends to minimize the importance of the Constitution of the United States in the minds of the American people, and to emphasize the citizenship idea, which falls into the world citizen plan of propaganda; be it

Resolved, That the Wisconsin Society, Daughters of the American Revolution, in convention assembled, petition the United States Congress to restore the name of Constitution Day to the date of September 17, that all Americans, on this anniversary, may rededicate themselves to the basic principles of this great document.

Respectfully submitted.

Mrs. FREDERICK BRAUN,
Antigo, Wis.
Mrs. JAMES BRAY,
Sheboygan, Wis.
Mrs. HOBART OLSON,
Milwaukee, Wis.
Mrs. MILTON SHOEMANER,

Chairman, Kohler, Wis.

A Living Lincoln

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address delivered by Dr. Robert L. Kincaid, president of Lincoln Memorial University, Harrogate, Tenn., before the Lincoln Group of Washington, D. C., Lincoln Museum, Ford Theater, April 17, 1955.

This splendid presentation on the beginning of a great institution of learning in the South is worthy of consideration and reading by every Member of Congress. This fine school offers an opportunity to the young men and women of the area to obtain an education which might not otherwise be possible.

I commend the reading of this fine address to all of my colleagues:

A LIVING LINCOLN

(Address by Dr. Robert L. Kincaid, president, Lincoln Memorial University, Harrogate, Tenn., before Lincoln Group of Washington, D. C., Lincoln Museum, Ford Theater, April 17, 1955)

Ninety years ago, April 15, 1865, at 7:22 a. m., the earthly life of Abraham Lincoln came to a close across the street from where we are assembled today. All about us are intimate physical reminders of his life and deeds. Because it was in this room where he had his last conscious thoughts, we feel his presence as though he were still in our midst. We accept the reality of his death which took him out of the world, but what he did and thought and felt is projected down the ages. So today as we meet on the 90th anniversary of his passing, we think of him as a living Lincoln whose work will never cease to bless mankind.

Across the centuries Lincoln's fame glows in undimmed splendor. His words lives in the hearts of all who cherish individual freedom and opportunity. His deeds encourage and inspire new generations to further conquests in the emancipation of mankind from the slavery of ignorance, the paralysis of fear, and the thraldom of oppression. His policies and principles are timeless in their application toward the complete attainment of what he called the last best hope of earth.

As a grateful people we have followed the conventional way of preserving the memory of our great leaders. We build temples, cathedrals, shrines, and memorials to capture their deathless spirits. We enshrine them in bronze and marble and sketch their features and deeds upon giant canvasses. We describe their achievements in countless books, erect colossal shafts to them, and give their names to mountains in an effort to provide fitting symbols of their greatness. As Lincoln said at Gettysburg, "it is altogether fitting and proper we should do this."

Our Founding Fathers, trailblazers, and empire builders in the formative years of our Republic have their memorials—Franklin, Washington, Jefferson, and Jackson, to mention only a few of our early statesmen. But now, in the 90 years since Lincoln lived, he leads all the rest in shrines, monuments, and places dedicated to his memory. No other world leader is so affectionately remembered and his words and deeds so devotedly cherished. In the multitude of monuments to Lincoln is the recognition of his true greatness. His influence is worldwide. His name is a symbol of hope and inspiration for all mankind. His credo of liberty and opportunity is spoken in every tongue. His philosophy is based on enduring truth. What he lived for, what he accomplished, what he left to the world have become the heritage of all peoples.

I am told that more people make a pilgrimage to the magnificent Lincoln shrine here in Washington than to any other temple, monument, or shrine in all the world. This is not for worship but for inspiration. No one can walk up the steps of this temple and look upon the silent, brooding, and majestic face of the "man who belongs to the ages" without being stirred with emotions of gratitude and hope and a renewed dedication to the ideals he lived for. So in a similar way we feel the presence of Lincoln wherever we come upon a stone, marble, or plaque which commemorates some event in his life.

Lincoln's path to greatness is well marked with these appropriate memorials. The temple at Hodgenville, Ky., enshrines the little log cabin in which he was born; the Nancy Hanks Memorial Park in Indiana shelters the place where his mother sleeps; the reconstructed village of New Salem, Ill., shows where he walked and talked and studied, developing the common touch and formulating his political ideals and philosophy; the Springfield home portrays how he reared his family, entertained his friends, and lived as any ordinary citizen; and the memorial at the tomb where his body lies is grand in its dignity and simplicity. Each of these memorials is unique and appropriate in its own way. To travel this path from the log cabin in the wilderness where Lincoln was born, "ill-fed, ill-clad, and ill-housed," to this place where he passed from us is to witness the true miracle of America. You encompass it all in this awe-inspiring experience. You can never be the same again. You feel you walked with the living Lincoln and your heart burned within you.

Memorials to Lincoln are not confined to the central points where he worked and lived. Twenty-seven cities and many counties are named for him; a trans-continental highway bears his name; one of the tallest peaks in the Colorado Rockies is Mount Lincoln towering 14,287 feet in the sky; carved in granite at Mount Rushmore, S. Dak., is the message head of Lincoln, along with Washington, Jefferson, and Theodore Roosevelt, the most colossal and enduring monument ever chiselled out by the hand of man. More than 120 statues of Lincoln stand in public places or buildings throughout the Nation and foreign lands. Public and private Lincoln museums and libraries are located in many States, and these are growing daily. Books and pamphlets on Lincoln continue to come from the press, until today there exist more books and material on Lincoln than any other historical figure. If we could estimate all that has been invested to preserve the memory of Lincoln, we would have an incomprehensible figure.

But not all the important monuments to Lincoln are in marble and bronze. There are "living memorials," educational institutions where young people are brought in conscious contact with the spirit of the great humanitarian and emancipator. There is a Lincoln University in Pennsylvania for the education of the Negro; a similar institution in Missouri. There is a junior college for white students in Lincoln, Ill., named for him with his consent shortly before his assassination. Also there is Lincoln Memorial University in the Deep South, at Harrogate, Tenn., which I represent as an alumnus and president. It is about that college, inspired in the heart of Lincoln, I am pleased to speak in more detail.

To begin my story I must go back to September 26, 1863, when President Lincoln had a conference in the White House with a Union general, Oliver Otis Howard. Howard was still a young man, a graduate of Bowdoin College and West Point, but he was already a seasoned veteran, had taken part in many battles, and had lost his right arm at Fair Oaks. He was in command of the 11th Corps of the Army of the Potomac, and had recently been a central figure in the fighting at Gettysburg. Now his corps was being sent to reinforce Grant at Chattanooga. President Lincoln sought a conference with Howard about the situation in the South.

For an hour the two men talked. President Lincoln dwelt at length with the problems facing the Union forces west of the mountains which had recently been placed under the command of General Grant. He spoke warmly of the mountain people of east Tennessee and southeastern Kentucky. It had been his concern since the beginning of the war to give aid and support to the people of this great island of loyalty in the highland South. The President pulled down a roll map on the wall, pointed to Cumberland Gap, where Kentucky, Tennessee and Virginia come together, and which had been captured by General Burnside. Lincoln referred to the great gap as the "key to the situation."

General Howard, who later repeated the story many times, described how Lincoln turned to him and spoke with deep emotion and tenderness of the loyalty of the people around Cumberland Gap. Near the close of the interview, he said:

"General, if you come out of this horror and misery alive, and I pray to God that you may, I want you to do something for those mountain people who have been shut out of the world all these years. I know them. If I live I will do all I can to aid, and between us perhaps we can do the justice they deserve. Please remember this, and if God is good to us we may be able to speak of this later."

Lincoln gave General Howard his map, took the General's own field map, and they bade goodby to each other. It was the last time General Howard saw Lincoln, but the President's words and concern for the people of the southern highlands he never forgot. The time would come when he would carry out this last assignment from his commander-in-chief.

The further career of General Howard is well known to all history students. After reaching Chattanooga with his corps, he

remained with Sherman until the close of the war; commanded the right wing of Sherman's army on the march to the sea; and was called to Washington after Lincoln's assassination to head the Freedman's Bureau for the rehabilitation of the 4 million slaves who had suddenly found themselves free. In this difficult and revolutionary task, with no pattern to go by, he performed a service unique in the annals of the Nation, despite criticism and opposition from extremists in the North who wanted him to move faster, and violence and bitterness in the South where many selfish and vindictive subordinates nullified much of his efforts for the education and rehabilitation of the distressed freedmen. His lasting contribution was the establishment of Howard University in Washington and the strengthening of other institutions for the education of the Negro.

After the work of the Freedman's Bureau was closed, Howard spent the rest of his active military career in the West, principally in quelling outbreaks of Indian tribes and acting as an understanding agent of the Government in dealing with the Indians. At last, in 1895, he retired from the Army, settled in Burlington, Vt., devoted much time to writing, and made frequent trips for addresses before religious, military, and historical groups.

Meanwhile, down in the Cumberlands in Kentucky was a congregational preacher, the Reverend A. A. Myers, like a prophet of old, going about doing good. Trained at Hillsdale College in Michigan, he had gone into the southern mountains as a home missionary, founding churches, starting Sunday schools, and doing educational work. In his journeys, he came to Cumberland Gap, in 1890, where a big industrial boom was in progress. Here he built a little church and started a private school in the basement. These quarters were soon inadequate for the fast-growing school. An abandoned hotel was taken over. Soon it was going as a full-fledged academy, known as the Harrow School. Myers began to enlist the interest of philanthropic people in the North and East in his missionary program. Learning that General Howard was soon to make a lecture trip through the South, Myers invited the general to include Cumberland Gap in his tour and speak to his students.

We do not know what memories were awakened in General Howard when he got off the train at Middlesboro, Ky., where he was met by a student from the school. In the school carriage, they crossed from Kentucky to Tennessee through the famous pass in the Cumberlands, where the scars of the Civil War were still visible. The old Union veteran must have recalled the story of the struggle around the historic pass; the activities of Zollicoffer before he was killed at Mill Springs; the remarkable conquest of the Union general, George W. Morgan, in June 1862, and his evacuation 3 months later when he was forced to withdraw; the brilliant march of Gen. Ambrose E. Burnside from Kentucky to Knoxville, Tenn., in August 1863, and his investment and final capture of the gap on September 9; and, at last, Burnside's predicament when he was surrounded at Knoxville by Confederate forces under General Longstreet.

And that brought General Howard again into the presence of the lonely man in the White House when Lincoln had pointed his long, bony finger at Cumberland Gap and said, "General, that is the key to the situation!"

Filled with such memories, as the buggy rolled and jolted along the rough road over which contending armies had passed, General Howard came down to the little school at the foot of the pass on the Tennessee side. Here he was greeted by Brother Myers, Mrs. Myers, and two visiting guests, the Reverend P. B. Avery, an Episcopal preacher from Cleveland, Ohio, and Darwin R. James, a banker and Congressman from New York City. We have no record of what he said when he spoke to the students packed into the small auditorium of the school building. Perhaps it was about Grant, who had spent the night at Cumberland Gap on January 6, 1864, when he was on an inspection tour of the Wilderness Road.

But we do know what immediately followed. General Howard, Mr. Myers, the Episcopal rector, and the New York Congressman were seated on the front porch of the school. Mr. Myers talked. He told of the earnest boys and girls attending his school, of the forgotten and neglected people hidden away in the surrounding hills, of his desire to give them an educational opportunity, which had so long been denied them. His warm brown eyes glowed with a burning fire, and his words kindled a sympathetic flame in the hearts of his listeners.

General Howard could not long remain silent. He rose impulsively, and strode up and down the veranda in a moment of reverie, his empty right sleeve flapping in the breeze. Then he turned to the men and said: "Gentlemen, I want to tell you a story." His listeners sat enthralled as he told of his last interview with Lincoln. It was as though the Great Emancipator were speaking. Across the way was the face of the rugged Pinnacle Mountain, gaunt and gray with the weight of the centuries. Along the face of the mountain was the thin line of the road which reached over into Kentucky and the Great West, which Captain Abraham Lincoln and little Tom had traveled a century before. It was a moment of fulfillment, a final linking of events which were to lead to still mightier consequences.

General Howard at last paused in his recital and said to Brother Myers:

"If you will make this a larger enterprise, as a memorial to Abraham Lincoln, I will take hold and help."

He was accepting his last assignment from the peerless leader whom he had served so faithfully in the tragic sixties.

It is not known whether any audible prayers were said on that occasion, but I know how Brother Myers, in his rejoicing, must have shouted inwardly, and how the hearts of Dr. Avery and Mr. James must have been strangely moved. The four men made a covenant on that historic day with the spirit of Abraham Lincoln, which each of them was to keep until they were called for their final bivouac in eternity.

So it was that the words of Lincoln to Howard in 1863 had their fulfillment in the establishment of Lincoln Memorial University. The four men talked over plans for an enlarged Harrow School which should bear the name of Lincoln as a living memorial to the Great Emancipator. Brother Myers told of an abandoned hotel property nearby, at Harrogate, which he believed he could secure for the new institution. General Howard made arrangements to send his booking agent, Cyrus E. Kehr, an attorney of Chicago, to Harrogate to assist in the details of the larger organization. Promotion work began immediately. Howard continued his lecture tour but kept in close touch with the men in Harrogate. A charter for the college was drafted, incorporating General Howard's idea. It was signed by the local incorporators, headed by Brother Myers, on February 12, 1897. The primary function of the institution was "to provide education for the children of the humble, common people of America among whom Lincoln was born." The college colors were blue and gray. A college flag was adopted, consisting of a golden "L" in a field of white, the "L" standing for "Lincoln, love, loyalty, liberty, and labor." An abandoned sanatorium on the newly acquired hotel property, used as the first building, was called Grant-Lee Hall.

General Howard soon became chairman of the board of the newly founded institution, and a Confederate veteran in the community, Capt. Robert F. Patterson, who had surrendered with Lee at Appomattox, was elected vice president of the board. The first school work on the new location at Harrogate was begun in the fall of 1899. This was to be the college department, and the Harrow School continued at Cumberland Gap as the academy.

I wish it were possible to give in detail the story of General Howard at Cumberland Gap from February 12, 1897, to his death on October 26, 1909. As Gen. Robert E. Lee laid aside the faded gray uniform of a lost cause to devote the rest of his life to the youth of the South in perpetuation of the name of Washington, so a Union man gave his last full measure of devotion to a similar service in the name of Abraham Lincoln.

It was not my privilege to know General Howard. His service for the college was before my time. But I have reveled in the stories which I have collected from various sources about the kindly, gray-haired, one-armed general who visited with the students, ate with them in the dining hall, talked to them in chapel, and rode on many missions into the surrounding hills. Not long ago I talked with an old man who was the lad who had driven the general to the Cumberland Gap school for his first speech. A few months I listened to another man, a rural school teacher trained at Lincoln Memorial University, who accompanied the general on a long horseback ride through the Kentucky hills. Another former student described the dramatic occasions when the old veteran would inspire the students by his chapel talks, sometimes using the stub of his right arm in forceful gestures. On one occasion the general pulled a small flag from his pocket and waved it triumphantly to illustrate a point in one of his patriotic addresses.

General Howard had one friend in the Harrogate community whom he always visited when he came to the college for official meetings. He and Capt. Robert F. Patterson, the Confederate veteran who became the vice president of the board, would indulge in many pleasantries as they recalled events of the past when they were fighting on opposite sides. A deep affection grew up between them. Among the Howard papers is a letter from Captain Patterson which reveals the cordial spirit of that rich friendship. Captain Patterson had no particular purpose in writing, except to express his gratitude for what the general was doing for the young people in the Cumberland region. Listen to a part of that letter:

"MY DEAR GENERAL: I have been thinking for sometime to write you a word of appreciation and encouragement in your undertaking to establish a * * * university in memory of Mr. Lincoln at Cumberland Gap. It is generally estimated that a man's best work is done on the sunny side of 60; but if you succeed in this enterprise (as I believe you will) then the shady side of 60 will be to you the harvest time for golden honors. Your life has been a busy one and you have given your best service to your country, but public honors have not blinded you to the intellectual and moral needs of your less fortunate countrymen. * * *

"I cannot imagine a more desirable end to a long and successful life of an old soldier than to see him still in the saddle, booted and spurred, with sword in hand, battling against ignorance, intemperance, and irreligion—enemies more dangerous to our liberty and to peace of society than any armed foe. It is gratifying also to remember you have undertaken this enterprise with the instincts of a true commander. You have not sent out Aide or Pickett to report, but you have reconnoitered the field in person, and I cannot see where you would have

selected a better position for the university. I believe that Mr. Lincoln himself would take you by the hand and tell you that you could do him no greater honor than to erect a university in his name which would educate the descendents of the old mountain soldiers who left their own State and stood by him for the Union during the Civil War."

But I must turn back to the Lincoln heritage in the Cumberlands, the final culmination of the diverse and unrelated little events which, unified and enlarged, led to vast consequences. Lincoln, talking to a one-armed general; a preacher with a pick, building a church; a covenant of four men sitting on the front porch of a little school; a dream of a great memorial to a martyred President for the service of humanity. Little things, indeed; but from them has come a powerful educational force which has spread throughout the mountain region of the South. Where there has been darkness in the hollows, there has come light. Where there have been poverty, isolation, and defeated ambitions, there have come happiness, courage, and hope. At the Lincoln shrine in the Cumberlands many thousands of young people have been touched by a holy fire. Their hearts have been lifted, their horizons extended, their lives enriched and ennobled.

I cannot speak of this without being profoundly moved. My testimony is personal. I go back to the first day when I attended a chapel service in the old, rambling, temporary auditorium built in General Howard's day until funds could be secured for a better one. The first thing to attract my attention was a large painting on the wall, back of the lectern on the stage. It showed President Lincoln standing in his study with General Howard, pointing to Cumberland Gap. Nearby, on the wall, was a large plaque containing the last words of Capt. Guy Howard, son of the general, who had been killed in the Philippinees in 1901. Bold and impressive were the words: "Whatever happens to me, keep the launch going." Fire long ago destroyed the painting and the words of Guy Howard, when the old building burned, but not that vivid memory of mine and of thousands of others who met daily in that chapel. Some things are deathless.

It has been 46 years since General Howard passed from the scene of his labors at Cumberland Gap. But his spirit and his ideals still live. The little institution which he started has grown into a splendid physical plant with beautiful surroundings. More than 500 young men and young women come each year for their college training. They pursue liberal arts courses, but they get something more than mere knowledge. They touch the lives of Lincoln, of Howard, and of other great Americans whose careers challenge and inspire. Woven into their lives, consciously and unconsciously, are strong, compelling forces which come from their daily association with a living Lincoln.

Soon after registration day each fall, we take our freshmen on a tour of our buildings as a part of their orientation program. We close the tour with a visit to our Lincoln Room where we have our vast collection of Lincoln books, pamphlets, pictures, statuary, and manuscripts, one of the largest in the world. The students browse through the room, examine rare documents, and leaf through priceless books. They look upon the display of all the photographs of Lincoln and inspect valuable relics connected with his life. Then they sign a register, seated at a desk used by Lincoln when he was a member of the Illinois legislature. They come into conscious contact with the personality whose spirit will brood over their lives while in college. A little thing, perhaps, but there flows into their consciousness an intangible and inspiring influence which will help shape their thoughts and ideals. It is a good begining for their college careers.

In the foyer of our hall of citizenship we have a beautiful Volk bust of Lincoln on a pedestal. Not long ago I noticed a pile of books which some student had temporarily deposited on the base of the bust. On top of the pile was his textbook on American history entitled "Land of the Free." I stood for a moment before Lincoln and the book at his feet. It seemed to me here was revealed the real significance of our institution. Lincoln and the land of the free. Lincoln living in the hearts of youth soon to accept the responsibilities of leadership in a world "half slave and half free."

From the young people who daily walk in the presence of Lincoln we can take increased courage and hope. From them and others like them throughout the Nation, trained and inspired by his leadership, we can build a better society and a stronger civilization. In our own small and limited way, that is our mission at Lincoln Memorial University.

New Colored School in Edgefield, S. C.

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "New Colored School Among Finest in the Nation," published in the Edgefield (S. C.) Advertiser of March 9, 1955. The editor of this newspaper is one of the ablest editors in the State of South Carolina.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW COLORED SCHOOL AMONG FINEST IN THE NATION—WAS OCCUPIED MONDAY BY COLORED PUPILS OF AREA

The new school plant that was recently completed is one of the finest to be found in South Carolina and perhaps in the Nation.

It was officially occupied Monday morning when some 800 pupils from Edgefield and adjoining areas made their way to the expansive educational plant located a mile from the court house, north, near the Crest Manufacturing Co.

Last Friday the white people were invited to look over the buildings and Sunday afternoon the colored people were invited.

Supt. R. O. Derrick, who heads the school system of Edgefield, with Mrs. Derrick, and members of the board of trustees, had worked with Principal S. K. Dean and his faculty in making the occasion noteworthy.

Constructed at a cost of more than $600,000, the architectural design was drawn by LaFaye and LaFaye, and Fair, of Columbia, and the contractor was Craig-Robinson. The work was completed in approximately 10 months.

The general plan is a central combination gymnasium and auditorium with wings on each side. A court yard at the back is bounded by other wings that begin at the ends of the front structure. Construction is of brick and concrete, the interior walls of concrete blocks painted pale green. Floors of the corridors and classrooms are covered with plastic tile in tan and green; "blackboards" are green; lighting, effects are the latest types in fluorescent lights in the rooms; and there are picture windows throughout. In each class room is a lavatory with chrome fittings. There are steel lockers for each child located in the corridors with special numbers and combination locks. Desks are of light oak, single and adjustable to suit the size of the pupil. Doors are of metal with bronze knobs, with a small pane of glass in the upper center.

Skylights over the corridors give maximum light during the day. Along the sides are radiators for conducting heat throughout the buildings.

Door plates are used in the administrative section as well as special departments, such as cafeteria, home economics, typing, shop, first aid, etc.

The home economics department is beautifully equipped with electric and gas stoves, electric refrigerator, deep freeze, large sinks on each side with built-in cabinets surrounding them. Several dinette sets of yellow plastic and chrome ,and modern tea carts are among the furnishings.

The cafeteria and kitchen are equipped in the most modern style, with expensive machinery for preparing, cooking, and serving, and the follow-up of dishwashing.

The shop is well equipped with machinery for such things as welding, planing, sawing, drilling, that will be of practical use to the student especially on the farm.

The gymnasium is naturally the largest unit with a ceiling that reaches to a height of two stories, and equipment for basketball and similar games. There is ample lighting, highly polished oak floor, spaces for seats on the sides, and one elevated side that will be used as a platform when the main space serves as an auditorium. There are locker rooms for girls and boys with showers and toilets.

The front and rear courtyards have been leveled off and planted in grass. A tall flagpole is in front from which the Nation's colors fly.

During the open house hours members of the faculty received in their respective rooms and courteously explained their courses of study, and in some cases displayed work done by the students. Some of the girl students served as guides in the different parts of the building—a wise procedure since one might easily become lost in the vast expanse of corridors and rooms.

The building will care for pupils from the primary grades through junior and senior high schools. It is the main high school to serve the colored people of Edgefield County, and most of the elementary schools. There will be only four other schools next year in the county which will remain in use for colored pupils. It is estimated that approximately 1,200 pupils will enroll during the next school year.

Booze Broadcasting Is a Beast

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. SILER. Mr. Speaker, I have introduced H. R. 4627, which is a bill to prohibit the transportation in interstate commerce of advertisements of alcoholic

beverages. It is my hope and desire that my colleagues will study this bill carefully and then act favorably upon it for the sake of a more spiritual citizenship, a more stabilized American home, and a more serious-minded youth of tomorrow.

There are some things that should be strictly regulated while they exist or else put in complete subjugation among civilized peoples, for example, the rattlesnake, the brothel, the stalking murderer, the insidious thief, the troublemaker at home or abroad, and the nice, genteel advertisement of booze in whatever form may be best calculated to make strongest appeal to our boys and girls. You say it is a legal subject matter. So is the rattlesnake. You say freedom of speech and of press are inviolable. Yes; but under exercise of police power we do not allow the free-speech man to use indecent language in the public square nor do we allow the free-press man to publish obscene pictures in the Daily Times. Morals, health, and welfare may be, ought to be, and must be closely and firmly regulated under the police power concept breathed into our Constitution by our Founding Fathers more than a century and a half ago.

In the dusty annals of bygone history, there once lived a king named Belshazzar. He was "a man of distinction." So much so that one night he had a great feast and invited 1,000 of his lords, not to speak of many princes, wives and concubines that also came along in great numbers. Now it looked like everybody wanted to be a man of distinction and get on a big binge on that occasion. I suppose the 1,000 lords about all got tanked up and doubtless we have derived our current expression, "drunk as a lord," from the unseemly condition of Belshazzar's own lords at that famous festival when wine flowed like a mountain stream after a hard shower in the springtime. Strange handwriting suddenly appeared on the plastered wall, old Belshazzar took a bad case of delirium tremens and on that very night the drunken king was killed and a new and sober administration came into power under King Darius. Of course, the Belshazzar wine was perfectly legal. None whatever thought it should be regulated. "Let it flow freely," said everyone from the king on down. "Let it come into the very home of the king and let its free intercourse be unmolested in the name of complete liberty." But before that fateful night was over, there was some free writing on the wall, some free delirium tremens among the men of distinction, some free rigor mortis on the regal throne of Babylon.

In 1871 the Chicago fire raged over the city unregulated and caused $196 million in damages.

In 1889 the Johnstown flood surged down the valley unregulated and cost 2,200 lives.

And now, unrestrained and uninhibited, alcoholic advertising may well, in my humble opinion, cost much more than all the damage and loss of life of both the Chicago fire and Johnstown flood combined and then multiplied by two.

During my own lifetime my good State of Kentucky has continuously stood at the top of the list of alcoholic producers and has frequently bragged about this, and yet during that same lifetime span I notice that whereas Kentucky once stood 11th in population among the States, it now stands 19th in the list of States. Cause and effect? Well you be the judge. The same handwriting that was once on the plastered wall of Belshazzar may now be appearing on the plastered wall of Kentucky or on that of America if we persist in going ahead without total indifference toward the harmful influences that come within our homes and about our hearthsides in the form of alcoholic advertisements.

Twenty million people in America are offended every day by the alcoholic advertising that comes to their homes consistently and continually without even knocking at their doors, entering the very impressionable minds of boys and girls with the obvious purpose of making more customers for an industry that destroys, dooms, and damns human personality as it rolls along.

We would not think of allowing an offending beast to come into the American home unrestrained and uninhibited. Yet, booze broadcasting by TV, radio, or publication is a beast and it sorely offends millions every day in the American home. It is now time to illegalize it in interstate commerce. It may be later than we think.

Shinner Small Farm Plan—I

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks in two instances to include the entire text of an article by E. G. Shinner, one of my most distinguished constituents, in the New Leader of April 11, 1955. It merits the thoughtful reading by my colleagues. Mr. Shinner, a businesman of large stature, is the originator of what has come to be known as the Shinner agricultural plan, the basic principles of which have a strong advocate in the great statesman from Texas, the Honorable WRIGHT PATMAN, and which has been widely discussed throughout the Nation. The first installment of Mr. Shinner's illuminating article follows:

TOWARD PERMANENT FARM PROSPERITY
(By E. G. Shinner)

America's No. 1 industry—agriculture—has come upon troubled days. Yankee ingenuity in making 2 blades of grass grow where but 1 grew before has hoist us on our own petard. In a sense, we are the victims of our own genius. The use of revolutionary power machinery, the development of hybrid plants with high resistance to weather and disease, the elimination of pests, and the scientific use of fertilizer have all greatly contributed to raising our per-acre yield to unprecedented heights. As a result, we are possessed of a glut of farm products. The orderly distribution of this farm surplus has become a problem which has baffled the most ingenious and analytical minds.

In producing this surplus, ease of production has been coupled with the inducements offered by the Federal Government in the way of a guaranteed market for unlimited quantities of agricultural products. We are now producing food and fiber clearly beyond the capacity of both the domestic and foreign markets to absorb.

There are other complicating factors in the present dilemma of our farm economy. The development of synthetic fibers and foods (for both human and animal consumption) can no longer be ignored. Such formidable giants as rayon, dacron, nylon, etc, are making tremendous inroads in the use of cotton, wool, and other natural fibers. In addition, the use of silicon in the treatment of fabrics is producing fantastic results. The life of natural yarns so treated can be increased, in some instances, as much as ten times. Public acceptance of new synthetic fabrics is a fait accompli.

Less well known is the successful use of stilbestrol and urea in the feeding of cattle and sheep. Estimates of the savings in grain which result from the use of these miracle drugs range from 10 to 40 percent. One should also mention the increasing use in the human diet of oleomargarine, saccharin, sucaryl, various extracts, etc.; this type of chemical competition with natural farm products will undoubtedly increase as time passes. Also increasing is the national consciousness of the waistline; the persistent recommendation by expert dieticians of the desirability of reducing the intake of sweets, fats, and starches establishes an effective roadblock in the way of greatly increased food consumption.

While it is true that there are still several million people in the United States who are undernourished, it is difficult to see how the farm problem can be solved in any permanent way merely by improving their diets. We must rather effect a reasonable balance between production and consumption if we are to have a permanently healthy agricultural economy.

Lest there be any question about agriculture's importance, the following figures compare the gross annual output (in millions) of our five leading industries (construction figure for 1954, the rest for 1953):

Agriculture	$35,430
Construction (plant and residential)	26,100
Oil (estimated refined products)	23,000
Automobiles	13,984
Steel	12,433

Not only must we protect and stabilize our leading industry; we must protect and stabilize our huge farm investment, the aggregate of which is over $150 billion. While farm indebtedness is, percentagewise, comparatively small (roughly $18 billion), it is nevertheless true that many farms are mortgaged up to 50 or 75 percent of their current market value; hence, it becomes an elementary economic necessity that farm values be maintained at or near their present level. Our vital long-term mortgage investment can easily be impaired, or even destroyed, by either deflation or inflation of any significant magnitude.

The importance of a healthy agricultural economy can hardly be overestimated. When agriculture falters, there is no other sector of the economy capable of taking up the slack. Farm recessions, as we have learned by bitter experience over the last three decades, quickly infect other sections of our economy. The farm situation today is not healthy.

Per capita income is perhaps the best means of measuring economic wealth. In uniform 1953 dollars, per capita nonfarm

income was $1,921 in 1946, $1,970 in 1953, and $1,926 last year. For the same 3 years, farm income was $851, $709, and $688, respectively. By the end of 1954, the per capita farm income of $652 was about a third of nonfarm income; it was about 44 percent just after World War II. Moreover, while nonfarm income now is slightly higher than just after World War II, farm income has shrunk by almost 20 percent.

Notwithstanding this sharp decline, our concern is more for the farmers' future than for their immediate present. If conditions in the industry were stabilized and would not in the foreseeable future grow worse than they are today, there would be comparatively little cause for alarm. Unhappily, the end of the farm decline is not in sight.

The present farm price-support program is both inequitable and ineffective. It falls far short of its major purpose—stabilization of the farm economy. Just a casual glance at the distribution of the money spent for farm support readily reveals the inequity and futility of the present program.

The latest census figures indicate these startling facts:

One and nine-tenths percent of the Nation's farmers received more than 25 percent of the total price-support benefits.

Nine percent received in excess of 50 percent of the benefits.

Nintey one percent of our farmers received less than half of the price-support payments.

Price-support loans, for example, to the 5 largest cottongrowers in California averaged $649,335 in 1953; the overall average was $1,731. The 5 largest wheat loans in Montana and Oregon that year averaged $176,000 each, against an overall average loan of $4,000 in Montana and $6,293 in Oregon. The 5 largest corn loans in Iowa averaged $98,000 against an overall average of $2,154.

While it is true that even this inequitable distribution of public support has made some contribution to the farm economy, it is inconceivable that it be continued as permanent Government policy. In common justice, we cannot continue to pay huge sums of money to factory-in-the-field type of operations, and at the same time permit only a dribble to reach the vast majority of our farm population.

Since 1935, the number of farms of 1,000-or-more acres has increased 37 percent. These farms now contain a total of 494 million acres, or 42.6 percent of all United States farmlands. The trend toward gigantism and the factory-in-the-field type of farm is astonishingly rapid.

When we moved armies of occupation into Italy, Germany, and Japan, among our first acts was to break up the great feudal estates. Right now, we have a Government land expert in Indochina engaged in a similar program. In our eagerness to promote and develop democracy in agriculture abroad, we have seemingly neglected to protect our own agricultural economy against the growth of a kind of creeping feudalism.

My approach to the present farm problem would be to abandon completely our present system of purchasing and/or providing nonrecourse loans on farm products. I would substitute for it a system of direct production payments to the individual farmer, in an amount sufficient to give him and his family a reasonable basic income. Furthermore, I would limit the amount of production payments which any individual farmer could receive to a maximum of $2,000 annually. I would allow the individual farmer full parity on his production up to $7,000 of gross annual product and stop all payments at that point. Prices of farm products would be permitted to seek their own level in the open market. Production payments would consist of the difference between the parity price and the price the farmer received in the free market.

The total gross income of farmers in the record year of 1951 was $37 billion. That was, roughly, $7,000 per farm, the figure which I have arbitrarily used as a limit of income on which production payments would be made. The following example will more clearly illustrate my plan:

Farmer A raises 10 bales of cotton (5,000 pounds), which he sells for, say, 25 cents a pound in the open market, realizing $1,250. The parity price is, say, 35 cents a pound. He would be entitled to a subsidy payment of 10 cents a pound, the difference between parity and market, or a net total payment of $500.

Farmer B, a plantation owner, raises 1,000 bales of cotton (500,000 pounds), sells it for 25 cents a pound, for a total of $125,000. He, too, is entitled to a subsidy payment of 10 cents a pound on the first $7,000 of gross production (in this case, the first 20,000 pounds), but not more than $2,000. In this case, the difference between market and parity would exactly equal the $2,000 maximum.

If certain wealthy individuals and/or corporations wish to engage in farming as a business, let them do so by all means. But they should depend on the open market rather than on the Government for the sale of their product. Vast production of wholly unneeded products for sale to the Government should cease forthwith.

Similar production payments would be made or any and all products which Congress might see fit to include under the price-support system. It would seem feasible, however, to exempt sugar and wool from the above program. The present regulations appear to be getting reasonably satisfactory results on these products.

It has been urged that my figure of $7,000 is too low; that $10,000, $12,000 or even $15,000 would be more realistic. It has also been suggested that a graduated support system might be established with the payments, lowered by stages, up to a total of $15,000 of gross annual production. I regard the figure as less important than the principle, but whatever figure may finally be adopted should not be so high as to defeat the objective—to effectively divert price-support benefits away from the wealthy 9 percent who do not need them, to the 91 percent of small farmers whose need is vital.

Such a farm program would simply do for the small farmer what is being done for the worker by labor unions and by the minimum-wage law. It would serve as a floor—an assurance that if the farmer makes the effort, he can get a reasonable return for his labor.

Certain economists have suggested a food-stamp plan as a means of disposing of our unmanageable surpluses. I regard food stamps as un-American in concept, basically a form of charity rather than a fair reward for labor. To be reasonably effective, a stamp plan would involve a gigantic problem of administration—bureaucracy previously unknown to us in peacetime. Furthermore, it would become a badge of pauperism, publicly displayed throughout the retail markets of the Nation. Our people don't want charity; they want the opportunity to earn the money with which to buy food, and at prices which they can afford. A stamp plan is, at best, only a palliative. It does not attack the roots of the farm problem.

One of the most serious aspects of the farm problem is the constant drift of the farm population into the industrial labor market. Since 1930, the farm population has shrunk by over 8 million, while the overall population of the Nation has gained by 41 million. Over the last 10 years, an average of 77,000 families has made the exodus from farm to city each year. If each family represents approximately 1.5 workers (the actual figure is a bit higher), we are augmenting our city labor force by roughly 115,000 workers every year.

This exodus from the farms means that small towns and villages are suffering a similar fate. The shrinkage of farm population means a comparable shrinkage of the small-town population—professional men, merchants and a great variety of service tradesmen. It is safe to estimate that our urban labor force is being annually augmented from this source by another 30,000 or 40,000 workers.

All of this should cause labor leaders to take heed, especially in view of the fact that urban production and employment are constantly yielding to technological improvements. Government figures show that in January 1955 the factories of the Nation were employing 400,000 less people than they employed in January 1954, notwithstanding an overall increase in production of some 8 percent. Factory employment in January 1955 was a cool million and a half below that of January 1953. The lesson is clear: Factory production is rising, while employment is steadily on the decline.

Labor groups increasingly pressured by the annual addition of 140,000 to 150,000 displaced rural workers must also face some startling facts about industrial automation. It is reliably reported that the Western Union Telegraph Co., through the adoption of automation, has reduced employment by more than 30,000 persons since 1945 and by some 18,000 since 1952. The advantage the company has gained from this curtailment is apparent; operating costs were reduced some $4 million for the first 9 months of 1954, compared with the same period in 1953; earnings per share were $7.50 in 1954, compared with $6.77 in 1953, $1.04 in 1952, and $4.85 per share in 1951.

While estimates of the effects of automation on the Nation at large are, at best, educated guesses, students of the problem believe that insurance and communication companies, public utilities, and similar concerns which have a high degree of repetitive clerical operations will, within the next 2 or 3 years, install much automatic equipment. By so doing, they can easily reduce their working force by literally several hundred thousand persons annually.

A certain group of economists and some businessmen contend that this process will simply release these people for more constructive work elsewhere. (Benjamin Fairless of United States Steel expounded this theory in a recent speech before the Johnstown (Pa.) Chamber of Commerce.) Apropos of this argument, there is a story that Harlow Curtice, president of General Motors, was displaying the newest automatic machines to CIO President Walter Reuther and asked: "Walter, how are you going to collect union dues from these guys?" Reuther was not at a loss: "How," he asked, "are you going to get them to buy cars?"

Admittedly, automation has created a new industry; but I am unable to find where it has increased employment in any of the so-called basic industries. Automation is here to stay, and a process of intensive study should be directed toward meeting this challenge, without delay. I had a feeling of frustration and deep disappointment when I read the President's 1955 Economic Report and found not a word on this all-important subject.

I know of no better place to start attacking the problem of automation than on the farm. All the facts of the urban labor situation point to the conclusion that we should seek to improve and conserve rural life by every means possible. We should keep the door of opportunity open not only for the small, family-sized farm but for the business and professional men of the small towns and villages, who depend for their livelihood upon a healthy farm economy.

Shinner Small Farm Plan—II

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the second installment of the article by E. G. Shinner in the New Leader of April 11, 1955, and a discussion of the international ramifications of Mr. Shinner's proposals by Oscar Schnabel, whose four decades of activity in international trade and finance included organizing the Austrian Grain War Office in World War I.

The concluding installment of Mr. Shinner's article follows:

TOWARD PERMANENT FARM PROSPERITY—Continued

(By E. G. Shinner)

What are the overall benefits to be derived from a program such as I have outlined? The first is obvious: lower food prices. These would amount to an automatic wage increase for the entire economy.

Second, the farmer would be free to operate his farm in accordance with his own judgment. He would be freed of the burden of providing storage, conforming to acreage allotments and all of the many regulations to which he is now subjected.

Third, we would once more be in a position to compete in the markets of the world for our just share of foreign trade without fear of ridicule or criticism. We could no longer be charged with dumping by the various nations of the Western World whose good will we so earnestly need and seek. (See the accompanying article by Oscar Schnabel.)

The question of the cost of such a program is, of course, proper. But, in evaluating its cost, let us bear in mind the health of our agricultural economy and its proper priority in relation to other major governmental expenditures. We are currently spending some $40 billion annually on national defense. It is now proposed that the Federal Government contribute some $2.5 billion a year to assist in improving our educational facilities, and, in addition, sponsor a highway program to cost $101 billion over the next 10 years. I submit that, in order to meet the cost of these programs (all of which, for the purpose of this discussion, may be accepted as necessary), a sound and healthy national economy must be maintained. And our economic history is replete with indisputable evidence that the basis of our prosperity depends at all times on the degree of mass purchasing power which we are able to maintain.

Here we have an opportunity to improve the economic status (purchasing power) of some 20-odd million of our farm population and, to a lesser degree, help the entire population through a reduction in the cost of living which must inevitably follow the restoration of a free market on agricultural products. All of this can be accomplished to the slight disadvantage of only 1.9 percent of our farmers (the group currently getting 25 percent of Government support benefits).

While it is impossible to state with any positive degree of accuracy exactly what the program might cost, the most intelligent estimate that I have been able to obtain would place the maximum annual cost under $3 billion; it might run as low as $750 million a year. But this program would take the Government completely out of the picture insofar as buying, selling, and storing farm products are concerned, and would accordingly permit it to start an orderly process of liquidating the $8 billion hoard of products now on hand. Therefore, it is conceivable that the money derived from liquidating the present surplus would completely finance the new program for at least 2 or 3 years. During this period, we would gain the necessary experience upon which to predicate a permanent program. It would be presumptuous to suggest that the factor of trial and error can henceforth be completely eliminated.

Administration of such a law should be relatively simple. The Bureau of Internal Revenue could easily amend its tax forms to show what products a farmer had produced and sold, for how much, and the amount of payments due from the Government, settlement to be made annually at the earliest date feasible after filing of the income-tax return. This showing of payments due would permit the farmer to establish immediately the basis for a bank loan of a comparable amount, as his needs may arise.

I am aware that certain economists will declare that this program penalizes efficiency. They will say that factory-in-the-field farms, whether operated by individuals or corporations, are most efficient. Even assuming this is correct, I would like to call attention to the phrase in our Declaration of Independence which speaks of our inalienable right to "the pursuit of happiness." And I contend that there is much more happiness on the farm than there is in the city slums to which many of our displaced farmers must migrate. The pursuit of dollars—efficiency, if you please—is not mentioned in the Declaration or the Constitution.

Since colonial days, the American farmer and the family-sized farm have been the very backbone both of our free-enterprise system and of our political democracy. Our present farm-support program has substituted a high degree of regimentation and an insidious type of creeping feudalism, both of which are utterly distasteful to the rank-and-file of our farmers. Because the present support program is also economically unsound, a new approach to the farm problem seems very much in order.

The analysis by Mr. Schnabel follows:

THE FARMER AND AMERICA'S ALLIES

(By Oscar Schnabel)

Deeply concerned about our highly involved agricultural problem, E. G. Shinner proposes that we abandon our present system of Government purchasing and/or nonrecourse loans on farm products. He would replace this with direct subsidy payments to individual farmers. The farmer would be entitled to the difference between the market price and the parity price on the first $7,000 of gross production, with a maximum subsidy of $2,000. This program would stop subsidized overproduction by big farms and, at the same time, protect the purchasing power of the bulk of our rural population. Such a program would not only pave the way for a better balance between production and consumption of our agricultural products, with numerous advantages for our national economy; it would also have a healthy influence on our economic and political relations with our allies.

Abroad, we preach the blessings of free enterprise and induce our friends to facilitate international trade. We strongly object to import restrictions, as well as to unsound promotion of exports by subsidies and by dumping. But what are we doing? For all practical purposes, we have eliminated the free market in our largest industry, agriculture. We promote overproduction through Government subsidies, and our Government agencies try to sell our surpluses abroad at prices far below those on our home markets. And we continue to accumulate these surpluses at a fantastic rate, holding them like a Sword of Damocles over the economies of our allies.

The United Nations Statistical Year Book for 1954 reveals the situation that has developed as a consequence of our present farm policy:

Our population increased from 129 million in 1937 to 157 million in 1952 and 159.6 million in 1953—that is, by 21.8 and 23.8 percent respectively. Our wheat production rose from 874 million bushels in 1937 to 1,299 million bushels in 1952 and 1,167 million bushels in 1953—increases of 48.7 and 33.7 percent. In other words, in a 15 or 16 year period, population grew by 22.7 percent while the wheat crop rose by more than 41 percent. But even these figures do not tell the whole story.

Per-capita consumption of wheat amounted to 198 pounds in 1937, only 163 pounds in 1952. This means that the total human wheat consumption in 1952 was the same as in 1937—namely, 426 million bushels. Assuming that there is no further decrease in our per-capita consumption of wheat, our present productive capacity is adequate to meet tha needs of a population of 220 million (currently projected for 1975) after allowing ample reserves as insurance against wars, droughts, floods, or other emergencies.

In 1951, we exported more than 460 million bushels of wheat and flour. In 1953 (the last year for which figures are available), we exported only 265 million bushels, or 195 million bushels less, largely because we reduced our foreign aid. Thus, the projected increase over 20 years of our domestic human consumption of wheat will be less than the decrease of our wheat exports in 2 years. (To avoid misunderstanding, we should note that the needs for seed and feed are not included in this discussion. About a sixth of our wheat crop is so used—10 percent for feed, 6 percent for seed.)

Since the end of the last war, the recovery of European agriculture has made great progress, even compared with prewar days; agricultural production has risen in free Europe (including the United Kingdom) far faster than population has grown. At the same time, per-capita wheat consumption shows a steady decline in Western Europe, while the intake of calories (with the exception of Italy, whose per-capita wheat consumption is second largest in the world) is practically the same as that in the United States.

Therefore, it is hardly likely that Europe will step up her wheat imports; in fact, she might reduce them. Furthermore, on the European market we face the competition of other wheat-exporting countries—primarily of Canada. In 1953, our wheat and flour exports totaled $589.5 million; this was 2.75 percent of the value of all of our exports, less than 0.2 percent of our national income. Canada's wheat and flour exports amounted to $670.1 million—16 percent of her exports and 3.5 percent of her national income. If, in sharp competition with Canada, we captured a quarter of her wheat and flour export, we would decrease her income by approximately $170 million, or nearly 1 percent of her national income. Since Canada buys $800 million worth more from us than we buy from her, such inroads would automatically lead to a reduction of our exports.

We need no further details to show that, on a commercial basis, there is no foreign outlet for our wheat surplus. We will be fortunate if, in the years to come, we can sell as much wheat as we sell now, without endangering export markets for our industrial products.

Nor can we substantially increase commercial export of our dairy products without hurting allies. Holland, for instance, exports dairy products in order to pay for her wheat imports. If we keep Dutch dairy products off

our markets, and deprive Holland of other markets by dumping our own dairy products on them, we will lose Holland as a buyer of our wheat. Denmark is in a similar predicament; to her, dairy and pork exports are literally of vital importance.

Our cotton consumption in 1953–54 was 22.5 percent higher than in 1939. Because of the population increase in that period, this means that per capita cotton consumption did not change at all. Improvement in our clothing was provided primarily by the use of synthetic fibers. But our cotton production rose during this period by more than 39 percent. Cotton exports, which in 1950 amounted to 5.7 million bales, fell to 2.8 million bales in 1953, again chiefly because of the reduction in our foreign aid.

We must now realize that the free world's postwar predicament, and the aid we provided to overcome it, postponed an explosive situation in our wheat and cotton production. The postwar predicament is now over and done with, and we must now recognize that commercial exports cannot take care of these surpluses.

There is a widespread belief that the best way to get rid of our agricultural surplus is to give it away to needy countries, thus mixing charity with good international politics. Giving away food in case of an emergency, as after the west European floods last year, certainly makes sense. But giving away unwanted surpluses regularly will misfire politically. Hostile propaganda can easily convince the beneficiaries of our gifts that we are more interested in dumping our surplus than in aiding anyone. Yet even the continuation of a politically unsound and obviously inflationary give-away policy could reduce our annual surplus only to a very slight extent. It could not avoid the further building up of new agricultural surpluses.

We must begin to consider the revolutionary change since 1914 in both our economic and political relationships abroad. Before World War I, we were a debtor nation, which imported manufactured goods and exported farm products. World politics was made by the then existent six big powers without much consideration of our country's isolationist policy. During World War I, we repaid our foreign debts and started on our way to become the world's largest creditor nation. Simultaneously, we began to change the whole structure of our economy. We are now by far the most industrialized nation in the world, and could, if necessary, provide our population with practically all the manufactured goods it needs or wants. The magnificent growth of our urban industries has been accompanied by an equally steady increase in our agricultural production, the latter far exceeding the need of our growing population even after adequate allowance has been made for our steadily rising standard of living.

Parallel with the growth of our economy has been the increase of our political influence upon the free world, now challenged by the Communist bloc. To meet this challenge, we need the cooperation of the other countries of the free world—most of all, of Western Europe. Europe is at the same time the seat of the Communist powerhouse and the home of twice as many free and culturally advanced people as we have in our own country. If we want to keep these people on our side, we must consider the impact of our economic policy on their economies. Now, the United Kingdom and Western Europe must import raw materials and part of their food supply. They can do so only by paying with the proceeds of their exports, mostly of manufactured goods. In other words, they must barter the products of their industrial labor for food and raw materials. The less we are open to such barter, the more they must trade with other countries that open their gates to European exports. Obviously, Europe will cover her food (as well as cotton) needs in countries which provide a market for her manufactured goods—that is, in Asia, Latin America, etc. Dumping our agricultural surpluses on Asian markets, therefore, would bring about a major disturbance of the free world's economy without greatly increasing our exports.

There is another angle to all this. Our policy of subsidizing over-production is a major source of inflation. The more we permit our price level to rise, the more we increase the difficulty of liberalizing our foreign trade policy; we must cooperate with our friends to reduce the gap between our price level and theirs in order to make increased trade possible. Acceptance of Mr. Shinner's suggested program would be a major step in the direction of a liberal foreign economic policy.

Dean of Pan-Americanists

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. DONDERO. Mr. Speaker, I offer for the CONGRESSIONAL RECORD copy of a letter written by Dr. Persio C. Franko which appeared in the column Letters to the Star of the Evening Star, of Washington, D. C., April 5, 1955, and which article is entitled "Dean of Pan-Americanists" and deals with Dr. Emilio Bello Codosido, of Chile, and his outstanding work for Pan-American unity.

WASHINGTON, *April 2, 1955.*

To the EDITOR OF THE EVENING STAR:

Dr. Emilio Bello Codesido, of Chile, is the dean of Pan Americanists. He is the oldest and most outstanding human symbol of Pan Americanism living. He is a great American who is truly a citizen of the Americas.

In September 1944 it was discovered, as a result of a thorough inquiry made by me, at the Pan American Union, the Department of State and the Latin American embassies in Washington, that all of the delegates to the First International Conference of American States had died and that of the delegates to the second conference only three were then living: Dr. Federico Henriquez y Carvajal, Dominican; Dr. Francisco Antoni Reyes, Salvadorean, and Dr. Emilio Bello Codesido, Chilean.

The first Conference was held in Washington October 2, 1889–April 18, 1890. Eighteen countries took part, represented by 37 delegates.

The second conference was held in Mexico City October 22, 1901–January 22, 1902. Nineteen countries participated, represented by 46 delegates.

Dr. Francisco Antonio Reyes, of El Salvador, who was also a delegate to the third conference, held in Rio de Janeiro July 21–August 26, 1906, died April 3, 1951, in this country. He was born there on October 10, 1860.

Dr. Federico Henriquez y Carvajal died in the capital city of the Dominican Republic on February 4, 1952, at the remarkable age of 103 years, 4 months, 19 days. He was born there on September 16, 1848.

Dr. Bello Codesido has had a long and brilliant public career. He has held among a long list of high public offices, the following: President of the Junta that governed the Republic in 1925; Minister of Foreign Affairs, of Justice and Public Instruction, of Public Works, of the Interior, of Defense; delegate to the Fourth International Conference of American States, held in Buenos Aires July 12–August 30, 1910; presidente of the house of representatives; president of the Chilean delegation to the League of Nations; president of the Chilean delegation to the International Labor Conference held in Geneva in 1925; Ambassador of Chile in various countries; member, designated by Honduras, of the tribunal formed to arbitrate the very old boundary dispute existing between Honduras and Guatemala, president of which tribunal was Charles Evans Hughes, then Chief Justice of the Supreme Court, and whose decision, issued on January 23, 1933, put an end to the dispute. In connection with this act of arbitration, Dr. Bello Codesido published in 1939 a book entitled "El Arbitraje y la Equidad."

Dr. Bello Codesido is a grandson of the eminent American Andres Bello, of Venezuela, who lived in Chile for many years and there performed part of his great intellectual work. He was born in Santiago de Chile on July 31, 1868. He married in 1893 Miss Elisa Balmaceda y Toro, daughter of President Jose Manuel Balmaceda; she died on January 3, 1943. They had no children.

Dr. Bello Codesido retired several years ago to private life.

I have just addressed a communication to the President of the Council of the Organization of American States suggesting that Dr. Emilio Bello Codesido be invited to come to Washington to receive, in the Hall of the Americas in the Pan American Union building, the homage of the American peoples. I believe that if he were invited and came it would move the conscience of all men and be a contribution toward the creation of peace among all peoples of the world.

PERSIO C. FRANCO.

A Great Democratic American and a Great American Democrat

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. MULTER. Mr. Speaker, it was my happy privilege to join with many thousands of fellow citizens and fellow Democrats last Saturday night in paying a well deserved tribute to a really great man, the Speaker of this House, the Honorable SAM RAYBURN.

It is now my privilege to make a part of the CONGRESSIONAL RECORD the address made on that occasion by former President Harry S. Truman as follows:

TRUMAN SPEECH

I assume that it is no longer "top secret" that I am an early riser. It runs in the family. My father was always out of bed at about 4 a. m. My mother used to sing a song to my brother, sister, and me about the sluggard who liked to lie abed and what awful things happened to him. Solomon and Ben Franklin, too, had things to say about late sleepers.

Anyway—the other morning a neighbor caught up with me on one of my regular walks. There was a touch of spring in the air, and I was up earlier than usual. I missed some of the neighbors who usually join me on my walks and who talk with me about everything under the sun.

These good people are so typical of Americans throughout this wonderful land. They

are friendly, alert, and inquiring and vigorous in their questions.

On this particular morning, my walking companion said: "I hear you are going to Washington to make a speech. What are you going to talk about?"

I said: "No, I am not going to make a speech. I am making this trip to join in the honoring of a great American, my friend and former colleague, SAM RAYBURN."

RECALLS ROOSEVELT'S DEATH

No doubt you remember, SAM, that meeting which took place in your office on the 12th day of April, 10 years ago last Tuesday. I came to see you to get an agreement between the Speaker and the Vice President on certain legislation and to discuss the domestic and world situation generally.

While I was in your office, I received a telephone call to come to the White House as soon as possible. When I arrived at the White House, Mrs. Roosevelt informed me that the President was dead.

Just 10 years ago last Tuesday one of the greatest of the Presidents of the United States passed away.

Mr. Roosevelt, in my opinion, was one of the few great men of the ages whose interest and life were devoted to the welfare of the everyday man. You and I, SAM, missed him very much at the time. The country and the whole free world missed him. And we will continue to miss him as long as it is necessary for someone to look after the interests of the common people who make up the population of this country and the world. I did my best to continue the policies he advocated for the welfare of this country and for world peace.

SAM, you have set an example for conduct and leadership in the Congress and in political life that has earned you the affection and the respect of the entire Nation, regardless of party. Your place in history is secure, not only because you have served longest as Speaker of the House of Representatives, but because you never yield to partisanship on the basic issues affecting the welfare of the Nation.

So, it is well that we remind ourselves tonight that if the United States is a world leader among the nations today, you will find that SAM RAYBURN played a large part in helping our country to achieve this leadership. If the United States today is a leader in democracy for its enlightened social legislation, you will find that SAM RAYBURN in Congress had a large role in shaping that legislation. I know of few Americans who symbolize the good deeds of this country so much as SAM RAYBURN. It took something more than ordinary talent and courage to look over the horizon beyond the interests of his own district and his own State to the broader view of this country and the world.

CRITICIZES PRESS

That is why I am so glad to be here tonight. (You know I have been working hard lately to put together the important facts about our own administration so as to set the record straight.)

In paying tribute to SAM RAYBURN we are taking this opportunity also to remind ourselves and the world of the reasons for America's great achievements and leadership. At this time, when many of us are worried, and even fearful, about what is happening in this country and abroad, let us not forget how soundly and securely we have built this country so that it has even been able to withstand some pretty bad management of the Government during the last 2 years.

A most remarkable display of publicity and cooperation from the newspapers has tried to keep much of this bad management from the people. There has been no parallel in our history to the cloak of protection thrown about this administration by so much of the press.

You know, we have heard a good deal about a slogan intended to impress our enemy—and that slogan is: massive retaliation. Well, the Democrats know something about massive retaliation. It's the kind of press the Democrats get everywhere, all the time.

Future historians will be puzzled when they come to judge our times, when they see how so much of the press distorted the facts so that no Democratic administration could do right and no Republican administration could do wrong.

What the press and radio commentators said about me never worried me personally. But I have always felt that there is no sense in having a free press under the Constitution and yet not have it free in fact. The people should not be limited to what the publishers choose to tell them. The people are entitled to all the facts and all the news.

There is only one rightful purpose for a government to use publicity, and that is to inform the public of all the facts and the whole truth. But publicity is no substitute for performance. Yet never in the peacetime history of this Nation has there been such a vast volume of persistent publicity to praise and extol an administration.

We know that in certain sections of the world this is an automatic practice.

I ask you, why the big buildup in this free country? Why?

I, for one, am glad that SAM RAYBURN is again Speaker of the House. Sam is an old and experienced hand in sensing what the real issues are. He knows what is best for all the people and how to attend to their interests in Congress. He is not easily deceived by ballyhoo. And when the security of the Nation is involved, he always rises above partisan politics.

He is a remarkable example of that courageous statesmanship which this Republican administration would do well to emulate. For this administration has been playing partisan politics with our security, with our foreign policy, with our civil service, and with our Nation's resources.

I regret to say that we have not seen such cynical political behavior in any administration since the early twenties. The price of compromise with the extremists within the Republican party has led this administration to surrender on basic principles on foreign policy. It has resulted in confusion and disturbing the American people and in frightening our friends and allies.

The administration has talked about an "agonizing reappraisal" of foreign policy. I can well understand their agony. After repeatedly getting into trouble with their own policy, it must be agonizing indeed to realize that sooner or later they must reverse themselves and return to the sound policies of the Democratic administration.

There is no room for partisan bickering over the great issues of national survival. Our foreign policy ought to be the foreign policy of the United States and not the foreign policy of 1 Senator, or 1 general, or 1 admiral, or 1 party. The Democratic Party understands this.

The Republican administration has repeatedly played political tricks with the grave and serious issues of both foreign and domestic policies.

CITES MESSAGE TO CONGRESS

The state of the Union address by the Republican administration in 1953 launched this business of conducting foreign affairs for domestic political advantage. It was in this address that the administration announced it was unleashing Chiang Kai-shek to attack the mainland of China. They announced they were moving the Seventh Fleet, which was there only to protect Chiang. Anyway, it was a serious blunder, and they had to put the fleet back.

The Republican administration must have known that the picture of an unleashed Chiang Kai-shek invading China was a barefaced political fraud. But the idea behind all this was to attempt to discredit the sound policy of the Democratic administration which was carefully designed to limit the conflict in the Far East.

And now the Republican administration is desperately trying not only to limit the conflict in Asia but to get a permanent ceasefire there. I fervently hope they do. But the administration, by this unfortunate political maneuver in its state of the Union message, has enabled the Communists to picture us as instigating and preparing an attack on China and has embroiled us in controversies with almost all our allies in Asia and in Europe.

If we are face to face in Asia with the prospect of war, a war which the administration says may have to be fought with atomic weapons, nobody is going to get any political advantage out of it. If we are pushed into the abyss of a new war, the whole world may tumble into that abyss with us.

I suggest that as Americans, working together in good faith, we ought to back a national bipartisan foreign policy with these simple fundamental aims:

First, let us keep the free nations together for a common purpose, and that is to defend our common freedom.

Second, to uphold the principles of international peace and order, the principles that are embodied in the United Nations.

Third, to strengthen in every way we can the weaker members of the free nations of the world and to develop the underdeveloped areas of the world so that all may have enough to eat, enough to wear and a decent place in which to live. Our aim is not to make people fight for us, but to win them over to freedom and to a peaceful and prosperous world.

Fourth, we must keep our country strong in every way, militarily and economically.

ATTACKS SERVICE CUTS

And we cannot keep the country strong militarily by cutting the Army and the Navy. We must keep our Armed Forces in line with our military commitments. Important as atomic weapons are, there is as yet no substitute for men. It takes men in the Armed Forces to make even a pushbutton war work. In fact, in atomic warfare, it takes more men, better-educated men and better-trained men than in preatomic warfare.

These are the basic elements of a foreign policy on which the whole nation could unite. We ought to be giving all our attention to this task instead of trying to make political capital out of the dangers and difficulties of world affairs.

The Republicans ought to know that the best hope of avoiding ultimate tragedy depends upon the full and free cooperation of the Democratic majority in Congress and the majority of the people in the country.

The times are critical, and we face serious decisions. They demand the best that is in us. They require leadership of the highest order.

Mr. Speaker, I wish you many more years of life and good fortune and of service to the Nation. And my best wishes to you, Senator JOHNSON, and to your colleagues in the Senate and the House.

Help for the United States Merchant Fleet

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13, 1955

Mr. BUTLER. Mr. President, our fourth arm of defense—the American merchant marine—is also one of our greatest assets in peacetime. Efforts to preserve and strengthen our essential maritime industries, have received a varying degree of support through the years. But foremost among the advocates of a strong and positive national maritime policy has been the American Legion. The leadership and constancy of this fine, virile organization of veterans has contributed effectively and immeasurably to the growing public awareness of the nature and importance of the American merchant marine to our national security and national economy.

I, therefore, ask unanimous consent to have printed in the Appendix of the RECORD an outstanding and comprehensive article by Seaborn P. Collins, national commander, the American Legion, entitled "Why the American Legion Favors Help for the United States Merchant Fleet," which appeared in the April 1955 issue of the American Legion magazine.

I am informed by the Public Printer that the printing of the article in the Appendix will require two and one-third pages, at a cost of $187. I ask unanimous consent that the article be printed in the Appendix, notwithstanding that fact.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY THE AMERICAN LEGION FAVORS HELP FOR THE UNITED STATES MERCHANT FLEET

(By Seaborn P. Collins, national commander, the American Legion)

Since its 1921 national convention in Kansas City, Mo., the American Legion has continuously urged that the Government of the United States support the American merchant marine—by favorable legislation, by financial assistance, and by other means.

In addition to a broad policy of Government support for our privately operated, oceangoing cargo and passenger ships, the American Legion favors a number of specific steps by which our merchant marine may receive help.

Why a merchant marine policy? Why a policy of assistance? What the goals and what are the limits of this policy? What are the steps to the goals? Where do we stand now?

To answer the last question, briefly, before the others—we are not in good shape. Our merchant marine is shrinking in size and becoming outmoded in design—after two shots in the arm from World War II and the Korean war, and in spite of some welcome, but piecemeal, Government supports without which the patient would already be dead.

Why a merchant-marine policy for a veterans organization?

The American Legion is interested in the vital part that the merchant marine plays in our national defense picture and as an instrument of national policy. Our merchant marine is made up chiefly of those ships which, in peacetime, carry dry cargo, passengers and liquid cargo. In time of war they would carry war materiel, troops, and liquid fuel to and from war theaters, and bring to the United States materials needed for war industry, many of which must be gotten overseas. Shipping in wartime is a matter of life or death for our Nation.

Time and allies saw us through our shipping crises (at great dollar cost) in World Wars I and II. The outlook for the future does not even permit thinking of time to start a shipbuilding program after hostilities begin, in the event of another general war. A peacetime shipping program based on minimum wartime needs, at the very least, is a necessity.

Why does our maritime industry need help?

Unassisted, our merchant marine cannot survive in the free competition that exists on the high seas among all seafaring nations in peacetime. American labor costs, based on American living standards, are the ruling factor. An American able-bodied seaman earns more than 4 times as much as a British seaman, 3½ times as much as a Norwegian seaman, 18 times as much as a Chilean seaman. You cannot survive in free competition if your costs are from 3½ to 13 times the costs of your competitors. Unaided United States shipping is not surviving this competition. In the last 5 months of 1954, 67 unsubsidized United States ships went over to foreign flags.

The goals of the American Legion's policies regarding an American merchant marine include:

1. Size: A merchant fleet large enough to meet all immediate shipping needs upon the outbreak of a war, and able to serve as a nucleus for a wartime program of additions.

2. Usefulness: Ships designed and built to meet conditions imposed at any time by war. This means having a modern fleet in being at all times, with a constant program of replacement for worn-out, and out-of-date ships. It means a fleet with defense features built in, however uneconomic they may be to peacetime operators.

3. Skilled manpower: A merchant fleet that supports in peacetime enough skilled seamen to handle our immediate shipping manpower needs upon the outbreak of a war, and to see us safely through a wartime shipping-manpower build-up.

4. Shipbuilding capacity: A merchant fleet that supports a peacetime shipbuilding industry able to serve (in size, modernity and skilled manpower) as a mobilization nucleus for a wartime program of additions.

Those are the chief goals. There are also limits to such aims:

1. The Legion does not propose Government ownership or operation of the merchant fleet. Unlike a shooting Navy, a merchant marine has self-supporting features. Government need not foot the whole bill as it must for an adequate Navy. It need only foot that part which makes it possible for our high-priced ships to compete on even terms with cheap foreign competition, in numbers and quality suitable to sound defense needs.

2. The Legion does not propose a Government-sponsored shipping race with other nations. It is true that a sensible merchant shipping program would vastly increase the number of modern American flag vessels on the seas. But Government-sponsored expansion should stop at the point where national security needs are soundly met.

We have encouraged our allies to go after most of the ocean business, so that today we only carry 28 percent of our own foreign commerce. That figure is falling. In a build-up of our own fleet, we should let friendly maritime nations understand our intention of stopping at the point where our own defense needs are met.

II. THE WRONG WAY

Twice in recent history the United States built huge cargo and transport fleets entirely out of public funds—in World War I and again in World War II. The World War I fleet was not finished until the war was over, and most of it rotted away unused thereafter.

The vastly larger World War II fleet cost us $19 billion, a fantastic figure. The Liberties, Victories, C2's, C3's, and C4's were vital to the winning of the war. But they can't last forever and we can't count on them again.

We have saved some of our World War II ships. The Government put some of them in cold storage and found good use for them during the Korean War at a cost of about $100,000 to break each one out.

Others are hauling Government freight for our Military Sea Transport Service.

Others are being operated on scheduled freighter lines by private companies, helped by Government subsidies.

United States owners bought still others and operated them as tramps, without subsidies. The tramps managed to make money during the shipping shortage right after World War II and again during the Korean War. But recently—under "normal" competitive conditions—many of them have been driven to the wall or have fled to foreign flags.

Still others of our World War II cargo and transport fleet were sold, under the Ship Sale Act of 1946, to foreign owners at one-third the construction cost.

The entire fleet is now out of date for future defense needs. But it exists, and its existence has led us into the temptation of relying upon it and doing too little about a continuous replacement program.

In large measure we are repeating the phenomenon of block obsolescence, depending for security needs upon a huge fleet that was built all at once and has gone out of date all at once. A few facts of security bring home the meaning of block obsolescence:

1. Nuclear weapons have outmoded giant wartime convoys of cargo and troop ships. A mass of ships in one convoy would make a perfect target for a nuclear bomb. Ocean transport in future wars calls for ships dispersed into small groups. This in turn means that naval support for payload ships must be spread thinner, leaving each ship more on its own to escape submarines. Speed of ship is called for.

2. Russia probably has more than 400 snorkel subs capable of doing at least 20 knots under water.

3. Of 629 privately operated United States freighters and passenger ships engaged in foreign commerce (or only temporarily inactive) at the end of 1952, 558 were Victories, Liberties, or C-type ships. Of these, 159 Liberties could do 9 knots, 59 Victories could do 14 knots, 340 C-types could do 17 or 18 knots.

4. By going to the reserve boneyard, we could dig up a total of more than 3,000 ships, including tankers, and put them to sea. A modern submarine could run rings around most of them without surfacing.

Naturally, a part of the American Legion's merchant marine policy urges "a long-range ship construction program to provide replacements and avoid block obsolescence of our aging merchants ships."

III. HOW ABOUT SUBSIDIES?

You don't speak of Government help for shipping without thinking, right off, of direct cash subsidies to shipowners.

Part of the American Legion's mandate on shipping urges policies that will "More fully implement the sound principles and procedures of the Merchant Marine Act of 1936."

That act provides, among other things, for direct Government payments to shipowners, both for the operation and building of ships. The Legion approves of these subsidies, and

implies that they should be used to build and operate more ships than they do now. This does not mean that ships that are already subsidized should get more money from the Government, except in cases where it is necessary to meet foreign competition.

It is too easy to think of subsidies as a lush gift of the taxpayers' money to the capital and management of a shipping firm, and to muse that it must be nice to be the owner of a subsidized line of ships and have the taxpayers guarantee you a successful business.

Such thoughts, which are entirely natural, have weakened both public and congressional support of an extended subsidy program. But they are baseless.

Suppose you are the lucky owner who gets an operating subsidy.

If you carry general cargo in a subsidized ship that sails between San Francisco and Tokyo, your irreducible operating costs might be $18,000 a month more than those of the Japanese vessel that docks beside you in both ports and bids against you for cargoes.

As an American vessel, yours must carry an American crew while you rival could carry a low-paid Japanese crew. No matter whom you compete against, the same problem plagues you. Differences in labor costs between United States and foreign vessels ranging from $10,000 to $19,000 a month are commonplace. The average operating cost difference between all subsidized United States ships and their closest foreign rivals is close to $15,000 a month.

In times of tough competition (which has come to mean whenever there is no war) your Japanese competitor could page his rates at a level where he'd earned $1,000 a month. If you matched him in order to get an equal share of cargoes, you'd lose $17,000 a month, if you had no operating subsidy.

But you have a subsidy. How does it work?

The Maritime Administration bases your subsidy on a strict comparison between your necessary costs and the costs of the Japanese ship which is your closest rival. If it agreed that the difference is $18,000, that would be the amount of your subsidy, no more.

If the Maritime Administration considered that some of your costs were unwise, it would disallow them. The subsidy equalizes necessary costs, it does not pay for your business mistakes.

Suppose you accept the subsidy, yet are shrewd enough or lucky enough to earn a pile of money this year. Do you keep $18,000 a month of the taxpayers' money on top of your own earnings? The Maritime Administration will subtract from your subsidy half of all you earn above 10 percent on your investment, up to the point where you have repaid the whole subsidy.

Between 1947 and 1953, 28 percent of subsidies accrued by our ships was recaptured by the Government. We had an average of 300 ships subsidized each year during this period. Gross subsidies came to about $54.8 million a year. Recaptures from good operations and some good times brought back an average of $14 million a year. The same ships paid taxes averaging $11.8 million a year. The net cost of this program, as a nationally sponsored venture, was a little lers than $29 million a year on what looked offhand like a $54.8-million-a-year subsidy program.

The subsidy does not pay you a profit. It does not cover your losses. It puts you in the scrap for ocean business on an equal footing with your foreign rival. It lets you fail or succeed with the Japanese or English or Dutch or Greek operator on the same basis that one American businessman competes with another. The advantage of the subsidy is that it lets American businessmen fight for the ocean trade without being overly penalized for flying the American flag, buying American and hiring American.

Who benefits? The Nation benefits to the extent that your operation helps maintain the nucleus of ships, shipbuilding and the shipping manpower the Nation needs.

Who else benefits? The bulk of ship subsidies actually goes to American labor, rather than to capital and management. The payments are chiefly based on the cost of American labor. They permit the employment of seamen, shipyard workers and other shipping labor at rates of pay that are consistent with American living standards. In effect, an American level of wages is guaranteed by the subsidy, but profits must come from successful business competition.

This is a proper statement of what the shipping subsidies add up to, in the face of a rather easy suspicion that the subsidies are a form of handout to management.

This subsidy principle is the one that is approved by the American Legion, other national organizations, and the Congress. It is the subsidy principle of the Merchant Marine Act of 1936. The Legion believes that private capital is ready to increase our merchant fleet if the penalties of flying our flag are not too great. Thus a present program to provide $173 million of Government aid for shipbuilding and overhaul is expected to attrack $227 million more of private investment funds.

Exactly the same principle applies to shipbuilding subsidies as applies to ship operating subsidies. Your subsidy to build a ship in an American yard cannot exceed the saving you could make by building it in a qualified foreign yard. It makes up the extra cost that you have to pay for building an American ship in an American yard with American products and American labor.

IV. HOW ABOUT A PROGRAM?

The Congress has done a great deal to encourage revitalization of our merchant marine in the last year. Henry C. Parke, of Brooklyn, N. Y., chairman of the American Legion's national merchant marine committee, represented the Legion well, and tirelessly supported favorable shipping legislation in the Congress. He was ably supported by a strong and representative committee. Compared to other years, 1954 was productive. Some of the achievements:

1. The ship operating subsidy appropriation was increased.

2. A plan to repair and improve our laid-up cargo ships was adopted. This was done not only with the thought in mind of updating the reserve fleet to some extent, but to help maintain the shipyards. The mothballed cargo ships of the reserve fleet were put away in the condition in which they came out of World War II. Recently 57 of them were in the shipyards for renovation, including 4 guinea-pig Liberties which will be remodeled in an attempt to improve upon the performance for which they were designed.

3. A blanket law was passed requiring that at least half of all Government-financed cargoes shipped overseas must go in American-flag vessels. This is called the 50–50 law. Such a provision had been written into individual bills for foreign aid in the past, but it had not been a general law applying to all Government-financed cargoes.

This reasonable law, by assuring cargoes for American-flag vessels, is a costless way of improving earnings and thus reducing the need for direct grants to United States shipping.

The 50–50 law is under indirect attack by foreign shipowners.

Since no other shipping nation permits as much as half of its entire foreign commerce to travel on any ships but its own, and since our own shipping is far below national safety requirements, the American Legion is continuing to support the 50–50 law and will fight any attempt to repeal or weaken it.

4. Construction of 10 new supertankers has been privately financed as a result of a trade-in-and-build program, with an assurance that the Government would have cargoes for them for many years. Fifteen more such tankers will probably be built in the not too distant future.

5. An addition of about 20 modern dry cargo and passenger ships to our merchant fleet seems likely as a result of plans now afoot. These would include new ships and remodeled ships.

Yet all of this good news is not a progressive plan to achieve definite goals.

The Navy's estimate is that we need at least 214 new freighters, tankers, and transports, capable of 20 knots or more, right now. The 25 tankers and 20 freighters and passenger ships mentioned above do not approach this goal. They add up to 45 ships, many of which are in the "maybe" stage.

The realities call for a bold, intelligent plan.

Such a plan would fix a sensible objective and provide the necessary steps to bring it into being and to keep it in operation.

Such a plan would provide a steady means of modernizing some ships and replacing others as fast as they become outmoded or worn out.

Legislating out of desperation, without any real plan, must forever keep our shipping at a level far below the limits of national requirements.

A plan that goes after what we need would be "bold" in terms of a merchant marine. But the boldness should not particularly frighten anyone. It is the same method by which me maintain the Navy, Army, and Air Force that we need, except that the Nation need not foot the entire cost of a merchant marine.

Most of the ships to which we are giving operating subsidies today are Victories and C-type ships. We aren't getting our full money's worth in terms of usefulness to the national defense. These ships would be helpful in a Korea-type emergency in which we would have absolute control of the seas. They are already out of date for any situation in which modern enemy subs, planes, or ships would challenge us.

Our subsidy dollar is keeping seamen employed and keeping shipping industry operating to a certain extent. Those are two goals. It is buying us very little in terms of the other goals: shipyard capacity, fleet usefulness in war, or fleet size. Each dollar of operating subsidy would be better spent if it were helping a fleet of the right size and right design.

With no planned shipbuilding program, we are lagging behind in ship design. The new supertankers are large, speedy, and modern in every sense. So are our three big, fast, new passenger ships, the *United States*, the *Constitution*, and the *Independence*. But no basic change in the design of the bulk of the ocean-going fleet has occurred since World War II, except for the new mariner class.

Thirty-five new mariners have been built. They are beautiful, fast cargo ships, but were unfortunately designed to be Navy auxiliaries, without enough thought to their peacetime operation.

The design of the Mariners requires such big crews that, as they came off the ways, few operators would undertake to sail them commercially. Twenty-six of the brandnew Mariners went directly into the tiedup reserve fleet. Seven are privately operated with subsidy, the Navy is using one and one has been lost at sea.

Now, two more of them will be remodeled for operating efficiency and put into the passenger trade. Those 2 are part of the 20 cargo and passenger ships included in the schedule of tentative new shipping above.

The Federal Maritime Board has asked for $102 million for 1956 to help up-date our merchant fleet and the President included this sum in his budget message to Congress.

The American Legion will support this and other specific steps aimed at improvement.

However, this and the other encouraging recent actions are not aimed at a positive goal. They are, rather, emergency measures to patch up a bad situation that has reached a critical stage.

Within a few years nearly all of our merchant ships will be outdated not only for defense purposes but for commercial use. Of our 405 privately operated tankers, for instance, 85 percent need replacement now.

Today it is recognized that replacement cannot be put off any longer without reaching a point where we will have to send the bulk of our ships to the graveyard all at once, in a very few years from now. To replace even the equivalent of our present fleet then would be beyond the capacity of our yards.

A merchant marine program with a goal would be something other than a fill-in to ease a crisis. We would ask, How many ships of what types does the Nation need? We would establish the answer and build the ships. We would ask, On what routes can we operate them? We would commit more ships to more routes, and support their operation as much as necessary. We would ask, What replacement rate need we employ steadily to keep the fleet up to date and to keep the shipping industry stable at a safe level? We would schedule a continuing replacement program and end the era of recurring crises.

Neither now nor in the past have we made a shipping program on the basis of these questions and answers—and our failure has been rather more costly than less.

The cost per ship would almost certainly be less under a planned program than under a mend-and-patch policy. Sound planning would, among other things, encourage bolder management and more adventurous enterprise on the part of operators.

The absence of dependable planning in an industry that requires Government support has made timidity and caution characteristics of our shipping industry.

It is most likely that if the industry were placed on a sound and dependable basis, bolder attitudes would appear, would pay off, and make overcautiousness unprofitable.

The cost of an enlarged, coordinated, shipping program could also be reduced by more measures—such as the 50-50 Act—that encourage more shipping in American bottoms.

A great deal remains to be done to give United States shipping more of the United States cargoes. If all such steps were taken, they would reduce the amount of Government support needed to maintain a sound merchant fleet and would reflect to the advantage of every American taxpayer.

V. A LITTLE HISTORY

Few Americans seem to have been aware of the tremendous cost difference between operating American ships and operating foreign ships. The idea that American-flag ships would be driven off the seas without Government support seems to be one of the best-kept secrets of the last century. It has been in fact nearly a century since United States shipping has been able to hold its own, by its own.

In the early years of our country we were a seacoast Nation, struggling to make out in the world. Shipping was the very first major industry in which we rose to a position of world importance.

The success of our ships, between 1780 and 1860, caused many of our troubles and battles of those years, including, of course, the British acts of repression against our enterprising ships that led to the War of 1812. The American Revolution, in earlier years, also sprang in part from Britain's efforts to hold down the American shipping that was giving Britannia a merry race.

But America ceased to be a seacoast Nation as it opened up the wilderness at its back. Millions of Americans went west, away from the sea, and took with them a memory of their country as a world leader on the high seas.

The memory still lives. Yet from 1860 onward, except in times of war, our merchant fleet was dying. Up until 1860 we maintained about 4 tons of shipping for every $1,000 worth of foreign commerce. After 1860 our commerce spiraled upward, but our shipping fell off.

What happened? Wealth gained inland raised the American standard of living. Inland workers were protected by tariffs from having their wages or employment itself knocked down by the importation of too many products made by cheap labor abroad. Naturally, American sailors would not put to sea for wages that were inferior to the standards of their country. United States maritime wages rose, although shipping had to compete against foreign costs without benefit of tariff.

The result was that fewer and fewer shipping operations could survive. Foreign ships got more of the business, United States ships got less.

In 1825 American ships carried 92 percent of our foreign trade. In 1860 they carried 66 percent. In 1901 they carried only 8 percent.

In a crisis, America still carries the goods. A few years ago, as a result of the World War II shipping shortage, United States ships that we built for $19 billion carried more than 70 percent of our foreign trade. Today the figure has fallen off to 28 percent and is diving back toward the 1900 level.

Because unaided shipping is a losing business in America, there is no point in going after the ocean trade with Government help just to lead the parade. But since shipping is a vital instrument of national policy and a vital necessity for national safety, there is every reason to achieve intelligently that level of shipping which the realities of national welfare dictate.

A basic policy of the American Legion, reaffirmed in nearly every year since 1921, urges that we make and keep a stable merchant marine on that level.

Addresses Delivered Before Annual Meeting of Pennsylvania Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1955

Mr. MARTIN of Pennsylvania. Mr. President, on February 22, in Philadelphia, Pa., the annual meeting of the Pennsylvania Manufacturers' Association was held. At that meeting addresses were delivered by my distinguished colleague [Mr. DUFF] and the distinguished Senator from Illinois [Mr. DIRKSEN]; by the dean of the Pennsylvania Republican delegation, Representative RICHARD M. SIMPSON, and by the distinguished Member of the House from Indiana, Mr. CHARLES A. HALLECK, as well as an address delivered by myself. I ask unanimous consent that these addresses may be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. RICHARD M. SIMPSON

I was thrilled, as I know you were, when the young man who just spoke to us created a picture of the businessman of the immediate future. I could not help but think of how this young man has been favored above many others who are in colleges today and who are getting their learning out of books only. He has been privileged to get some learning by practical experience with businessmen, and he expressed it so nicely when he said that he learned in effect that businessmen are not ogres, but on the contrary do try to get along with their employees.

And I say to you, young man, you have come to a group of Pennsylvanians who have made it a business for many years to provide jobs in Pennsylvania and they have done that by helping to create a healthy atmosphere in which business might thrive, and only as business thrives are there jobs for your neighbors and mine.

In Washington we have been told for some time that the Democrats and the Republicans would get along very nicely, be highly cooperative and bipartisan, and that the day had come when it didn't make a great deal of difference—this was after the election—whether the Republicans controlled the House and the Senate or not. Before that date we urged the election of Republican Congressmen, and if we had them we would, not be in the mess we are today. But we didn't get them.

Then we began to listen to the will-of-the-wisp, the people who told us, "Well, the Democrats are pretty good guys anyway," and you could take their word and they would cooperate with us and give our great President the kind of legislation he wants and the cooperation he needs.

Not being on the inside, I cannot speak conclusively, but having read the newspapers and having listened to the Democrats talk, I know that the Democrats did come offering honey gifts and words, seeking to tie the hands of the Republicans and to pretend a close cooperation for Mr. Eisenhower's program. And what are we getting? Has the Democratic Party changed its spots and is it today any more willing to cooperate with Republicans than it has been in the past? Well, we have thus far had at least two instances in Washington which belie any such claim.

One was a bill purported to be the same as the administration had requested a year ago when the Republicans were in the majority of the Congress, a bill dealing with the foreign trade. It was handed to Mr. COOPER of the Ways and Means Committee for introduction. Between the time the bill left our party's leadership in Washington and the time it was introduced, it was changed, and things were written into it which were not in the administration bill a year ago, a bill based upon the Randall Commission report.

Now, the bill had been sold to the country on the basis of cooperation, on the basis of an agreement made with the Democrats because this was an international matter and it was believed that the legislation would go through unanimously. But the Democratic Party breached the faith that our party had placed in it even in that international field and only confirmed what I have said frequently and what I repeat: You cannot trust the Democratic Party in Washington to help us make a good record for our President. Certainly you cannot trust the Democrats in this year immediately preceding a Presidential election, for they are out to lick Dwight Eisenhower and elect their own man as President. I hope that we won't fall into their trap again.

CITES SECOND DECEPTION

The other instance became apparent only a day or two ago—and both of these examples

involved the committee upon which I serve, the Ways and Means Committee. Less than 10 days ago the chairman of the Ways and Means Committee said to all the members: Can we get an agreement that there will be no hearings held in connection with the bill providing for continuation of the present corporate tax rate and extension of the present rates on certain of excises due to expire in April? The matter was discussed by our committee and I said, "I assume this means that there will be no amendments made to the bill." An equivocal answer was given and I became suspicious, but inasmuch as the Democrats have a majority of 15 to 10 upon the committee, we did not argue because we didn't have the votes, and it was decided not to have hearings.

Well, you recall how last week, after disposing of the trade extension bill in the House without warning, and frankly without much careful thought on the part of the Democrats, they suddenly announced that they were going to amend the tax bill by a proviso that every taxpayer might deduct $20 for himself and his dependents from the tax which he figured he owed the Government.

We challenged them in the committee as to why they had told us one thing and done another and received an answer to this effect: "Well, we fooled you fellows; you'd better make the best of it."

A DISHONEST PROPOSAL

It is a dishonest proposal. It comes at a time when the President has assured us that if we continue with the very sound financial policies that we have been following for the past year or two, we will be able to next year make a tax reduction, in the absence of war, which will be sound, of a greater amount in my opinion, and a kind of a tax reduction which will not have to be replaced by a new tax in the immediate future for it won't tend to increase the national debt.

The Republican Party under President Eisenhower has given this country something we have not had for a generation, a sound Government, a Government in which we are endeavoring to make the outgo and the income match, a Government in which we have stabilized the value of the dollar so that the dollar you pay today for your social security, or for your life insurance will, if we maintain our policies, be, when you get it back, worth at least as much as it is today. That is what the Republican Party stands for, a country where a businessman can look ahead 1, 2, or 3 years and know that, if these policies are continued under a Republican administration, there will be a healthy climate under which his business can prosper and grow. That is what we stand for. That is why I am proud to tell them in Washington that I believe with Dwight Eisenhower as our nominee for the President, Pennsylvania will get back in the Republican column, and for another generation at least will stay there.

You businessmen owe an obligation not only to your business, but to your country and to the Republican Party, which is the medium through which you can express yourself. I would like to call upon each of you as you go into your respective counties to persuade others to get out and work the Republican ticket, and endeavor to get others who should be in poltics as candidates to become candidates, and to sponsor in every way you can good government through the Republican Party.

If you do that in the next 2 years, there is no doubt but that Dwight Eisenhower will be our President for another 4 years and the Republican Party will again be in the ascendency here in Pennsylvania.

Thank you.

ADDRESS OF HON. CHARLES A. HALLECK

MASON and DICK, my colleagues of the Congress, members of the Pennsylvania Manufacturers' Association, and friends, I am happy to be here and I would like to say that as a Republican from Indiana I haven't any allergy for men who are successes in business. It would be good for the country, for everybody, if people in business had no allergy for us who are in politics, because politics, my friends, is getting to be a right important business.

As I say, I come from Indiana and am a Republican, but this is going to be a nonpartisan Republican speech. We take our politics pretty seriously out there in Indiana. They say the first words spoken by every child born in the State are these: "I am not a candidate for any public office, but I promise if nominated and elected I shall serve to the best of my ability." And that is really the way we work at it.

MASON, you said I have been your longtime friend. I have. You had me come to Tioga County in 1936, I think it was, to speak to a Republican meeting, and I was glad to come up there from Washington, but the opposition darned near wrecked the meeting. We had it out in the ballpark at Mansfield, and darned if the WPA didn't move in and put brand-new green paint on all the seats in the grandstand the day before we were to hold the meeting. But we went ahead and held the meeting anyway.

MASON, you have been a stalwart fighter in our cause for a long time.

DICK SIMPSON, I just want to say to you in the presence of these people from Pennsylvania that I have never ceased to be happy for what little I did to bring about your election. I have been happy to play and work on your team because you are the great kind of a fellow that we need.

I was at the White House this morning for our conference. It was stepped up by the reason of certain developments, principally this $20 deal. And are they going to give a mule with that or not? I don't know. I got out a copy of the Corrupt Practices Act. You know it says in there if you spend money to buy somebody's vote, that is a violation of the criminal law. I don't know whether technically this is such a violation, but certainly it is a violation of the spirit of the Corrupt Practices Act.

They also stepped up the meeting a little so that I could come up here, and the President was happy to do it. And as I left he said, "Good luck, CHARLIE. I am glad you are going up there to Philadelphia to talk to those folks."

If you could have been with me this morning and heard the President's expression on some of the problems that immediately beset us, why, there wouldn't be one of you who would not go out of there and say, "I am willing to go down the line on that program."

Now, I do want to say a few things about this program. First of all, folks, I don't care whether you are running a business or whether you have an association like this, you have got to have managers to run it.

NEW SET OF MANAGERS

A little more than 2 years ago the people of this country called for a new set of managers to operate their Federal Government. This change in political leadership resulted from a growing public discontent with the manner in which the country was being run. Not the least of the reasons for this discontent was a deep-seated conviction that America was being pushed toward socialism. Progressively bigger Federal spending programs, higher taxes, controls, competition with private enterprise, grandiose schemes for public power, and attempts to regiment medicine and agriculture were all part of the socialistic pattern.

The trend toward centralized government, with emphasis on the authority of the executive at the expense of Congress, was another alarming feature of the campaign to substitute government "over" the people for government "of" the people. Inflation and the illusion of "free money" from Washington were devices designed to perpetuate a political dynasty. Scandals and corruption were a natural byproduct of cynicism in high places. Even foreign relations were used as a tool to accomplish radical ends. Employing a "crisis psychology," previous administrations were quick to seize on events in the international picture as an excuse for new controls and regulations, new spending, and greater taxes.

No new management could have done a better job of giving the American people the kind of government they wanted than has the Republican administration of Dwight D. Eisenhower. In spite of inherited commitments involving upward of $80 billion, for which no provision to pay had been made by the old set of managers, we have succeeded in achieving substantial budget reductions. Economies in the Federal household have made possible the largest tax-cutting program in the Nation's history, amounting to $7.4 billion on an annual basis.

Controls were ended as one of the first orders of business.

Sound fiscal policies have halted ruinous inflation.

The Ewing plan for socialized medicine and the Brannan plan to do the same thing to agriculture have both been sunk without a trace.

RESTORING PUBLIC CONFIDENCE

The new managers on the Washington scene are restoring public confidence in private enterprise as the best system mankind has yet devised for steady progress toward better living for all Americans. Two years ago that confidence was at low ebb because for two decades business had served as a convenient whipping boy for radicals. The climate has been changed from one of hostility toward important segments of our economy to one of friendly cooperation and fair treatment for all segments. This change results from a fundamental belief in our system on the part of this new political management, in contrast to the attitude of hot-eyed extremists who hoped they could make America over into something completely foreign.

The trumped-up Dixon-Yates controversy betrays the anguish of public-power advocates, especially in the Tennessee Valley area, who are afraid the gravy train is running out. The basic issue at stake is whether this Government is going to enter into a fair and equitable contract with private enterprise or soak the taxpayers of this Nation $100 million to build another steam generating plant to subsidize low-cost power. The contract itself confirms this administration's respect for the principle that government should encourage private enterprise wherever possible and practicable.

This administration is further demonstrating its faith in private enterprise by moving to get Government out of business activities where it has no right to be.

President Eisenhower's respect for constitutional processes is reflected in his cooperative attitude toward the Congress, which he considers a partner in the business of Government operation.

We are also moving steadily toward the restoration of rights and responsibilities to States and communities with carefully considered aid programs that call for greater participation at the local level and less control at the Federal level.

We are getting more government back home, where it belongs.

The farm program adopted by the Republican 83d Congress marks a sure-footed approach to the problem of getting agriculture out from under the staggering burden of unmanageable surpluses which had built up under the rigid parity system. It is a major move toward the release of American farmers from the bondage of ever-tightening controls and restrictions and brings agriculture closer to the goal of 100 percent parity in the market place.

Handling of the Formosa incident is in striking contrast to the manner in which a previous administration met a situation in Korea. In the case of Korea, members of the Congress learned that American troops had been committed to armed conflict by reading the news in the Nation's press. In the case of Formosa, President Eisenhower called on the Congress for support of his policy in advance of action. Instead of the confusion and misunderstanding at home and abroad which characterized United States policy toward Korea, the American people, as well as our friends and potential enemies, know exactly where we stand on the issue of defending Formosa.

Beyond that, the calmness with which the Eisenhower administration has pursued its foreign policy, the absence of alarms and fanfare, has resulted in a quiet confidence on the part of our citizens that we now have managers at the helm who know what they are doing. This consistent and courageous policy may well prove to be one of our most effective weapons for safeguarding the peace of the world. Certainly the manner in which it has been developed, with forthright debate in and overwhelming support by the Congress of the United States, is our best guarantee of national unity.

GOALS OF ADMINISTRATION

The goals of the Eisenhower administration during the next 2 years will be to continue the gains we have made toward the establishment of a sound prosperity based on a just and lasting peace. Avoiding extremes of political philosophy, we are charting a course to which an overwhelming majority of Americans can subscribe. It is a course that calls for conservative policies where the people's money is concerned, but for sympathetic attention to the problems of human needs, where the public good requires Federal action. It is a course that minimizes government interference in matters properly the concern of private enterprise or of states and communities. It is a course which emphasizes the responsibility of the individual to do those things for himself which are the traditional responsibilities of free American citizens.

This new set of managers strongly believes that incentive is the great motivating force in the American economy and that honest interpretation of the law, together with fair and impartial treatment for everyone, are foundation stones of good government.

Pursuit of such policies and principles during the past 2 years has created a wholesome attitude of public trust in government leadership. This faith, together with sound, forward-looking management of the Federal operation, has brought the Nation through a difficult transition period with a minimum of dislocations and adjustment. The prophets of gloom who were so loud in their predictions of a serious recession not so long ago have been shamed into silence by accumulating evidence that ours is a vigorous and expanding Nation.

Those who think the battle has been easy, or that it is won for all time, should be forewarned:

The radicals, the spenders, the socializers, the crisis-manufacturers are no longer in power, but they have not given up hope of returning. They are waiting in the wings. They are ready to come in. And believe me, they will come in if we don't win.

I can't believe the people of this country want that to happen. It won't happen if citizens in all walks of life who believe in our system and who want to help make it work better than ever before will take a continuing interest in Government at all levels. As manufacturers, you well know that any quality product starts with quality materials. By the same token, good Government in America is the end product of good citizenship. Good citizenship begins here—in this room—with you.

That is the way I feel about it. And if you feel about it the way I do, believe me you are going to do something about it. And if you do, then I am very, very sure that we are going to win through to the greatest period of peace and happiness and prosperity that this Nation ever saw.

ADDRESS OF HON. JAMES H. DUFF

This is a magnificent audience and it is a great privilege to be here.

I would like to tell you of an experience I had at noon today at Independence Hall during a meeting on the Voice of Freedom. There was a young man there every one of you would have been pleased beyond measure to hear: Polish Lieutenant Jerecki, who had joined the Communist Party in Poland because he thought that was his best opportunity for service.

He happened to be the son of a Polish officer who had been executed when the Russians took over. Had they known that, he said, he would not have been trained for the air force in Russian Poland but would have been sent to Siberia.

Only 21 at the time, he became flight commander of a crack squadron of MIG's under Russian control in the land where his own government had been destroyed, where personal property had been confiscated, where the women had been violated, and where the people had been deprived of their civil and religious liberties.

He risked all for freedom, fleeing from behind the Iron Curtain so he could tell the people of America what it was like to be under the iron foot of communism.

As everyone here knows, and as he pointed out, the experience of Poland will be the experience of the world unless something is done about it.

I think that the challenge to our generation was never greater than it is today, with this country the sole roadblock between freedom and the overrunning of the world by the most vicious and evil and godless force that has ever attempted to conquer a country.

At such a time, we are favored beyond imagination in having as President one of the great diplomats of our time and one of the greatest soldiers in the history of America—Dwight D. Eisenhower.

And finally, as a Republican, believing in Republicanism and believing that the control of this Government by Republicans is necessary to keep it on the track and to guide our destinies in the most serious period of our history, I am confident that Dwight D. Eisenhower will again respond to the call of the people of this country and next year will be reelected President of the United States.

ADDRESS OF HON. EDWARD MARTIN

It is an inspiration to come to this historic center of patriotism on the birthday anniversary of George Washington.

Here, in the city of William Penn, freedom of the individual took root and flourished for the first time in the world. Here American independence was proclaimed and the world's greatest charter of freedom, the Constitution of the United States, was framed and adopted.

With that great tradition in mind I would like to discuss briefly our duty to our country and the dangers we must overcome to preserve our sacred heritage of liberty and independence.

I have in mind also the great good that can be accomplished by the influence and example of the distinguished group of leaders in business and industry assembled here tonight.

The stability of our Government, the economic strength of the Nation, and the continuance of the American way of life depend upon men and women like you.

The Founding Fathers, meeting here in Philadelphia, erected a great landmark in world progress when they proclaimed that the right to life, liberty, and the pursuit of happiness are divine endowments bestowed upon all mankind by the Creator of the universe. They framed a new concept of self-government by free men.

Their plan embraced the fundamental proposition that governments derive their just powers from the consent of the governed. They established the principle that government has no power over the individual beyond that granted by the people themselves.

The knew from their profound study of history that great democracies of the past had failed because the moral fiber of the people had become undermined by greed and corruption. They knew that tyranny and dictatorship have always overwhelmed free people who ignored the sound principle that government has nothing to give except that which it first takes from the people.

I would like to direct your attention to three great dangers that threaten America.

First. Big government and government doing things that we should do for ourselves.

The vast expansion in the size and cost of government at all levels is leading us away from the ideals of the Founding Fathers. The people are constantly demanding more and more services. Under that pressure Government has become involved in too many functions in which it does not properly belong. The result has always been excessive taxation and the steady flow of power from the hands of the people into centralized, bureaucratic authority and government control.

Second. Too much private and public debt. Too many of our people do not seem to be concerned with the ever increasing burden of debt which is growing bigger and bigger at a sickening rate.

Never before in the history of the world have any people owed so much as we owe today. It should be a matter of deep concern to every one of us that the American people now owe a total of more than $600 billion, three times as much as the debt 15 years ago.

Twenty years ago, when we were fighting the worst depression we ever had, the Federal debt was less than $20 billion. Today it is $278 billion, an increase of $20 billion since the end of World War II.

The debts of State and local governments have increased 16 percent in one year alone, reaching a total of $38 billion on June 30, 1954.

If for any reason we should be forced into a decline—even a slight decline in business activity, jobs and income—this staggering burden of public and private debt could prove too much for our economy to sustain and could bring us to disaster.

Please bear in mind that more nations have been destroyed by debt and taxes than by invading armies.

Third. Too little interest in government. It is unfortunate that so many of our people have forgotten that taking part in government is a patriotic duty. We cannot expect clean and economical government unless we take a real part in it.

There will be disloyalty and communism in government unless the people really demand loyalty. Greed, corruption, and disloyalty can destroy the strongest nation.

We must know our Government. It was President Woodrow Wilson who said, and I quote:

"Freedom and free institutions cannot long be maintained by any people who do not understand the nature of their government."

Our people should be taught in schoolrooms, in our colleges, in union halls, and in business meetings, from the lecture platform, the pulpit, the legislative halls, and the courts, the difference between our republican form of government and the communistic system of Soviet Russia. The blessings of individual freedom and human dignity should be compared with the terror and tyranny under which millions of people are enslaved behind the Iron Curtain of godless communism.

We must emphasize that freedom of the individual as ordained by God is the firm foundation of our national strength. It is our responsibility to keep alive for future generations the freedoms and the opoprtunities that made the United States the greatest nation on earth.

It is a great honor to have as our guest the brilliant and forceful Senator from Illinois.

He is a great American statesman. He has deep patriotic and religious convictions. He knows and loves America. He is proud to be an American.

In World War I he enlisted as a private in the Army and was commissioned second lieutenant in the field. He served overseas for 17 months.

He came to the Senate after eight consecutive terms of outstanding service in the House.

It is an honor to present to this fine Pennsylvania audience the distinguished Senator from Illinois, the Honorable EVERETT MCKINLEY DIRKSEN.

ADDRESS OF HON. EVERETT M. DIRKSEN

I am delighted to be your guest and I trust you will settle yourselves comfortably in those comfortable chairs. I have just been advised that the train doesn't go until 11:20, so we have lots of time. [Laughter.]

I have come frequently to this great municipality and you have treated me with the utmost courtesy and hospitality, and on each recurring occasion I feel a good deal like the two Army Chaplains who were lost on the Western Front when I was a soldier in World War I. They had become detached from their respective military organizations and were floundering around in the mud and water of the shellholes in the darkness. After hours of fruitless wandering they heard a rich voice from an invalided friend say, "Who in the devil led the Ace of Spades?" They got up and embraced each other and said, "Thank goodness we are among Christians."

That is the way I feel when I come to your great commonwealth.

I want to say first of all that as I get around the country I find some confusion. I find some bewilderment in the minds of people and bewilderment and confusion so easily lead to frustration. And frustration in turn often develops a sense of misdirection. Frequently, then, we must get back to a solid orientation as citizens of the greatest Republic on earth.

When Lincoln was in the Legislature in Illinois long ago, they had a judge over across the way in Kentucky who had a fondness for corn liquor. He would sit on the bench all day and dispense equity and justice and puff on a pipe that never had any smoke curling from the bowl. But in the afternoon he was in what they call down in Kentucky a slightly mellow condition. That is where you fall on the ground and hold on to keep from rolling off.

It so happened that he had a rubber tube going from a bottle in his inside pocket up to his pipe. And that was the reason for his condition. He came out of the courthouse in the afternoon and threw the saddle on his horse and unfortunately he got the saddle on backward. A young lawyer observed it and he said, "Hey, Judge, you got the saddle on backward." And the Judge looked at him with that withering contempt that only our judicial friends know and said, "Well, how in the devil do you know in what direction I am going?"

THE CITADEL OF TRADITION

So we have got to have a sense of direction and know where we are going. And in an hour of misdirection and bewilderment there is no better place to go than the citadel of American tradition.

Now, that is a lovely mouth-filling word, but when all is said and done tradition is the great tapestry of America; it consists of individuals, great achievements and incidents, sweet things and little things and noble things.

Who can think of this country and not think of the Pilgrims, or the men who stood at Valley Forge, or Thomas Paine, or Samuel Adams, or Thomas Jefferson, or Abraham Lincoln? And all those other hallowed personalities who are a part of the cavalcade.

When we think of great events in the panorama, there come quickly to mind the Declaration of Independence, the Constitution, the Monroe Doctrine, the Emancipation Proclamation.

When we think of great men, we think of George Washington.

In my judgment, there is nobody in the whole history of mankind whose record of achievement can even approximate that of Washington. That is not a statement out of a story book. I think it can be established. For if we look at Washington's 3 great accomplishments and then at the accomplishments of Caesar, Napoleon, Bismarck, and Alexander, we find that theirs do not begin to approximate Washington's quality, in dimension, and in durability.

First, we think of independence when we think of Washington. He was 43 when he assumed command. He had a great farm situated on many lovely acres of land. He could have commanded preferment from the King. He had a family. He could have lived in ease and luxury. Why did he assume the responsibility and the unquenchable devotion to independence when life could have been so lush and easy for him? He had a bickering and reluctant Congress that would not provide supplies and munitions and equipment. He had the knife of conspiracy in his back as he looked upon trusted officers who tried to displace him. He had to listen to criticism.

What a load he carried. What frustrations must have stricken his heart at times. But, with unfailing fidelity to the cause, he remained with it until the sword went back into the scabbard. And to Washington more than to any other individual we can ascribe the freedom which we as legatees and beneficiaries are privileged to enjoy in this, the one great free remaining country on God's footstool.

His second achievement came here in your great city. What an amazing convention it was that started in May of 1787. What an outstanding complexion it had. The youngest man was 33 and the oldest man was 81. Every kind of diverse temperament was represented there, and it was Washington's restraint, his wisdom, and his patience, his capacity to inject cooling periods that finally resulted in an organic document which is the oldest writen Constitution in the whole wide world.

His third achievement was to breathe life into a new government, the first great experiment in free government on the face of the earth. He gave it form. For 8 years his steady hand was upon the helm and guided it through those days when the British were still fomenting Indian uprisings, when there was much caustic criticism because we were not on the side of the French in their war with the British, and when there were many other problems.

A LEGACY AND A CHALLENGE

So Washington, by his wisdom and kindly counsel and by his firmness, gave this organism of government the life necessary to have it march from infancy into the sunlight and achieve a majesty unmatched in any time or generation.

Those were the accomplishments. But out of the accomplishments he left us an inheritance. He left us a problem. And he left us a challenge.

The problem in this feverish and tumultuous age is, can a country conceived in liberty endure? That is it. Very simple. Why, it seemed academic 20 years ago. People would scoff at the idea, then. I say to you tonight that in my considered judgment the endurance of this country is no longer an academic matter.

We must clarify that. I don't mean that it is going to disintegrate. Not even the mightiest cobalt bomb can do more than destroy a portion of the physical substance of this Republic. The mightiest bomb might smite and skill a few million people, but there will be others, scores of millions remaining. When I speak of survival and the endurance of the country, I am speaking of a concept. I am speaking of a mode of existence under which we are still free to pick and choose, under which we are still free to buy and sell, under which we are still free to reject or accept, under which people are the masters and not government, a mode of life that is a spiritual adventure and not merely a project. That is the thing that is in danger.

What are the dangers? At the very top of the list I would write socialism.

What is socialism? Control. Harold Laski, the late great British socialist, put it simply: "The essence is control, not ownership." And we had better remember that, because when government moves beyond the lines of reasonable regulation into the field of control, look out for the freedom of your country. You cannot have socialism and freedom in the same land.

I think the second danger is what I call a delusion of form. Isn't it astonishing that a President of the United States could seize the steel industry and get three Justices of the Supreme Court of the United States to concur in that action? But the fact of the matter is that the due process clause is still in the Constitution.

Isn't it amazing that a Secretary of State should send a message to the Congress some years ago and say—and I quote him accurately—"Constitutional doctrine is molded largely by practical necessity. For example, the power of Congress to declare war has fallen into abeyance because wars are no longer declared in advance." The exclusive power to put this country into war has been vested in the Congress by the Constitution. The form is there, but carry out that doctrine by a Secretary of State and what happens to the substance of this document? You see, we may be deluded by the form while the substance is being torpedoed.

I ask you very simply, how long can this blessed freedom last under circumstances like that?

There are people who do not regard communism as a particular menace. Frankly, ladies and gentleman, I do.

Remember Lenin's premise of conquest: "First, we shall dominate eastern Europe. Then we shall dominate the masses of Asia. And then (and I quote Lenin accurately) we shall encircle the last bastion of capitalism in the United States, and, like overripe fruit, it will fall in the basket."

He has come pretty close to his timetable, with Eastern Europe behind the Iron Curtain and this brutal ideology moving in the Orient and elsewhere. And if it were not so, our warships and air carriers would not be in the Pacific tonight, and brains would not be furrowed, and brows would not be agitated at the dangers that are inherent.

Again we can be grateful to a President for firmness in this rather critical hour, because it is easier to drift into war than to go into it with your eyes open.

But let us not discount this force that has been moving across the world since 1917.

Malenkov, Khrushchev, and Bulganin are interested in only one thing, and that is to destroy the concept that has ennobled America and brought it to its present high state. There has been no retraction from that thesis. It is a grave danger.

THERE'S FISCAL DANGER, TOO

Senator MARTIN alluded to the fiscal danger. Nearly every country that actually lost its freedom went down the fiscal drain first. It is the hardest thing in the world to dramatize, and I am afraid we have gotten rather accustomed to a deficit situation. Your Government and mine has been in a deficit position for 23 years out of the last 26.

I think of a young man who filled out an application for an insurance policy. One of the questions was, "How old was your father when he died and of what did he die?" His father had been hanged. The son didn't like that. So he wrote, "My father was 65 when he died. He came to his end while participating in a public function when the platform gave way." [Laughter.] A wonderful way to say it—you disarm the severity of the circumstance.

So you speak about deficit financing. It means going in the hole. And when you go in the hole you toy with the inflationary fever that has destroyed so many countries. Oh, for the power of somebody or other to dramatize it and to bring home to people the necessity for the solvency of their Government under every circumstance, because when solvency goes out the window, it takes a frightful toll. It means that freedom goes out with it.

Let me allude to one other force, and that is indifference. There are 100 million potential voters in the United States. In November 1954—and mind you, I am not talking as a partisan—in November 1954 roughly 75 million were registered and qualified. How many voted on election day? Just a little fewer than 42 million. What happened to the other 33 million? They weren't interested enough.

The ballot is the symbol of freedom. And the way to lose freedom is not to use it.

Our hope of survival lies within ourselves and our hope of progress lies in preserving freedom.

I have said that on the 16th of July 1945, two ages were born when that bomb exploded in New Mexico. The atom age was born and the age of fear was born. But fear is a poor substitute for reason. And whenever it transcends reason there has been generated another force that can jeopardize and destroy the freedom of the country.

One thing will save freedom: when free men speak up, no matter what the sacrifice.

When the Apostle Paul was being prepared to be scourged, even though he had not yet been condemned, he said to the centurion: "How is it that I, a Roman citizen, uncondemned, could be scourged?"

Then the centurion asked: "Are you a Roman citizen?"

And Paul replied: "With a great sum I obtained this freedom."

This freedom that we enjoy is no academic thing. It came at a great price. Those men without shoes at Valley Forge, this man Washington, whose heart must have been broken at times by the frustrations that were attendant upon his task; this man Lincoln who could see 3,500 crosses from where he stood on the speakers' platform in Gettysburg in 1863—they are just a few of those who helped to pay the price for what we have. And as successor trustees in these long, endless generations of Americans we too must pay the price in proportion.

SPEAK OUT FOR FREEDOM

The spirit of freedom expects us to talk up so that we can be found, found in a critical hour of the history of our country.

When I was campaigning in Illinois in 1950, I heard of a man who went down to a pet shop and bought a parrot. The proprietor said, "This is a fine, healthy, smart bird; speaks eight languages." The man said, "I will take him." He paid $35 for the bird and cage and said, "Send him out to my house and be sure he is there when I get home from work tonight." And when he got home he bounded up the steps and the door opened and there was his beloved wife, Mary. He said, "Mary, did the bird come?"

She said, "Yes, he did."

"Where is he?"

"In the oven."

When the husband regained his composure he said, "In Heaven's name, woman, that was a smart bird and could speak eight languages."

And Mary said, "Well, why didn't he speak up?"

Speak up for freedom.

Honoring Our Mr. Sam

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. MULTER. Mr. Speaker, on the occasion of paying a grand tribute to that grandest of men, our Speaker, the Honorable SAM RAYBURN, last Saturday night, the Honorable Adlai Stevenson, spoke as follows:

STEVENSON'S SPEECH

We are here tonight to honor a man we all admire and love. For over 40 years SAM RAYBURN has embodied the ideals of the Democratic Party here in Washington, a period during which the Nation's history has been enriched by our party's creative and constructive contributions in adversity and prosperity, in war and peace.

The man we honor tonight came to Washington as a young Congressman in the time of Woodrow Wilson, a great Democratic President.

He first became Speaker of the House in the administration of Franklin Roosevelt, another great Democratic President.

All Americans who love freedom and justice joined this week in mourning on the tenth anniversary of the death of your great husband, Mrs. Roosevelt. And so they will as long as men care deeply about liberty and social progress.

Our guest of honor also served in the administration of another great Democratic President, Harry Truman.

Harry Truman proved again that the genius of American democracy is that it can produce plain citizens who, when the times demand, can scale the lonely heights of courage and vision.

PRAISES DEMOCRATIC FAITH

Probably the oldest political organization on earth is the Democratic Party of the United States. And it has survived the bitter tests of time and adversity because for the most part it has met the challenges of each new generation with boldness, imagination and faith in Government by consent of the people, all the people—a faith that stretches back to Thomas Jefferson; and that will stretch on into the shadowed future, so long as men continue to care about representative government and the freedom of the individual.

No one better understands and has fought more valiantly to vindicate our Democratic faith than our guest tonight. And I hope he would agree with me that the Democratic Party must stand for three basic things if it is to be true to itself.

The first is social progress. In our century the Democratic Party has led the way in domesticating the industrial revolution so that it has become an instrument, not of greed and exploitation, but of abundance for all. Although our opponents fought them every inch of the way, the great national reforms that commenced with Woodrow Wilson are now imperishable landmarks along the road to a society compounded of opportunity and responsibility.

The second thing we must stand for is civil freedom. With Jefferson, we as a party have sworn eternal hostility to every form of tyranny over the mind of man. And we believe that a free society has no meaning if there is not equality of opportunity for all. We have not forsaken the old Jeffersonian Maxim: "Equal rights for all, special privileges for none."

CALLS PEACE "MOST URGENT"

Finally, we must stand for peace—which is the most urgent business of the 20th century, the hydrogen age. Woodrow Wilson gave his life blood to the fight for the League of Nations. Franklin Roosevelt spent his last energies planning for the United Nations. Both dared accept the horror of war to save the Nation worse horrors—but only in the conviction that out of the agony of war we could pluck a new resolve to win peace for all suffering mankind.

As I say, no one knows the meaning of the democratic faith in this century better than our beloved guest.

When President Wilson fought for the wise Government regulation of banking and industry and for the League of Nations, he was there.

When President Roosevelt led the Nation through the worst depression and the most terrible war of our history, he was there.

When President Truman called for the new social advance at home and rallied the free world against the menace of Communist aggression abroad, he was there.

And, Sam, we count on your being there for a good long time to come.

Tonight, ladies and gentlemen, he is here—the Speaker of the House of Representatives—the Honorable SAM RAYBURN of Texas.

Atomic Power Here?

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. YOUNG. Mr. Speaker, during the recent atomic tests conducted in southern Nevada, dozens of our colleagues traveled to my State to learn firsthand the amazing achievements of our nuclear scientists in the field of warfare. I know they discovered that Ne-

vadans are proud of the substantial contribution our State has made to national defense through these tests.

It is also true that many Nevadans feel somewhat of a proprietary interest in the fields of fission and fusion because of their proximity to the famous testing grounds at Yucca Flat. This familiarity with the force of the unleashed atom has also given rise to another feeling in my State—a realization of the tremendous potential of nuclear energy in the field of industry.

I wish at this time to include in the RECORD a very excellent editorial from the Las Vegas Sun which gives clear expression to this growing belief of many people to whom the flash and the sound of the exploding atom are a common experience, this growing belief that the peacetime, commercial development of atomic energy holds great promise for us all:

ATOMIC POWER HERE?

It was recently announced that the Atomic Energy Commission has given the go-ahead to locate the first nuclear powerplant in New York. We wonder if southern Nevada officials have considered applying for such an installation here.

There is no question about the impact of a source of limitless power on future industrial development of this area.

It remains to be seen what advantages Clark County might have economically and geographically that would make location of an atomic powerplant here a natural. We think there are some good arguing points for any campaign to bring atomic power here, if anyone is interested in campaigning.

The first consideration is the location of a powerplant, we believe, is the creation of healthy industry where there was none before, and the alleviation of a power shortage in highly industrialized areas. Southern Nevada is in the unique position to be supplying power to the heavy industries of metropolitan Los Angeles—and not enough at that—while being in the critical position of having to discourage industry because of a shortage of electric power here.

The Southern Nevada Power Co. no sooner started construction on its Whitney steam turbine plant than it announced plans to build a second unit to take care of a backlog of industrial power applications which it will not be able to handle until at least 1957.

Transmission lines from an atomic plant could supply electric lights and operate manufacturing concerns throughout southern Utah, Arizona, and southern California. Much of the desert wasteland which at present is good only for scenery could be converted to manufacturing use.

The Nation's economic planners have been following a policy of industrial decentralization since before World War II. Southern California particularly has felt the effects of this decentralization.

If there is to be industrial expansion in the continental limits of the United States, the planners have indicated, it would be better to move westward to more sparsely populated areas.

Nevada has the smallest population per square mile of any State.

Conditions of climate, cheap land (much of it owned by the Government), easy access by motor, rail and air transport and a nearby labor force—in southern California—are potent factors to consider by the persons selecting a site for a nuclear powerplant. They are likewise important items for major industrial concerns to consider.

Hazards of Carrying Mail

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. MULTER. Mr. Speaker, with the postal pay-increase bill about ready for House action, it is appropriate to call attention to the following article which appeared in the April 1954 issue of the Postal Record, official organ of the National Association of Letter Carriers:

HAZARDS OF CARRYING MAIL—FACTS PROVE THAT IT'S A TOUGH JOB

During the hearing before the Post Office and Civil Service Committee, President William C. Doherty made the statement that carrying mail was the most hazardous job in the Government service. Congressman MURRAY of Tennessee challenged the statement and inquired as to whether or not it was more hazardous than the FBI. President Doherty declared that without a doubt it was, and statistics completely bear out this statement.

In the year 1952, the number of fatal chargeable cases recorded by the Bureau of Employees' Compensation were 14 in the Post Office Department—5 were from the carrier-special delivery messenger group, and 4 were in the rural mail service. In the Department of Justice, there were 3 fatal cases—1 in the United States marshal's office, 1 in the FBI, and 1 in the Immigration and Naturalization Service. In the Treasury Department, there were 2 deaths in 1952—1 in the Comptroller of Currency Office; and 1 in the Secret Service. There were none in the Bureau of Narcotics.

The Bureau of Employees' Compensation publishes a study of casualty statistics. This report shows the frequency which represents the number of disabling injuries per million man-hours, and also the severity which measures the number of days lost per thousand man-hours. The frequency for the entire Federal service is 8. The infrequency in the case of the Department of Justice is 4.3. In the Post Office Department it is 12.8. However, the frequency rate in the case of carriers is 22.1, compared to 2.7 for the FBI. In other words, the frequency of injury in the case of carriers is 8 times greater than the FBI and almost 3 times greater than the average for all Federal employees.

The severity rate for the FBI is .33, while for carriers it is .54.

Carriers compelled to carry mail in all types of weather and under all street hazards have an increasingly difficult job. Fry & Associates have never been confronted with the task of descending 20 steps covered with ice, handicapped by a load of heavy mail; they have never been faced with the necessity of crossing and recrossing heavily traveled highways burdened with a load of mail. Perhaps they have never been soaked to the skin by an icy cold rain, and compelled to remain out in it for hours; neither have they been compelled to keep a load of mail under control in a driving windstorm or to plow hip deep through newly fallen snow, in the meantime keeping their sense alert to maintain accurate delivery. There is no job as exacting as that of carrying mail, there is no job that demands and extracts more physical and mental energy. There is no job that is more closely supervised than that of letter carriers.

WHAT PRICE A STRAINED HEART?

It does seem strange that a Department as efficient as the Post Office hasn't got some way of dealing with peak loads at the letter-carrier level.

Take for instance Thursday of this week. The letter carrier who regularly carries the Tower Hill Street route arrives with the day's mail at our house box around 12 o'clock. Just above our house on Tower Hill Street is the supply box for our section.

Thursday, when he hadn't arrived at 1:10 p. m., we figured he must have been sandbagged and on our way back to work we backtracked on the route we knew he traveled. Sure enough there he was on his knees before the post office supply box just outside the schoolhouse corner of Oregon Avenue, Doyle Street, etc. He had filled his bag again and then some but there was still another bagful in the supply box.

We drove up behind him. He told us cheerfully that he had already delivered 3 bags full of mail, now he had 2 bags full at this supply box; that there were 2 more split loads at the supply-box corner of Tower Hill and Pearl Streets, and still another bagfull at another supply box toward the end of his route.

When we inquired how he was going to deliver all this mail in 1 day he shrugged his shoulders and smiled. We asked what arrangements were made when an overload like that had to be delivered—couldn't he get some help w ith maybe half of his route. He smiled again, resignedly, telling us there isn't any money for extra help.

The Honorable John E. Nelson

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks regarding the passing of our late colleague, John E. Nelson, of Maine, I hereby express my sympathy to his distinguished son, our colleague, the Honorable CHARLES P. NELSON, of Maine, and to the members of his family.

John E. Nelson was a Member of this House when I first came to Congress to serve. During the time I was here he was considered by his colleagues to be an extremely able Member of Congress. Always he had time to help a colleague in his work and to offer helpful suggestions in regard to difficult matters. John Nelson was a great friend in the truest sense of friendship.

A deeply patriotic American, John Nelson was that type of individual whose word was his bond, who was completely dependable, who was always honest and fair above all with his colleagues and fellow men.

During the decade he served in this Congress, from 1922 to 1932, John Nelson etched his name in the distinguished history of this country. His decisions on the great issues of that period disclose his wisdom and his loyalty and his

feeling toward the welfare of Americans throughout the country.

In the early days of my service here in this House John Nelson gave me many helpful suggestions and helped me greatly in my committee assignments and in the parliamentary work of the Congress. His unselfish interest in helping others will stand forever to his credit. He was one of the very distinguished gentlemen who have helped down through the years to make this House the greatest representative parliament of the people in any country in the world.

John Nelson was my colleague and was my friend. With his thousands of friends in his home State of Maine and the thousands all over America, I join in mourning his passing. His gentle qualities, his great ability, and his fine character will be forever enshrined in the history of the House of Representatives here in Washington and in the history of his country.

As the Dust Begins To Blow

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. YOUNG. Mr. Speaker, an emergency situation has arisen in the southern Great Plains region where it appears that a vast new dust bowl is being created.

As the Government embarks on an emergency program to ameliorate this situation, it would perhaps be worthwhile to reflect that these conditions were created in part by an earlier emergency program.

In this connection, the following editorial which appeared in the Deseret News under date of March 29, 1955, is worth of serious consideration:

AS THE DUST BEGINS TO BLOW

The farm-State controlled House Agriculture Committee issued another of its blasts against flexible farm price supports late last week. Even as it did, ominous winds were beginning to rise in the southern Great Plains. And with the winds came fears of a tragedy made eminent, in part at least, by the very price program the farm bloc is trying to go back to.

Last year's spring winds started the creation of a vast new dustbowl stretching across western Texas, eastern New Mexico, western Oklahoma, western Kansas, eastern Colorado, southwestern Nebraska, and southeastern Wyoming. The most widespread and severe soil blowing since 1938 occurred in that area last spring.

This spring it could be worse. Fairly general precipitation has prevented too much damage so far. But more soil is exposed to wind erosion this spring than last and unless mild winds and considerable moisture continue through April, there will be serious trouble.

The Soil Conservation Service has reported that about 4 million acres were damaged by winds during December and another 2 million acres early in March. SCS reports from the affected area earlier this month indicate that more than 18 million acres are "in condition to blow."

What has caused all this? There are several factors. The Department of Agriculture mentions failure to leave crop residues on the ground to bind the soil, clearing land by burning, shallow tillage, heavy grazing, failure to check water runoff.

But the number one reason listed is use of unsuitable lands for cultivation.

Here's what that means, as related to one crop specifically: Between 1940 and 1953, wheat acreage increased by 27 percent in the United States. That might have been expected. But where was it increased? Not so much in the natural wheat-growing sections, but mainly in marginal lands and to a large extent in the area that is now fast becoming the new dustbowl. Wheat acreage in Colorado, for example, increased by 163 percent, the highest in the Nation, and almost entirely in the dustbowl area.

Why? Because high, mandatory support prices of wheat made it possible for almost anyone to produce at a profit even on ground not well suited to raising wheat. So millions of acres of grasslands went under the plow. Profits rolled in, surplus wheat piled up in Government-rented elevators and mothballed ships, and now, in a dry cycle, the dust is blowing.

Emergency measures must be and will be taken, of course. Soil is too valuable a resource to be wasted. Soil conservation agents have been hard at work with farmers preparing emergency programs. The President has asked $7 million for emergency tillage and this appropriation is expected in the near future.

But is that the real answer? It is a poor physician indeed who treats only the symptom and lets the cause go unchecked. Thanks to Congress' courage last year, this year's crops are the first planted in years without the stimulus of high rigid supports bringing more and more marginal acres under the plow. That is the beginning of a basic cure.

Yet Congress, like the alcoholic who knows that a drink will ruin him but hasn't the will power to resist, is under pressure to go back to the program that helped ruin this land. America expects better judgment and stronger willpower than that.

Housing for Everybody

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith my address before the Armstrong Association of Philadelphia in that city on January 13, 1955, on the subject Housing for Everybody:

Dr. Butterweck, Mrs. Montgomery, Mrs. Hill, members and friends of Armstrong Association of Philadelphia, coming from one of your neighboring cities, I welcome the opportunity to visit with you here. This City of Brotherly Love is an appropriate place to discuss your conference theme, Good Housing for Everybody.

Some of us have been striving for this objective for many years. For 10 years I served as a member of the Reading Housing Authority. Long before, I was one of those who helped fight the battle against those elements which see public housing and every other social advance as a threat to our way of life and our basic freedoms.

I am concerned, and I know you are, too, about decent homes for the people of our respective communities. But we are also interested, as you propose in "good housing for everybody," in Reading, in Philadelphia, in Pennsylvania and for all American citizens wherever they may live, and whoever they may be. To strive for decent homes for all of our people is a way to strengthen our way of life and our basic freedoms. It is where homes are dark, damp, and dreary, where there is poverty and injustice, that the seeds of communism take root. The fight against communism and all brands of totalitarian tyranny can be won by striking at the root of these evils. Communism breeds on the lack of education and employment opportunities, on discrimination, and in slum areas. Some of the most vocal opponents against communism unconsciously promote the Communist cause when they seek to block public housing programs and other social welfare measures.

Opponents of public housing often profess an interest in other housing programs. Most anything but what we should have. Their interest is primarily in how much they can exploit home building. They are looking at the dollar sign rather than at the social problem. I am sure you have some good examples here of windfall housing profits and discrimination that is both racial and political.

You are fortunate in the city of Philadelphia to have a mayor who is sincerely interested in housing for everybody. I have a high regard for your mayor, Joseph Clark. He is a great humanitarian, a practical idealist and a man of strong character and integrity. He is a true friend of public housing and a foe of discrimination, corruption and injustice. As a Pennsylvania Democrat I am proud of him. Having a good mayor does not mean that your problem of good housing for everybody will be readily solved. Indeed there are powerful forces here and throughout the Nation who have, from the start, bitterly opposed the public housing program which did so much to lift this Nation from the distress it suffered in the early 1930's. I can remember in my own community, the shantytowns on the dumps on the banks of the Schuykill River. I can also remember the opponents of public housing at that time who tried to block public housing. They saw the end of freedom and the beginning of regimented slavery with the development of public housing projects which were proposed. But despite such opposition, progress has been made throughout the Nation. Over 8 million new homes have been constructed in the United States since the end of World War II. It is far from adequate, but is a great step forward. All the while the foes of public housing never quit in their blind opposition. Today that opposition presents their own program which in many respects is phony or which is designed to benefit only the real estate and financial interests and speculators.

The problem of homes for everybody naturally involves such questions as finances, the selection of good sites for new homes, and the matter of how to take care of the uprooted families when slum areas are cleared Always associated with the housing problem in a big city is the question of discrimination against Negroes and minority groups. So your task to win good housing for everybody is no easy one and you are to be commended for your noble efforts. To achieve the goal for which you strive it is necessary to have good organization. With aggressive leadership, inspired by humanitarian ideals and possessing vision and good sense, you may effectively push your program to a successful conclusion. You will na-

turally find many good citizens who will support your efforts, and other organizations who are equally concerned about the housing problem.

The total supply of housing in our country has been increased, not as much as some would desire, but certainly more than the number which would have been built if the Federal Government under Presidents Roosevelt and Truman had not established a vigorous Federal housing program. We have made long strides therefore, toward the goal established by the Congress that the general welfare and security of the Nation and the health and living standards of its people require housing production and related community development sufficient to remedy the serious housing shortage.

And, the Supreme Court by its decisions in the covenant cases made possible a more equitable distribution of the increased supply of good housing which exists in this Nation.

The opening of the 84th Congress last week gives us an opportunity once again to review the existing supply of tools in the housing field to see if it may not be possible to make this sharing of good housing more general, or as your conference theme puts it, for everybody.

You who believe in good housing for everybody are well represented in the House of Representatives in the Congress. I speak particularly of the five Democratic colleagues. You never need worry. My good friend, Congressman EARL CHUDOFF, claims that he has more public housing in his district than any other in Pennsylvania. He has frequently boasted of the Raymond Rosen Apartments and a few others of which he rightfully feels very proud.

Those of you who have made a study of the tools which are available now in housing must realize how complex this field of housing is. We in Congress must keep in mind the wide variety of programs which have been written into the statute books. Recently we heard of the successful termination of one of these efforts when the Home Owners Loan Corporation was finally liquidated.

Another organization, the FHA, has been much in the news this past year. Those of you who are interested in slum clearance are aware of the existence of the Urban Renewal Administration. Last year 400,000 homes were built in this country through loans partially guaranteed by the Home Loan Guaranty Division of the Veterans' Administration. One million homeowners secured mortgages through the activities of savings and loan associations which operate under the auspices of the home loan bank.

I shall not take time to mention all of the activities of the Federal Government in this field because I am sure that you have here in the State of Pennsylvania similar group of agencies from the State Housing Board, coming down through your local housing coordinator and the activities of many citizens groups including Mrs. Montgomery's Philadelphia Housing Association.

The 1950 census of housing showed the Congress the size of the housing job lies ahead and it became clear to everyone in the housing field that it would require an increase in total housing production if we were to make a realistic impact on the problem. Those associated with the conservative judgments in the real estate industry had annually predicted the volume of housing to be constructed based exclusively on family formation. As a result the predictions of construction were wide off the actual number produced and sold each year in the housing market. The difference between the rate of construction and the prediction was so great that recently leading industry economists have been forced into public admission that the formation of additional families cannot be the sole basis for judging requirements of the market in this vital field.

If the real estate industry's approach had been accurate it would have meant that those who lived in the slums, those who were doubled up, were condemned to such continued existence. But happily the market does not respond alone to such narrow considerations as family formation and production in 1950 approximated 1,400,000 and has averaged 1,100,000 since. This coming year the industry predicts 1,200,000, the same as 1954, even though competent students urge a higher level of construction not only to house the expanding population and replace the overaged buildings in our national supply but the level of adequate housing necessary to achieve "the goal of a decent home and a suitable living environment for every American family," as established by the Declaration of National Housing Policy by Public Law 171 of the 81st Congress.

I believe that to achieve this objective we must set an annual goal of at least 2 million new homes a year. Even the National Association of Home Builders set their goal recently at 2 million homes a year for the next decade. Their goal, unfortunately, was based on rebuilding old as well as new homes.

The National Housing Conference, estimating replacement of the existing supply of substandard homes over a 20-year period, set the goal of just a little over 2 million homes a year—a figure advocated by the CIO in 1952. The CIO urged a minimum annual rate of production of (a) 850,000 for family and population growth; (b) 750,000 for slum elimination; and (c) 400,000 to replace outworn homes in the existing market.

The administration's proposal of 35,000 homes annually is disgracefully inadequate, and some of his administration leaders even rebel at his inadequate program.

The diehard opponents to public housing in the Congress have a philosophy which becomes apparent every time any important social and economic issues come before the Congress. They see red when any sort of improvement is suggested in the fields of housing, education, social security, and other welfare measures.

Since 1952 the organizations who represent conservative influence in the homebuilding industry, particularly the Mortgage Bankers Association of America, headed by William A. Clarke, of Philadelphia, have advocated emphasis on the old housing, that is, rehabilitation of the old housing, rather than construction of new housing.

Mr. Clarke described his performance in an appearance before the Banking and Currency Committee of the Senate. In testifying on "Middle Income Housing," he said: "We worked out an arrangement with the Redevelopment Authority of the city of Philadelphia in which they are condemning one block in that area." Later he said: "They will turn that over to us and what they turn over to us is a block of houses that were built about the time of the Civil War. These are semidetached, still in good fundamental condition, but now in very bad shape otherwise."

The New York Times reported: "The Quakers have no permanent financial stake in their housing project. But they have spent some $60,000 which they plan to absorb as the cost of pioneering."

Even if this project was working out financially, and there is no public evidence to that effect, after 5 years it is far from completed and don't forget this was only a block. During this long period another project was started and is well on its way to completion in Bucks County.

Here great strides have been made in increasing the total supply of housing while making backward strides in the distribution. In December 1950, 10 months after Mr. Clarke revealed his plans which had been several years under formulation, the United States Steel Corp. announced construction of a $400 million plant on the Delaware River. Then other enterprising organizations announced similar developments. Then, in the spring of 1951 Mr. William Levitt turned the full resources of his organization to work to secure passage of the Defense Housing Act. In June he issued a booklet entitled "Defense Housing" with a change in the old slogan from "There ought to be a law" to "There must be a law," the defense housing law, which he helped ballyhoo through the Congress to make it possible for him to build Levittown. On July 28 he announced the purchase of 2,000 acres of land for Bucks County.

In the face of every effort Mr. Levitt and his colleagues have succeeded in establishing a new kind of segregated community as a neighbor to this City of Brotherly Love.

Recently the Congress investigated the operations of the FHA. During the course of this investigation it became clear that the success of Mr. Levitt's operation was due to the existence of a Government insured mortgage system known as the FHA. In a similar project on Long Island, Mr. Levitt secured FHA insurance for 4,028 houses, of approximately $29 million. In the Bucks County project he announced his intention to build 16,000 units.

After the houses were built and the bank loan had been repaid, and all debts had been paid, Mr. Levitt's company retained over $5 million cash in the bank. This kind of windfall profit would not have been possible without the FHA.

In the normal course of the construction business Mr. Levitt would have had no windfall; he would have even had to make some slight investment in the construction of 4,028 houses. If Mr. Levitt is such a substantial beneficiary of this Federal housing program enacted by the Congress to secure "good housing for everybody" it seems to me that the FHA should be so administered that its benefits should flow to everybody.

When the FHA appeared before the Appropriations Committee last year, Congressman YATES sought to find out whether or not the FHA was so administered. He asked, "How many units of nonwhite housing has FHA approved for mortgages this year?"

It is no wonder that there is increasing request for the Government to refuse to use its powers as insurer of mortgages for lenders or builders who refuse to make sales or to rent to any group in our population. The solution lies not alone in increasing the production of housing. While I join with those organizations who call for an increasing supply, I shall urge my colleagues in the Congress to give the most careful attention to proposals to secure a more equitable administration of the FHA, the Veterans' Administration home loan guaranties and other segments of the Federal housing program. It may well be that the time has come in the review of the administration of the National Housing Act under which FHA operates, that the Congress declare that "no FHA insurance be granted where occupancy is denied to persons because of race, creed, or national origin."

Here in the Philadelphia area, as well as in many other communities throughout the United States, can be found those examples which prove the necessity of early action by the Congress in this vital matter which may determine whether our standing in the eyes of the world will be based upon performance as well as promise.

Your help and the help of all friends of housing for everybody is needed if we can hope for a forward looking program from this Congress.

Your work is more than a great contribution to the Negro people. It is a service to your entire city. It is a service to your entire city, to the cause of human decency and democracy, and to a better America and a more peaceful world.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton. Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wisconsin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Appropriations

Messrs. Cannon (chairman), Mahon, Sheppard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Fernandez, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Lanham, Deane, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Murray of Illinois, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Phillips, Scrivner, Coudert, Clevenger, Wilson of Indiana, Davis of Wisconsin, James, Ford, Miller of Maryland, Vursell, Hand, Ostertag, and Bow.

Committee on Armed Services

Messrs. Vinson (chairman), Brooks of Louisiana, Kilday, Durham, Rivers, Philbin, Hébert, Winstead, Price, Fisher, Hardy, Green of Pennsylvania, Doyle, Wickersham, Miller of California, Bennett of Florida, Holtzman, Mollohan, Lankford, Huddleston, Short, Arends, Cole, Johnson of California, Gavin, Norblad, Van Zandt, Patterson, Cunningham, Bates, Hess, Nelson, Devereux, O'Konski, Bray, Wilson of California, Osmers, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Banking and Currency

Messrs. Spence (chairman), Brown of Georgia, Patman, Rains, Multer, Addonizio, Barrett, O'Hara of Illinois, Mrs. Buchanan, Mrs. Sullivan, Messrs. Fountain, Reuss, Mrs. Griffiths, Messrs. Ashley, Vanik, Davidson, Bell, Wolcott, Gamble, Talle, Kilburn, McDonough, Widnall, Betts, Mumma, McVey, Hiestand, Nicholson, Oliver P. Bolton, and Bass of New Hampshire.

Committee on the District of Columbia

Messrs. McMillan (chairman), Harris, Abernethy, Smith of Virginia, Klein, Teague of Texas, Davis of Georgia, Morrison, Dawson of Illinois, Williams of Mississippi, Steed, Wier, Jones of North Carolina, Rutherford, Simpson of Illinois, O'Hara of Minnesota, Talle, Miller of Nebraska, Auchincloss, Allen of California, Kearns, Patterson, Gubser, Broyhill, and Hyde.

Committee on Education and Labor

Messrs. Barden (chairman), Kelley of Pennsylvania, Powell, Bailey, Perkins, Wier, Elliott, Landrum, Metcalf, Bowler, Chudoff, Mrs. Green of Oregon, Messrs. Roosevelt, Zelenko, McDowell, Thompson of New Jersey, Udall, McConnell, Gwinn, Smith of Kansas, Kearns, Velde, Hoffman of Michigan, Bosch, Holt, Rhodes of Arizona, Wainwright, Frelinghuysen, Coon, and Fjare.

Committee on Foreign Affairs

Messrs. Richards (chairman), Gordon, Morgan, Carnahan, Chatham, Zablocki, Burleson, Hays of Arkansas, Mrs. Kelly of New York, Messrs. Dodd, Hays of Ohio, Donovan, Jarman, Byrd, Selden, Pilcher, Williams of New Jersey, Chiperfield, Vorys, Mrs. Frances P. Bolton, Messrs. Smith of Wisconsin, Merrow, Judd, Fulton, Jackson, LeCompte, Radwan, Morano, Mrs. Church, Messrs. Adair, Prouty, and Bentley.

Committee on Government Operations

Messrs. Dawson of Illinois (chairman), Holifield, McCormack, Chudoff, Brooks of Texas, Holtzman, Mollohan, Fountain, Hardy, Blatnik, Jones of Alabama, Garmatz, Moss, Kilgore, Fascell, Mrs. Griffiths, Messrs. Reuss, Hoffman of Michigan, Riehlman, Mrs. Harden, Messrs. Brownson, Meader, Brown of Ohio, Lipscomb, Reece of Tennessee, Younger, Knox, Krueger, Jonas, and Minshall.

Committee on House Administration

Messrs. Burleson (chairman), Byrd, Friedel, Ashmore, Hays of Ohio, Jones of Missouri, Rhodes of Pennsylvania, Lesinski, Smith of Mississippi, Dowdy, Long, Alexander, Thompson of New Jersey, ———, LeCompte, Morano, Schenck, Carrigg, Harrison of Nebraska, Corbett, Bennett of Michigan, Hillings, Oliver P. Bolton, Lipscomb, and Halleck.

Committee on Interior and Insular Affairs

Messrs. Engle (chairman), Aspinall, O'Brien of New York, Rogers of Texas, Mrs. Pfost, Messrs. Haley, Shuford, Powell, Edmondson, Metcalf, Christopher, Sisk, Udall, Diggs, Rutherford, Mrs. Green of Oregon, Messrs. Miller of Nebraska, Saylor, Wharton, Berry, Dawson of Utah, Westland, Pillion, Young, Hosmer, Rhodes of Arizona, Budge, Chenoweth, Utt, Mrs. Farrington, Messrs. Bartlett and Fernós-Isern.

Committee on Interstate and Foreign Commerce

Messrs. Priest (chairman), Harris, Klein, Granahan, Carlyle, Williams of Mississippi, Mack of Illinois, Roberts, Moulder, Staggers, Dollinger, Rogers of Texas, Dies, Friedel, Flynt, Macdonald, Hayworth, Wolverton, Hinshaw, O'Hara of Minnesota, Hale, Dolliver, Heselton, Bennett of Michigan, Hoffman of Illinois, Beamer, Springer, Bush, Schenck, Carrigg, and Derounian.

Committee on the Judiciary

Messrs. Celler (chairman), Walter, Lane, Feighan, Cheif, Willis, Frazier, Rodino, Jones of North Carolina, Forrester, Rogers of Colorado, Donohue, Fine, Brooks of Texas, Tuck, Ashmore, Quigley, Boyle, Reed of Illinois, Keating, McCulloch, Miss Thompson of Michigan, Messrs. Hillings, Crumpacker, Miller of New York, Taylor, Burdick, Curtis of Massachusetts, Robsion of Kentucky, Hyde, Poff, and Scott.

Committee on Merchant Marine and Fisheries

Messrs. Bonner (chairman), Boykin, Garmatz, Robeson of Virginia, Mrs. Sullivan, Messrs. Thompson of Louisiana, Miller of California, Kluczynski, Byrne of Pennsylvania, Bell, Tumulty, Davidson, Zelenko, Clark, Ashley, Machrowicz, Tollefson, Allen of California, Seely-Brown, Sheehan, Van Pelt, Ray, Mailliard, Dorn of New York, Pelly, Cederberg, Baumhart, Chase, ———, Bartlett.

Committee on Post Office and Civil Service

Messrs. Murray of Tennessee (chairman), Morrison, Davis of Georgia, Rhodes of Pennsylvania, Lesinski, Dowdy, Alexander, Moss, Robeson of Virginia, Mrs. Pfost, Messrs. Fascell, Tumulty, Kilgore, Holifield, Rees of Kansas, Corbett, Mrs. St. George, Mr. Gross, Mrs. Harden, Messrs. Cretella, Gubser, Broyhill, Cederberg, Henderson, and Johansen.

Committee on Public Works

Messrs. Buckley (chairman), Fallon, Davis of Tennessee, Blatnik, Jones of Alabama, Dempsey, Smith of Mississippi, Machrowicz, Kluczynski, Steed, Thompson of Louisiana, Gentry, Burnside, Mrs. Blitch, Messrs. Wright, Hull, Gray, Clark, Rogers of Florida, Dondero, McGregor, Auchincloss, Mack of Washington, Scudder, George, Becker, Scherer, Withrow, Cramer, Baldwin, Schwengel, Alger, Bush, and Nicholson.

Committee on Rules

Messrs. Smith of Virginia (chairman), Colmer, Madden, Delaney, Trimble, Thornberry, Bolling, O'Neill, Allen of Illinois, Brown of Ohio, Ellsworth, and Latham.

Committee on Un-American Activities

Messrs. Walter (chairman), Moulder, Doyle, Frazier, Willis, Velde, Kearney, Jackson, and Scherer.

Committee on Veterans' Affairs

Messrs. Teague of Texas (chairman), Dorn of South Carolina, Mrs. Kee, Messrs. Long, Byrne of Pennsylvania, Edmondson, Boykin, Aspinall, O'Brien of New York, Shuford, Christopher, Diggs, Sisk, Haley, ———, Mrs. Rogers of Massachusetts, Messrs. Kearney, Ayres, Adair, Fino, Weaver, Avery, Thomson of Wyoming, Siler, and Teague of California.

Committee on Ways and Means

Messrs. Cooper (chairman), Dingell, Mills, Gregory, Forand, Eberharter, King of California, O'Brien of Illinois, Boggs, Keogh, Harrison of Virginia, Karsten, Herlong, McCarthy, Ikard, Reed of New York, Jenkins, Simpson of Pennsylvania, Kean, Mason, Holmes, Byrnes of Wisconsin, Sadlak, Baker, and Curtis of Missouri.

Appendix

Internal Security and Constitutional Rights

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1955

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address recently delivered by my able colleague, the senior Senator from Missouri [Mr. HENNINGS], before the Chicago Law Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A LAWYER LOOKS AT INTERNAL SECURITY AND CONSTITUTIONAL RIGHTS

(Address by Senator HENNINGS)

I am grateful for the opportunity to speak to you tonight—to submit for your consideration some legal and political questions in matters that are increasingly on my mind, and I know upon yours, as citizens and as lawyers.

For a long time now I have been troubled by the unmistakable fact that civil rights—which are the cornerstone of our national life—are under attack and in danger of abridgement. And I am sure the uneasiness I feel is not just the result of vague impressions. Unfortunately, it is based on facts some of which I shall mention later on in the course of my remarks.

Yet, before I turn to the matter at hand, may I say, that I come before you in order to formulate questions rather than to offer conclusions. And I also come with a request that you, as distinguished members of the bar, should help our country find the answers that will preserve our civil liberties.

I believe we all agree that the erosion of civil rights, if true, is a paramount question of our political life and spells dangers of unforeseeable gravity. History, however, teaches us that civil rights are seldom lost solely by conscious deliberate action. More often than not the loss is, in great part, the result of an absent-minded, unconscious drift. When the citizens do not see the threat and when constituted legislative, executive, and judicial authorities do not realize the consequences of their acts, civil liberties are in danger of loss by default. As I see it, the trend that is now taking place in our country is just of this nature. There is, of course, no suggestion of repealing the Bill of Rights, but steadily, in unrealized stages, the rights guaranteed by the bill are invated and in danger of becoming nugatory.

The birth of our Nation was a momentous fact in the development of mankind. An entirely new state entered the community of nations. Economically, politically, and legally it had not precedent. Economically it was free of the restraining shackles of feudal economy—a land where property was held in free and common socage and where there was unhampered internal trade and freedom of occupation for its citizens, with equal opportunity for all. Politically and legally it was a country with a written constitution that embodied the experiences of a protracted fight against inherited privilege and tyranny. This Constitution happily united practical considerations with deep theoretical insights. The student of our past is impressed by its closeness to political and social realities of American life. At the same time, the sociologist and the legal scholar realize how closely it materialized the theoretical formulations of Montesquieu on the separation of powers. These, may I say, "Un-American" ideas born in old Europe became not only an integral part of our political life but found in our country their first, true and only application. Now new and how revolutionary all this had been becomes particularly clear when, for the sake of comparison, we look at the other parts of the American and European Continents at that time.

The Constitution formulated by the Founding Fathers is philosophically a complex document. It is at once optimistic and trustful—and pessimistic, skeptical, and suspicious. It is a supreme expression of the mistrust in political power; it splits the governmental authority into its component executive, legislative, and judicial parts, and it enumerates its powers. On the other hand, it is an equally strong expression of a supreme trust in man as the source of cultural and political activity—the spiritual substance of all life.

We often recall and frequently mention that our Constitution is based on the principle of checks and balances in government. I am impressed by the further thought, however, that the principle of checks and balances permeates not only the governmental structure of our country. I am afraid we often forget that the framers of the Constitution knew that this principle lies at the root of societal life itself. They have visualized our country as a social construct where the freedom of the people as a whole and that of the individual are balanced against the state and its coercive powers. Neither the people nor the state has the upper hand. This relationship, however, is not coincidental or artificial. It is founded on the recognition that man, in his rights and freedoms, is secure only within the framework of society—the state.

The creative activity of man prospers best in conditions of security and peace of mind. Any invasion of human rights has a deliterious effect on the cultural and economic success of human endeavor and is justified, of course, only when the exercise of individual rights, in its turn, invades the concurrent rights of others.

The trust in the free activity of man and the care of safeguarding it faces us in all the basic provisions of the Constitution. I have mentioned the splitting of governmental powers as a proof of this trust. The right to vote does not even require mention. More in point, is the injunction against the passage of bill of attainder—the legislative means by which the English parliament used to punish dissidents without trial and under accusations having no basis in the criminal law of the land. Article 1, section 9, clause 3 of our Constitution enjoins the Federal legislature from passing such bills and article 1, section 10, clause 1 extends this injunction to State legislatiures. It is clear from these injunctions that we have here a fundamental provision prefiguring the Bill of Rights.

In this connection I want to mention that the opponents of the first 10 amendments in the first Congress based their opposition not on any objections to the rights to be secured but on the idea that these rights were already secured by the Constitution itself. But Jefferson and his followers carried the day and the Bill of Rights was adopted as an explicit statement of faith in individual freedom.

This faith, I dare say, never faltered. And the adoption of the 13th and 14th amendments was its forceful reaffirmation in the 19th century.

All these provisions, if observed, consitute a mighty bulwark which securely protects the individual against government interference as well as against invasions on the part of fellow citizens.

We know that legal propositions are not disjoined statements but constitute a contextual entity. Only within their context are they truly interpretable. Only by the token of this context do they find their proper place within the entire structure and exhibit their relative values. When from this point of view we look now at the Bill of Rights, I am inclined to believe, that the first amendment stands out as the cornerstone of the entire protective edifice. It is this amendment which, in protecting the freedom of his thought, of his beliefs, and of his speech, secures man in the exercise of those gifts which distinguish him from animals.

The language of the first amendment is unequivocal and all-embracing. It is a truly revolutionary declaration that democracy as established by our Constitution is alien to the idea of orthodoxy as a test of human rights. Therefore, no matter how unorthodox or unpopular the opinions held by the individual, he must be protected from persecution both on the part of governmental agencies and on the part of other individuals. And that is why I believe that second in importance stands out the due process clause of the 5th and the 14th amendments.

These remarks, I hope, truthfully describe the nature of American democracy and represent views traditionally held. We discern them at the cradle of our Constitution * * * And in this connection, permit me to qoute to you from the Virginia Statute on Religious Freedom, written by Thomas Jefferson and regarded by him as his greatest achievement next to the Declaration of Independence.

The statute enunciates these propositions: "that the opinions of men are not the object of civil government, nor under its jurisdiction; that to suffer the civil magistrate to intrude his powers into the field of opinion and to restrain the profession or propagation of principles on supposition of their ill tendency is a dangerous fallacy * * * because he being of course judge of that tendency will make his opinions the rule of judgment and approve or condemn the sentiments of others only as they shall square with or differ from his own; that it is time enough for the rightful purposes of civil government for its officers to interfere when principles break out into overt acts against peace and good order; and finally, that truth is great and will prevail if left to herself; that she is the proper and sufficient antagonist to error, and has nothing to fear from the conflict unless by human interposi-

tion disarmed of her natural weapons, free argument and debate; errors ceasing to be dangerous when it is permitted freely to contradict them."

Now how does our 20th century practice square with our political-democratic tradition? Do we adhere to the precept that opinions and beliefs are within the sovereign domain of man as the builder of cultural values and that the State should intervene only when opinions and beliefs pass into overt acts in contravention of constitutional procedures? Or do we say, "We have changed all that," as the fake doctor in Moliere did when it was pointed out to him that traditionally the heart is on the left and the liver on the right side, and not vice versa?

Certain facts make me doubtful as to the answer.

The Smith Act, for instance, makes it a crime to teach and advocate (please note these words)—no matter how abstractly and philosophically—any ideas of overthrowing the constituted Government by force and violence. The wording of the statute seems, on the face of it, to contradict the first amendment and I am not convinced that the decision of the Supreme Court with its negative answer settles this question. *Dennis* v. *United States*, 341 U. S. 494). The decision was not unanimous and we know that dissenting opinions have in more than one instance become the law of the future.

It would be well for us to keep in mind the prophetic words of Mr. Justice Black in his dissenting opinion in the Dennis case. He said: "Public opinion being what it now is, few will protest the conviction of these Communist petitioners. There is hope, however, that in calmer times, when present pressures, passions, and fears subside, this or some later court will restore the first amendment liberties to the high preferred place where they belong in a free society."

It would also be well for us to recall that Jefferson on his accession to the Presidency in the exercise of his Presidential powers pardoned all persons convicted under the Alien and Sedition Acts and thereby in effect invalidated these laws as they applied to to those convicted. Jefferson, in a letter he wrote to Mrs. John Adams in 1804, explained the basis for his action in granting these wholesale pardons. In his letter he said: "I do not know who was the particular wretch alluded to, but I discharged every person under punishment or prosecution under the sedition law, because I considered, and now consider, that law to be a nullity, as absolute and as palatable as if Congress had ordered us to fall down and worship a golden image, and that it was as much my duty to arrest its execution in every stage, as it would have been to have rescued from the fiery furnace those who should have been cast into it for refusing to worship the image. It was, accordingly, done in every instance, without asking what the offenders had done, or against whom they had offended, but whether the pains they were suffering were inflicted under the pretended sedition law."

If Jefferson were alive today he would be a determined and bitter opponent of communism and the Communist Party and he would do all in his power to wipe out espionage and treason, whether practiced by domestic Communists or others. We may also be sure, however, that he would insist on acting against Communists in conformity with the Bill of Rights and its historic principles.

In addition to the Smith Act we have the Internal Security Act of 1950 aimed at registering and branding Communists and members of various ill-defined organizations solely on the ground that the mere holding of certain ideas deprives such persons of first class citizenship. I will be frank with you that this legislation aroused in me grave doubts as to its constitutional validity. I found it alarming that there should be a statute in the United States which would deprive individuals of their rights without due process of law, and limit, in such drastic manner, the right to hold opinions. For this reason, last year I voted to outlaw the Communist Party. Only in this way, some of us thought, could an abnormal situation be clarified, a situation in which we heretofore claimed that it was legal for people to hold Communist ideas and belong to the Communist Party and nevertheless forced such people to register, ostracized them, starved them economically, and yet refused to give them a trial in a court of law. I thought that if we do these things, we must do them honestly. If Communists are to be stripped of full citizenship, let us do so directly by a law making it illegal to be one. Then we can bring them to trial and they can test in the courts the constitutionality of our action. We owe this to our Constitution and to our democratic tradition.

The third example I would like to submit is the provision of the Taft-Hartley Act regarding the anti-Communist oath. In passing on its constitutionality, Justice Vinson, speaking for the majority of the Court, said: "The Government's interest here is not in preventing the dissemination of Communist doctrine or the holding of past beliefs because it is feared that unlawful action will result therefrom if free speech is practiced. Its interest is in protecting the free flow of commerce from what Congress considers to be substantial evils of conduct. Section 9 (h), the anti-Communist oath provision does not interfere with speech because Congress fears the consequence of speech; it regulates harmful conduct which Congress has determined is carried on by persons who may be identified by their political affiliations and beliefs."

I am not unaware that the commerce clause of the Constitution played an important part in the determinations of the Supreme Court. And I am far from criticizing this trend of our law. Yet we must not forget that the Court itself, speaking through some of its members, on occasions expressed doubts as to the desirability and interpretative fruitfulness of overworking the commerce clause. I refer to the forceful concurring opinions of Justices Douglas and Jackson in *Edwards* v. *California* (314 U. S. 160). This was a case dealing with a California statute restricting the entry of indigent citizens of other States into California. The majority of the Court invalidated the statute as a restriction of interstate commerce, while the minority, concurring in the result, strongly urged a decision on the basis of the immunities and privileges clause of the 14th amendment. Thus Justice Douglas said: "But I am of the opinion that the right of persons to move freely from State to State occupies a more protected position in our constitutional system than does the movement of cattle, fruit, steel, and coal across State lines."

I think the reference here to the relative constitutional depth of the two provisions is significant and should, I feel, never be lost sight of. Yet in this case there was no contradiction betweenthe alternative grounds of the decision. In the quoted opinion of Justice Vinson, however, such contradiction not only exists, but it is even explicitly admitted. Are we not justified then in insisting that the validity of the oath provision be tested in the light of the first amendment—the soul of the Bill of Rights? The right of Congress to legislate in a particular field can be justified on the basis of any applicable constitutional provision, but can Federal legislation be considered valid when its substance violates a fundamental right guaranteed by the Constitution?

Of course we know that all this raises difficult questions—perhaps questions which go to the very root of our entire cultural and political life. They are difficult not only objectively but also subjectively. For my part I decidedly disagree with communism—its doctrines and its practices. I should say more: I abhor them. It requires a great effort on my part to discuss anticommunist legislation in terms of the democratic philosophy to which we adhere by tradition and by conviction. But the inner ideological core of our Constitution is involved and the faith in that type of world which lies at its foundation.

For us Americans the Constitution of the United States is not a passing document. It is the embodiment of our existence. Like any embodiment it is inseparable from the things it embodies. Our adherence to its provisions is not a half-hearted acceptance. It is a belief—an unshakable belief—in its wisdom. Once it was a prophecy and our history has shown that it came true. For these reasons, I feel, it is the essence of our life's task to live up to the precepts of our Constitution. And even when we think of amending it, we must beware lest we destroy that pessimistic-optimistic spirit which I mentioned in the beginning. We should shun amendments that would impair this spirit. I am convinced for instance that the Bricker amendment would do just this.

The way of life that the Constitution helped to create made our country, in the words of our anthem, "the land of the free and the home of the brave." And you will understand that, considering the way I feel, it would be insufferable to me to think of defending our Constitution by unconstitutional or even constitutionally doubtful means.

Now, I fully realize the stresses and trials of the tense international situation where the issue of communism plays such an important part. I know the temptations and I understand how the fainthearted feel, but our faith must be stronger than any doubts. And may we pray in the words of the Lord's Prayer: "Lead us not into temptation, but deliver us from evil." Let us remember that the Constitution is a living thing tested in the vicissitudes of history and let us not forget that doctrines come and go but that the Constitution is and must be always with us.

When I survey the program of our anti-Communist legislation, I am not convinced that it is always in accord with the principles and beliefs just expressed. In part, I regret to say, it is the result of doubts in the soundness of our social organization and in part it must be ascribed to dullness of mind and preference for conformity where initiative is required.

Recently the papers reported that there was a question whether a piano tuner who invoked the fifth amendment in declining to answer whether he was a Communist should be licensed. As I understand it, he was finally given a license, but consider what the raising of such question implies? Assuming that he was actually a Communist, how can the tuning of pianos by a Communist endanger our security? Is it not a clear case of persecution for holding unpopular views, a position inconsistent with the first amendment? This case, to be sure, was favorably resolved. But we know that similar cases arise constantly. Would you not say that we tread here on dangerous ground?

I pass now to the loyalty-security program as a whole, and shall begin with the statement of some general propositions. I think that the following persons cannot hold positions in government agencies:

1. A traitor.
2. A spy.

3. A person whose opinions would prevent him from following established policy relevant to his tasks.

Treason and espionage are crimes, and criminals are subject to trials and, if convicted, to punishment. A person, however, who holds an opinion which prevents him from fulfilling his duties is not a criminal but an inappropriate public servant. I suggest that the reason for his dismissal or nonemployment is the lack of necessary qualifications. It seems that our difficulties with the loyalty-security program arise because we confuse these basically different situations and, also, because we disregard the cases where the opinions of an employee are irrelevant.

In stating these views, I do not close my eyes to the question of seditious conspiracy which must be considered when we deal with members of the Communist Party. I suggest, however, that it is inconsistent with the principles of democracy to imply the knowledge of criminal conspiratorial aims or to decide these matters by means of administrative determination. As a confirmed Jeffersonian, I personally feel that, in general, the scope of administrative law should not be unduly enlarged. In this instance, however, my reluctance has still another reason. The questions of guilt arising from participation in a criminal conspiracy traditionally belong in the domain of criminal law and its procedures. It does not require elaboration that according to the system of our law a person charged with a criminal offense has the right to be tried and to be convicted or acquitted by the verdict of his peers. This principle is universal, and I entertain the gravest doubts that questions of guilt raised by the loyalty-security program should be decided outside the established procedures of adjudication. To do so seems a violation of the due process clause. The crimes implied by the loyalty-security program are heinous crimes, and I do not think that persons whose very honor and economic existence is under threat can be deprived of a fair trial in the accepted Anglo-Saxon tradition.

In this question, I fully identify myself with the following words of Harry P. Cain, former Senator from Washington and now a member of the Subversive Activities Control Board:

"In other periods, we have abused the meaning of the Bill of Rights. We are so abusing some of its meaning today. This must not dishearten us because until the amendments have been repealed, and this prospect is not in sight, nor is it likely to be, men and women possessed of reason can prevail upon others to understand that the amendments constitute our American way of life, and with courage these same citizens can prevail upon authorities to live in accordance with every one of them.

"What I have just recited about the letter of the Bill of Rights means just this: Had you chosen recently between being indicted for a capital or infamous crime or being held to be a loyalty or security risk, there would have been no choice to make. From the indictment, you would have been found guilty or acquitted; sentenced or released through language and methods everyone can understand. From the allegation that you were a loyalty or security risk, you might have long wallowed in the wilderness of despair and mental torment without determining what the charges were all about, or where they came from."

The idea of allowing one accused to face his accuser is indeed not new. In St. Paul's day the Romans observed this rule.

In chapter 25 of the Book of Acts, verses 12 to 16, we find the following passage.

"Festus laid Paul's case before the king, saying: There is a certain man left a prisoner by Felix; about whom, when I was at Jerusalem, the chief priests and elders of the Jews informed me, asking for sentence against him. To whom I answered that it is not the custom of the Romans to give up any man, before that the accused have the accusers face to face, and have had the opportunity to make his defense concerning the matter laid against him."

When I think of the Federal loyalty-security program, I cannot escape the conclusion that a still further confusion prevents us from reaching calm and judicious decisions. The same, I believe, applies to congressional investigations. We seem to confuse more advocacy of ideals with propagation of ideas by coercion. If anybody doubts this let him read the memoranda from the FBI and the Army and Navy intelligence services which were submitted to President Truman's Temporary Commission on Employee Loyalty and which dictated the original loyalty program set up on the basis of the Commission's recommendations. Copious extracts from these memoranda have been published in Miss Eleanor Bontacou's recent book on the Federal loyalty-security program. These memoranda make amazing reading. They tell us that disloyal and subversive persons—they are never once defined—are dangerous for two reasons. They are dangerous, first, because they are potential spies. And they are also dangerous—and I quote—"because of the propaganda they disseminate." The Director of the Office of Naval Intelligence tells us that—and I quote—"because it has its roots in humanitarian principles based on the rights of man, our democracy is particularly susceptible to subversive attack. It is easy to masquerade as protectors of civil liberties, or promoters of the interest of individuals whose level of economy is declared to be substandard. Making an emotional appeal for the down-trodden such groups loudly demand rights for particular groups, but usually fail to point out the corresponding duty which logically arises from any social contract."

A Jefferson would have regarded the rights of man as constituting the strongest foundation of our democracy, but here this is presented as its greatest weakness. A Lincoln would have said that you cannot fool the people very often, but here the people are pictured as the great gullible who needs a policeman to keep the Communists from subverting him.

Now, I have tried to stress that, if we want to preserve democracy the fight for the integrity of our institutions must be carried on by means approved by the Constitution itself. Any abridgement of rights which it guarantees would defeat the very purpose of the fight. I have also pointed out that, in my view, we have gone far afield in stretching the limits of the permissible scope of action. At the same time, I indicated some of the political reasons for the present trends: I mentioned the emotional tensions of the cold war with Soviet Russia and the resulting fears lest our Nation be destroyed. It remains to point out some of the reasons which are anchored in home politics.

Indeed, I am troubled by the fact that when we speak of Communists, we are rather vague in stating what a Communist is. It is a matter of everyday occurrence that people of liberal views are called Communists. There is also evidence that such confusion is not limited to "neighborly" relations but tends to affect the Federal clearance procedures. In studying these attitudes, I feel that we have here a situation which threatens the integrity of our institutions and our way of life. As every other work of human endeavor, our country is not perfect. Only a steady process of improvement can prevent society from decay or revolution. We believe that the best way to bring about beneficial changes is the democratic process established by the Constitution.

The essence of liberalism is a keen feeling for the necessity of change when the existing state of affairs exhibits social and economic injustice or traits of a lifeless and trammeling past. Liberalism, therefore, is a structural element of the democratic process. To suggest that liberals are traitors or to intimate this covertly, represents a direct danger to our society.

Of late, the fight against liberals has been carried out under the slogans of the fight against treason. This new slogan came to supplement the older pretext that the liberals in our country had advocated "un-American" ideas.

Representative MARTIN DIES who was the principal proponent of the resolution creating the Committee on Unaminous Ideas and its first chairman only last Monday issued a statement strongly urging fair hearings for persons accused as security risks. He said: "I know the accused ought to be confronted with witnesses * * * he ought to have a bill of particulars in advance, and he ought to know the criteria for judging—the rules on what constitutes guilt." He stated further: "When the committee started in 1938, I warned in my opening statement that such a probe could go to excess. I pledged if it did, that I would take the lead in correcting it and defending innocent people. So I felt a moral obligation. * * * I never wanted this to become an emotional, hysterical thing." Representative DIES indicated that he became alarmed concerning the Federal loyalty-security program in the process of representing a Federal employee, Dr. Edward Elliot, charged with disloyalty. This man, Representative DIES had cleared before the Un-American Activities Committee back in 1942. In regard to this case, Representatives DIES said: "I believe that in back of this thing was violent opposition to Dr. Elliott's views. He had liberal ideas, but we're not supposed to punish men for their ideas, it made me feel we were getting back to the star chamber. It frightened me, because it seemed so contrary to what I always believed was fundamental American fair play * * * I want to do something. I am trying to accomplish the purpose of keeping security from being used for oppression or political purpose."

I believe that the time has come to raise the question as to the place of the liberals in our society urgently and openly. The liberal must be restored in his constitutional rights and given the place which, in the spirit of the Constitution, he must hold in our democratic society. And, too, the liberal must be protected from unfounded politically inspired accusations of treason, communism and subversion.

At present the position of the liberal has become particularly difficult not only because he has been placed in a state of general mistrust, but also because every one of his ideas or suggestions for the improvement of conditions in our country is immediately challenged in some political quarters as Communist inspired. In a certain historical situation there are only a limited number of measures for improvement and it is not surprising that men of different philosophies of life may in practice follow a similar train of thought. This coincidence of detail, however, does not justify the conclusion that similar solutions necessarily presuppose identity of political philosophies.

For example, John Foster Dulles has written at length how the Communists have adopted in their propaganda many basic tenents of the Christian religion. Mr. Dulles' inference was clear that an ardent Christian cannot be called a Communist because some of his social attitudes coincide with some of the views of Communists.

Do we not agree that this unworthy challenge should not be made a test of loyalty? I believe it is alarming that we are presently forced to fight for the right of the liberals

to exist and to act in our society. This disturbing trend that we are forced to fight clearly shows that the questions discussed tonight bear directly on our entire future.

It is our tragic lot to live in the shadow of a possible new global war and we know that, if war should come, it is of little importance how we plan to shape our lives. With the new weapons and their devastating power civilization will hardly survive. But we all hope that mankind will succeed in avoiding this terrible end. We trust that reason will prevail and that it will be given to us to bequeath to our children the democratic heritage as unimpaired as we have received it from the hands of our fathers. This is a difficult task to fulfill. Only a firm belief in the social values of democracy, only intellectual integrity, thoughful vigilance, and selfless dedication to serve our fellowmen can help us to prevail.

From an old past, from a different country comes to us an admonition. The scene is Rome. The time—a moment of grave danger to the Roman Republic. The speaker—Marcus Porcius Cato, the statesman and the patriot. At the Roman magistrate he threw his challenge:

"Caveant consules ne quid detrimenti res publica capiat!" • • • "Consuls, beware, lest disaster befall the Republic."

These words are always in my mind. They do not let me rest.

Wisconsin: America's Outboard Boating Center

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1955

Mr. WILEY. Mr. President, the call of spring reminds one and all that Americans are beginning to flock into the outdoors, once more to enjoy the unparalleled leisure-time opportunities of our great country. We prize this leisure as one of the great attributes of America's high standard of living.

I should like to point out, for the RECORD, that one of the most pleasant aspects of our legitimate pursuits is America's enjoyment of boating. Not only is it a pastime for an estimated 30 million Americans who will enjoy pleasure craft this year, but it is now a billion-dollar industry.

I am pleased to say that my own State is the outboard-manufacturing center of America. It is most appropriate that the Badger State is supreme in its production of outboard motors, in view of the unexcelled water resources available in and around the Badger State. Combined with Wisconsin's top fishing opportunities, outdoor craft of Wisconsin manufacturers offer a double treat to American pleasure seekers.

I send to the desk the text of two fine articles describing America's boating recreation. They appeared in last Sunday's Milwaukee Journal. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

STATE IS OUTBOARD CENTER—HALF OF MOTORS MADE IN NATION COME FROM WISCONSIN FACTORIES—OUTLOOK FOR YEAR IS GOOD

(By Paul McMahon)

Wisconsin is the outboard manufacturing center of America. Close to one-half of the 500,000 outboard motors which this country expects to build in 1955 will be produced in Wisconsin, according to industry leaders. That means $70 million in production. Outboard motors of various sizes and types are made in plants in Milwaukee, Fond du Lac, Cedarburg, Beaver Dam, Oshkosh, and Hartford. Close to 3,000 workers are engaged in this work. In addition, motors are being turned out in other States in plants owned by Wisconsin firms.

The boom in the outboard industry in recent years is causing rapid changes in the product. Motors being built today are much quieter and have a far greater horsepower than a few years ago. Some have a gearshift and a remote gas tank. They are as colorful as automobiles.

"The industry realizes that it will sell more engines if they run more quietly and work better," said J. R. Brown, vice president for administration of the West Bend Aluminum Co., which builds motors in its plant at Hartford. Brown is president of the Outboard Motor Manufacturers Association. "The entire industry has done a fine job in improving engines."

ENGINES MORE POWERFUL

Motors a few years ago were more than three times as noisy as the new ones now being produced, Brown said. He based his opinion on scientific tests made by his company, but added that every manufacturer is trying to quiet his engines as much as possible.

A change in models by the West Bend Aluminum Co., which builds the Elgin motors for Sears, Roebuck & Co., indicates the trend in the industry toward bigger, more powerful motors. The Elgin used to come in 2, 5, 7½, and 16 horsepower. This year, Brown said, the 16 horsepower is being discontinued and a 12 and 25 horsepower added to the company's line.

The biggest outboard motor in the industry is the 40 horsepower Mercury built by the Kiekhaefer Corp., according to its vice president in charge of sales, Armand Hauser. Kiekhaefer has plants in Fond du Lac, Cedarburg, Beaver Dam, and Oshkosh. Mercury motors also come in several other sizes ranging from 5 to 18 horsepower.

OPTIMISTIC OUTLOOK

Some of the industry's bigger motors are being so built that a father can lock the engine at a particular horsepower if he doesn't want his children using the maximum power. This device also permits use of powerful motors in States which otherwise would not allow them because of legal restrictions.

"The trend in outboard motors is about the same as in automobiles," observed George L. Kuehn, president of Metal Products Corp., Milwaukee, builder of the Flambeau engine. "Actually, cars and motors may not need all this power stuff but the public wants it. And the public doesn't seem to want the cheap items."

Wisconsin manufacturers have only the most optimistic outlook for this year. One manufacturer reported that his business for the first 3 months of this year was 49 percent better than for the comparable period last year.

The rapid expansion of the industry generally was reported by W. J. Webb, vice president and division manager of the Evinrude Motors division of Outboard Marine & Manufacturing Co. He said that in 1951, slowed by the Korean war, the industry produced only 290,000 outboard motors. The number increased to 320,000 the next year, to 450,000 in 1953, and 500,000 last year. In contrast, only 175,000 were produced in 1941.

"All of Wisconsin manufacturers will benefit from this expanding market," Webb predicted. "The greatest gain in sales will be among newcomers. Last year 3 out of 4 Evinrude sales were made to first-time owners. There is every reason to believe that this rate will hold true for all manufacturers."

THIRTY MILLION PERSONS AFLOAT—BOATING, IN SPECTACULAR GROWTH, LOOKS FORWARD TO A GREAT YEAR—CRUISING GAINS IN POPULARITY

Where the lakes show blue and where the rivers ripple, hugged between their tree-lined banks, the growing flotilla of pleasure boats will sail this spring. And once again, the number of the craft will increase. The few years since World War II have brought about a remarkable change in boating, transforming it from the pastime of the few to recreation for millions.

The figures on boating are spectacular:

Thirty million Americans, the industry says, will be afloat in pleasure craft this year.

For the second year in a row, boating will be a billion-dollar industry.

Half a million outboard motors will be built in 1955, three times the 1941 production.

There are 5,300,000 small craft in the Nation, of which 760,000 contain sleeping cabins.

The number of boat trailers, an index to the number of boats moving around small inland waters, will approximate 100,000, which is 25 times the number in 1947.

STATE BOATING CENTER

This growth Milwaukee and Wisconsin share in full measure. The State borders Lake Michigan, always a boating center, and is interlaced with water for small craft, within easy reach of every State resident. It is the center of outboard-motor manufacture—nearly half of all the outboard motors produced in the Nation are built here.

The Milwaukee Journal consumer analysis shows that 18,991 families in Greater Milwaukee—18 percent of the total—own outboard motors. Manufacturers and dealers here describe this as "tremendous outboard ownership." In the Milwaukee area as a whole, 55,205 outboard motors are owned, as against 32,513 in 1950.

Boating and outboard motors are expanding in each of four broad fields.

The number of fishermen and summer cottagers is growing yearly. To these, a boat is an integral part of the fun, and the great majority has become so convinced of the advantages of an outboard motor that it is a "must."

CRUISING ON INCREASE

Pleasure cruising—the act of hopping into a boat and driving it for fun—has spread from the larger waters to the smaller. This, a new development, is attributed in large part to the crowded condition of the highways, hampering the leisurely family afternoon drive. The amount of this type of sailing on the Great Lakes is also on the increase.

Increased knowledge and improved technique have changed water skiing from an adventure by a few madcaps to a sport within the reach of nearly everyone. Water skiers claim theirs is the fastest growing of any aquatic sport.

The sport of racing is on the increase, both on the big water, where hundreds of yachts have been added to Great Lakes fleets, and among outboard enthusiasts, whose addiction went into a temporary eclipse during and after World War II.

OUTBOARDS QUIETER

In this boating growth, the outboard motor is playing a major role. With the reliability of their product beyond question for years, the outboard manufacturers have been adding horsepower and refinements. One of the present aims is silence, and great strides toward it have been made in recent years.

Numbers, types, and materials in boats have increased. The boatmakers are striving for comfort and safety. The present trend seems to be toward greater beam and added freeboard.

For the small-craft cruising enthusiast, manufacturers are producing trailers to fit any small boat and developing new mechanisms to ease the task of launching and pickup. New equipment for the boats themselves is being brought out constantly.

BOATING SPREADS OUT

One of the important developments in boating is that it is spreading out geographically as well as numerically. A few years ago, 95 percent of the Nation's small boats were concentrated in five areas. Long Island Sound, Chesapeake Bay, Miami, Lake Michigan, and Puget Sound.

Now boating sales are national. The great impoundments of the Tennessee Valley Authority have added a big and important area to the Nation's boating grounds, but boating is also taking hold in areas which, in the public mind, do not seem to contain enough water to fill a bird bath. A power cruiser squadron was recently formed, for example, in Oklahoma.

One of the big appeals of boating is the feeling of untrammeled freedom and power it gives to the person afloat, members of the industry believe. Coupled with this is the realization that the recreation is not reserved for the wealthy, but is well within reach of persons of moderate income.

WANT THE WATER

The longing of men for the watery horizon was brought out dramatically at the recent national motor-boat show in New York, where 4,000 persons waited in line in freezing weather for the opening of the first Sunday session. In the show's 10 days, it was attended by 215,000 persons, who bought $15 million worth of boats and accessories.

Showpiece of the show was a 51-foot cruiser, bought later for $88,000. Men and women stood in line for an hour and a half for a chance to inspect the craft. When they got aboard, the women headed for the salon, where they sat on divans and dreamed. The men, one after another, went to the cruiser wheel, fingered it lovingly and stood for a moment, their eyes fixed upon an imaginary horizon, savoring the mastery of a ship at sea.

Milk 12 Cents a Quart—Part I

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am extending my remarks in three instances to include the full text of an article by Bill Davidson in the April 29 issue of Collier's magazine.

The article by Mr. Davidson, titled "Milk 12 Cents a Quart—Why Not in Your Town?" deals with a subject of interest to every person in the country. This explanatory article is of particular interest to dairy farmers and consumers.

The dairy subcommittee of the House Agriculture Committee will very shortly start to hold hearings on some of the problems discussed in Mr. Davidson's article. Without any comments or observations on my part, I urge my colleagues to study the article. The first installment follows:

How much do you pay for milk? Last summer, when supplies were plentiful, the price in Jacksonville, Fla., was 27 cents a quart; in Kansas City, Mo., 14½ cents. Similarly, people in Portland, Oreg., had to pay 21 cents while families in Minneapolis, Minn., could buy a quart for only 12½ cents. In some areas, the price at times has been nearly twice as high as in nearby communities. The situation is most bizarre, probably, along the Pennsylvania-Ohio border. On the Ohio side of the line, the summer price not too long ago was 12 cents; only a few feet away in Pennsylvania, people were paying 25 cents.

Seldom has an American industry been so ridden with chaos, seldom has the American family been so victimized. As a result, 12-to-15-cents-a-quart milk, which should be the rule in much of the country, is rare in the United States today.

The milk muddle involves politics, greed, short-sightedness—and honest but misguided concern for the public health. It has turned union against union, city against city. It helped elect a governor in Pennsylvania, where Democrat George M. Leader campaigned last year on a promise to untangle the State's snarled milk situation. It has bred violence and gangsterism—in Ohio, where the tires on trucks owned by crusading Akron dairyman James J. Lawson were slashed and stink bombs thrown into his milk tanks; in Oregon, where thugs threatened to throw acid into the eyes of State Representative Maurine Neuberger, wife of United States Senator RICHARD NEUBERGER, because she helped lead a successful consumers' fight in a State referendum to get cheaper milk.

Most tragic of all, the American people are not drinking enough milk—and the chaos and wrangling are one reason why. In 1950 United States Assistant Surgeon General Dr. Charles L. Williams told the Senate Agriculture Committee, "It is a matter of great concern to public health authorities that many of our citizens in the milk-deficient sections do not consume sufficient amounts of this most nearly perfect food. The effect is particularly serious among low-income families who can afford little, and frequently no milk for their children. Reduced consumption of milk and milk products may seriously affect the nutritional status of the Nation."

The situation has not improved much since 1950. Indeed, in some areas it has worsened. By 1953 national per capita milk consumption had dropped 11 percent from its high in 1945; in New York City, it had fallen off an alarming 17 percent. The estimated figures for 1954 are no better. Though nutritionists agree that a child needs a quart of milk a day and an adult requires at least a pint, there are many cities—such as Evansville, Ind., and Birmingham, Ala., where the average is considerably less than a pint per person per day.

MANY FAMILIES CAN'T AFFORD ENOUGH MILK

In Alabama, I spoke with a number of low-income families, and one after another told me that they just couldn't afford enough fresh milk. "We should have 3 quarts a day in our home," said factory worker, J. A. Black, "but that would cost me nearly $300 a year—or one-tenth of my take-home pay." A leading nutritionist reports, "Millions of American children are being raised today without enough of the calcium, riboflavin, and other milk components that are necessary to build strong bones and healthy bodies."

Despite these shocking deficiencies at home, a Minnesota dairy princess, Eleanor Maley, journeyed to France recently to help the then premier, Pierre Mendès-France, in his campaign to entice the French people to drink more milk instead of wine. The beauteous Miss Maley presented the premier with 48 bottles of milk and a milk dispenser, presumably as symbols of America's great milk-drinking propensities and as an inspiration to the benighted people of France. Embarrassingly enough, it turned out that the French were already far ahead of Americans in per capita consumption of milk and dairy products as a whole. (France ranks 11th among the nations of the world, the United States 13th.) It is true that Americans drink more fluid milk than the French, but even in this category the United States ranks only eighth in the world—behind such countries as Sweden, Canada, and Ireland.

How could we—the wealthiest and most advanced nation in the world—fall so far behind in the consumption of one of the most essential foods A host of investigating agencies—from the United States Department of Agriculture to the National Grange—is looking into the matter, and all have focused on one basic cause among many. As the Senate Agriculture Committee reported, "High retail prices, particularly for the low-income families, coupled with health and inspection laws and ordinances preventing the free flow of milk in interstate commerce, have reduced milk consumption in various localities."

In other words, a crazy patchwork of outmoded laws and regulations—piled one on another without regard for the public welfare—is undermining the health of our children. Our pocketbooks are being taxed because of scores of artificial legal barriers—called "Chinese Walls of protection" by A. W. Fuchs, a sanitary engineering director of the United States Public Health Service.

These "Chinese Walls" of the milk industry vary in height and composition, and many were erected with insidious intent. In Rhode Island, there used to be a law permitting the commissioner of agriculture to color all milk brought in from outside the State with vivid vegetable dyes. Now the relatively cheap outside milk is excluded by a more subtle method; no milk can be shipped into the State in tank trucks or cars. It must arrive at the distributing dairy in the same small cans in which it was placed by the out-of-State farmer when he milked his cows, and each can must bear the farmers's name and address. "The regulation is necessary so we can trace the source of contaminated milk," one official told me—but he winked as he said it.

Actually, milk is shipped all over the United States today in modern refrigerated tank trucks and cars—hundreds of miles farther than the short haul from, say, upstate New York to Providence. It has been years since any other State required that milk be kept in the farmer's original cans, and it's virtually impossible for any contamination to escape detection when the milk is inspected at the processing plant by health authorities using universally accepted standards. The original-can regulation simply piles crippling expense on any dairy rash enough to want to bring in cheaper milk from the outside. As one Rhode Island dairy executive admitted to Gordon K. Zimmerman, of the national grange, "We are determined to find a home for every gallon of milk produced in Rhode Island, and at the right price, before we import any outside milk." Says Zimmerman, "The Chinese Wall really works in Rhode Island—and the people of the State get it in the neck. Milk is 25 cents a quart in Providence."

A less subtle method of victimizing the housewife is practiced by the State of Ala-

bama. Since it costs anywhere from 3 cents upward to deliver a quart of milk to the home,you'd expect to pay considerably less if you purchased a bottle in a store and carried it home yourself. But Alabama has fixed the price of store milk at exactly that of home-delivered milk—and in addition imposes a 1-cent sales tax on store milk. Thus the price of store milk actually is higher than that of the more expensive home-delivered product—a violation of all the laws of economics. One Birmingham dairy executive told me, "If the store price dropped, milk would flood into the grocery stores and markets. Then what would happen to us home-delivery fellows? And what about the milk drivers union? They deserve protection, too."

Again the Chinese Wall. Milk runs as high as 27 cents a quart in Alabama.

OPPOSITION TO A PLAN TO REDUCE PRICE

The Chinese Wall has been encountered in still a third form by Meyer Parodneck, head of a farmer-consumer milk cooperative in New York City. Not long ago Parodneck instituted a plan to knock 2 to 4 cents off the retail price by delivering quarts of milk to central locations in big housing projects. He hired part-time clerks from among the tenants and anyone could go to the clerk in his building and purchase milk at the reduced price. Parodneck also cut the price of home-delivered milk 2 to 4 cents a quart under that charged by other distributors. Soon afterward the State of New York revoked Parodneck's license for unauthorized procedure—and the case has been in the courts ever since. As the late John Hartford, chairman of the board of A. & P., once wrote, "Whenever a retailer tries to sell milk cheaper, he either finds that he is violating the law, or cannot get milk at all."

Nearly everywhere I went in the dairy industry, I found people lamenting the barriers—except when they themselves benefited from them. Every segment of the business has its own set of protective ordinances—and some of them have been on the books for almost a hundred years. It's been easy to get all sorts of milk legislation passed because of the natural anxiety of Americans that their families get the purest and best supervised milk. No one is against stringent measures to prevent disease germs from developing in the highly perishable product, but as Cornell University's Dr. A. C. Dahlberg points out, "There sometimes is more self-interest than public interest in milk laws and ordinances."

Farmers, unions, and distributors have all taken advantage of the concern of the consumer to push through self-interest regulations. Ancient ordinances made obsolete by modern technology remain on the books simply because they eliminate competition for small favored groups. Laws passed to deal with now nonexistent economic conditions are kept in force for the benefit of the few at the expense of the many. A University of Illinois bulletin states that of some 2,000 standard foods—including many more perishable than milk—none other is subject to such a monstrous tangle of restrictions. "Milk," says the bulletin, "is the only food sold in large quantities in the United States against which legal barriers have been created to prevent free intermarket shipments." Dr. W. E. Petersen of the University of Minnesota says, "Outside of drugs nothing is more regulated than milk."

The regulations generally take two forms—those adopted in the name of protecting public health, and out-and-out economic prohibitions. The health barriers are erected at both the State and local levels. Not long ago, a forward-looking Chicago dairyman named Sam Dean sought to extend his milk deliveries to the city of Madison, Wis. To his amazement, he discovered that the city had passed a "health" ordinance just 2 years before, forbidding the sale of any milk not pasteurized and bottled within a radius of 5 miles of the center of Madison. Such a regulation had no scientific justification even in the days before modern refrigeration and high-speed trucks. Dean's milk, moreover, was inspected by the ultrastrict Chicago Health Department, and he was perfectly willing to submit to Madison inspection as well. He sued the city, and the case was fought all the way up to the United States Supreme Court. The Nation's highest tribunal suggested that the ordinance was not a health regulation at all, but an attempt to interfere with interstate commerce. It was, said the Court, "an economic barrier protecting a major local industry against competition from without the State."

Milk 12 Cents a Quart—Part II

EXTENSION OF REMARKS
OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am extending my remarks to include the second of three articles by Mr. Bill Davidson on Milk 12 Cents a Quart—Why Not in Your Town? The article follows:

LACK OF COOPERATION AMONG CITIES

Sam Dean got to sell his milk in Madison. But in dozens of other American cities where there has been no crusader to take the fight to the courts, the same type of ordinance is still in effect. Furthermore, most cities refuse to accept the milk-inspection approval of other cities, even though nearly all use the same code, drawn up by the United States Public Health Service. This refusal, too, tends to exclude less expensive outside milk that would drive down the local price. "How silly can you get?" asks Dr. Glenn C. Holm, dean of the school of agriculture at the South Dakota Agricultural College. "Wouldn't it be just as logical to say that all the lettuce and lobster sold in Denver or Chicago had to be produced within an area of 40 or 50 miles? Lobsters and lettuce are also perishable products."

Unnecessary health regulations also add to the cost of milk in other ways. One of Sam Dean's current problems is in the city of South Bend, Ind., which has an archaic law requiring that, for bottled milk, every cow of every producer be tested for tuberculosis once a year. The rub is that tuberculosis has almost disappeared from American cattle, and in the absence of epidemic the United States Public Health Service and most States and cities do not require the expensive tuberculin test more than once in 3 or 6 years.

The annual South Bend test is not too much of a financial burden for the local dairymen, who obtain their milk from relatively few cows. But how about Sam Dean, who draws on thousands of cows and sells his milk in more than a dozen other cities in the South and Midwest? Because he distributes milk in South Bend he must pay to have every single cow examined once a year, even though only a fraction of the milk goes into South Bend. That adds to the overall expense throughout his distribution system. "Why," he asks, "should the people of Chicago and Memphis have to pay more for their milk because of the whim of a distant town?"

Cornell's Dr. Dahlberg, one of the world's top milk sanitation experts, says, "The payoff on all these overstringent regulations is that the record proves they have little or no public-health significance. For a considerable number of years there has been no disease epidemic traceable to properly pasteurized milk. In all cities the majority of the supply is pasteurized and in most cities nothing but pasteurized milk can be sold. They have given America the most sanitary milk in the world." Yet the unjustified, expense-creating rulings persist. Farmers must keep open-top milk pails for some cities, closed-top pails for others. Pennsylvania suggests that the milk stool on which the farmer sits should be of a certain height; how, asks Dr. Dahlberg, can that possibly affect the quality of the milk?

The National Research Council began looking into the problem in 1949 and found hundreds of equally meaningless rules. In 1953 it reported, "One could not expect * * * any relationship between the quality of milk and such regulations as the cow yard * * * being a specified distance from the barn * * * 2 rooms instead of 1 in a milkhouse * * * It is decidedly doubtful whether a producer who must build to precise specifications would produce better milk than another without them."

Now, 2 years later, it appears that little heed has been paid to the council's disclosures. Recently, an upstate New York farmer wanted to modernize his plant so that he could bring down the price of his milk. But the local sanitary inspector told him: "You can't do that unless you install a 60-foot length of pipe. It must be of stainless steel and it must be in one piece, without seams." That ended the modernization—and the prospect of a reduction in the price of the farmer's milk. Not only would it have been extremely difficult for him to obtain 60 feet of stainless-steel pipe all in one piece (an absurdity, according to milk sanitation experts), but to install it he would have had to take the roof off the plant.

In the milk business, absurdity seems to pile on absurdity. In Washington, D. C., the following procedure has been laid down for cleaning cows before milking: "Take one towel for each udder and after using, place in a separate bucket. Then dry each udder with a clean, dry, individual towel. * * * Towels should be at least 12 by 14 inches or its equivalent in area. * * * After towels are washed they may be dried on a line in the washroom, boiler room, or outside of the dairy. Towels shall not be hung on a line in the stable." Says Dr. Dahlberg, "That means the farmer must have four towels per cow per day. He must have electric washing machines and hang up towels all over the premises. The United States Public Health Service, on the other hand, allows the farmer to use a single, germicidally treated towel until it is soiled. You don't have to go beyond this regulation to realize the "udder" ridiculousness of some procedures."

NEW YORK HOUSEWIVES PENALIZED

But few areas are free of such restrictions. New York prohibits the importation of out-of-State cream on nebulous health grounds. Wisconsin cream, which the regulation is designed to exclude, is safely consumed in adjoining New Jersey and Connecticut—and costs 4½ cents a pint less than New York City residents, just a few miles away, pay for their State product. The city also is one of the few still clinging to the outmoded custom of dating milk. As New York Governor Averell Harriman recently pointed out most experts now consider milk dating an anachronism, a burdensome holdover from the days before modern pasteurization and refrigeration, when milk could not be expected to keep safely for much more than 24 hours. Today, if milk is kept cool, it's perfectly good for at least 5 days and, in some cases, for as long as 2 weeks after pasteurization. But New York distributors must go to the added expense of

buying separate bottle caps or containers for each of the 7 days of the week. Also, hundreds of tons of flawless fresh milk must be returned from the stores every day because housewives won't buy milk on Thursday if it's dated Wednesday. Who pays the cost of the wastage? The housewife.

Sometimes, too, the housewife suffers in other ways from needless health barriers. Birmingham, Ala., for example, insists on a bacteria count far below the United States Public Health Service standards. This means extra expense, for the farmer has to install costly special equipment to meet the strict requirements. But what happens? The National Research Council reports that of the eight cities which it surveyed, Birmingham had the worst-tasting milk a few days after pasteurization. Housewives there complained to me that the milk has a tallowy or cardboardy flavor. One reason may be the low bacteria count. The bacteria that remain in milk after pasteurization are harmless. If there are too many they quickly turn the milk sour, but in moderate numbers they perform a useful function: as the milk oxidizes, they absorb the oxidation products. In Birmingham, apparently, not enough bacteria remain to do the job. Many experts believe that the excess oxygen reacts with other components in the Birmingham milk to produce the bad taste. More bacteria, they think, would prevent the tallowy, cardboardy flavor.

Far more serious is the role played by the artificial health regulations in preventing progress in the industry. The American Dairy Industry Association is now conducting a campaign to get people to drink more milk. The members are advocating new, modern methods of making larger quantities of milk more readily available. "However," says Frank Neu, an executive of the association, "we run head on into laws which stymie us. We feel that one of the best ways to sell a lot of milk at lower prices is through multiple-quart containers and through milk-vending and dispensing machines. But many States and cities forbid them—on unfounded sanitary grounds. These are the most damaging barriers of all."

In Akron, Ohio, progressive dairyman James J. Lawson figured he could cut costs and gain volume sales by selling milk in gallon jugs. He tried it, and soon was able to drop his price to the equivalent of 12½ cents a quart. Consumption of milk in Akron increased to almost 13 percent above the national average, according to Akron Health Department figures. Nonetheless, six States and many cities ban the gallon jug on the grounds that it can't be sterilized properly. A leading milk-sanitation expert says, "If anyone claims it's more difficult to wash a gallon bottle than a quart bottle, he has some other purpose in mind—such as trying to keep out competitors who could come in with the gallon jug and cut prices." New York dairyman Meyer Parodneck adds, "There's no more reason for regulating the size of a bottle for milk than regulating the size of buttons."

I saw the controversial modern milk-dispensing machines in restaurants in Wisconsin, and big roadside vending machines (called Maisie, the mechanical cow) in Minnesota. The dispensers had disposable plastic nozzles so that no human hands would ever touch the milk. The vending machines were placed in gasoline stations and along busy highways and delivered a half-gallon container down a chute when coins were placed in the slot. Wherever installed, these mechanical devices have contributed to lower prices and increased consumption, but they are banned in Ohio and in many important cities in other States on the grounds they are not sanitary. Said one Milwaukee dairyman, "If it's true what they say in Ohio about dispensing machines, then everyone in Wisconsin should be dead." (Actually, dairymen say, the laws are protective barriers for milk-handlers' unions, which fear that the machines will eliminate jobs.)

The second major group of artificial barriers in the milk industry are price-fixing laws. Many experts feel that these laws, too, are archaic and even basically evil in their present-day application. They were passed during the depression, when price wars raged and farmers dumped their milk into ditches rather than accept only a cent or two a quart for it. Even Al Capone was in the dairy business at the time, and the competition for customers was enlivened by bombings, machine-gunnings and bottle-breaking. The economists of the day believed that if you fixed a minimum retail price as well as a farm price, it would eliminate the retail price wars that were ruining the farmers.

In recent years, however, most experts have come to the conclusion that if the State fixes the farm price alone (which also can be done by the Federal Government whenever the farmers of an area request it), that's sufficient protection for the milk producer. Of the 28 States which originally fixed prices, 12 have given up the practice. Five States continue to control the farm price, while 11 still fix retail prices—and these 11 are the scene of most of the trouble today.

The retail-price-fixing States are Alabama, California, Florida, Georgia, Maine, Montana, New Hampshire, Pennsylvania, Rhode Island, Vermont, and Virginia. In all, the State price-control laws sometimes do great harm and even encourage illegal practices—such as secret rebates and under-the-counter deals with storekeepers. In New Jersey, four distributors were recently fined $10,000 apiece for such practices. The whole history of barriers has been tragic in that State, for local farmers were almost ruined by the very price-fixing law that was passed to protect them. Not long ago some of the largest New Jersey distributors began buying less expensive milk from farms in nearby Pennsylvania and upstate New York. The cheaper milk gave the distributors a much bigger markin of profit at the State-guaranteed high retail price—and put the New Jersey farmer and consumer in a dreadful squeeze. Alarmed, Gov. Robert B. Meyner, denounced 13 distributors for engaging in "pirate trade" and accused them of "wanting to have their cake and eat it." Then, a few weeks ago, he ordered the end of all retail price controls on milk in the State.

Milk 12 Cents a Quart—Part III

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am extending my remarks to include the third and final installment of an article by Mr. Bill Davidson which appeared in the April 29, 1955, issue of Collier's magazine.

I wish to point out that I have inserted the full text of the article titled "Milk 12 Cents a Quart—Why Not in Your Town?" without any comment or observations because I believe it brings out certain problems facing dairy farmers and consumers on the selling and consumption of milk. I do not say whether I am in complete agreement or disagreement with the article. I do hope, however, that the Dairy Subcommittee of the House Agriculture Committee, will soon have some authoritative information on the problems discussed by Mr. Davidson. This is the reason why I have inserted the article in full in the RECORD.

The final installment of the article follows:

TWO ECONOMISTS CHANGE VIEWS

Significantly, some of the people who once were the strongest supporters of State retail price-control laws have turned against them. Dr. Leland Spencer, a Cornell agricultural economist, now says, "I have come to the conclusion that the disadvantages outweigh the advantages." In California, one of the framers of the State's milk-control law—Dr. James M. Tinley, of the University of California School of Agriculture—now firmly favors its repeal.

What would happen if existing price-fixing laws were repealed? Defenders of the controls insist that the result would be disastrous price wars, but no such catastrophes have occurred in the 17 States which already have junked retail price fixing. All that's happened is that the price for the housewife has come down. Milk dropped 2 cents a quart in New Jersey immediately after repeal, and the same blessing befell the people of Oregon after that State tossed out its controls. The Oregon situation has turned up other interesting results. Hugh Gallagher, manager of the Damascus Milk Co., a subsidiary of the Carnation Co., says, "We opposed the repeal. But now we have to admit that we have been dependent on a cane for 22 years. With the law going out, the market has stabilized more rapidly than we anticipated. Our margins are substantially what they were before.

John Denny, market editor of the Portland Oregonian, reports an average increase of about 10 percent in milk consumption.

What would happen if all barriers—both the economic and the needless sanitary ones—were removed? Dr. Roland W. Bartlett, professor of agricultural economics at the University of Illinois, has made some studies which give a clue to the answer. In Cleveland, with an open market and the removal of most barriers, the price of milk dropped 4 cents a quart between 1952 and 1953. With housewives flocking to buy more milk at the reduced price, the farmers made $550,000 more than they otherwise would have. When the price dropped in Detroit, milk consumption jumped 5.9 percent. Similarly, Columbus, Ohio, reported a spectacular 11.1 percent rise in consumption after price cuts.

Dr. Bartlett says, "If all barriers were removed, the price would drop as much as 20 percent in many places, and per capita consumption would rise as much as 10 percent nationally. That means we would have no dairy surpluses—and no more worries about our children not getting enough milk." Cornell's Dr. Spencer, a long-time adversary of Dr. Bartlett, agrees that consumption would go up, but is more conservative. "If the price drops 10 percent," he says, "we can expect a 3 percent rise in milk drinking." Even that would solve many of America's milk and dairy problems.

What are the chances of the millenium occurring in the near future? The outlook is dim but hopeful. Many crusaders have sprung up in the last few years to fight for reduced milk prices. In Oregon, a small dairy farmer named Elmer Deetz almost singlehandedly knocked out the State milk-control law after he was refused permission to sell milk. He took his battle to the people and not only did he win an overwhelming victory in a referendum in the 1954 election, but he was elected to the State legislature as well. In Pennsylvania, dairyman Temple McAllister has moved across the border from

Ohio and is challenging Pennsylvania price control in the courts as a violation of Federal antitrust laws. The most dogged crusader of all, dairyman Sam Dean, of Chicago, has waged no less than 16 major court campaigns against petty sanitary regulations. He fought to get paper containers legalized in Chicago and he battled for half-gallon containers elsewhere. He also led the fight for a lower store price in many Midwestern cities—and he deserves considerable credit for the fact that Chicago had milk for as little as 15 cents last summer.

In recent years, too, some big store chains have joined the fray. In California, the fight is being led by Safeway Stores—both in the courts and in the legislature. Ray Bush, manager of Safeway's subsidiary, the Lucerne Milk Co., says, "Safeway is convinced that unrealistic prices are discouraging the consumption and sale of milk. We firmly believe that the producer and the consumer are both harmed by regulations that fix prices of milk beyond the producer level. It's our job to sell food to the consumer, and what's good for the consumer is good for us."

TOO MUCH MILK FOR UNCLE SAM

The crusaders soon may have some help from an unexpected source—the Federal Government. A few months ago, Secretary of Agriculture Ezra Benson become so concerned over the fact that the Government had had to buy a staggering surplus of dairy products equivalent to 5,500,000,000 quarts of milk that he ordered a study by the Department's Agricultural Marketing Service. "Why," he wanted to know, "isn't more milk being sold?"

Like everyone in the industry, the Agriculture Department investigators realized the bewildering complexity of the milk business—a tangled labor situation, complicated pricing arrangements, backwardness in merchandising and advertising. But they decided to concentrate on what they felt might be the two principal causes—the artificial health and economic regulations. Their report is due in June, and the crusaders hope it will give them new weapons in the battle of the milk barriers.

In the meantime, how is the battle going? All in all, the attack against artifical sanitary ordinances is developing slow but noticeable momentum; the campaign against price-control laws is a standoff. It seems that Pennsylvania and California may drop their retail-price laws within the next 2 years, but in at least two other States the legislatures appear about to pass archaic price-fixing statutes.

IF THE CRUSADERS SHOULD LOSE

What will happen if the crusaders lose the battle of the milk barriers? Secretary of Agriculture Benson says, "There is danger that milk will price itself out of the market, just as butter has done." If that occurs, it could set in motion a series of events that might be disastrous to our economy. As Wisconsin dairy farmer John Fluckiger, Jr., told me, "The collapse of the fluid-milk market could mean the destruction of the cheese industry as well." Gordon K. Zimmerman of the National Grange points out that a collapse of the dairy industry would hurt the fine flood- and erosion-control programs in the South, where worn-out cotton lands are being put back into grass—which holds the soil. "The prime incentive for a farmer to grow grass," says Zimmerman, "is the money he can make from grazing cattle on it."

Most important of all, if milk prices itself out of its market, it means a threat to the health of your children and mine.

That's why more and more thoughtful Americans are asking their legislators and city officials, "If it's possible elsewhere, why can't we have 12-cent milk?" And they are finding that the answer is not easy. As Federal Judge Jerome N. Frank once wrote in a court decision involving a New York dairy, "The milk problem is exquisitely complicated. The city dweller or poet who regards the cow as the symbol of bucolic serenity is indeed naive. From the udder of that placid animal flows a bland liquid indispensable to human health, but often provoking as much human strife and nastiness as strong alcoholic beverages."

The People's Choice

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. ALLEN of Illinois. Mr. Speaker, if the American people, in a truly democratic fashion, could choose the military service they want to guarantee United States defense, there is no doubt what their choice would be. They believe in air power, and they know that only air power can guarantee our security. They know that the United States Air Force, with its intercontinental bombers, and its record of performance in World War II and in Korea, is the best bet for victory in world war III, if it comes, and for keeping the peace, in hopes of avoiding it.

A recent Gallup poll has proved this decisively. When asked which branch of the Armed Forces they thought would be most important in the event of another war, more than 70 percent of the people questioned reaffirmed, as they did in a similar poll in 1949, that they thought the Air Force would be the most important.

Comments the director of the Gallup poll:

Military experts may be startled to note how extremely one-sided the vote continues to be on the Air Force—how much the drama and color of the Air Force has fired the popular imagination.

The great popular appeal of the Air Force affects all walks of life. Persons who have attended college feel the same way about the relative position of the Army, Navy, and Air Force as those who attended only high school or grade school.

It is not that the Air Force is the most popular of the services in general esteem, however. The point is, Mr. Speaker, that the Air Force must play the top role in the next war, if we are to win it; and that is what the American people know, and what we must keep in mind in our consideration of the defense budget.

I ask the consent of my colleagues to extend my remarks and insert in the CONGRESSIONAL RECORD the figures assembled by Mr. George Gallup, director of the American Institute of Public Opinion, bearing on this inescapable fact. The news release containing this significant information follows:

THE GALLUP POLL—TOP ROLE FOR AIR FORCE IN NEXT WAR FORECAST

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., March 31.—If another world war comes, the average American today has one idea fixed firmly in his mind: the United States Air Force would play a much more important part in it than either the Army or the Navy.

More than 7 out of every 10 persons, or 71 percent, questioned in the latest institute survey think the Air Force would be most important, compared to 5 percent who say the Navy and 4 percent who think the Army would be most important.

About 1 person in 5, or 19 percent, believes all 3 branches will be equally important. This is an increase, however, over the opinion reflected by a similar question in 1949.

This is clearly shown in the results of interviews with a cross-section of adults across the country, who were asked this question by institute reporters:

"In the event of another world war, which branch of the Armed Forces do you think will be most important—the Army, the Navy or the Air Force?"

The vote today and that of a similar survey in October, 1949:

Today 1949

	Today	1949
	Percent	*Percent*
Army	4	6
Navy	5	4
Air Force	71	74
All three equally important	19	9
Don't know	3	7

Today's table adds to more than 100 percent because some persons named two branches which they said would be equally important.

Military experts may be startled to note how extremely one-sided the vote continues to be on the Air Force, how much the drama and color of the Air Force has fired the popular imagination.

The great popular appeal of the Air Force affects all walks of life. Persons who have attended college feel the same way about the relative position of the Army, Navy, and Air Force as those who attended only high school or grade school.

The same situation prevails by age levels, as shown in the following tables:

By education

	College	High school	Grade school
	Percent	*Percent*	*Percent*
Army	6	3	6
Navy	4	4	6
Air Force	71	71	70
All three	19	21	16
Don't know	2	2	5

By age

	21–29 years	30–49 years	50 and over
	Percent	*Percent*	*Percent*
Army	7	4	3
Navy	3	5	5
Air Force	70	69	75
All three	19	21	17
Don't know	2	3	3

Bridge Clearances Over Navigable Streams

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD the following article which appeared in the Evening Star on March 25, 1955:

FORE AND AFT

(By Malcolm Lamborne, Jr.)

The recent Commerce Department report on bridge clearances over navigable streams has brought into the open a long-standing dispute between highway and railroad groups on one hand and waterway forces on the other. The report is only the beginning of what promises to be a hot debate for some time to come.

Final arbiter in all likelihood may be Congress. What it decides could sharply affect boatowners in all parts of the country, including the Potomac and Chesapeake Bay area.

With the administration's $101 billion proposed highway program as a backdrop, State highway officials, road builders, and others are vitally interested in keeping down costs, particularly for bridges over rivers and coves. For many years the Army engineers have had the final say on bridge clearances over waterways.

There has been a move by some groups, meanwhile, to have Congress shift responsibility for bridge clearances to the Commerce Department which some feel would be more friendly to highway people—perhaps at the expense of waterway traffic. While the Commerce study refrains from making any transfer proposal, the Hoover Commission task force on water resources, headed by Adm. Ben Moreell, has been looking into this and other problems. Its report is due to go to the full Commission next month, and the Commission to report to Congress in early May.

It is of interest that the engineers would not support the key recommendation of six proposals made in the Commerce report. Commerce would have Congress set up new categories of what is a navigable stream. Under the lowest category would come waterways now "deemed navigable but of questionable value for navigation." Obviously this would include many rivers and waterways used by yachtsmen and fishermen.

Commerce suggests a solution for craft using these waterways: Hinged masts, radars, and stacks. What this would cost boatmen no one ventures to estimate.

Boat owners have an ally in this respect, too. A report from the Treasury Department (obviously prepared by the Coast Guard) states that it may not be practical or safe for masts to be unstepped or collapsed, and besides, such alterations might violate both international and inland rules on carrying of navigation lights.

The Commerce study also discloses that Defense Secretary Wilson does not go along with the Army engineers on the need for additional legislation in defining the new categories of waterways.

The American Association of State Highway Officials, which has been active in this whole field, has summed up the arguments for the land forces in this way:

"We are not opposed in any way to reasonable and justifiable clearances and navigation requirements, but the relative importance of waterborne and automotive transport has not remained static over the years since the action of Congress in 1906 when the superior rights of water traffic was indicated. In 1906 there were 106,000 passenger cars and 2,000 trucks used in our country, whereas now there are some 46 million passenger cars and 10 million trucks * * * the relative importance of waterborne transportation has diminished."

Boatmen, lacking any national voice in such matters, only hope the boom won't swing too far the other way in this whole dispute.

Ironically, it would come at a time when boating has become a major form of recreation and the boating industry reaches close to a $1-billion-a-year operation.

Red Cross Programs and Services in Alabama

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a report made to the Governor of Alabama on the Red Cross programs and services carried on in Alabama this last year. The citizens of Alabama as Red Cross volunteers, are giving daily exemplary humanitarian service to their neighbors in need. The Red Cross volunteers in Alabama have been particularly active in the national blood program. Last year the residents of Alabama made it possible to supply sufficient blood to meet both defense and civilian blood needs in the territory. These volunteers are performing a wonderful service and I wish to express my deepest gratitude and appreciation of the personal sacrifices they have made in behalf of all the people.

The aforementioned report follows:

THE AMERICAN NATIONAL RED CROSS,
Atlanta, Ga., April 7, 1955.

The Honorable KENNETH A. ROBERTS,
House of Representatives,
Washington, D. C.

DEAR MR. ROBERTS: As Representative from Alabama, we believe that you will be interested in the attached copy of a report made to the Governor of Alabama on Red Cross programs and services provided in the State during the last fiscal year. This same report has gone to each of the State legislators. We are happy to share with you information regarding Red Cross in your State and in your district since we feel that you have a personal interest.

As director of field service for Alabama, it is my pleasure to work with each of the 78 Red Cross chapters in the State. I am very proud of the record that has been made by Red Cross volunteers and look forward to continued progress in all programs and activities during the coming year.

The chapters in central Alabama participate actively in the national blood program through the Red Cross regional blood center in Birmingham. Last year residents of Alabama made it possible to supply sufficient blood to meet defense and civilian blood needs in the territory.

We will be glad to provide additional information on any of the Red Cross services or programs about which you may have questions.

Sincerely yours,

EDNA MATTOX,
Miss Edna Mattox,
Director, Field Service.

REPORT TO THE GOVERNOR OF ALABAMA, RED CROSS ACTIVITIES IN THE STATE DURING 1954

THE AMERICAN NATIONAL RED CROSS,
Atlanta, Ga., February 25, 1955.

The Honorable JAMES E. FOLSOM,
Governor of Alabama,
Montgomery, Ala.

DEAR GOVERNOR FOLSOM: Citizens of Alabama, as Red Cross volunteers, are giving exemplary humanitarian service to their neighbors in need. It is with pleasure that we offer this annual report of their activities during 1954.

In 78 chapters covering every community in the State, 29,000 volunteer workers are giving consistently of their time, training, and talents toward accomplishment of these services. In many instances they are working in conjunction with governmental and community organizations.

These volunteers, in discharge of a primary obligation of the Red Cross, are assisting members of the Armed Forces and their families with their personal problems. Last year 11,500 servicemen's families, through local chapters, were assisted in family crises created by illness, accident, death, financial, and other emergencies, and many routine welfare problems. Working with hometown chapters in handling these situations were Red Cross staff assigned to military installations and hospitals in the United States and overseas.

They are providing entertainment and recreation for convalescents in military, veterans, and civilian hospitals. Gray Lady, canteen, entertainment, staff aide, nurse's aide, motor service, production, and other volunteers gave almost 30,000 hours of time and special talent in the entertainment and instruction in crafts of convalescent patients in military hospitals. Volunteers also have given 33,400 hours of time to similar service in Veterans' Administration hospitals located at Birmingham, Montgomery, Tuscaloosa, and Tuskegee in the past year.

They are assisting war veterans and their families in welfare problems, and also giving assistance in applying for Government benefits and in developing and presenting claims. In this service they work with Red Cross claims staff assigned to Veterans' Administration offices. A total number of 900 claims cases were acted upon last year.

They are helping to make whole blood and its derivatives available to the sick and injured through Red Cross blood centers located at Birmingham and Mobile, and Atlanta, Ga. Last year, Alabama donors contributed 58,200 units of blood to these centers. Fifty-seven Alabama chapters are participants in this blood program. The Office of Defense Mobilization distributed 30,080 cc's of gamma globulin from Red Cross sources to public health departments in Alabama during 1954, in addition to shipments from the National Foundation for Infantile Paralysis.

They are helping the victims of tornadoes, floods, hurricanes, fires, and other natural disasters, not only in time of emergency but also for weeks afterward, where needed, giving long-term rehabilitation aid that will help restore stricken families to normal life. In disaster operations they work in conjunction with State, county, and city governmental agencies; Civil Defense; military and other groups having responsibility in this field. Also in cooperation with these groups, Alabama's Red Cross chapter workers are active in preparedness for disaster, educating the public in precautionary measures, and setting up cooperative plans of emergency action with other agencies. The past year was a relatively light one for major natural disasters in Alabama. In 12 relief operations the Red Cross helped 144 families at a cost of $96,800, mostly for homes reconstruction and refurnishing and assistance with medical and hospital expenses.

Alabama chapters' volunteers are reducing the hazards of water sports by providing training in swimming and lifesaving, and in safe handling of small craft. Last year, 700 water safety instructors issued 8,600 certificates in swimming and lifesaving.

They are teaching people how to be self-reliant in home nursing and how to give first-aid in emergencies. Last year, 1,600 first-aid instructors issued certificates to more than 7,500 persons; while 3,200 certificates in home care of the sick and mother and baby care were issued by approximately 200 home nursing instructors.

Volunteers have taught young people of high and elementary school age, through the Junior Red Cross, how to be good citizens through service in projects for the community and in behalf of needy children in other lands. Last year, Junior Red Cross enrollment in Alabama's schools totaled 371,880 students.

This record of service is one of which you and all the people of Alabama may well be proud, for it is a magnificent tribute to the warm heart of a great people.

Respectfully submitted.

EDNA MATTOX,
Miss Edna Mattox,
Director, Field Service.

Ike Strong in Minshall Poll

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing the results of a poll taken by my colleague, WILLIAM E. MINSHALL, who represents the 23d District of Ohio.

Mr. Speaker, I am sure you join with me when I say that some of us who have been here for several terms look with pride upon the endeavors and accomplishments of some of the freshmen or new Members of Congress. I have that pride when I see the services being performed by Congressman MINSHALL, of Ohio. It was my privilege to serve with Congressman MINSHALL back in the Ohio Legislature. He is bringing to Congress the same excellent service and unceasing efforts on behalf of the people he represents. His endeavors to keep in contact with his constituents by means of many visits and polls certainly is comemndable. In my opinion, we need have no fear of the future when the American people send to Congress young men with vision, integrity, honesty, and a willingness to work as exemplified by some of the new Members of this great legislative body, including the capable Member from the 23d District of Ohio.

IKE STRONG IN MINSHALL POLL

Congressman WILLIAM E. MINSHALL today released the final tabulation of returns to his opinion poll which was mailed to a cross section of approximately 25,000 23d Congressional District residents in March.

The final tabulation of nearly 4,000 returns produced unmistakable evidence that President Eisenhower and his program are extremely popular with 23d District voters. Eighty-three and seven-tenths percent of those people answering the poll answered "Yes" to the question, "Is the Eisenhower administration doing a good job?"

This 83.7-percent support is an increase of almost 15 percent over the Eisenhower vote in 1952 when the President received 69.4 percent of the total vote cast for that office in the 23d Congressional District.

The largest number of "Yes" answers was in response to the question "Do you favor the development and use of atomic energy in private enterprise?" Ninety-three and one-tenth percent of the answers favored this portion of President Eisenhower's program. Another portion of the Eisenhower program heavily favored by 23d Congressional District voters was the 89.4 percent support of the President's Armed Forces Reserve program.

Twenty-third District residents registered their greatest disapproval against the admission of Red China to the United Nations. Almost as great a disapproval was registered against the further lowering of taxes when 84 percent of those polled answered "No" to the question "Do you believe that we should cut taxes first and balance the budget later?" In this regard, a near majority, 49.3 percent, would even approve higher Federal taxes if needed to balance the budget.

Thirty-one and five-tenths percent of the people polled had no opinion on the Bricker amendment and 27.2 percent had no opinion on the reciprocal trade-agreements program, the two largest percentages in the "no opinion" column.

Congressman MINSHALL expressed his appreciation for the prompt and amazing response to his opinion poll and stated: "The results evidenced such a sincere and genuine interest in Government operations that future polls will be a regular part of my representing the people of the 23d Congressional District."

The final tabulation follows:

Final tabulation, Congressman William E. Minshall's opinion poll

Question	Answer in percentages		
	Yes	No	No opinion
Do you favor continued military assistance to Asia?	69.7	21.5	8.8
Do you favor continued economic assistance to Asia?	70.1	21.6	8.3
Do you favor continued military assistance to Europe?	72.4	21.3	6.3
Do you favor continued economic assistance to Europe?	56.2	37.5	6.3
Should nuclear weapons be used against Communist aggression?	73.7	17.7	8.6
Do you feel the United Nations deserves our continued support?	80.6	13.3	6.1
Do you favor admitting Red China to the United Nations?	11.9	82.4	5.7
Are you in agreement with the Eisenhower-Dulles foreign policy?	74.3	11.9	13.8
Would you favor reductions in defense spending?	28.0	67.7	4.3
Do you favor wage and price "standby" controls for use in case of emergency?	79.3	13.7	7.0
Do you believe that the civil defense program is adequate?	34.2	52.3	13.5
Do you favor congressional investigations of Un-American activities?	75.2	19.7	5.1
Do you favor granting immunity from criminal prosecution and forcing people to testify who use the defense of the fifth amendment?	39.1	47.9	13.0
Do you favor the use in Federal courts of evidence gained by or developed from wire tapping in cases involving national security?	81.7	14.0	4.3
Do you favor an Armed Forces Reserve program to build and maintain powerful civilian reserves?	89.4	6.6	4.0
Do you favor universal military training?	76.8	19.3	3.9
Do you believe that we should cut taxes first and balance the budget later?	12.3	84.0	3.7
Would you approve higher Federal taxes if needed to balance the budget?	49.3	46.3	4.4
Would you favor increasing present old age and survivorship benefits under the Social Security Act?	56.5	36.3	7.2
Should the Taft-Hartley Act be amended?	34.9	49.7	15.4
Do you approve of Federal aid to education to assist States in providing more public school classrooms?	64.4	30.3	5.3
Do you approve of statehood for Hawaii?	76.4	10.2	13.4
Do you approve of statehood for Alaska?	73.6	15.6	10.8
Do you approve of the reciprocal trade agreements program?	65.5	7.3	27.2
Do you favor the administration's farm program of flexible price supports?	66.8	19.7	13.5
Do you favor the Bricker amendment?	35.6	32.9	31.5
Do you favor raising postal rates to reduce the deficit in the Post Office Department?	71.4	23.2	5.4
Should 18-year-olds be given the right to vote?	40.9	53.6	5.5
Should the present 75 cents an hour minimum wage law be increased to 90 cents an hour?	56.6	32.6	10.8
Do you favor a salary increase for Federal employees?	51.8	29.1	19.1
Do you believe that Congress should authorize 35,000 additional public housing units in each of the next 2 years?	32.8	43.8	18.0
Do you believe that the Small Business Administration which assists and encourages small-business enterprises should be continued?	81.7	10.8	7.5
Are you in favor of the administration's expanded Federal interstate highway program?	84.2	8.6	7.2
Do you favor a Federal health reinsurance program to encourage voluntary participation in health-insurance programs?	38.5	44.0	17.5
Do you favor the development and use of atomic energy in private enterprise?	93.1	4.1	2.8
Is the Eisenhower administration doing a good job?	83.7	5.1	11.2

National Monument at Summit, Utah

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from Utah State Legislature urging national monument at Promontory Summit, Utah:

Senate Resolution 5

Resolution of the Senate of the 31st Legislature of the State of Utah Urging Congress to Have the Area at Promontory Summit, Utah, Where the Two Railroads Joined Made a National Monument

Be it resolved by the Senate of the Legislature of the State of Utah:

Whereas the Union Pacific Railway Co. and the Central Pacific Railway Co., now known as the Southern Pacific Railway Co., constructed nearly 1,800 miles of railroad in 6 years and joined a continent by meeting at Promontory Summit, Box Elder County, Utah, on May 10, 1869; and

Whereas the joining of our west and east coasts by railway changed the history of our country and affected and improved the lives of its inhabitants; and

Whereas the building of these two mighty railroads in such short time and over such rough and wild country still stands as one of the finest examples of American ingenuity; and

Whereas the importance of the event attracts large numbers of visitors and tourists to this area each year, although there are few accommodations at present for them; and

Whereas many thinking people have investigated for sometime plans to perpetuate this great and important historical moment in our Nation's history and have concluded that the area must be given to the people of this country: Now, therefore, be it

Resolved, That the Senate of the 31st Legislature of the State of Utah urge the Congress of the United States of America to proceed to have a national park made of the area at Promontory Summit, Utah, to commemorate the event mentioned; be it further

Resolved, That a certified copy of this resolution be forwarded by the secretary of state to the congressional delegation for Utah and to the Secretary of the Interior of the United States of America.

Background on Parcel Post Size and Weight Controversy

EXTENSION OF REMARKS
OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. BROYHILL. Mr. Speaker, the parcel post service was created by act of Congress in 1912, and went into operation on January 1, 1913. It was recognized in the Congress at that time that the establishment of a parcel-post system would bring about some dislocations in the transportation business. Proof is found in the CONGRESSIONAL RECORD of August 13, 1912, where this statement is found:

> The proposed measure will benefit all classes of the people except those carriers now engaged in the business of transporting small wares. While the patronage of these will be lessened, it will have the effect to limit their business to the more weighty freight, which is distinctly the business of such carriers.

That statement also belies some allegations that the parcel-post establishment was for the principal benefit of rural residents in that it says the enactment would benefit all classes of people.

The impermanence of the original 11-pound, 72-inch limit on parcel post is pointed up by the Senate committee report of 1912, which said:

> When the parcel-post service has once been inaugurated, details, such as insurance, collect on delivery, reduction in rates, increased weight limits, and so forth, can be rapidly added as experience indicates the character of the new service that should be provided.

The wants of the American public were quickly made known, and the first increase in parcels allowable in the mails was made in August 1913—just 8 months after the service began. Other increases were made periodically until 1931, when the 70-pound, 100-inch limit was reached. This was apparently the optimum, as it remained in effect for more than 20 years, half the life of the parcel-post system, until Public Law 199 was enacted in 1951.

During this 20-year period, the Railway Express Agency was making acquisitions to become a monopoly in its field, the final acquisition being made in 1938. During this 20-year period, the express agency enjoyed its greatest period of prosperity. During the latter part of this 20-year period, there began an upsurge in the businesses of motor carriers and freight forwarders.

In an economic period, when nearly all business was prospering, the early years after World War II, the business of the express agency declined. Rising costs of doing business forced railway-express rates up 123 percent, while parcel-post rates were increasing 125 percent. During this period, there was a 25-percent decline in railway-express shipments and a 50-percent decline in railroad less-than-carload shipments. At the same time, however, there wa staking place a 180-percent increase in freight-forwarder activity, a 260-percent rise in over-the-road carriage—motor carriers, and a 7,251-percent increase in air freight. During this same period, the growth of the parcel-post service only paralleled the growth of business in the other three classifications of mail.

The express agency, supported by its parent-company railroads, found a convenient whipping boy in the parcel-post system. Apparently they felt that it would be easier to wreck this valuable service in an effort to recoup its losses than it would be to cope with their true competitors—the freight forwarders, motor carriers, and air transport.

They sold their case well to the Congress. The employee unions of the railroads and the express agency were mobilized, and the rank-and-file employees were recruited to write emotional letters to the Congress, and fallacious reasoning was employed so effectively that the Congress was persuaded to enact Public Law 199 in 1951, to become effective January 1, 1952.

That law says:

> I. Packages moving between first-class post offices in the first and second postal zones can measure no more than 72 inches, length and girth combined, and can weigh up to 40 pounds.
>
> II. Packages moving between first-class post offices in the third through eighth postal zones can measure 72 inches, length and girth combined, but can weigh no more than 20 pounds.
>
> III. Parcels moving to or from a second-, third-, or fourth-class post office could still adhere to the 70-pound, 100-inch limit formerly available to all postal patrons.

The effect of this law was to provide a Government small-parcel delivery service to the least populous sections of the country; a parcel delivery service of the most expensive kind to the areas of the country which by reason of their lack of development contributed least to the support of the cost of the service. But at the same time, the citizens of the more densely populated areas, from whom comes the major financial support to the Government, are being denied all but a small part of the parcel-post service.

The law was enacted over the protest of the shipping public who stood ready to pay any necessary cost of the parcel-post service commensurate with efficient operation; a shipping public which knew there could be no substitute for the parcel-post system, which reaches into every town, village, and hamlet of the United States.

The proponents of Public Law 199 had as their watchword "Get the freight out of the parcel-post service." While Webster's International Unabridged Dictionary provides no definitive dimensions for freight, traffic experts recognize freight as being only those shipments in excess of 100 pounds.

The effects of the law have been these:

Contrary to the claim that enactment of the law would increase Railway Express employment, the number of employees of that agency has continued to decline until now there are fewer employees than in 1940, and 1,155 fewer employees than when the law went into effect.

According to information filed with the Interstate Commerce Commission, Express Agency net profit has fallen from $556,000 in 1951, the last year before Public Law 199 became operative, to only $11,624 for the first 10 months of 1954.

Packaging costs of commercial users of parcel post have increased greatly due to the necessity of breaking packages formerly acceptable in parcel post into two or more packages in order to meet the restrictions of Public Law 199. This also has the effect of increasing operating expenses in the Post Office Department by reason of increasing the number of packages handled in moving a volume of weight formerly acceptable in the mail in a single package.

The private patron of the parcel post system has met with utter confusion under the act. In many instances the son or daughter in college can no longer send their laundry home; food boxes from home are smaller. New patterns are being sent in Christmas gifts going through the mails in order to avoid the freight classification spelled out in Public Law 199. A lady's winter coat, when properly packaged for mailing, is now barred from the mails because it often falls into the category of freight.

Rural patrons of the Post Office Department, who were exempted from the restrictions of Public Law 199, were not able to escape the 36-percent increase in parcel-post rates, which is said by postal officials to be an increase nearly 60 percent greater than would have been necessary without Public Law 199.

The fiscal condition of the Post Office Department, in behalf of which the proponents of Public Law 199 assumed to speak at length, is said by postal officials to be around $70 million worse off than would be the case without Public Law 199.

But the efforts of the opponents to this law to get it repealed have not yet been successful.

Principal reasons for this lack of success to date are:

The proponents of the law are most adept at twisting statistics to picture conditions as favorable to their cause when such is not the case. They take the Post Office Department reports and interpret them to mean something entirely different from what was intended by that office. They quote statements out of context, and use different figures of their own to portray whatever picture best suits their need at the moment.

An outstanding example of the latter is this:

The express agency, when seeking ICC approval for increased minimum charges, said they had captured only 20 percent of the business lost to the Post Office Department by reason of Public Law 199. But, a few weeks later, when they went before the St. George subcommittee in the House of Representatives in January 1954 to urge retention of that law, they said they had gained 57 percent of the business lost to the post office by reason of Public Law 199. In the same connection, the agency often claims that competition from the Post Office Department had caused the layoff of 40,000 railway express employees. However, when they appeared before the ICC to get a rate increase, they presented information to show that 1,941 employees had been returned to their jobs. They told the congressional committee that about 4,000 had been returned to their jobs. Now, if they had recovered 20 percent of the business they claimed the parcel-post system had taken from them before Public Law 199, it would seem that 8,000 people would have been returned to their jobs. If they had recaptured 57 percent of the traffic driven out of the parcel-post system by Public Law 199, would not more than 22,000 people have been returned to their jobs? Yet, according to most recent employment figures available, there are 1,155 fewer employees in the agency now than when Public Law 199 went into effect. That leaves us completely in the dark as to just how has the parcel-post system affected railway express employment and profits? Indeed, is there any relationship at all? Was the parcel-post system ever competitive with the Railway Express Agency? The business on which the motor carriers, air carriers, and freight forwarders are prospering certainly did not come from the parcel-post system. Proof of this lies in the difficulties experienced when a shipper asks for the pickup of a shipment weighing less than 100 pounds. The prosperity of these carriers cannot all be attributed to movement of merchandise that just never moved before. It had to come from some other carrier, and there is ample evidence to indicate that much of it came from the railroads and from the Railway Express Agency.

But the railroads and the express agency have the political strength to continue to convince the Congress that its competitor is the parcel-post system; they have sold the Congress that its losses were due to the dozen shirts, the fishing rod, the card table, the lamp shade, and any number of similar items formerly carried by the parcel-post system, but which, because of a strange act of Congress, are now classified as "freight," and, as such, are barred from the mails.

It is to be hoped that Congress will soon realize that interests of 160 million Americans—all potential users of the parcel-post system—are to be considered ahead of the interests of a single monopoly that cannot rightly tell who its real competitors are. When the Congress reaches such a realization, or when the true facts of the parcel-post controversy are evaluated, there can be only one result: repeal of Public Law 199.

Percy A. Brown Observes 50th Year in Business

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature story from the Sunday Independent, Wilkes-Barre, Sunday, April 17, 1955, on the occasion of the 50th anniversary observance of one of the Nation's outstanding restauranteurs and merchandisers, Percy A. Brown. As documented in the article, Mr. Brown's career is a saga in the annals of American private enterprise, and graphically points up the inevitable result of hard work and initiative. His is a career of which I am exceedingly proud.

The article follows:

PERCY A. BROWN TO MARK 50TH YEAR IN BUSINESS—STARTED CAREER AS NEWSPAPERBOY ON STREETS OF WILKES-BARRE—FIRM HAS SPLENDID NATIONAL REPUTATION

Percy A. Brown, Wyoming Valley's merchant prince, is preparing to observce his 50th year in business.

The man who started his career as a newspaper boy on the streets of Wilkes-Barre at the age of 10 will mark his first half century as a business leader with a series of gala events within the coming weeks.

As he prepares to start another milestone in business his eyes are on the future.

"We have gone a long way in the past 50 years through up-to-date merchandising. The people of Wyoming Valley can be assured that our policy will not change in the years ahead. We will try with each succeeding day to keep abreast of our field," Mr. Brown declared.

From a humble beginning Percy A. Brown has progressed to a place of eminence in the business history of the State and Nation. His combination store and cafeteria at 18–32 East Northampton Street has a splendid national reputation. During the years that have passed since he first entered business, Mr. Brown has been a pace setter. His merchandising methods have been copied by businessmen the Nation over.

ACTIVE FOR YEARS

A leader in all branches of community life, Mr. Brown has the respect and admiration of the cosmopolitan population which makes up Wyoming Valley. During the past half century he has been at the forefront of all movements designed to assist in the promotion and development of this region.

Mr. Brown was born of humble parents in 1883, near St. John's in Butler Valley in what is now commonly referred to as the Pennsylvania Dutch country. His father, the late Franklin Jackson Brown, moved to Wilkes-Barre to accept employment as a substitute mail carrier when the present merchant prince was a mere tot. His late mother was Mary C. (Wenner) Brown. The merchant's father finished his life serving as a coachman for the late Morgan B. Williams, a coal operator in the days when Wilkes-Barre was not so old.

PARENTS OF DAUGHTER

Percy Brown married Leah Brink, of Laceyville, and they have one daughter, Mrs. Clyde Davis, of Kingston. Mrs. Davis is secretary of Percy A. Brown & Co.

He attended the public schools and at the age of 10 began his active business career as a newspaper boy. Later, after leaving school, he was employed as a delivery boy in the department store of Fowler, Dick & Walker.

In 1896 Mr. Brown first became connected with the meat business finding employment with L. M. Utz, a prosperous and successful meat dealer. He remained with this establishment for 5 years, acquiring a thorough knowledge of the meat business. Later Mr. Brown was connected with other establishments of the same type, including the meat markets of Herman Knappman, Jacob Henricks, and Frederick LaFrance.

When Mr. LaFrance died in 1905, Mr. Brown, together with his father, bought the business and at that time continued the meat market at South Washington and East Northampton Streets.

Mr. Brown's policy of handling only top quality meats and bolognas proved successful from the start. By 1909, Mr. Brown's business had increased to the point that it was necessary to find larger quarters and he moved to the location the store now occupies. Every few years after he added new departments.

The first addition provided for a New York-type delicatessen department. From the outset Percy Brown carried imported and fancy foods along with scores of standard items, thus providing his customers with the greatest selectivity possible.

NATIONALLY KNOWN

During the intervening years, Mr. Brown's reputation as a merchant grew in leaps and bounds. His concern is now nationally recognized as a famous food market and cafeteria. To complement his meat and delicatessen departments, Mr. Brown first added a fresh fruits and vegetable department and soon after that incorporated fresh fish in the same department. Next came the sandwich counter which in 1920 was developed into a large, modern cafeteria. At the same time the bakery was added; followed soon by his own ice cream and dairy department.

After this period, Mr. Brown's energy was poured into the task of making more room for his evergrowing business. His interest in better cooked foods and the quality standards he adopted in 1905, kept his organization ever mindful of better methods, improved ingredients and perfect housekeeping. Quality was always the prime interest. Procedures for uniformity and quality control methods were constantly being installed so that every day the hundreds of items served or sold at Brown's were always the same.

In 1929, the cafeteria was again enlarged and modernized. Four years after that, a complete candy department was acquired, making the store as complete as could be found anywhere.

Just before World War II started, Mr. Brown became interested in the development of cooked frozen foods. Many people had successfully frozen and marketed frozen vegetables, fruits and juices, but up until this time little had been done in the freezing of cooked food items. With his eyes on the future, Mr. Brown embarked on a project of research in this line.

MANY STUDIED RESULTS

His research was so extensive many famous restaurant and food store owners throughout the country visited Brown's to study the results. The United States Army, working with the National Restaurant Association in 1946 sent a group of technicians

and a mobile laboratory from Chicago to make tests on some of the items Percy Brown had frozen.

Other experimental projects were launched by Brown's. A radar range was installed for experimental purposes. Dietitians employed by Mr. Brown performed services for the entire industry, finding out what could be done with this type of cooking. The manufacturer of the range still uses many of the techniques developed by Percy Brown.

A new and controlled method of aging beef was developed in the back room of Brown's. Somewhere in the country, some men had made a cabinet to age beef, thus improving the flavor and increasing the tenderness. The final technical angles and the method was supplied by Percy Brown.

During the past 50 years, Percy Brown has been first in many achievements. The first air-conditioning system was installed in the cafeteria long before the modern systems were developed. Although a bit crude from the mechanical point of view, this system then provided by ice and fans, afforded comfort for the guest in the cafeteria.

In recent years a stainless steel anthracite burning stove was installed in the restaurant kitchen. This was widely publicized because it was the first stainless steel coal stove ever made.

Over this last half century, improved equipment, such as ice-making machinery, conveyor systems, reel type ovens, automatic wrapping machines and a vacuum blender which extracts all air during the mixing process of bolognas and table-ready meats were added.

Today, after 50 years, the completely modernized Percy Brown's offers to this community, the widest variety of quality foods at consistently competitive prices, in an atmosphere of courtesy and friendliness.

International Educational Exchange Program

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

INTERNATIONAL EDUCATIONAL EXCHANGE PROGRAM—GRANTS FOR FOREIGN STUDENTS TO STUDY AT INSTITUTIONS IN OTHER FOREIGN COUNTRIES

The report of the House Appropriation Committee on the international educational exchange activities of the State Department includes a statement to the effect that the committee "doubts that it was ever the intent of the Congress to pay the cost of sending foreign students from their country to study at a university of another foreign country." This statement read in connection with the hearings on this activity seems to reflect some concern over the fact that $220,155 in foreign currency equivalents, out of a total of $22 million requested for this activity, would be spent on grants to enable foreigners to attend American educational institutions in other foreign countries.

I should like to point out that the hearings indicate that the Department does not propose to spend this modest sum for studies in universities of other foreign countries but rather for studies in American colleges, American schools, and American institutes situated in foreign countries, and mostly in the countries of which the proposed students are citizens. It is true that to a limited extent some of these students would study in other foreign countries.

The information submitted by the Department and included in the report of the hearings (p. 334), however, indicates that something less than 16 percent of the local overseas grants or a total of $35,154 in foreign currency equivalents would be devoted to such studies in so-called "third countries." That information indicates that this small sum would enable two students from Iraq to study at the American University of Beirut and that less than 220 out of the 1,354 of these local overseas grantees would study for short periods of time at the well-known Salzburg Seminar in American Studies in Salzburg, Austria, and at American institutes modeled after it in Norway and Holland.

As I understand it, the authority for such grants is to be found in the Fulbright act. That act provides, among other things, for the expenditure of foreign currencies for "financing studies, research, instruction and other educational activities * * * of the citizens of such foreign country in the American schools and institutions of higher learning located outside the continental United States" and its territories "including transportation, tuition, maintenance, and other expenses incident to scholastic activities." I understand that this provision was intended to extend the benefits of educational exchange to a few foreign grantees, too many of whom could not come to this country and for whom such contact with American education and American educators would be the next best thing.

Pursuant to that provision, grants have been made for attendance at such American centers of American influence as Roberts College at Istanbul, the American University of Beirut and the American Farm School at Salonika and other such institutions. As the program has progressed, other additional institutions have been qualified to participate in this phase of the program by the Board of Foreign Scholarships, the Board appointed by the President of the United States and consisting primarily of nongovernmental educators "for the purpose of selecting students and educational institutions qualified to participate in this program, and to supervise the exchange program authorized herein."

The hearings in the report would indicate that the committee was concerned primarily with the attendance of these foreign nationals at such American institutes abroad as the Salzburg Seminar in American Studies at Salzburg, Austria, and similar American institutes which have been established with the Salzburg Seminar as a model. I understand also that the focus of study in such institutes or seminars is American institutions and American studies, and that in most cases the students who receive these small grants are, in fact, teachers and mature people in positions where they can pass on what they have learned about American institutions in an influential way to their students, their associates, and their fellow citizens at home.

The hearings themselves contain a full description of the Salzburg Seminar which points out the fact that the Seminar is a private American institution which has received gifts from many private respectable American sources. The purpose of the Seminar is to enable Europeans to understand more fully the United States, its institutions, culture and way of life, and insofar as possible to correct the misconceptions concerning the United States which exist in Europe today. I call attention especially to the statement of the United States High Commissioner to Austria in 1951, which is quoted in the hearings: "Never before has it been so necessary for freemen to meet together in groups dedicated to better understanding and support of our free institutions."

I understand that the Salzburg Seminar and others like it also utilize fully American professors sent abroad under the FULBRIGHT program thereby expanding greatly the audiences for these spokesmen on American life and institutions. In view of all these facts, I would hope that nothing in the committee report would convey the impression that these seminars or institutes are universities of another foreign country. Rather, they are American centers abroad which, like the earlier and better known institutions like Roberts College, are islands of American influence and understanding overseas. I hope that this kind of activity can be continued on its current modest scale.

Will We Have To Ration Doctors?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of my radio broadcast on Saturday, April 16, 1955, over WMEX, Boston, Mass.:

The health standards of the United States are rising.

More people recognize the importance of good health and want to protect it.

With our increasing population, however, there are not enongh doctors, dentists, and nurses to go around.

The question "Will we have to ration doctors?" is intended to point up the shortage and to get us thinking about remedies for this malnutrition in the medical profession itself.

The Health Resources Advisory Committee, which includes distinguished doctors, has just made a report of its findings to the Office of Defense Mobilization of the United States Government.

Their diagnosis should be given careful consideration in the treatment of aid-to-medical-schools bills which are now before the Congress. Generally speaking, these bills intend to provide $250 to $300 million in direct-grant aid to medical schools on a matching basis for the construction of new facilities.

Why is this necessary?

To help meet the $330 million construction of new facilities by medical schools that was needed as far back as 1947–48.

Based on the estimate of 75 out of 79 medical schools that they urgently need additional or improved space.

The increase in the number of physicians is falling behind the more rapid increase in our population.

The gross ratio of physicians to population is now 1.32 per 1,000, and the net ratio (active physicans only) is now 1.18, both slightly lower than just before World War II.

By 1960 the United States will have a total of 177 million people who will, at some time or another, need medical care.

At the rate we are going in medical education there will be fewer physicians percentagewise in 1960 than we had in 1950.

As the Committee summarizes, "We have a tight supply situation in the three major health professions—medicine, dentistry, and nursing. The supply, both of physicians and dentists, has not increased as fast as the

population, in the period since the beginning of World War II. The supply of nurses has increased more rapidly, but there are still many unmet demands for graduate nurses. There is little prospect for improvement in the total situation in this decade."

The medical schools are finding it hard to maintain adequate staffs with money problems and the shortage of qualified health manpower exerting heavy pressures.

Most medical schools reply upon part-time personnel, especially for instruction in clinical subjects. In the 1951 survey, medical faculties included 3,933 members with full-time, and 11,630 members with part-time appointments. Many of the 11,630 part-time faculty members were able to devote little time to teaching, the average being less than 300 hours per year.

Only 21 of the 72 four-year medical schools reported staffing which was up to the standard recommended by the Joint Committee on Medical Education.

The most specific report on this subject is found in the 1953 Education Number of the American Medical Association which states that for the school year 1953, the number of unfilled fulltime positions in the instructional staffs of medical schools was 283.

A significant change in the pattern of medical education and practice in recent years, is the growth of hospital internship, and residency training programs. Hospitals and practicing physicians have come increasingly to rely on these "house staffs." The result is that the demand by hospitals has, for some time, been greater than the supply of potential trainees, and hospitals vie with one another for their services.

In spite of the rapid increase in the number of physicians in training, the opportunities for training have continued to increase faster than the number of applicants. In 1952–53, 28 percent of internships and 24 percent of the residencies in hospitals were unfilled.

An important aspect of the hospital staffing picture has been the increase in the number of aliens on house staffs. Alien physicians comprise over a quarter of the house staffs of general nonteaching and of tuberculosis hospitals, and almost a quarter of the staffs of mental hospitals. Without their services, the shortage would be acute.

Concerning physicians in private practice, the very long workweek reported, 60 hours on the average, shows that there is little reserve of professional time and skill in today's pattern of provision for medical care.

Although there has been a rapid growth of public health services in this country, at least 30 million people live in areas without organized health departments. As of 1951, budgeted vacancies in the existing State and local public health departments amounted to 20 percent for physicians, 21 percent for dentists, 14 percent for sanitary engineers, 6 percent for sanitarians, 10 percent for veterinarians, and 9 percent for public health nurses. Even without the threat of atomic attack, or biological warfare, a shortage of this size is serious. With these threats existing, the shortage might threaten preventable disaster.

Bear in mind that this whole report was on the subject of "Mobilization and Health Manpower" and was submitted to the Office of Defense Mobilization where you hear this conclusion, and I quote:

"The physician-population ratio has become essentially stabilized. There are unmet demands today in medical education, public health, mental and tuberculosis hospitals, industry and rehabilitation, to name only a few areas. Many rural areas and small towns are in need of practicing physicians. Hospitals in increasing numbers are using alien physicians for house staffs.

"If the threat of attack on the cities of this country were to materialize in any of the presently predicted forms, the combined effect of civilian casualties and casualties in the health professions would place a considerably heavier burden on the population than did the last war, when the civilian population suffered neither military attack nor such an occurrence as the influenza pandemic of the First World War. A civilian disaster of the magnitude possible today could put an incredible load on the civilian health personnel."

Concerning the overall question: "Is there adequate medical training in the United States?" a few of the following facts will help us to reach an answer.

There are 74 approved medical schools, and 6 approved schools of basic medical sciences in the United States, including 1 approved medical school in Puerto Rico.

Twenty-seven thousand six hundred and five students were enrolled in the country's medical schools and 438 students in schools of basic sciences in 1953–54, making a total of 28,043 persons now preparing to fill the Nation's need for doctors.

Six thousand eight hundred and sixteen students graduated from medical schools in the United States during the year ending June 30, 1954. However, it is estimated that about 4,000 doctors are lost each year through death and retirement, so that the actual net increase of doctors was only 2,816.

Fourteen thousand six hundred and seventy-eight individuals applied for admission to American medical schools for the college year 1953–54.

Forty-three percent of these applicants came from 6 States (New York, Pennsylvania, Ohio, Texas, Illinois, and California).

Applicants from the following 7 States (Delaware, Maine, Nevada, New Hampshire, New Mexico, Vermont, and Wyoming) represented only 1.4 percent of all persons submitting applications for admission to our medical schools. Only one of this number, Vermont, has an approved medical school.

By contrast, 2 years previously more than 20,000 applied for admission. The drop for 1953–54 reflects three factors.

1. The increasing cost of medical school tuition is pricing thousands of potential medical school students out of the market. New York University recently raised its medical school tuition to $1,000 per year.

2. The end of eligibility under the GI bill of rights.

3. A general feeling among college graduates that it is just too tough to get into medical schools.

Only 53 percent of the applicants were admitted as freshmen to the medical colleges in the United States in 1953–54.

Large numbers of qualified applicants are unable to gain admittance because of geographical restrictions. Thirty-eight percent of the State and municipally owned medical colleges (15 out of 39) restrict enrollment of first-year students to residents of the State in which the school is located. Twenty-three schools limit the number of out-of-State residents to less than 10 percent of the positions in the entering class. Only 22 schools admit out-of-State residents in numbers equal to more than 50 percent of the openings. As a result of these restrictions, some medical schools are forced to take nearly every one who applies, while others can accept only 1 out of every 10 or 15 applicants.

The basic barrier to increasing the number of physicians is actually the limited capacity of our medical schools. This means that the proportion of students who enter medical school has remained almost constant for the past 20 years whereas the proportion who receive a college education has more than quadrupled, and the proportion entering engineering has increased sixfold.

By 1960, the shortage of nurses for this country as a whole may exceed 50,000.

There are almost 300,000 auxiliary nursing workers in hospitals, and perhaps another 100,000 elsewhere. The need in 1960 for these workers, is estimated at more than 450,000.

The technician shortage is a serious bottleneck in the provision of medical service. Hospitals in the United States recently reported about 18,000 vacant positions for workers in 7 major fields allied to medicine—laboratory technicians, therapists of all kinds, X-ray technicians, hospital administrators, clinical psychologists, etc. In another 5 years, 35,000 will be needed.

In a nationwide survey conducted by the New York Times in 1952, it was found that "30 percent of the Nation's medical schools report that they are unable to get sufficient funds to meet their operating budgets." Of the $3,000 to $4,500 a year it costs the medical school to educate a medical student, the average student pays $600 to $900 a year in tuition, or only one-fifth of the cost.

In contrast to the $93 million to be spent for medical education in the academic year 1954–55, the American public spent in 1953 $5,300,000,000 for tobacco products and smoking supplies, $377 million for parimutuel net receipts, $105 million for make-up bases, face power, and lipsticks.

From this comparison, it would seem that the Congress would be justified in making a modest appropriation to keep our medical schools alive.

Iowa Leads Nation in Meat Production

EXTENSION OF REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

IOWA AGAIN LEADS NATION IN MEAT PRODUCTION

If all Iowa-produced meat had been kept in the State in 1954, each well-fed Iowan would have eaten almost 3 pounds of meat a day—or during the year over 1,014 pounds of pork products, juicy beefsteaks, roast beef, veal, lamb chops and roasts, calves liver, and, of course, Mulligan stew.

United States Department of Agriculture overall commercial meat-production figures for 1954 show that Iowa again led all 48 States in total volume of all livestock slaughtered. Of the 23,823,000,000 pounds of meat commercially produced in the United States, Iowa livestock accounted for over 11 percent—or 2,658,125,000 pounds—reaching American tables.

Besides taking first honors in hog production, Iowa ranked second in slaughter of sheep and lambs, third in cattle production, and ninth in calf slaughter.

Iowa ranked second in the number of cattle and calves on farms, with 6,279,000 head, or 6.5 percent of the Nation's total.

FROM IOWA HOGS IN 1954: OVER 400 MILLION PORK CHOPS

In terms of pork chops at an average of 38 chops per hog, in 1954 Iowa's porkers could have come to the dinner table as 408,804,000 pork chops.

If Iowans wanted to keep all the pork chops at home, there would have been enough chops from Hawkeye hogs to give each Iowan a supply of 156 chops. Dividing the supply up, enough Iowa hogs were raised in 1954 to provide 2½ pork chops apiece for the entire United States population—man, woman and child—including the

Armed Forces. And this doesn't include the rosy baked hams or pork loin roasts or bacon or sausage from Iowa's 1954 pig crop.

Last year Iowa again led the Nation in hog production, with 10,758,000 head, or 2,750,088,000 pounds liveweight, slaughtered in 1954. (This United States Department of Agriculture figure includes slaughter in federally inspected plants and other wholesale and retail plants, but excludes farm slaughter.)

Iowa's hog production last year was almost equal to the combined production of the two next highest States, Illinois and Minnesota. Of the 64,901,000 hogs slaughtered in the United States during the year, Iowa accounted for 16.4 percent—or 10,758,000 head.

Although fewer hogs were slaughtered in 1954 compared with 1953, an increase in average liveweight per head resulted in a 1-percent increase in pork production. Total liveweight of hogs produced in the United States in 1954 was 15,569,609,000 pounds, and 17.6 percent of the national total was made up of 2,750,088,000 pounds of corn-fattened Iowa porkers.

IOWA COWS SUPPLY 7.8 PERCENT OF NATION'S MILK SUPPLY

Iowa ranks third in the Nation in production of whole milk used in manufactured dairy products.

Iowa's dairy cows contributed 7.8 percent—4,420,420,000 pounds—of the Nation's total production of whole milk (57,016,696,000 pounds) in 1953.

Substantiating Iowa's position as a top-ranking dairy State, figures released by the Agricultural Marketing Service of the United States Department of Agriculture show Iowa third in creamery butter production. Of the Nation's total butter supply of 1,411,814,000 pounds. Iowa accounted for 13.3 percent, or 187,296,000 pounds. On a 10-year average, Iowa ranks second in butter production.

Iowa takes fourth place in the United States in number of milk cows on farms. Last year's total number of milk cows in Iowa, 1,111,000, constitutes nearly 5 percent of the total number of milk cows throughout the Nation, which was 24,408,000 in 1954.

UNICO's Newest Service

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre, Pa., Times-Leader-Evening News, of April 16, 1955:

UNICO'S NEWEST SERVICE

In presenting two ether suction machines to Wyoming Valley Hospital today, UNICO, a local service club organized by a group of Americans of Italian extraction, adds impressively to its record of philanthropy. The equipment, costing in excess of $1,000, was financed by proceeds of the East-West football game sponsored by UNICO.

In 1954, UNICO presented a fluoroscope to Wilkes-Barre General Hospital. Next year, one of the other hospitals will receive an appliance of its own choosing with the needs of underprivileged children in mind. UNICO, which derives its name from the first letters of the words—Unity, Neighborliness, Integrity, Charity and Opportunity, thus carries out its program.

UNICO has made cash contributions to the Salvation Army, Catholic Charities, Family Service Association and the Cerebral Palsy Fund. It also has financed a cancer bed and radio for a patient at home.

For a group of 35 representative citizens, UNICO is setting a stiff pace for clubs throughout the area.

Day of Triumph

EXTENSION OF REMARKS
OF
HON. VERA BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD an editorial entitled, Day of Triumph from the Pittsburgh Post-Gazette of April 13, 1955. The editorial emphasizes the great contribution of Dr. Jonas E. Salk, director of the University of Pittsburgh Virus Research Laboratory, in developing a successful polio vaccine. A tremendous debt of gratitude is owed to Dr. Salk, his colleagues and the National Foundation for Infantile Paralysis for this dramatic triumph over another dread disease.

It was praticularly appropriate that the announcement of this great milestone in medical history was made on the tenth anniversary of the death of Franklin Delano Roosevelt. The establishment of the National Foundation for Infantile Paralysis by Franklin Delano Roosevelt brought dramatically to the public mind the need for funds to carry on the virus research.

The editorial follows:

DAY OF TRIUMPH

April 12, 1955, will go down as one of the most memorable dates in the annals of medical science. Although yesterday's announcement of the success of an antipolio vaccine was not unexpected, it put a stamp of official approval on a weapon which had promised to prevent the touching tragedy of widespread death and paralysis, especially among children. Now the promise is fulfilled. Independent field trials conducted under the direction of Dr. Thomas Francis of the University of Michigan have shown that the vaccine developed at the University of Pittsburgh is safe and 80 to 90 percent effective.

Yesterday was a day of triumph for Dr. Jonas E. Salk, director of Pitt's Virus Research Laboratory, where the vaccine was developed. It was a day of triumph for all of the other brilliant scientists who contributed knowledge conducive to victory: Dr. Karl Landsteiner of Austria, who identified the polio virus and showed that the disease could be transmitted to monkeys; Drs. John F. Enders, Thomas H. Weller, and Frederick C. Robbins of Harvard, who showed that the polio virus could be grown in cultures of non-nervous tissue; Dr. William McD. Hammon of the University of Pittsburgh, who showed through the use of gamma globulin that temporary prevention of polio paralysis could be achieved by raising the antibody level in the bloodstream; and many other scientific pioneers.

But April 12, 1955, was also a day of triumph for many whose names have never been seen in print: the patient researchers in scattered laboratories here and elsewhere, the forgotten benefactors who gave money for research with no guaranty of a payoff, the countless supporters of and workers for the National Foundation for Infantile Paralysis. These will be rewarded by the now bright prospect that within the next few years a deadly scourge will be ended. We are happy that the University of Pittsburgh and Pitt scientists have played such a significant part in the conquest.

County Man Learns a Union Lesson

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to introduce a letter from Mr. Lee Vandiner, of Buena Park, Calif., to the ediitor of the Santa Ana Register which appeared on March 23, 1955, and an editorial in the same edition of the Register discussing the letter.

The letter from Mr. Lee Vandiner is one of the best arguments in favor of the right-to-work laws.

The idea of forcing a person to join an organization against his will in order to make a living is against the principles of freedom upon which this country was built, and the damage is compounded when a man, realizing that he is prevented from making a living because of the power of the unions, is willing to pay the tribute demanded for membership and then still is denied the opportunity of working because the union arbitrarily refuses his membership.

The letter and editorial follows:

EDITOR, SANTA ANA REGISTER:

I am a painter, have been for 25 years, have some good letters of references, have for the last 3 months been working for anyone by day or otherwise.

Because I am not a union member, 2 weeks ago I went to the union hall on East First in Santa Ana.

I told the business agent if I could go to work out of there and pay the regular $3 per day they charge on permit men, this $3 goes toward becoming a member, the total fee is $150 for a painter's book. He said (Bill Seiguest) he could not send me on a job as long as some of his members were not working. So last Friday I talked to a contractor; he told me to go to the Santa Ana local and get a permit; he could put me to work Monday which is today.

I went to Bill Seiquest today at 8:30 a. m., stayed around there till 10 a. m.

I saw the union send men out on different jobs—one painter was sent out to wash down a kitchen and paint it. He came back, said "h—, I don't want to use a spunge and a bucket of water."

Another painter was sent out on a job He came back, said "Oh, the guy just had 2 days' work; I don't want that." Several men were asked if they wanted to go to work for the same man I got a job from Friday. They said, "No." I know some of those members don't want to work. They lay around that union hall and that of course keeps their names on the want book.

The point is Where is my right to work? I am kept out of work by such goings on. I would have taken any of those jobs and payed $3 per day to work, until I had paid

$150 to become a member. Now, on the other hand, if I had $50 to give them on a $150 book to become a member they will send me out. I want to know if we still have our rights in this land of the free, the pursuits of happiness, and so forth.

I have a family, am willing to pay to work if it is not written in our Constitution. I will drive most any place to work. I didn't know maybe you wanted to tell the free people this or maybe you don't care. At any rate I thank you for your time.

LEE VANDINER.

BUENA PARK.

COUNTY MAN LEARNS A UNION LESSON

Those who think that "there are some good unions" and that "we need laws controlling the right to work" ought to talk to Lee Vandiner, 9232 Western Avenue, Buena Park, whose letter appears in the Clearing House column today.

Mr. Vandiner puts it on the line in cold, bitter, and understandable English that leaves no doubt or confusion about what he thinks.

As he says:

"The point is, where is my right to work?"

It seems pretty pitiful that a man must be willing, as Mr. Vandiner says he is, to pay $3 a day to work. That, in itself ought to inflame anyone who believes in the American system and the American way of life. But it must be the nadir of something when a man is willing to pay $3 a day for "the right to work" and still cannot get work through the union that is supposed to be in the business of providing such workers.

We know nothing of Mr. Vandiner's accomplishments as a painter but we would like to hazard a guess that his interest and his determination to get work would spur him to do a better job than most union painters who seek to maintain an artificial and unearned monopoly in the painting business. We would be willing to bet that a man as interested in getting a job as Mr. Vandiner is would be just as interested in doing a good job so that he might put himself in the position of getting more work.

We hope that the publication of his letter and whatever we say here will be the means of encouraging those who have work for him to get in touch with Mr. Vandiner.

In this connection it is interesting to remember that Gov. Goodwin J. Knight has told us, prior to his election, that he would do his best to veto and defeat any sort of legislation designed to help people in the same position as Mr. Vandiner.

Some of us with reasonable memories will recall that on the occasion of a visit to the Santa Ana Lions Club Governor Knight was asked some pointed questions about his views on labor legislation. Knight contended that labor unions had done so much for "the working man" that those people who do not belong to the labor unions should not "get the advantages created by labor unions." But when he was pressed by his questioners to give any information on how any labor union ever raised the wage levels of all the workers he was mighty anxious to get away and duck the question.

The point, of course, was that he nor no one else can give any evidence that labor unions have benefited the working man if the definition of the working man is a person who produces. We are all "working men" whether we use a paint brush, a typewriter, a scalpel, or do any other kind of honest and dignified work.

We would like to have Governor Knight explain his theory to Mr. Lee Vandiner of Buena Park. We suspect that Mr. Vandiner might have some different ideas on just how valuable the unions and union bosses are to "the working man."

Smeared With Sugar, Quota Change Proposals Still Are Sour

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

M. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues two editorials dealing with proposals to alter the Sugar Act of 1948. Having recently completed an exhaustive study of the Cuban sugar industry in relation to the Cuban economy and to the best interests of the United States, I find myself in wholehearted agreement with both of these articles.

[From the Washington Post and Times Herald of April 6, 1955]

PROTECTING THE PROTECTED

Senator ELLENDER's bill to give increased protection to domestic sugar producers emphasizes anew the contradictions in our agricultural policy. The sugar industry is one of the most heavily protected and subsidized in the country. But as is nearly always the case, the protected want constantly more protection, at the expense, of course, of the taxpayer and our relations with friendly countries.

Domestic sugar producers have a plausible argument that because of better methods of production they are being forced to divert their lands to other uses; instead of doing this they would rather limit imports of sugar more and more. Their representatives in Congress jump to their defense without much thought of the consequences. Yet domestic producers have the benefit of import quotas, tariffs, and subsidies. The subsidies amount in some instances to as much as $53 an acre. The result is that Americans pay about 50 percent more for their sugar than they would pay if they could buy it at the world market price.

The present sugar act establishing quotas for producers in this country and for foreign suppliers of the American market is supposed to continue in effect through 1956. But Senator ELLENDER's bill would amend the act immediately so as to allow domestic producers an additional 240,000-ton annual production at the expense of Cuban imports. This would cause real hardship in Cuba, which already has made its plans for this year on the basis of Secretary Benson's estimates of United States sugar needs in 1955. If any adjustment in sugar quotas is warranted because of the increase in population, certainly it should not be until the present act expires next year.

[From Barron's of December 20, 1954]

ONE LUMP OF TWO?—THE UNITED STATES NEEDS MORE IMPORTED SUGAR, NOT LESS

To those who encounter it only at coffee or tea time, sugar must seem a pleasant and inoffensive commodity, calculated to stir up nothing more controversial than the question of one lump or two. It is the vital ingredient in such good things as soda pop and candy, and it contributes to the richness and flavor of beer. In recent years, in one form or another, the United States has been consuming some 8 million tons annually, a figure which suggests that this country has an enormous sweet tooth indeed.

Yet, in the words of the poet, sometimes "things sweet to taste prove in digestion sour," and in a manner of speaking that is true of sugar. For this innocent-seeming table product is the very stuff of controversy, both at home and abroad. The reason is, simply, that the United States Government, at the behest of those who raise beets and cane, has set up a rigorous and fantastic system of subsidies, tariffs, and quotas on the production of sugar. This week, in fact, Secretary of Agriculture Ezra Taft Benson will announce the first official estimate of United States sugar consumption in 1955, as well as the quotas set for the various producers; in all likelihood, thereby, he will touch off a dispute which will rage in the halls of Congress next year and echo in a number of friendly chancelleries. The story of sugar, in short, is the old tale of the mischief that invariably comes from trying to find a substitute for supply and demand.

Nobody in Washington understands this better than Ezra Benson, who fought and won the good fight over flexible farm price supports, and who probably finds his chores with respect to sugar somewhat unpalatable. But whatever his own predilections, Cousin Ezra is bound to administer the law, and in this matter the governing statute is the notorious Sugar Act of 1948. Under this legislation, the Secretary of Agriculture each fall must determine how much sugar the United States will consume in the coming year. In making his estimate, however, he is adjured to carefully take into account its probable effect on the price of the commodity. Without quite saying so, then, the Sugar Act hints as broadly as possible that Agriculture's estimate should be low, in order to keep the price firm. In any case, that's how things have worked out in practice. In nearly every year, sugar consumption has been underestimated at first, and frequently revised upward later. More than once, under this incredible system, the United States has suffered from a temporary shortage of what is, after all, in anything but wartime or some other emergency, a surplus commodity.

This very abundance helps explain the second principal feature of the Sugar Act, its provisions for doling out the lush domestic market among the various American producers on the mainland and overseas. Each group is allotted a fixed tonnage which, by and large, only Congress can change. Thus, for example, of the aforementioned 8 million tons, domestic growers of beet sugar, which is raised in some 22 States, enjoy a quota of 1.8 million; mainland cane growers (in Louisiana and Florida exclusively), 500,000; Hawaii and Puerto Rico, slightly more than 1 million tons each; the Philippines, around 950,000 tons; and the Virgin Islands, 12,000 tons. This adds up to roughly 4.4 million tons. The rest of the quota is given to foreign growers, notably Cuba, which gets nearly all of it and a few other countries such as Mexico and the Dominican Republic. All imported sugar, it might be noted, is subject to a stiff duty, which, in effect, is turned over to the higher-cost domestic growers in subsidy payments.

This ingenious cellophane-wrapped marketing scheme, until quite recently, achieved all its adherents hoped for. The price of sugar in the United States for years has been "stabilized"—at levels nearly twice that prevailing anywhere else on the globe. Throughout 1953–54, for instance, the quotation for raw sugar on the New York Commodity Exchange hovered around 6 cents per pound, compared with something over 3 cents on the world market. But lately trouble has arisen in this protected paradise. Sugar is again in vast oversupply all over the world, and prices are generally low. Moreover, acreage restrictions on cotton and

wheat in this country have made farmers more eager to grow sugar beets which, thanks to the subsidies and controls, are a sure cash crop. Hence the various producing groups have all begun to clamor for a bigger slice of the United States pie.

Particularly strident—and politically powerful—are the demands of the domestic beet and cane growers. Although the Sugar Act does not expire until 1956, Democratic Senators from both Louisiana and Florida this year introduced bills to raise the mainland cane quota from 500,000 tons to 600,000. With fine bipartisanship, Senator HENRY DWORSHAK and Representative HAMER BUDGE, both Idaho Republicans, offered measures to lift the quota on beets from 1.8 million tons to 2 million. None of these proposals got very far at the last session of Congress. However, they are certain to be introduced again when the lawmakers return, and they are conceded to have a pretty good chance of passing. If they do, it is perfectly clear who will suffer. Since the total quota is only raised a little each year, a bigger share for one producer must come at the expense of another. In this case the chosen victims are Cuba and its sugar companies (largely United States owned, by the way) which happen to be low-cost producers, but which unfortunately, can muster no divisions on Capitol Hill.

In the end, of course, this country will also suffer from new curbs on foreign sugar. For a cutback in United States purchases of the Cuban product, which is basic to the island's economy, must sooner or later lead to lower sales of American-made goods in this part of the world. The same principle in varying degree applies to the other overseas producers. In return, the United States will get nothing but a steadily increasing acreage planted to beets and cane, which would have trouble surviving without special subsidies and tariff protection. This is Adam Smith's division of labor turned topsy-turvy and its effects can only be harmful to all. The moral seems clear. Sugar, like any other commodity, should be free to seek its proper level in the market place.

Polio Is Conquered

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, probably no material blessing has happened to the world of such importance in generations as that which came from the University of Pittsburgh's Medical School, under the direction of Dr. Jonas E. Salk. This is the vaccine that will relieve the anxiety and apprehension of fathers and mothers throughout the world. It will prevent the dread disease of poliomyelitis attacking and crippling especially our children.

We must not forget, either, that the March of Dimes has contributed much toward this with its financing of this project. Under permission to extend my remarks in the RECORD, I wish to insert an editorial from the Greensburg (Pa.) Morning Review. It is a splendid editorial and says eloquently what must be in the hearts of all of us:

POLIO IS CONQUERED

Man has conquered another disease—the Salk vaccine having delivered the knockout punch to polio which attacked so many children.

In the future polio, like diphtheria and scarlet fever, will rarely strike anyone who has been immunized by the Salk vaccine.

Dr. Jonas E. Salk, of the University of Pittsburgh, rightly receives the plaudits of the world but Dr. Salk—modest as are all great men—gives equal credit to the many assistants who aided in development of the vaccine.

He has from the first attempted to have the vaccine publicized without the use of his name. However, the public seems to have decided that it must be called Salk vaccine.

The public at large can share Dr. Salk's pride in the vaccine which will kill the polio threat. It was the dimes and dollars subscribed to the National Foundation of Infantile Paralysis—founded by Franklin D. Roosevelt, himself a sufferer from polio—which made the extensive tests of the vaccine possible.

The result of the tests was forecast when the date for the evaluation report was set on the 10th anniversary of the death of the late President Roosevelt. Its confirmation set at rest all doubts.

There is bound to be an overwhelming rush by parents to have their children immunized. It will take time, however, before all sections of the country can be covered. In the meantime patience will be required from those who are most anxious to have their youngsters given the shots.

April 12 should become a day of general thanksgiving.

Anniversary of the Birth of Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given by me commemorating the 212th anniversary of the birth of Jefferson, under the auspices of the Sons of the American Revolution held at Jefferson Memorial, April 13, 1955:

My fellow Americans, today, in an atmosphere befitting the occasion, we assemble to do honor to a great American. Standing here at the memorial he so richly deserves, we gaze upon the outskirts of Washington, a city which represents the Capital of a nation he helped to mould. Lawyer, rebel legislator, Governor, Ambassador, Secretary of State, Vice President, and President, Thomas Jefferson perhaps more than any other man charted the course and served at the helm of a ship of state which has become through the years the envy of the entire world.

Though his capacities were many in service of his country, his greatest attainment was as an architect. He visioned and built Monticello. He visioned and built the University of Virginia. But, best of all, he visioned and built a Federal Constitution that guaranteed freedom to live the life of one's own choosing; to worship as our conscience dictates; to speak our own minds without fear; to participate in the affairs of our Government; to preserve our own dignity as God intended that it be preserved.

He made another major contribution to America and the entire universe. He was the architect of a political philosophy which is as rich and as right today as when he put it into words nearly 200 years ago. The philosophy of Thomas Jefferson has been a beacon light to guard America's future against dangerous adventures and false Old World philosophies which would compromise or destroy our birthright.

Indeed, dangerous times came about when prophets of socialism in other guises sought to belittle and brush aside the advice of the Sage of Monticello. And in these times our Nation ventured into strange waters which brought a degree of regimentation of the people; of peacetime controls over the economy; of inflation and unbalanced budgets. Jefferson had warned that when we tell the farmer what to sow and what to reap we would soon want bread. He was so right when he said:

"My God. How little do my countrymen know what precious blessings they are in possession of, and which no other people on earth enjoy."

And yet despite our previous misadventures and experiments away from the American form of government, there are still a number of national legislators backed up by a strong and vociferous minority who believe there is something wrong with the way we do things; that we can borrow parts of socialism and integrate them into our philosophy of government. My good friends, freedom and socialism are as compatible as a cat and dog. If we want to destroy freedom we have only to adopt socialism. Extreme danger exists even if we flirt with it as some of our nearsighted people suggest.

Thomas Jefferson had another architectual accomplishment. It was through his efforts that the great Democratic Party came into being. Throughout the years until the early 1930's, his political philosophy dictated the action of that party. But then the party began to depart from Jeffersonian teachings and direction.

But after a period of this transgression the American people became alarmed and through the voice that Jefferson gave them returned the Nation to the course decreed by our forefathers. In so doing, they reaffirmed their belief in and adherence to the principles on which America was founded and grew to greatness.

Today the political party Thomas Jefferson brought into being is content to team him with another patron saint—Andrew Jackson. That is somewhat of a shotgun wedding because Jefferson was a statesman with ideals that transcended political considerations and Jackson was a political and a very inept politician at that. He does not belong in the same company with Jefferson.

Jefferson is not a patron saint of the Democratic Party only. He is also a patron saint of the Republican Party. He was also the founder of the Jeffersonian Republican Party. And throughout the years the Republican Party has more consistently embraced and advanced Jeffersonian philosophy than has the Democratic Party. The critics of that philosophy and those who expound it say that we are behind the times; that we live in a forgotten age; that tradition mars our vision; that the world is passing us by.

If keeping step with a world of communism and socialism is necessary to progress; if following in the footsteps of Bevan and Stalin are essential to America's future then then indeed we are a decadent nation and a decadent people. But I, for one, prefer to be decadent; I prefer that the world march by without us. I prefer to live in a forgotten age—an age that gave me cherished and inalienable rights; I prefer to have my vision clouded by tradition.

Of course we are not out of step with the world. By following the principles of Jefferson and others like him we are so far ahead of the world in government philosophy, in spiritual and material greatness that the world will never catch up with us. Those

who advocate a departure from our course are either terribly misguided or they are purposely seeking to destroy our way of life. We shall not fall into their trap. We shall not guide our ship of state into dangerous shoals.

We most certainly would not forsake the American way for that of Russia or her satellites. We would certainly not lower our standards to those of England whose previous socialistic experiments have made it a nation of "have nots." Of France, Jefferson wrote and I quote:

"Indeed it is difficult to conceive how so good a people, so fertile a soil, so genial a climate, should be rendered so ineffectual for producing human happiness by one single curse—that of a bad form of government. * * * Of 20 millions of people supposed to be in France, I am of the opinion there are 19 millions more wretched, more accursed in every circumstance of human existence than the most conspicuously wretched individual of the whole United States." Jefferson wrote this appraisal in 1785. It still stands good. France is now floundering because of unstable government. Her standard of living cannot be remotely compared with ours. Do we want to keep in step with France? The answer is a thundering "no."

Name any nation, compare it with these United States, and you will quickly count your blessings. America became that way because of farsighted men like Thomas Jefferson. And America is going to stay that way by rededicating itself to the principles of Thomas Jefferson. These principles are given himself in what might be called a credo to a Democrat. In a letter written to Elbridge Gerry, of Massachusetts, in January 1799, Jefferson said, and I quote:

"I am for preserving to the States the powers not yielded by them to the Union * * * and I am not for transferring all the powers of the States to the Federal Government.

"I am for a government rigorously frugal and simple, applying all of the possible savings of the public revenue to the discharge of the national debt; and not for a multiplication of officers and salaries merely to make partisans, and for increasing, by every device, the public debt on the principle of it's being a public blessing.

"I am for free commerce with all nations; political connection with none. And I am not for linking ourselves by new treaties with the quarrels of Europe; entering the fields of slaughter to preserve their balance, or joining in the confederacy of kings to war against the principles of liberty.

"I am for freedom of religion and against all maneuvers to bring about a legal ascendency of one sect over another; for freedom of the press and against all violations of the Constitution to silence by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of their agents. * * * The first object of my heart is my own country. In that is embarked my family, my fortune, and my own existence. I have not one farthing of interest, nor one fibre of attachment out of it, nor one single motive of preference of any one nation to another, but in proportion as they are more or less friendly to us."

Those are the words of Thomas Jefferson and instead of the "credo of a Democrat," they should be the "credo of an American." Many have sought to tag Jefferson with the label of an isolationist. But harken to his words which I just quoted and which I now repeat. Said he: "I have not one farthing of interest, nor one fiber of attachment out of it, nor one single motive of preference of any one nation to another but in proportion as the are more or less friendly to us." "More or less friendly to us." This phrase, in my opinion, gives Jeffersonian sanction to the mutual defense alliances between the free nations against the spread and aggression of communism. Indeed, communism would destroy all Jefferson worked and labored for and were he living today he would be one of its most vigorous opponents.

The Sage of Monticello was a doer. His accomplishments in behalf of his country were their own reward. His labors brought him satisfaction and a measure of contentment. He was essentially a family man and it was his regret that he could not spend more time with those dear to him. The great love of his life came to an untimely end with the death of his Martha, who gave him six children. On the white marble tombstone Jefferson inscribed a verse of such tenderness that, to shelter his emotions from the public gaze, he had it chiseled in Greek. Translated it reads:

"If in the melancholy shades below,
The flames of friends and lovers cease to glow,
Yet mine shall sacred last; mine undecayed
Burn on through death and animate my shade."

And though he had lost his most precious possession the great man found momentary relief in the unselfish service of the Nation he helped create. And in this process of service and eventual retirement his affections were transferred to his daughter, Martha Randolph.

When, after perhaps the most useful life of any American citizen, Thomas Jefferson himself saw the approach of his own death, it was to Mary Randolph he penned a private and deeply moving farewell. It was a little poem and he handed it to her in a little casket. It read, and I quote:

"Life's visions are vanished, its dreams are no more,
Dear friends of my bosom, why bathed in tears?
I go to my fathers; I welcome the shore
Which crowns all my hopes or which buries my cares.
Then farewell, my dear, my lov'd daughter, adieu!
The last pang of life is in parting from you!
Two seraphs await me long shrouded in death;
I will bear them your love on my last parting breath."

Death came to him, as it must to all of us, on July 4, 1826, just 50 years to the day after the Declaration of Independence.

Thomas Jefferson had lived triumphantly a full and rich life, the fruit of which will feed and inspire countless generations of Americans to come. Said James Madison: "* * * he lives and will live in the memory and gratitude of the wise and good, as a luminary of science, as a votary of liberty, as a model of patriotism, and as a benefactor of human kind."

To pay homage to this great man today is an honor and a privilege. Like Washington, he is "first in the hearts of his countrymen."

Free Trade

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Polish-American Journal on Saturday, April 2, 1955. This article, by George Mark, former national commander of the Polish Legion of American Veterans, advocates the expansion of trade among free nations and the liberalization of American trade policies. Mr. Mark further advocates, following his world tour, the maintenance of our reciprocal-trade program and a lowering of our tariff barriers in order to prevent free nations from falling into Communist hands.

The article follows:

Mr. Mark said:

"Distrust of America's capacity to lead the world in a global fight against communism is rolling over the skies of Europe and Asia like an atomic cloud. In every country I visited I found government and party leaders suffering from the fallout of empty promises, broken pledges, and diplomatic doubletalk emanating from Washington," Mark stated.

"The effects of this loss of world confidence in the United States are worse than those of radiation disease. They sap the strength of government leaders in dozens of countries where they are fighting a battle against communism in their own front yards, instead of comparative safety of Washington, or the United States State Department," Mark declared.

NO FAITH IN GOP

"The world has no faith in the Republican promises to liberate enslaved nations or to use massive retaliation against Communist aggression. People in Europe and Asia are wondering whether the balance of the Republican Party pledges to restore peace in the world will be forgotten as just 'campaign promises.'

"I believe the entire world is waiting now to see whether the Eisenhower administration has the strength to carry out its last remaining pledge—to safeguard the economies of free nations by unconditionally supporting and promoting world trade," the former PLAV commander stated.

"President Eisenhower's decision to raise tariffs on Swiss watches was considered throughout Europe as the test case of his foreign-trade policy in which he completely failed to live up to his own trade principles."

Mark further emphasized that, "if we break this final pledge we will forfeit the respect of the world. Europe's leaders, who have been made cynical of American trade promises by the example of our treatment of Switzerland, will turn to more and more trade with Russia as they see the American market withdrawn from them. This will mark the beginning of the greatest Communist triumph. Russia will not hesitate to insidiously penetrate the economies of every nation in the world and to weaken the morale and political fiber of each of these countries by becoming the ruling economy power in trade, because we have abdicated our position."

How Your Dimes Can Buy Health

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, it must be a great satisfaction to those who have been contributing their dimes over the past years for the elimination of the dread disease, Poliomyelitis, now to know that their hopes have been attained.

With permission to extend my remarks in the RECORD, I am including an editorial from the Pittsburgh Press. We from western Pennsylvania are very proud that the Pittsburgh Medical Center, through Dr. Salk, has become world-distinguished as the result of the effectuation of this vaccine:

HOW YOUR DIMES CAN BUY HEALTH

While the flush of success in the long grueling fight against infantile paralysis still is in the headlines, let us consider how it all happened.

First of all, of course, there was the disease itself, and the deadly fear of it. Nothing can stimulate public action as an epidemic can do, or dread of it.

Yet polio has been a crippler for centuries. And the elder among us can recall the frightening epidemic of 1916.

It was 50 years ago that scientists discovered polio was caused by a virus.

Still, it was only in last few years that the problem was attacked on anything like an adequate scale—and, as a result, virtually all of our progress has occurred in these few years.

It was the dramatic personality of Franklin D. Roosevelt which got the show on the road. A victim of the disease, Mr. Roosevelt in 1927 set up the Warm Springs Foundation, first institution exclusively concerned with polio. Even that was a relatively small effort.

It was the idea of a "March of Dimes," to celebrate the late President's birthday, which really launched the program now capped by the success of Dr. Jonas E. Salk and his University of Pittsburgh researchers.

Since 1938, the National Foundation for Infantile Paralysis has spent more than $200 million aiding victims, training doctors, nurses, and technicians, financing research, all of this paid for in dimes donated by the general public.

It is the story of what research can do and what is not done without research. It is evidence of what can happen when the public is inspired to furnish the financial means, whether in dimes, or even pennies.

Take such a commonly known ailment as deafness. There are 750,000 persons in the United States who are totally deaf. Another 3,500,000 are partly deaf. Yet only $200,000 has been spent for research on disorders of the ear, according to a recent inquiry.

Consider, then, the possibilities if this problem were tackled with the same intensity, scholarship, and financing which have been applied to polio.

There are other grave problems: cancer, heart diseases, mental illness, multiple sclerosis, epilepsy, cerebral palsy, muscular dystrophy, blindness, arthritis, diabetes, to name the worst ones.

The answer in every case is more and better research. And, as with polio, the research could be financed by dime, or even penny, donations once the problems were publicly appreciated and the impetus and dramatic appeal supplied.

Studying Our National Problems

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. CANFIELD. Mr. Speaker, the job we have of studying national problems and enacting appropriate legislation is indeed a complex one. No longer are we in the slow-moving age of the horse and carriage, an age in which the great issues of the day are relatively simple, the day in which legislative problems can be resolved as matters of national policy with comparative ease.

That day is past, Mr. Speaker, and we now live in a most complex era, the atomic era, an era geared to rapid transportation and high-speed communications of all sorts. Our population is nearing 165 million. Our great system of transportation has reduced the size of the Nation in which we have overnight communication by mail from coast to coast. We live in an age of pressure, tension, and speed.

And these many problems, I am certain my colleagues will agree, have greatly complicated our mission of legislating for our fellow Americans. And by no means the least of our problems is the task of enacting laws which will assure fair and equitable treatment for our public servants—the great army of men and women who do the Government's work at every level of endeavor.

Every member of this body does his conscientious best to see that fairness and equity are dispensed legislatively and administratively. There are wide differences of opinion, differences which are by no means alined to political disagreements, but differences on philosophy and interpretation of what should be done.

In our endeavors in the House we must by the necessity of things depend upon those who speak for substantial number of public servants. In depending on these representatives we thereby are able to see, through the eyes of the workers themselves, the problems of salary and working conditions. And in this task we meet many fine men and women, people who are dedicating their efforts, their time and talents to improving the lot of their fellow citizens whom they represent. I would like, Mr. Speaker, to refer to one of these representatives, a man who is an outstanding leader in his chosen field—a leader as the representative of a great association of workers and a leader as a public-spirited citizen. I refer to one who most of the Members of this body know, some who may have acquaintanceship which antedates my own—I refer to William C. Doherty, president of the National Association of Letter Carriers.

I would like here and now to spell out some of the facts about the activities of Bill Doherty, some of which even some of his closest friends and associates may be unaware. Bill Doherty needs no praise from me, but I would like, as a matter of public record, to spell out some of the facts about this rather extraordinary American, for I am sure they will be praise enough. I would like to point out some of the salient activities of Mr. Doherty, as a labor lead and as a citizen—the man Fortune magazine this month calls the most important leader of Government unions.

Mr. Doherty began in the postal service in 1923 and was active in branch No. 43 of the National Association of Letter Carriers, and 3 years later he became financial secretary. From 1928–31 he served as branch president and was elected the following year as president of the Ohio State Association. During that same year, 1932, he was elected to the national board of officers of his organization, and in 1935 became a member of the executive board. In 1941 Mr. Doherty was elected national president, and at each succeeding convention he has been reelected to head the National Association of Letter Carriers.

Most of the members of this House who have served during the last 10 or 12 years will be familiar with the fine work Mr. Doherty has done in behalf of the membership in Washington. He has been an eloquent and persistent spokesman for his people and for all Government employes. He was a founder and organizer of the Government Employees' Council in 1945, an association of more than a half million Government workers.

Not only has Doherty been a strong and able leader in behalf of the postal workers and Government workers, he has served with distinction as a member of the executive council of the American Federation of Labor, a post he has held since 1943. As an AFL council member, he has given strong support to efforts of the last few years to effecting a unity in the ranks of labor and is a member of the unity committee of the AFL and CIO which brought to a conclusion plans to merge the two great confederations of American workers. The unity committee is continuing in developing proper and smooth-working procedures for bringing to a successful consolidation the forces of the AFL and CIO. He has also served on AFL jurisdictional committees, helping to iron out some of the vexing problems caused by differences in interpretations of lines of authority known as jurisdictional disputes.

A bright chapter in the career of Bill Doherty is the many contributions he has made in the field of international labor relations. Mr. Doherty is an anti-Communist from way back. He fought the old World Federation of Trade Unions, a group dominated by the Soviets, and he was a founder of the anti-Communist International Confederation of Free Trade Unions. He has been a delegate to the world conventions of this group and has served on important committees.

Mr. Doherty is an executive member of the Postal Telephone and Telegraph International, Berne, Switzerland, and has addressed world meetings of the group from time to time. He has carried his campaign against communism into the camp of the enemy through Radio Berlin where he spelled out the differences between free labor and slave labor. And speaking of slave labor, Mr. Doherty turned over to a Member of this House who was a delegate at the conference founding the United Nations 10 years ago this month data on Soviet slave labor. This data was shown to a delegate from the U. S. S. R.—and this was at a time when it was not popular to discuss such topics with the Russians.

Not only has Mr. Doherty served in the international field abroad, he has been host to numerous visiting delegations of exchange labor leaders, students, and others coming to America under the auspices of the Marshall plan and other

groups. The Letter Carriers has been singled out as a fine example of a Government union.

The public service of Bill Doherty includes service as a citizen and as a soldier. He served in Siberia in World War I with the American Expeditionary Forces as a telegraph operator in the Signal Corps on the Chinese Eastern-Transsiberian Railroad. After service there he was chief radio operator on Corregidor. And 4 of his 5 sons have seen foreign military service and a fifth son is nearing military age.

Mr. Doherty originated the first National Flag Day program in the Nation's Capital a few years ago. His union, under his leadership, directed the muscular dystrophy national drive 2 years ago and the record of Doherty's union in war-bond drives and other humanitarian crusades such as the Red Cross, March of Dimes, and other efforts is too well known to require further comment. He has taken a strong interest as a citizen in civil defense, in labor-management problems and in civil service and he has served on citizens' advisory groups in each of these areas.

There is more that I could say on the work and activities of this leader, but I think the facts that I have listed spell out better than words of praise a tribute to the leadership, energy, resourcefulness, and great ability of this man. I am proud to call him my friend—and that is a sentiment I am certain is shared by a great many in this body. In the current problems of Government and postal pay, Mr. Doherty has shown characteristic energy and understanding—in forwarding the cause of those whom he represents and the cause of all public workers. His work and the results achieved are his best tribute and the few words I have added here merely point up the highlights of the career of this man.

Trial of United States Service Personnel Stationed Abroad for Offenses Committed on Foreign Soil

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Utah State House entitled "Memorializing the Federal Government and the military authorities to assure fair trials for United States servicemen who commit offenses on foreign soil":

House Joint Resolution 12

Joint resolution memorializing responsible Federal Government officials, the United States Senate, and United States military and naval authorities with respect to the trial of United States service personnel stationed abroad for offenses committed on foreign soil

Be it resolved by the Legislature of the State of Utah (each house concurring therein):

SECTION 1. That the Legislature of the State of Utah, in regular session assembled, expresses its belief that all United States service personnel stationed abroad should be tried, wherever possible, by United States military tribunals for any offense committed on foreign soil and calls upon all responsible Government officials to make an effort in every case to secure jurisdiction and provide for disciplinary action, by United States military authorities, and failing this, to make every effort to insure that the persons involved are guaranteed a fair and legal trial. We urge that in future treaty negotiations or renegotiations, the responsible Government officials and the United States Senate seek to secure exclusive military jurisdiction over United States military personnel.

SEC. 2. That a copy of this joint resolution certified by the secretary of state of the State of Utah, under the great seal of the State of Utah, be transmitted by the secretary of state to the Secretary of State of the United States, the Secretary of Defense of the United States, the Chief of Staff of the Army of the United States, the Chief of Naval Operations of the United States, and to the Honorable ARTHUR J. WATKINS and the Honorable WALLACE F. BENNETT, United States Senators from the State of Utah, and to the Honorable WILLIAM A. DAWSON and the Honorable HENRY ALDOUS DIXON, Representatives of the United States from the State of Utah.

Mrs. Katherine Wilson Hyatt, Mother of the Year for Arkansas

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled, "Mother of the Year for Arkansas," written by Dr. George S. Reuter, Jr.

Dr. Reuter has written a well deserved tribute to Mrs. Katharine Wilson Hyatt of Monticello, Ark., who has been selected Mother of the Year for Arkansas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOTHER OF THE YEAR FOR ARKANSAS

(By Dr. George S. Reuter, Jr., Arkansas A. & M. College)

Mrs. Katharine Wilson Hyatt has been selected as 1955 Mother of the Year for Arkansas. She will be 1 of the 52 selected. The list will include the 48 States, Alaska, Hawaii, Puerto Rico, and Washington, D. C. She is the second person to be selected who came from Monticello, Ark.

Mrs. Hyatt is the widow of Dr. Robert Fee Hyatt, well-known optometrist and pharmacist. She is the mother of 10 children, 8 of whom are alive and active. They are Mrs. Ethylen Clare Hyatt Smith, wife of Morris Smith, Little Rock architect; Mrs. Margaret McCain Hyatt Albright, wife of Dr. Spencer D. Albright, Richmond, Va., educator; David Taylor Hyatt, a Monticello pharmacist; Mrs. Eliza Wilson Hyatt Lee, wife of R. E. Lee, Montrose, Ark., merchant and planter; Dr. Robert Fee Hyatt, Jr., and Dr. Cyril Lewis Hyatt, Monticello, Ark., physicians; Dr. Alexander Jamison Hyatt, Richmond, Calif., Baptist preacher; and Dr. Ross Wilson Hyatt, Monticello dentist.

Mrs. Hyatt was born in Monticello, Ark., November 16, 1878. The Wilson family came to America from Belfast, County Antrim, Ireland, on the ship *Irish Volunteer*. Her parents came to Monticello, Ark., on Christmas Day, 1857. Her father, Alexander Jamison Wilson, served with Owens Battery, 1st Arkansas Field Artillery, and with Stephen D. Lee and Forrest's Cavalry during the War Between the States. Mrs. Hyatt's mother was Eliza McCain. A direct ancestor was Hugh McCain, Sr., who came to America in 1752. He was with George Washington at Valley Forge and served as an officer under him at Braddock's defeat. Mrs. Hyatt is qualified for hereditary membership in the Society of Order of Cincinnati. Her sons served in World War II.

Mrs. Hyatt has been a successful mother, an active Southern Baptist, an outstanding homemaker, a devout believer in the precepts of the Golden Rule, and active in civic affairs. Of all the fine organizations she has been active in other than the First Baptist Church of Monticello, the WCTU stands out.

Arkansas has a real candidate for 1955 for national mother. All the people in Arkansas should encourage her to go to New York City as the winner. There have been sad moments, in the passing, as Mrs. C. C. Smith; there have been glad moments, in awarding Daisy Young Boggs in Holden, Mo., as an outstanding lodge member from a distinguished American family, but we truly can proudly hail Mrs. Hyatt, a special mother for a critical time.

Mrs. Alice Nelson Hyatt, wife of Dr. A. J. Hyatt, wrote these words on Mothers' Day, 1944:

"TO MOTHER HYATT

"We never cease to marvel
At your attitude serene
In all the ups and downs of life
Which might o'ercome a queen.

"A Queen you are, in very truth
With realm and subjects, too.
Your realm, your home;
Your throne, our hearts,
Which loyal are, and true.

"Your home is a dear haven
From toilsome hours and blue,
Where courage, faith, and love prevail
That does our strength renew.

"Then thanks be to our Father
Who sendeth from above
The good gift of a Mother dear,
Like you, for us to love."

A distinguished list of mothers have represented Arkansas. They are: Mrs. John W. Rhea of Waldo, 1945; Mrs. Roberta W. Fulbright of Fayetteville, 1946; Mrs. David D. Terry of Little Rock, 1947; Mrs. Agnes Wynne Twitty of Fordyce, 1948; Mrs. James R. Echols of Monticello, 1949; Mrs. T. J. Raney of Little Rock, 1950; Mrs. Owen O. Oxley of Warren, 1951; Mrs. Alice Harris Walker of Forrest City, 1952; Mrs. Guy Cazort of Little Rock, 1953; and Mrs. W. A. Woodward of Magnolia, 1954.

And finally, Mrs. Juanita Biscoe wrote a Tribute to Mrs. R. F. Hyatt, Sr., as follows:

"On this beautiful Easter morning,
Surrounded by family and friends,
There sits a most modest mother,
Happy in the church she attends.
We all know this kind mother
Whom we just adore
Whose unselfish life
Earned admirers by the score.
Just to know her is to love her
She's a friend to those in need.
'Cause she has a way of knowing
Just how she can proceed.
A mother of eight lovely children
She gave them the best she had,
She shared all their joys and sorrows
While making them so very glad.
A vision of the eveningtime
With the family gathered there,
While father read the Scriptures
And this mother led in prayer

Life's page holds no memories
Half as sweet that can compare
With that sacred family altar
Where this mother led in prayer.
With her endless words of encouragement
She urged for each a college degree,
Developing three doctors, chemist, and a divinity
Thus adding to their family tree.
Each morning should be a challenge
As we view this Easter morning sun
While going along life's journey
With knowledge, God's eternity has begun.
Let's make our life an example
To this 'mother of the year.'
While treading upon the sands of time
And striving for the clestial sphere
To you, Mrs. Hyatt, 'the mother of the year,'
A tribute we wish to convey
For the bestowal of this great honor
On this very 'Special Day.'"

Food and Peace

EXTENSION OF REMARKS
OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1955

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Food and Peace," which was published in the Missouri Times of Pleasant Hill, Mo., on March 17, 1955, which includes correspondence between the Reverend Albert Danter, pastor of St. Boniface Church, of St. Louis, Mo., and myself.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOD AND PEACE

The world and Mr. Dulles, it seems to us, are playing the old-fashioned chess-game kind of diplomacy. No one, however, is going to be able to say "check and mate" in the big game now, the overwhelming danger being that the board will get kicked over.

Such pawns as Quemoy and Matsu and even Formosa are not, we feel, of stupendous interest to ordinary people, who fail to understand as well as they should the concepts of battleship strategy in a time when Val Peterson is suggesting the construction of concrete culverts for them to cower in if war should come.

Mr. Dulles' reports are interesting, but a more enlightening discussion of some basic things about world peace comes, we think, in an exchange of letters between the Reverend Albert Danter, a Catholic priest of St. Louis, and Senator STUART SYMINGTON, to whom we are indebted for copies of this correspondence.

Wrote Father Danter to the Senator:

"It is said that the United States Government has $7 billion worth of surplus farm products stored on farms, in elevators, in caves, and even in ships anchored in the Hudson River (America, February 5, 1955). Despite these huge surpluses and the problem of their disposal the delegates to the last convention of the National Catholic Rural Life Conference thanked God for the great abundance of food which He has given our country and continues to give. They noted with approval the trend toward increased production both per acre and per person. They decried the growing alarm over these surpluses and the call for lowered production. They declared these surpluses a blessing, not a curse.

"Why did they speak this way? Because these surplus food products may be embarrassing to us, but they would be a gift from heaven to millions in many other countries not as fortunate as ours. It is a crime that cries to heaven for vengeance to allow these surpluses to rot or to call for lowered production when millions of human beings all over the world are hungry and starving. The obligations of charity do not stop at our national boundaries. According to the teachings of Christ, every human being is our neighbor. And if our neighbor is starving, we are bound to help him, whether he lives in New York, Los Angeles, India, or South Africa. I cannot see why God does not punish us severely for keeping this food from the mouths of the starving. He may do so yet.

"What means can we use to see that this food reaches the hungry all over the world? I would like to suggest one means, at least: the lowering or, perhaps, even the abolishing of our tariff walls. The peoples of other countries cannot buy the things they need from us unless we in turn buy their products. The selfish think only of American industry policy is not only short sighted, it may be disastrous. While we turn our backs on our neighbors, Soviet Russia grows fat from world trade. In this matter President Eisenhower is to be commended for his efforts to lower tariffs.

"I would like to suggest also, a continuation of, and even expansion of, point 4, and other programs to help poor countries to improve their economies. This will eventually do more to check communism than the billions we are pouring into ammunition.

"We take great pride in our prosperity and look down our noses at other less well-fed nations. Instead, we should not forget that God blessed us richly. We should not forget, also, that we were lucky enough to get one of the most fertile, most richly endowed regions in the world. It's time for us to get rid of our smugness and begin to thank God most humbly and most earnestly."

Senator SYMINGTON, in reply, said:

"Thank you for your very thoughtful elter of March 2 which I read with a great deal of interest.

"Communist drive to conquer the world can be met with atomic and hydrogen bombs; or with food, and ideals looking toward a better life.

"We must be so strong that the godless leaders of the Communist conspiracy will not dare attack us; in my opinion, if ever we are to achieve a lasting peace, it can only be through raising the living standards of the peoples of the world, that is, through the use of food.

"Ideals are of great importance, but ideals soon lose their meaning when not matched with deeds."

Address by Thomas Dixon, National Commander, United American Veterans

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. BURDICK. Mr. Speaker, I have an address by Mr. Thomas Dixon, national commander of the United American Veterans, of April 15, 1955, which I should like to insert in the RECORD:

ADDRESS BY THOMAS DIXON, NATIONAL COMMANDER, UNITED AMERICAN VETERANS, DELIVERED OVER THE FACILITIES OF WPIK, WASHINGTON, D. C., APRIL 15, 1955

Patriotic Americans, on March 28, 1955, Patrick Henry, of the speech, "Give me liberty or give me death," was dramatically brought back to life in a play at Lisner Auditorum, entitled "Cry of Freedom."

One hundred and eighty years ago, those words thrilled the Virginia statesmen, and led this country in action to partial victory. Over the years, however, it has amounted to little more than our freedom on paper from the British Government. It is still dictatorial in our foreign policy—exerting and apparently having a controlling influence over our Secretaries of State.

What this country needs today is the inspired leadership of some 20th century Patrick Henry so we may gain full and unfettered freedom from the Honorable Sirs and company in England.

Just take a look at all the words from England concerning the islands of Matsu and Quemoy. The English Sirs have stated that should this country get into a war over these islands, England would not support the United States in such a war. Very well, Honorable Sirs; but I warn you, that if and when the Communist Chinese start to drive the British out of Hong Kong and other British possessions in China, American citizens nationwide will oppose any act of Congress allowing American soldiers to be sacrificed for the financial gain of the British Empire. We have had entirely too much political pressure from those leaders. Enough is enough.

And while we seek our freedom again from the British leaders, we must also obtain our complete freedom from the United Nations. Complete separation is clearly indicated. There is one solution for the American people, and that is for Congress to enact H. R. 3269, which was introduced by Congressman USHER L. BURDICK, of North Dakota. This important resolution calls for the withdrawal of our membership from the United Nations. A growing number of our own leaders have had their eyes opened, and now openly admit that the United Nations is ineffectual as an instrument to bring about world peace, and has proved itself worthless to command peace among its member nations.

Let's face facts. If the United Nations could fulfill the mission which it was organized to accomplish, there would be no need for so many endless conferences. Thirty percent of American adults who were interviewed said they were against the United Nations. This percentage is increasing.

I should like to refresh your memory on brighter things to come. I have spoken about an organization, recently incorporated, with the unselfish purpose of sponsoring and building a shrine here in Washington to symbolize the honor long due the American Indians.

One of my listeners wrote, asking what value would such a shrine represent. Let me remind this listener of the great sacrifices the American Indians have endured. Let me remind you that there is no race of people on earth that has been the victim of such cruel injustice as the American Indians. Don't forget, this mistreatment continues even today, and has deprived many American Indians of the means of decent living. In Arizona the Indians are being deprived of the legal and rightful share of water to irrigate their farms. This property right was taken from them—in a cruel and inhumane way.

Another case you may not know, concerns a small tribe known as the Natchez-Cado Indians in Louisiana. Originally they possessed the area, now the State of Louisiana. They have been dispossessed of their ownership, and have never received one penny

from the United States Government. And they can't get any money now, because they have never made a peace treaty with the United States. You remember in studying history, when the United States cavalry drove the Indians into what is now Oklahoma, the Indians in Louisiana did not want to go to Oklahoma, so they hid out in the swamps and hills. And their descendents are still in the swamps and hills of Louisiana, many of them can't read or write, and they are in desperate financial condition. Such cases could be multiplied many times. We as individuals and as a Nation certainly do owe a great deal to those who sacrificed so much.

America has been rightfully generous in its splendid tributes of honor to Washington, Jefferson, and Lincoln, and a great many other distinguished persons. We are proud of these monuments and cherish the stimulation of thought which they represent.

The shrine dedicates to the great spiirt honoring the American Indians, will be a memorial in recognition of the great character and the great sacrifices endured under bitter conditions.

Many Indians will visit this shrine for spiritual inspiration, and for the satisfaction of realizing that at long last their contributions to the American way of life is evidenced in such a shrine.

This shrine will also be a mecca of great interest for millions of world tourists visiting Washington, the arts and handicrafts of many tribes will be displayed, and where genuine Indian articles may be purchased. Such objects of beauty and utility have a very great appeal. The net proceeds realized from all sales will be set aside for the assistance of needy American Indians, and for the higher education of talented American Indian youths who desire such an education.

The shrine represents a creative idea, it is to be alive to the needs of the time—all time. It will be the encouraging factor in its inspiration and guidance for Indian youths—ever leading onward.

The American Shrine, Inc., will always work for the best in the heritage of the past, and work for a better future for the many tribes of American Indians, bringing hope and at least some indemnity for the extreme losses in the past.

I shall be pleased to hear from you. Write your ideas to post office box 2518, Washington, D. C.

I thank you.

Father of Cotton Fiber Technology in United States Department of Agriculture

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Father of Cotton Fiber Technology in U. S. D. A.," written by Fred Bailey, and published in the Cotton Gin and Oil Mill Press of February 12, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRY OWES HIM MUCH—FATHER OF COTTON FIBER TECHNOLOGY IN USDA

(By Fred Bailey, Washington representative, the Cotton Gin and Oil Mill Press)

Have you ever cussed the Government and damned the bureaucrats? If not, this article probably will not interest you and we suggest you simply turn the page.

But, if you are among the great majority of us who have exercised that greatly prized privilege of telling off Washington, we suggest that you read on, for here is a story of a man you may want to applaud.

In the cotton industry we probably owe Dr. Robert W. Webb many times the amount we have paid him as a Government worker in the past one-third of a century. His work has added millions of dollars to the income of cotton growers, ginners, and spinners.

Often called the father of cotton fiber technology in the USDA, it was by birth and chance that Dr. Webb became interested in cotton-fiber research 28 years ago, come next March. Under various titles and departments since 1927 he has headed cotton-fiber research in USDA.

Born and raised in South Carolina, Dr. Webb learned about cotton production early in life from a practical standpoint. After graduating from Clemson College and Washington University, he joined the Department in June 1921.

Six years later, while he was engaged in plant pathology work on wheat, Arthur W. Palmer, now in charge of the cotton marketing division, asked him if he would be interested in working on cotton fibers, a field then largely ignored by the Department.

Dr. Webb replied that he felt the future of southern agriculture depended in a considerable measure on improving and finding new uses for cotton and that he would like to work on that. So little was known about cotton fiber that Dr. Webb and his staff spent the next 2 years searching out all that was known. Most of that time was spent in the Library of Congress.

He established the first modern cotton fiber research and testing laboratory in the United States and the third in the world. Two earlier ones were established in England. Today there are more than 125 government and private laboratories devoted to the study of cotton fiber properties.

Dr. Webb has been far more than just a pioneer in this field; he has been, and is, a leader and one of the principal contributors to the science of measuring the properties of cotton fiber. He has received many awards, the latest of which was a certificate of merit at the cotton industry Spinner-Breeder Conference held last October in Greenville, Miss., in "recognition of outstanding contributions to the development of scientific knowledge connected with the definitions and relationships of fiber properties and spinning qualities."

He is the inventor of the Suter-Webb duplex machine now in common use for separating cotton fibers according to length. He developed and directed the first modern and comprehensive cotton-quality research program in the United States, including cotton fiber, ginning, and spinning studies.

Dr. Webb established the fiber technical basis which sparked congressional authorization for the creation of the first cotton ginning laboratory in the United States in 1930, and for the successful development of the world's most comprehensive ginning research program.

His findings in reference to cotton-fiber fineness gave breeders in this country, as well as in others, a new target for use in their cotton-breeding and improvement work. Those results have been a prime factor influencing the direction of future cotton-breeding, improvement, and production programs in the United States and elsewhere.

Information developed by Dr. Webb led to creation by Congress of a cotton-testing service in the USDA in 1942. This made available cotton fiber and spinning tests on a fee-per-sample basis. Associates say this service has made possible rapid and positive improvement in the quality of the American crop, and that still more progress may be expected in the future.

In the past 28 years, Dr. Webb and his staff have trained and supervised hundreds of staff members in cotton-fiber technology. In most of the more than 125 laboratories mentioned above there are men trained by Dr. Webb.

The work of Dr. Webb over the past more than a quarter of a century has not been blazoned in headlines, but it has contributed solid advancement to one of our most important national industries, the growing, processing, and spinning of cotton fiber.

The unsung story of Dr. Webb is not an exceptional one. It is duplicated, more or less, by many thousands of honest, hard-working, and intelligent public servants who go quietly about doing their jobs.

"Thanks, Mr. Sam"

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a summation of the thoughts I have had as a freshman Member of the House about the Honorable SAM RAYBURN, who has been Speaker of the House longer than any other man in the history of the United States.

Speaker RAYBURN was honored by the members of his party last weekend, and these honors, plus the fact that I have had great respect for our beloved Speaker over the past several years, have moved me to write down some observations which I occasionally pass along to constitutents in conversation and by letter.

As a young man in southwest Virginia, which borders east Tennessee where our Speaker was born, I often heard of "Mr. SAM" from the Honorable John W. Flannagan, who served the Virginia Ninth District for many years in the House, and later from the Honorable Tom B. Fugate, who followed Mr. Flannagan as the Ninth District representative. They spoke of "Mr. SAM" with praise in every respect.

Later, when I started my campaign for Congress, numerous citizens came to me and said, in essence, "You see 'Mr. SAM' when you get to Congress and he will help you out." Those friends of mine, who had followed our Speaker's illustrious career through the years, were absolutely correct in their advice.

Even before I was elected, "Mr. SAM" came to my district and made a speech, met many of the citizens who have been his supporters over the past years, and discussed with them the phases of government which were of interest.

I have found in the short time that I have been a Member of this great representative assembly that our Speaker serves in his high position with dignity, calmness, and ability in every respect. He is a statesman with the qualifications of wisdom, patriotism, and devotion to duty. He uses wisely and effectively the powers of the high and honorable office he occupies.

I have already learned to love and respect him as one of the greatest Americans I have ever known.

This brief but sincere tribute cannot be ended without mention of his help and fatherly advice which he readily gives to the newcomer to Congress. On several occasions I, as I am certain many other freshmen have in the past, turned to him for counsel and guidance. He has never been too busy to discuss problems with me nor to give me the benefit of his many years of experience in the House.

So, "Mr. SAM," I say, "thank you" for your aid in the past. I express the wishes of hundreds of my constituents when I wish for you many more years of service in the House. You have our love, our respect, and our heartfelt thanks for your great contributions to the welfare of this Nation through the past years.

Wall Street on the Stand

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. WAINWRIGHT. Mr. Speaker, on March 29 last, the New York Times published an excellent editorial on the stock market investigation. I delayed placing this in the CONGRESSIONAL RECORD, pending the test of time on the accuracy of the opinion presented by the editorial.

To my many friends and former colleagues in the New York metropolitan area, I expressed the opinion that the investigation was a very salutary thing. At the time they felt that it was an expression of gloom and doom and would have unfortunate results. It seems to me that an intelligent and comprehensive study of a major facet of our economy, particularly where the results are good, is the best advertisement the industry could have. The results seem to bear this out.

The editorial follows:

WALL STREET ON THE STAND

With the conclusion of the first phase of the Fulbright committee's study of the stock market both the Senators on the committee and the public at large now have the opportunity to evaluate the results of these past few weeks of testimony. Senator FULBRIGHT has given his own personal conclusion that there are no major abuses in the market and no urgent legislation is required. The stock market itself, after declining for a time after the hearings opened, has resumed its upward march these past few days.

Several constructive results of the hearings are readily apparent. The public interest they have generated has probably given many persons a new awareness and understanding of the stock market—a useful result since this market is one of the key mechanisms permitting our free economy to function. The differences of opinion among those who have testified should help many to understand that the stock market is a complex phenomenon before which even the wisest of men, let alone the amateur investor, dare not be too dogmatic. The dangers of excessive speculation, and the need for caution even in these days of Securities and Exchange regulation, have also been well publicized. Against these positive effects must be put such unhappy by-products as Senator CAPEHART'S personal attack on Prof. J. K. Galbraith, whose views on the market, whether right or wrong, are far from being Communist.

Testifying on the last day of hearings, Bernard Baruch compared the stock market to a thermometer, pointing out that market fluctuations reflect the many uncertainties of our economic and political life. The real problem, he properly pointed out, arises from the need for sound economic and security policies, since if these exist the market will reflect the soundness of the environment in which we live.

Particularly pertinent, and in an area far more general than only the stock market, was Mr. Baruch's advice that we determine what national security requires in the way of expenditures "and then do it," putting other subsidiary considerations, such as tax reductions, in their proper secondary place. The high level of Mr. Baruch's testimony was a fitting close for a Senate study whose general conduct, with some few exceptions, has been such as to reflect credit upon Senator FULBRIGHT and his colleagues.

Proposes Nothing New

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I feel that the following editorial from the Burlington, Iowa, Hawk-Eye Gazette, of April 15, 1955, makes a point which many people are inclined to overlook in appraising our foreign policy:

PROPOSES NOTHING NEW

Adlai Stevenson, the titular head of the Democratic Party, has broken his long silence on the Asiatic problems faced by the United States. He would have the United States refrain from defending the islands of Quemoy and Matsu, but would stand behind General Chiang Kai-shek in the defense of Formosa.

Stevenson would have his admirers believe he has reached these conclusions after long research and that he is advocating a policy more wholesome than any advanced so far by the Eisenhower administration. His prediction is that to follow his course another world war might be avoided.

Obviously, Stevenson would like to appear in the role of a world saviour * * * a seer whose wisdom prevented another holocaust. This is natural since he probably still holds ambitions to be President, an honor denied him in 1952 by the United States voters.

Oddly enough, however, Stevenson's recommendations are virtually in support of rather than a substitute for the Eisenhower program. There is every reason for confidence that the President has sought diligently every avenue to avoid war in the Far East or anywhere else. Eisenhower has long pursued a course with which Stevenson, if sincere in his latest public statements, is not out of agreement.

Footnotes on the 1956 Olympic Games

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, in a historic speech delivered at the National Press Club in Washington, D. C., on February 28, 1955, William Randolph Hearst, Jr., after his Russian trip, said that the western program of building armed strength should be widened into a more flexible and imaginative strategy for competitive coexistence with the Communists in every field and on every front. While in Moscow he gained the impression that communism was moving ahead in many fields which the present western strategy overlooks. The arms race, he said, was not the only area in which they are competing with us. They have taken sports and culture and the impressionable years of youth and transformed them into arenas of the cold war. By inviting to Russia picked delegations from the satellite countries and the neutrals they strive to convey the impression that Soviet life is superior to that in the West.

Sports are a front on which the commissars are moving ahead full speed. The United States is likely to have a tough time at the 1956 Olympic games in Melbourne, when Soviet Russia enters a team which even now is being prepared for the big test, he warned.

America has dominated the Olympic games since their inception. It has also been a source of prestige throughout the world, especially with sport-conscious young people. How will the youth of the world feel, especially in doubtful areas, if the Russian team ends America's long sway at Melbourne in 1956?

Of course, these Russian athletes are not really amateurs. They are professionals. They are trained under government guidance, with government help. They receive bonuses and money prizes.

"We should find some way," he said, "of making sure that our Olympic contenders get everything they need in the way of training opportunities."

Mr. Hearst went on to say that—

The lively arts are another field wherein the commissars are operating with the professed intention of proving to the young people of the world that Russian achievements far surpass the West. Ballet, the theater, literature all are shaped toward aiding communism's long-range scheme of world domination. Top artists know they are not only expected to perform, but give their services at clinics where the plastic minds of youthful visitors can be influenced.

From Moscow radiate troupes of athletes and artists, circulating through the Soviet world and the satellites, venturing into countries like Red China and India with their gospel of communism. It stands to

reason that such extensive wooing of impressionable minds is likely to pay dividends—unless we compete vigorously with the Communist effort and even surpass it. We have so much more to offer than the Communists that any comparison must show up in our favor.

But it is not enough to sit complacently by while the Soviet Union throws its smaller resources into the scales and makes its weight felt because we do not choose to compete. Nor is it enough for our leaders to advocate and appropriate large sums for foreign military and economic aid and think they have met the challenge.

Money is not enough. I came away from Russia convinced that only deep thought and long-range planning would suffice to prevail over communism in the conflict of coexistence. Money spent on foreign aid will not get the most effective results unless it is thoughtfully expended in those fields where it will do the most good.

We should seek to convey to the world—to our allies, to the uncommitted countries especially, and to the Russians if possible—the idea that America is not only proud of its motor cars, its bathtubs, and other material benefits, but also of its cultural achievements. I believe that any cultural exchange between Russia and the United States is certain to develop in our favor. Within limits, I think such exchanges should be encouraged.

Mr. Hearst advocated the establishment of a permanent planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence with the Communists. This board should be scrupulously nonpartisan. It should be culled from the finest minds and talents available, both in public and private life. It should survey the whole global scene and develop plans for getting the peoples of the world on our side. "Sports, the theater, educational exchanges—no field should be neglected in this competition of the two conflicting systems," Mr. Hearst said and added: "Who can doubt that America would emerge on top in any such competition?"

I have introduced several bills which are specifically designed to put into legislative form the excellent proposals made by Mr. Hearst. One bill, to establish a civic and cultural center in the Nation's Capital, has been reported favorably to the House District of Columbia Committee and action is expected to be taken on it shortly. A second measure, H. R. 5040, would "establish a program of cultural interchange with foreign countries to meet the challenge of competitive coexistence with communism, establish a Federal Advisory Commission to advise the Federal Government on ways to encourage artistic and cultural endeavor and appreciation, and provide awards of merit." This bill makes a specific finding that communism cannot be overcome by armed strength alone, and that competitive coexistence must extend to every field and every front. It also takes note of Communist material achievements, and the extent to which cultural and artistic programs are used to spread Communist doctrine, and approves the President's recommendations to the Congress on the fine arts in his message on the state of the Union.

A third bill, H. R. 4109, would establish an advisory group, made up of the Nation's leading sports organizations, to assist the Federal commission created by the joint resolution of December 20, 1944, in establishing a national stadium for Olympic games as a memorial to the heroes of World War I, World War II, and the Korean hostilities.

I hope that a number of my colleagues from both sides of the House will join with me in sponsoring these measures, and I am very pleased that all of the Hearst newspapers have carried supporting articles on my measures similar to the following, which appeared in Chicago American on March 19, 1955:

HOUSE GETS DETAILS—HEARST AIMS TO CONGRESS

(By David Sentner)

WASHINGTON, March 19.—The warning by William Randolph Hearst, Jr., that preparedness alone will not win for us the battle of coexistence with Communist Russia was recorded before Congress today by Representative THOMPSON, Democrat, of New Jersey.

In detailing on the floor of the House the "trenchant observations" made by the editor in chief of the Hearst newspapers in his recent speech before the National Press Club, THOMPSON explained he and congressional colleagues have introduced several bills "which are specifically designed to put into legislative form the excellent proposals made by Hearst."

THOMPSON pointed out that one bill, to establish a civic and cultural center in the Nation's Capital, has been reported favorably to the House District of Columbia Committee after testimony from the country's leading cultural and business groups.

A second bill, THOMPSON continued, would establish an advisory group, made up of the Natilon's leading sports organizations, to assist a proposed Federal commission in establishing a national stadium for Olympic games as a memorial to the heroes of World Wars I and II and the Korean conflict THOMPSON added:

"The third measure would provide in the field of culture the kind of flexible and imaginative strategy called for by Mr. Hearst as well as the kind of program which will show that America is not only proud of its motorcars, its bathtubs, and other material benefits, but also of its cultural achievements and its creative artists."

In illustrating before the House how he was attempting to tailor the proposed legislation to fit the suggestions contained in the Hearst speech, THOMPSON paraphrased or quoted directly from the publisher's address, as follows:

"Mr. Speaker, the strength and ultimate survival of the free world's system, based on human freedom, the dignity of the individual, and private initiative, is being challenged by the Communists throughout the world.

"America has dominated the Olympic games since their inception. It also has been a source of prestige throughout the world, especially with sport-conscious young people. How will the youth of the world feel, especially in doubtful areas, if the Russian team ends America's long sway at Melbourne in 1956?

"The lively arts are another field wherein the U. S. S. R. is operating with the professed intention of proving to the young people of the world that Russian achievements far surpass the West.

"Ballet, the theater, literature—all are shaped toward aiding communism's long-range scheme of world domination.

"We have so much more to offer than the Communists that any comparison must show up in our favor. But it is not enough to sit complacently by while the Soviet Union throws its smaller resources into the scales and makes its weight felt because we do not choose to compete."

I am including, also, an article by Ray Hasson which appeared in the Trentonian, of Trenton, N. J., on April 14, 1955, telling of the work which one of my constituents is doing at the local level and with his own means to spike the Russian plans to capture the 1956 Olympics. Michael (Mike) Dertouzos is hoping to launch a local campaign to raise funds for the Olympics committee. He is looking for the cooperation of all groups in this job that now goes beyond the limits of mere athletic competition and is one of the major battles being fought in the cold war.

As Ray Hasson fittingly points out—

The ancient Greeks developed the basis of our free, democratic civilization. They also founded many of the athletic contests in the Olympics, which have been called the Greek Games.

It seems fitting that Mike, who springs from those freedom-loving people, should be a warrior in the battle to preserve that concept of civilization, and strike a blow in the cold war by helping America win the Olympics.

The Trentonian article follows:

TRENTONIAN TOPICS

(By Ray Hasson)

Around Trenton: The boys in the Kremlin don't know it, but their grandiose scheme to strike a major propaganda victory next year may be spiked by guys all over the country like Trenton's Mike Dertouzos.

It's Mike's idea that the cause of freedom—and winning world opinion to our side in the cold war—will be dealt more good if the free nations win next year's Olympics in Australia than all the mouthings of the striped pants set.

The Russians are straining to prove their alleged superiority in all things, sports particularly. And they have been subsidizing their Olympic athletes and training them to win next year's competition.

ANOTHER HOOK

If they come out tops, it will give them another hook on which to hang their claim that their way of life is superior to ours. It could be effective on the world's uncommitted peoples.

America is the only country that doesn't subsidize its athletes. It's nip and tuck whether the National Olympics Committee will get up enough scratch to pay for costs of training, coaching, feeding, transporting our athletes to Australia.

If we don't get our best athletes in the games, we stand a good chance of ending up second best.

Mike is hoping to launch a local campaign to raise funds for the Olympics Committee. He's looking for the cooperation of all groups in this job that now goes beyond the limits of mere athletic competition. It's a battle in the cold war.

"We have to prove to the world that we have the best way of life because the world looks to us for leadership, not only in diplomacy, but sports, as well," Mike says.

AAU BACKER

Mike, who owns the Famous Restaurant, is no stranger to sports. He's been active for years in promoting amateur sports events through the American Athletic Union. Last year he was president of the State AAU and is a member of its national executive and foreign relations committees.

He started the hard way—picking up dimes. Born on the Greek island of Andros, 60 miles from Athens, he shipped out as a passenger liner seaman.

In 1919 he landed in New York with two bucks in his pocket. After a job on Vincent Astor's yacht folded, he came to Trenton and became a waiter. He took boxing lessons at night. Then he started a luncheonette. It interfered with his boxing, so he sold it.

In 1937, he started his present restaurant. He had a gym upstairs where he taught boxing to kids and sponsored other athletic events.

A lot of top Trenton amateur athletics were aided by Mike. Many worthy causes picked up the entire box office receipts from athletic events he staged.

The ancient Greeks developed the basis of our free, democratic civilization. They also founded many of the athletic contests in the Olympics, which have been called the Greek Games.

It seems fitting that Mike, who springs from those freedom-loving people, should be a warrior in the battle to preserve that concept of civilization, and strike a blow in the cold war by helping America win the Olympics.

Mr. Stevenson's Suggestions

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks, I include an editorial published on April 14 by the Carlisle Sentinel, one of the oldest and most highly respected newspapers in central Pennsylvania:

MR. STEVENSON'S SUGGESTIONS

Adlai Stevenson had barely finished his speech when Secretary of State John Dulles, speaking for the administration, claimed that Mr. Stevenson had stolen the administration's thunder, that all of the program suggested by Mr. Stevenson was part and parcel of "exploitation" of foreign policy of the Government—in the planning stage.

Sometimes, it is most difficult to understand the actions of Mr. Dulles and the GOP administration. It is ridiculous for the Secretary to claim that Mr. Stevenson merely repeated the foreign policy program of the Eisenhower administration.

The Republican Party has rarely been split so badly as it is today, with, as Mr. Stevenson said, the President and his liberals on one side and Senator KNOWLAND and his conservatives on the other. There is not even the strength or power of unity at home, let alone on foreign policy. There is no real foreign policy because the administration is unwilling to separate foreign policy from domestic politics. Until there is unity within the GOP ranks—and that is wishful thinking—there will be argument over how problems in the Far East and the rest of the world should be handled. Too, as long as this Nation attempts to be master of other nations she will continue to lose the faith and trust of her allies. It is completely wrong to shout "mass retaliation," "unleashing Chiang for mainland attacks," and "Formosa will be protected" without a firm, clearly stated policy to our allies. The administration has done a lot of talking and made hundreds of commitments, but has backed down on every one when the cards have been called. The talk is merely talk and the commitments worthless paper—at least at the present time.

The experts, thus, can find no reason for Mr. Dulles' condemnation of Mr. Stevenson and neither the experts nor anyone else can find any evidence that the administration is exploting a Stevenson program, which Mr. Dulles said originated with the State Department and the administration. Ghost stories did appear in Wednesday's papers (stories not attributed to any source) claiming that there is general agreement between the administration and Stevenson programs but those stories were false propaganda pushed out quickly for publication to support Mr. Dulles' claims.

The real answer to this statement by the State Secretary accusing Adlai Stevenson of plagiarism is the same story as that of the Democrats during the campaign to reelect former President Woodrow Wilson. With the GOP split, and no candidate in sight who could win the Presidency, the administration is permitting the prestige of the United States to fall by the wayside (the Democrats did not do that) to gain political ends at home. The administration is purposely leaving the foreign policy position in the Far East in confusion and silence (the Democrats did not do that), so that the GOP campaign slogan (it hopes) for Mr. Eisenhower can be: "He kept us out of war."

It is almost unbelievable that this great Nation, formerly friendly and helpful to all the free world and respected by the free world, stands almost completely alone today in a sullen and disillusioned global community because of selfish politics. But it is true.

As Mr. Stevenson pointed out, it is time we return to our former position in the world if we can, it is time to try to gain international unity of all the free countries and request United Nations to take up the issue. Mr. Dulles, of course, claims it has been part of the administration's program to take the problem before U. N., but if that has been the case, the news of the action has been very successfully suppressed.

Hobbled Benson

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following article from a Midwest paper:

HOBBLED BENSON

Agriculture Secretary Benson is perhaps the most bludgeoned and hand-tied member of the Cabinet. Yet he keeps struggling doggedly, the political job of the Ike administration.

The hobbles around his official ankles are not of his making. Some of the incessant criticism hurled at him is obtusely unfair. He may not be a superman, but he exhibits superior patience and keeps driving toward what he believes is a saner farm program. More and more of the Nation's dirt farmers lean to the conviction he is right. But the political catcalls and brickbats still hurtle about his head.

Mr. Benson came to office under a heritage of crushing crop surpluses, largely induced by the high, rigid parities. He brought to his job the philosophy that farm products were produced to be sold and used, not stored in bulging Federal bins and piled in moldering pyramids of waste. He fought rigid parities in the teeth of wide farmer and political opposition. Months after he launched his campaign, wiseacres predicted he was not long for Washington's world.

But he remained. He has gained in stature. He has not convinced agriculture, but he is winning many of its shrewder leaders.

After stiff battling, he got a compromise flexible price support law enacted by the last Congress. This schedule was nothing like what he sought, but it did provide for variable crop supports, ranging from 82½ percent to 90 percent. They supplanted the mandatory 90 percent parity on corn, cotton, rice, wheat, and peanuts. But these elastic controls do not go into effect until the 1955 fall crops are harvested.

Meanwhile, the surpluses are mounting in cost and unused farm products. Because of the administration's inherited farm program, borrowing authority for supports has twice been raised from the 1952 figure of $6,750,000,000. Now Secretary Benson fears a third boost will be needed—$2 billion—which would hike the support borrowing to $10 billion.

Now certain groups in Congress are apparently blaming Mr. Benson for acreage controls, crop surpluses and inadequate foreign sales—all problems resulting from policies yoked upon him when he assumed office. Some of these critics were among the most stentorian champions of rigid supports. They are finding that high parities take acreage out of production, increase Federal controls, and encourage an increase of foreign production, with which we can't compete because of our high parity prices. That precisely is what Secretary Benson has warned about for 2 years.

It is true Mr. Benson has not solved the farm problem. But what has occurred to fatten surpluses and decrease production is not of his design. Quite the contrary. Some means of increasing foreign use of American farm products is essential, and close study should be given the new proposal in Congress for an international food and raw material pool. The more elastic parity scales, effective next fall, should help. A sorely handicapped Secretary Benson is moving in the right direction.

Public Opinion Poll in First Congressional District of New York

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. WAINWRIGHT. Mr. Speaker, it has been my custom to poll public opinion in the First Congressional District. I arbitrarily sent a copy of this questionnaire to every fifth name in my card index. In addition the questionnaire was printed in over 20 weekly newspapers. Over 6,000 answers of one kind or another on the identical questions were computed.

Question No. 1 was the same as the first question of last year's poll. It is extraordinary to note that the percentages were identical. If all those who answered "No opinion" on question No. 3 had answered "Yes," which is more probable than not, we find an unusual change in basic American thinking. The overwhelming support of President Eisenhower's UMT and lower reciprocal tariff programs was particularly illuminating.

	Yes	No	No opinion	
	Percent	*Percent*	*Percent*	
1. Should nuclear weapons be used to stop clear-cut Communist aggression?	(73)	(18)	(9)	1
2. Do you think it possible for the free world to live in peace with Communist nations?	(39)	(52)	(9)	2
3. Should Communist nations be destroyed by "preventive" war?	(27)	(55)	(18)	3
4. Do you favor President Eisenhower's permanent manpower defense program (UMT)?	(83)	(12)	(5)	4
5. Do you approve of President Eisenhower's "Trade not Aid," lower reciprocal tariff program?	(83)	(10)	(7)	5
6. Do you favor the entry of the Federal Government into the field of education in the form of school construction grants?	(54)	(42)	(4)	6
7. Should the minimum wage be raised to 90 cents per hour?	(71)	(21)	(8)	7
8. Do you feel postal rates should be increased to reduce the postal deficit (now running $1 million a day)?	(75)	(21)	(4)	8
9. Should statehood for Alaska and Hawaii be considered separately?	(60)	(26)	(14)	9
10. President Eisenhower said, "The transition to a peacetime economy is largely behind us. The economic outlook is good." Do you agree?	(68)	(19)	(13)	10
11. Should the United Nations be abolished?	(25)	(68)	(7)	11

John Garner: A Tribute to a Great American

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. FISHER. Mr. Speaker, when it was reported recently that former Vice President John Nance Garner might attend the dinner on Saturday night honoring Speaker SAM RAYBURN, the news was widely received with enthusiasm. And when the news came that because of a foot ailment Mr. Garner, upon the advice of his physician, would not be able to make the trip, there seemed to be universal regret and disappointment.

This evidence of interest in "Cactus Jack" Garner, after an absence of 14 years from Washington, is itself a tribute to a great American who as a dedicated apostle of good government over a period of nearly half a century contributed so much to the perpetuity of our institutions.

Perhaps it is appropriate that we pause in this busy life to pay tribute to that great individualist who perhaps more than any other living American typifies the rugged character and unyielding devotion to principle which actuated so many of the great men in our history. Let us hope his type will never vanish from the American scene. Today we can profit from the lessons which the public life and record of John Garner have taught.

As I think of Mr. Garner today I am reminded of the story of an incident that is said to have occurred one time at Boston. The story goes that an old man there had served for a lifetime directing ships through narrow channels in the harbor area. He had become a sort of institution, a symbol of safety and dependability. But, the story goes, there was a change in the city government and the new regime was cleaning house. It was decided that the old sea dog had served his time and that it was time to replace him. He was given a hearing, at which his capacity to do his job well was questioned.

At the hearing a critic asked the old man: "Do you claim to know where in the bottom of the harbor area all of the snares, rocks, and other obstructions are located?"

The old gentleman thought for a moment and finally replied, measuring his words carefully: "No, I can't say that I know where all the harbor obstructions are. But I know where they ain't."

And so as the ship of state was moored along turbulent seas, in and out of safe and unsafe harbors, during the first 4 decades of this century, John Garner's wisdom and guidance were of a man who may not have known where all the pitfalls were but who knew where they were not—and along such courses he chose to lead and direct.

Let us look for a moment at the life and career of this man whose judgment and counsel were so useful to America and to its progress. His grandmother brought 6 fatherless children in a covered wagon 600 miles over uncharted roads from the State of Tennessee, to seek a home in the prairie land of northeast Texas. There, in a log cabin built by his pioneer grandmother, near Blossom Prairie in Red River County, John Nance Garner was born—the first child from the marriage of Sarah Guest and John Nance Garner, the third.

General Grant had just been elected President. The Vice President was Schuyler Colfax, of Indiana, with whom the infant born in the Texas log cabin on November 22, 1869, was to share the distinction of being the only man to serve as both Speaker of the House of Representatives and Vice President of the United States.

As was common in those days, John Garner was exposed to the rigors and hard work of a country youth. When old enough he began the study of law. He was admitted to the bar, then moved to southwest Texas. He became county judge of Uvalde County, then a member of the State legislature, and in 1902 was elected to Congress. Elected and reelected 15 consecutive times, he served continuously for 30 years. He became minority leader of the Democratic Party and in 1931 climaxed his congressional career by being elected Speaker. His final 8 years in public office were spent presiding over the Senate as Vice President of the United States.

John Garner's whole political life was devoted to quiet and unselfish service. During World War I President Wilson called on him twice weekly as confidential adviser. His keen insight into political problems and judgment of men, coupled with his modest yet frank and unassuming demeanor, often caused him to be sought for confidential duties of utmost importance—duties which he performed with characteristic statesmanship, fidelity and success, but without general public knowledge.

During the early days of the depression, shortly after a White House conference with President Hoover, Mr. Garner was asked by reporters what his party intended to do about some of the proposals of the President. He made this significant statement: "Politics will be a secondary consideration. Country should always come ahead of party, and now the country should be the sole thought of everyone."

I shall not take the time here to recount some of Mr. Garner's dramatic actions as he led, with tact and wisdom, the stormy sessions of the House of Representatives that occurred during those critical, depression-burdened days of the early 1930's. Those were days when all sorts of panaceas were offered to restore prosperity; when scores of inflationary and printing-press schemes were advocated. It was a difficult time in which to exercise calm judgment, restraint and decorum, and not be washed to sea with the tide. On occasions members of both parties broke ranks to join with those offering crackpot schemes for miraculous recovery. It was, indeed, a time that called for statesmanship in leadership. And John Garner was equal to that occasion. Although effective solutions to many problems were not found, many unsound and fantastic proposals were exposed and avoided.

There have been many times when we would have done well to have followed the philosophy of this wise man from Uvalde, when his words of wisdom and restraint should have been heeded—his advice to make haste slowly, to avoid regrettable errors. He is and was a practical man and has always believed that government, like individuals, should strive to live within its income; that all governmental action should be within the framework of the Constitution and with proper regard for law. As H. I. Phillips remarked, Mr. Garner and his compatriots believed in—

Sticking to what he's learned in school
And what he's been raised to believe * * *
Things like simple arithmetic * * *
Old-fashioned bookkeeping and squarin'
Accounts on Saturday nights * * *
Dependin' on a budget, never spendin'
More than he had; being orful keerful
'Bout not making promises he couldn't keep,
An' things like that.

Research in Civil Aviation Medicine

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to include here the text of an ad-

dress I delivered recently before the Civil Aviation Medicine Association.

The address follows:

Mr. Chairman, I hope you will feel that I speak very sincerely when I say that it is a real pleasure and privilege to be with you on this occasion.

I am happy to be here because of my own personal interest in aviation and in research in general, but particularly in the field of medical science.

Among the legislative achievements in which I take most pride as a Member of the House of Representatives are the bills which I introduced and piloted through the House to establish the National Mental Health Institute, the Hospital Survey and Construction Act, the research program in neurological and metabolical diseases, and the National Science Foundation.

I want to express to you my personal appreciation for the very fact that you have such an organization as this. That fact in itself is a long step forward in progress toward still more far-reaching results.

It is my own opinion that there should be established some sort of institute devoted primarily to research in civil aviation medicine. As a matter of fact, I think it is becoming more and more imperative that this be done.

The time is not far distant when we shall cross the threshhold into the era of jet-propulsion in civil aviation. In my opinion the time is not more than 5 years away. And I do not need to tell you who know even better than I, the problems of aviation affecting human beings will be greatly increased.

Aviation medicine is not concerned with fighting viruses or hunting microbes. Its foe is not the general diseases of mankind, but forces man meets for the first time only as he goes out of his natural environment. Aviation medicine is concerned with the medical effects of human flight.

Nature designed man's body for a life on earth, never more than tree-top distance from the earth's surface. In the upper reaches of the atmosphere or in the airless space beyond, man is as much out of his element as a fish trying to swim across a desert. But unlike the fish, man has the capability of altering his environment—if not himself. To alter that environment, or to make it possible for man to survive and to function in it, is the task of aviation medicine.

The goal of aviation medicine is to help man adjust himself to the new world of height and of supersonic speed that the airplane has opened to him, the area that has been intelligently called "the vertical frontier." Aviation medicine helps man to meet the challenge of two of his own accomplishments, to fly high and to fly fast. Today's technology produces planes capable of carrying men at speeds and to altitudes that the human body cannot tolerate. Aviation medicine quite literally seeks to take man out of his element, and to help him to reach the stars.

In the United States Air Force one man—Maj. Arthur Murray—has already flown up to 90,000 feet—17 miles above the surface of the earth.

Another Air Force pilot—Maj. Charles Yeager—has flown at a speed of 1,650 miles per hour—almost 2½ times the speed of sound.

Still another Air Force officer—Lt. Col. John Stapp—has ridden a sled projected along the ground at 632 miles an hour, to test the effects of deceleration and wind-blast on the human body.

Air Force rockets have gone up to 250 miles of altitude at speeds up to 3,600 miles per hour, and two rhesus monkeys—named Pat and Mike—have been rocketed to 190,080 feet, and survived.

Finding out the limits of human endurance and developing ways of keeping men—not animals, but men—alive and protected in the unnatural environment man has begun to explore, is the problem of aviation medicine. The problem is the problem of survival in a new world man has never penetrated before our own generation.

There are three main fields of activity in the investigation of human factors in aviation.

1. Human resources is a field concerned with problems of man's reaction to his environment, matters of psychology, aptitudes, training, etc.

2. Human engineering is charged with determining design characteristics of equipment, and man-machine relationships, so that an operator can use that equipment with the greatest accuracy and efficiency.

3. The aero-medical sciences—which are the chief concern of this discussion.

The aero-medical sciences are concerned with the bio-medical, physiological, and psychological reactions of the individual to the wide range of situations and factors involved in aviation. Within the Air Force, for example, the chief research and development agencies are the School of Aviation Medicine at the Air University and the Aero-Medical Laboratory at the Wright Air Development Center of the Air Material Command. The first, which has the unique distinction of being the oldest organization in the Air Force that has operated continuously, without any essential change of function, does background and applied research in the basic life sciences and clinical sciences, as they affect the Air Force. Using the information developed at the School of Aviation Medicine, the Aero-Medical Laboratory develops information needed by aeronautical engineers to design aircraft without surpassing the physiological and psychological limitations of the air crew. It also develops the aero-medical protective equipment to offset man's physical limitations—equipment such as "G" suits, restraining devices, protective clothing, and escape equipment.

Frequent conferences and information exchanges are arranged with other organizations, such as the United States Navy Aeronautical Medical Equipment Laboratory, the Navy Electronics Laboratory, the Army Medical Research Laboratory, and the Johns Hopkins Operations Research Office (the latter an Army activity). Meetings of the Armed Forces-National Research Council Committees on Vision and on Hearing and Bio-Acoustics, provide additional opportunities for valuable interservice contacts.

The primary problem of aviation medical research is to find out in detail what happens to the human body during an ascent, and why. The problem is intensified as man learns to build machines that go higher and faster, but the problem is still one of altitude.

As most people know, a man can ascend to about 8,000 feet with no ill effects, if the ascent is gradual, as in driving up a mountain, but above 8,000 feet, things begin to happen to man. As man flies even higher, the field of vision narrows. Breathing becomes extremely difficult because of the lack of oxygen. Delusions can develop. Consciousness can be lost. Gases trapped in the intestines begin to expand. At 50,000 feet altitude, the heart—unprotected by devices or equipment of any sort—would probably cease to function.

To counteract these changes in man's normal body functioning, the whole body must be kept under pressure, in either a suit or a cabin. The pressurized cabin was developed during World War II. The pressurized suit for the individual flyer is a more recent development. But neither alone solves all the problems of survival at high altitude. Man must eat, man must relieve himself of body wastes, and man must combat fatigue and boredom.

Next in importance to the problem of altitude is the problem of gravity. Every time the human body is subjected to acceleration or deceleration, it feels the pull or push of gravity, or "G" forces. A jackrabbit start of a hotrod sports car can throw a passenger against the seat back. In an airplane, the whole crew is affected by any quick burst of speed or abrupt change in direction of flight. And these movements of the plane can cause internal movements in the body: blood flows from head to feet, and organs of the abdomen are pushed down to the pelvis. If the turn is sharp enough or fast enough to develop forces double the ordinary force of gravity, or more, the drainage of blood from the head and heart may cause a "blackout," that is, a loss of consciousness.

The human body's ability to withstand "G" forces varies enormously, depending largely on what part of the body's surface takes the brunt of the shock.

Research in aviation medicine, which has produced such diverse products as Aeroplast, a new spray-on surgical dressing for treating burns; the nylon pressure suit; the anti-G suit; and new inflight meals takes equally varied approaches to its problems. It may be performed by means of rockets, loaded with delicate instruments, and shot many miles above the surface of the earth; it may take place in an anechoic room, where quiet reigns supreme, which is used to study the effects of intense sound on animals and human beings. One of the most dramatic, and most publicized, research facilities is the sled at Holloman Air Force Base on which Lt. Col. John P. Stapp has traveled 632 miles an hour.

Colonel Stapp, who holds a civilian degree of doctor of medicine, and is also a graduate of the Air Force's School of Aviation Medicine and a flight surgeon, has been described both as a human guinea pig and as the fastest man on earth. He is merely an able scientist who has made his most important experiments on himself. His most publicized research has been in connection with deceleration. In his research he makes use of a sled which hurtles him along a railroad-like track at 460 miles an hour, then slams him into a braking area with a bone-jarring jolt. Every time he rides his machine he suffers the same shock that's experienced in the abrupt stop of a crashing airplane.

In the course of his research program, Stapp has several times sustained shocks greater than those incurred in fatal plane crashes. His maximum jolt was equivalent to driving an auto at 120 miles an hour into a brick wall. On three other occasions, the shock was equal to braking from 60 miles an hour to a complete stop in only 3 feet. Last December, with the windshield removed from his sled he made a supersonic run on the ground, to find out what happens to a pilot who bails out at supersonic speed at low altitudes. Without protection from the violent wind-blast such a speed will generate, and wearing no special protection except a plastic headgear and a special nylon harness, he withstood a force of 35 G's and a wind pressure of 2 tons, and suffered no lasting ill effects.

Information already developed in Stapp's deceleration experiments to find out just how much slow-down shock the human body can take will be used to redesign aircraft seats and safety belting, so that pilots and passengers will have greater protection against abrupt jolts in emergencies. The same information also can be applied to making automobiles safer. Information developed in the wind-blast experiment will be used in developing bail-out equipment.

Scientists working on the problems of aviation medicine do not hope ever basically to change man's earthbound nature. But they know that in the machine age, man has man-

aged to adapt himself to conditions that seemed "inhuman" and "impossible" as recently as 50 years ago. To ease his adaptation to space and speed, scientists are continuously studying examples of such adaptations in nature.

Other scientists meanwhile are studying the problem of inventing machines or gadgets to take over functions previously performed only by man. The real question that the jet age poses is whether man-as-flier is being made obsolete by the lag between what his brain can invent and his body can perform. In fact, planes are rapidly approaching a point where they are penalized rather than aided by the presence of a human pilot.

One important result of research in aviation medicine is the discovery that the human body can endure a great deal more physical and mental stress than was once thought possible. The answers to the problems of flight in tomorrow's jets and rocket aircraft may be found in the human research now being done in the field of aviation medicine rather than in loading the planes with heavy and expensive equipment.

So the planning brain must continue, as now, to seek new ways and ever more ingenious devices to adjust the strains to the tolerances of the body.

And so I conclude as I began by reemphasizing the need of research in the field of civil-aviation medicine.

After I have had an opportunity to give some additional study to the form of the legislation, it is my intention to introduce a bill calling for the establishment of an Institute of Civil Aviation Medicine.

And once again I express my appreciation for the contribution your association has made in the field of air safety, and for the objectives you seek.

Address by Gen. Benjamin W. Chidlaw Before the Air Defense Conference of the Air Force Association

EXTENSION OF REMARKS
OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. CHENOWETH. Mr. Speaker, I am sure Members of the House will be interested in a splendid address delivered by Gen. Benjamin W. Chidlaw, commander in chief of the Continental Air Defense Command at Colorado Springs, Colo., before the Air Defense Conference of the Air Force Association at a recent meeting in Colorado Springs.

General Chidlaw is recognized as one of the outstanding authorities on air defense and air power. He is retiring soon after a long and brilliant career in the Air Force. I am pleased to include as part of my remarks this challenging address:

Mr. Alison, distinguished Members of Congress, members of the Air Force Association, and honored guests, we are genuinely delighted that you gentlemen have been able to avail yourselves of the most gracious action on the part of the Air Force Association in arranging this timely meeting, to let us talk together on air-defense matters here in the hometown of the Continental Air Defense Command headquarters, and additionally to have you here in this beautiful setting in which soon will be built the Air Force Academy, the seat of learning and the cradle of tradition for the future of air power in this country.

Airpower has, of course, been a living, breathing thing in the imagination of many people, old and young, for years, but it is today striding ever more and more into world consciousness as a tremendous factor in all military schooling and planning, in the economic future of the world, and more and more into the daily lives of each of us.

I think it can be said that air power is no longer considered so much just an equal participant in the family of military services, but has become an overall field of the military potential affecting all services. A military potential possessing such a devastating capability that the threat of its use alone might prevent a world commitment to open warfare.

The world's past wars have shown generally that nations' so-called military roads to glory have often taken them along some pretty gloomy trails, milestoned by the skulls and skeletons of man's failures to bail himself out of his dilemma by all other means.

Through air power, growing evidence indicates that its very existence affects the atmosphere and attitudes at the world's conference tables. Through air power any imbalance in favor of a possible aggressor, even though local or temporary, frequently shows in the arrogance, the ruthlessness, the baldness of his demands.

Air power, taken in the larger sense of the complete gamut of missiles and aircraft using the avenue of the air, can now be sent on a terrifying mission of destruction by our enemies, and it could come just as unannounced as it would be uninvited with such a mission.

For no longer do we have the leisure of the chess player to study, then unhurriedly counteraction with reaction.

In air-power circles, action calls for action.

The attackers, and the atomic-bomb loads or warheads set in motion by them, must be hallenged by our own weapons system as close to their bases of origin and sustenance as is possible, and our challenge must be decisive.

To reckon unleashed air power in the hands of the enemy as any less than a disastrous capacity, or to leave it unopposed, instantaneously and without quarter, is to die miserably, to die individually, even possibly to die nationally.

Not long ago, a story came to me of an old clock which had been placed in a national museum as a relic of one of the early wars on this continent. It was of that rich, deep brown color, common to aging walnut wood. It showed signs of having been hacked by either a tommyhawk or knife, and imbedded in the wood was a flint arrowhead.

It really belonged in this collection of times past.

It still had grace. It had beauty. It was decorative. It was definitely tied to the infancy of our country, and bespoke some of the turmoil in which our Nation grew to its present maturity.

For this reason, it had a place of honor in the museum.

The important lesson this old clock had for me, however, and for my people, who must live alert to each day's problems and be preparing always to meet that greater emergency which might come on any tomorrow, was that it rested absolutely on the past.

It had one great defect. It could no longer perform the functions for which it was originally built, because the hands of this clock were stilled forever, the mechanism inside clogged with rust and dust. And although it was still referred to in the museum guidebook as a timepiece, it was no longer that; it couldn't tell time.

All our military services are constantly making adjustments, orienting themselves toward today's blunt military facts of life and away from museum thinking. Nationally, we are, I believe, gradually weaning ourselves from the thinking that the next war will be fought, if ever we must fight one, as the last one was fought.

In my many trips about the country I sense that the man in the street—Mr. Average American Citizen—is becoming more and more aware of the fact that America will have to abandon her time-honored role of the protected and secure arsenal of men and weapons and take on the much more alarming role of being the first and principal target.

No military force can ever afford to become a museum piece, and if there is one thing in the world which will disclose it as one, it is its failure to keep in step with the threat and be truly up to date, better well ahead of it.

Certainly, in this air-defense business the Continental Air Defense Command cannot afford a failure to be completely realistic.

For us, no crystal ball, no ivory towers.

We know that for the Continental Air Defense Command, there is no place of, nor time for, sanctuary.

Defense of the United States from air attack is today a No. 1 preoccupation of the American people, and that defense is the mission of the Continental Air Defense system.

Our command is perhaps the first major organization of the few in our whole military structure which must meet its acid test on D-day—in fact, on H-hour of that D-day, and D-day could come tomorrow.

Therefore, the shadow of reality is always as close to us as our own shadow.

An the Continental Air Defense Command must work, tirelessly and ceaselessly. It must undergo constant test, and revision based on the showing of these tests. It must be re-equipped to be ever new, and ever newer. It can never be truly effective if any portion of our system is approaching museum status nor is it ever safe to view or inspect it from the attitude of veneration for past achievement. Rather, it must be continually assessed for vigilance, or virility.

In this vein, I am frequently asked the question, "Since our scientists, our research and development people, anticipate many major improvements at somewhat later time periods, why should it be necessary to spend large sums of money modifying and improving the present system since ultimately much larger gains in effectiveness can be anticipated at that later date?" Well, gentlemen, viewing the world situation as it is today, I think the answer to that question is pretty obvious. Remembering always in this business that our D-day may be tomorrow, we cannot, we dare not, risk less than achieving the maximum "kill effectiveness" possible, employing the tools we have presently at hand.

Knowing all these things as realistic and to keep in a realistic vein, I wish to say that true air defense is not, in my opinion, confined solely to the erection of a so-called fortress-type weapons system around a particular criticial area. Such an approach would resemble that of a boxer who confines himself merely to "slipping" or warding off his opponent's punches. The boxer, to win, must be prepared to throw a few healthy knockout punches himself, so I include the counter-punch, the left cross, and the good old round-house haymaker right all in my definition of defense.

Air defense is then, in the truest sense, the whole tricky, razzle-dazzle and flexibility of the air weapon used in its full multiplied force and as far out from our homeland as time and circumstances permit.

True air defense takes in the complete array of the offensive and defensive capacities of all services to make up this effective air defense, everything to keep the enemy guessing, everything to keep him off balance,

to make him puzzle and pause, attempting to figure our air power out and make him doubtful of his own ability to cope with it.

Thus, I believe our Continental Air Defense System starts with a formidable couplet of the Strategic Air Command with its long-range, atomic packhorses; the Navy's carrier task forces wherever it is possible for them to contribute; and also those Air Forces, tactical in nature, which are based far out from this country and on the fringes of the Iron Curtain, represented in our own commitments to the North Atlantic Treaty Organization and those of our partners in this alliance.

We have this partnership with the free world in recognition of the immediacy of the times, that should the free world be struck, our responses would be total, from close in and far away, and be now.

Concerned as we all are that we keep this far-out extension of our defenses and improve them daily, and concerned as we all are to preserve and ever strengthen the mighty fists of our strategic striking air arms, we of the Continental Air Defense Command are also concerned that our assigned mission, that of defending the skies over and the aerial approaches to our homeland, be likewise fully understood and fully appreciated. Appreciated as the Nation's blunting force which may have to endure its greatest battles while the enemy is at full strength and while the enemy effort is freshest.

Facing squarely up to the problem, I feel, as do all military commanders, that little has altered that old military truism that "the best defense is a strong offense." I am certain that a purely defensive system alone would never be the one single force which would deter forever a Russian decision to strike us.

We must, at all costs, maintain our own long-range striking forces, our Strategic Air Command, and those other forces which are capable of striking at the vitals, the heartland, of any aggressor. And they must be kept at the highest levels of efficiency and size to do their job, once their mission is ordered.

But, I'm just as certain, that a major deterring factor lies in being able to guarantee that our striking forces will not be caught in their lairs. If that aggressor, specifically, if Communist Russia, knows that while she is fighting her way toward her targets, that the golden opportunity of easy destruction on the ground has passed, and the visitation of death and destruction to their homeland is but a few, very few, short hours away, then a decision by them to launch their first aggressive blow must be born only of sheer desperation.

The objective of our present and any future air defense system is thus, to ward off or reduce to acceptable limits the impact of enemy air attack, should our national aim of prevention of war itself fail. I feel, as do my people, that the market value of air defense will undoubtedly be at its highest, at its very peak on D-day and possibly a few days or weeks thereafter. We hope, we pray, that our offensive and defensive efforts will jointly cause it to taper off markedly from that point on.

We know that nuclear armament has revolutionized not only air defense thinking, but military strategy in its entirety.

We know that A-bombs and H-bombs plus the means of carting them accurately to and over a target complex for release, compel consideration of national survival itself as the number one mission of our country's military action.

Enemy capabilities, weighed against the cost and effectiveness of an immobilizing defensive force to put in the way of those capabilities, outline the general dimensions of our air defense problem.

Dozens of factors, i. e., possible enemy approach routes, his likely target selections, his delivery equipment, prevailing winds and weather, and the like, dictate our defensive deployments.

And always the question of national economics is before us. For example, must we or should we try to add a couple of fighter interceptors, or a new guided-missile position to our defenses as the Russian adds new types or numbers to his long-range air army inventory?

And in these considerations, there is always the thought that there may be, somewhere along the line, a point of diminishing return in this air-defense business as we currently know it or visualize it and that it is and will be extremely difficult to determine just exactly where this point lies.

One thing we can be sure of, however, is that to willfully stop short of this admittedly somewhat indeterminate point could be disastrous.

Stopping short is like the old story of throwing a 20-foot rope to a man who has fallen in a well 30 feet deep. It wouldn't bail him out; it wouldn't save him, and only a gesture has been made in the right direction. And whatever was spent for the rope represents a loss since it did not accomplish the mission.

Obviously, if we assumed complete desperation and tried to completely blanket the Nation with radar in overlays and layers, at the same time providing the well over 3 million square miles of our country with maximum intensity fighter-interceptor and guided-missile coverage, we would run into economic and manpower impossibility.

It is up to us, therefore, to go about the job of doing the most we can, and the best we can, with those present and programed forces of men and weapons which can be made available to us.

Our national sense of morality, our tradition of never having struck the first aggressive blow, would, I imagine, cause the enemy to assume, and we must assume, that they will have on their side the initial advantage because of their ability to select the time (and place) of attack and start unmolested the takeoff for delivery of what they hope will be the first great blow.

They patently will have many avenues of approach which gives them great flexibility in choosing and charting their hydrogen highways, as it correspondingly confronts us with multiple problems in blocking any aerial power play they initiate.

They undoubtedly assume, and we must assume, that they will have to go for a "package deal" in target arrangements—a veritable bag of varieties. In a civilization and with a defense system as complex as ours, they must know that there is no one solar plexus, no single touch point, which when struck could leave us totally paralyzed, broken, completely subdued, and subjugated.

Therefore, his offensive efforts would logically have to be as big as the target bag, and be designed to put us in an atomic vise.

In such a packet, we must figure that he would undoubtedly attempt to neutralize or wipe out our counteroffensive capability such as our retaliatory forces and their bases, the origin of our atomic stocks, certain of our major population and communication centers, and our industrial capacity for military production.

In the language of the poker player or crap shooter, if he were ever to set off on this package-deal expedition, he would truly be, as the expression has it, going for broke.

He would be shooting the works and trying to break the bank.

It would be comforting to say that very few who "go for broke" actually ever break the bank, or that few real gamblers would go up against such odds. We should not be foolish though, and not consider that there is more than an outside chance that such a course could or might be taken.

There is grave reason for us to respect the outside chance with Russia.

Who, at this time, can read meaning into the events of recent days at the Kremlin? Certainly the gambling behind the walls of the Soviet citadel is for high stakes.

I believe we can safely and wisely assume, then, that men like Lenin, Stalin, and Malenkov, and now a new name, Bulganin, have not laid aside the tendency toward taking the outside chance when it has proven successful on occasion or when there may seem to be no other course.

For this reason, we must seek constantly for outward extensions of our warning and tracking capability to take maximum advantage of area defense weapons in the Continental Air Defense Command. Our action must start with his action, so our forces must be so disposed in depth as to make him run a gantlet of continual harassing and destructive attack as soon as we make contact with him. To be sure that our response is instantaneous and rapid toward any hostile threat, our control must be decentralized.

Our full national potential in air defense must be available and have its well-defined place in the Continental Air Defense Command System, the organization which will probably fight its major battle on the day and hour the fight starts.

All usable fighters of other Air Force commands, those based in this country, must be slotted into usable places in the system. All Navy and Marine Corps fighter aircraft based coastally or inland, even those on carriers in or near port, figure in the system. The shore-based radar equipment of the Navy and various proving ground and guided missile test centers can make their contribution. The antiaircraft guns of naval vessels in port must have their place alongside the guns and missile batteries which the Army contributes to the regular defenses. The National Guard and certain parts of the Reserve Forces strength must come into the bag with us.

The contribution of these forces, taking their control and operational direction from the Continental Air Defense Command, can be an enormous help. We are now going forward rapidly with the planning which will make thorough use of all these augmentation elements and to make sure that the control machinery is fully ready.

Our first and most pressing need is that we obtain the greatest possible advance warning of any attack. To achieve this, we are shoving our radar detection nets further and further to the north, further and further out to sea, extending our detection, identification and tracking capabilities as rapidly as circumstances permit. Our second, and nearly as pressing need, is for streamlining the processes by which we put into motion all the vast resources of those strengths I have mentioned, and putting them into motion toward the places in the system where they will contribute the most, the quickest, and to maximum effect.

As I said before, all military services today are engaged in a fight to stay out of the museum and to be in step with what must be done to make certain our national survival.

Developments in science and engineering are so fast and furious, the struggle to stay out of the museum, that to avoid being categorized as the clock which could no longer tell time is demanding on all of us.

We must be sure at the first flicker that the enemy is taking to the high aerial road, that we set up a series of toll gates, barriers, in his way as soon as he gets on that road. These toll gates, these barriers, should be all the missiles and jet propelled carriers of destruction we can put out along that

road to regulate or halt that travel as he comes on his atomic outing.

He must pay heavily at those toll gates. He must be fought to a standstill there, shot down out there, and, God willing, his whole effort die out there. Because every uninterrupted second that we let him come on and every mile we let him penetrate our borders to get in reach of his strike position makes the cost ratio in blood, in life and treasure of this country mount.

If we have the means to erect these toll gates when it has to be done, the nation lives.

If we do not, the nation dies.

To those of us who wrestle with this enormous problem, who live with it every minute of every hour of the day and night, it is just as simple, just as cold turkey, as stark as that.

There are few gray areas left to consider in this business. It is possible now in this atomic age to see mostly only in black and white.

I know that this problem is on the minds of you gentlemen of Congress and other of our highest Government leaders and all our military commanders.

My feeling on air defense is that it amounts to the sum total of all the things which can be brought to bear on any enemy who would see in an all-out air attack the most lucrative, the quickest, and the most decisive way to get at our vitals and to knock us to our knees. The Continental Air Defense Command is a complete rationalization of that air defense potential in terms of making every mile, every yard, every foot of an attacker's thrust count for us and against him.

In a measure we are blessed with God-given geographic depth for our defenses, removed some distance from any aggressor's birds of prey.

We would indeed be profligate with our responsibilities, and going against all military lessons and training, if we did not figure on making every mile of that intervening distance pay-dirt for us and a place for our enemy to bite the dust.

We can all remember the time when those of us in the military were somewhat removed from the so-called plain American citizen. We didn't know too much about each other, we didn't give each other too much thought. They went about their business, we went about ours. They sent for us when they needed us and we sent for them to give us the increased strength we needed in time of a national emergency.

This is not true today.

Today we are in each other's business right up to our necks, because no matter what any man or woman thinks his or her business is today, it is really the business of insuring individual and national survival.

Because of this feeling, we have been able to get with us in the Continental Air Defense Command some 400,000 civilian volunteers in the role of ground observers. They have becocome interested in what they can do to help and are willing to give us that help because they wanted to know a role into which they can fit smoothly should D-day ever come. Because of this growing awareness and desire in American people to know a place to do volunteer duty, I feel we are stronger than we have been for a long while. Because in addition to what these ground observers do in plane spotting they have provided the first ripple in the great wave to come as Americans become more and more conscious of what each man and woman must do if we are to be safe and remain safe.

By coming into our family of air defense weapons freely and as volunteers, they have put their apathy and complacency into the museum alongside that old clock. Complacency today is just as useless as that old clock which could not tell time.

Let us all make certain, civilian and military man alike, that we discard now and forever any semblance of complacency.

Let us not believe that because we have never lost a war that we could not lose one.

Let's make certain we don't lose it.

Let us never rest on today's weapons system or be content that what we are doing today is enough. We all must dig deep to pull out that little something extra in us.

Because in these perilous times, should our military clock stop, chances are that it might never start again.

And, if our military clock stopped, it probably would never even find its way into a museum. There might be no museum left to put it in.

Thank you.

An About Face From War to Peace

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following abstract of remarks by Senator HUBERT H. HUMPHREY before University of North Carolina, Chapel Hill, April 1, 1955.

AN ABOUT FACE FROM WAR TO PEACE

At a time when strength and unity of purpose is urgently needed, America's leadership in our critically troubled world is fumbling and faltering.

In recent weeks the objective of our international relations has been lost in the twisting and turning of Presidential, State Department, and senatorial pronouncements and actions.

Let's look at the record:

Our ally on Formosa, Chiang Kai-shek, insists we are committed to the defense of the offshore islands. The Secretary of State, carrying out the policy of the President, says maybe we are and maybe we are not; possibly we will and possibly we will not. All add to the general confusion in a time of crisis.

The President and the Secretary of State informed us a week ago that we may very well use precision atomic weapons if the Chinese Communists attack the offshore islands. But on Wednesday, March 23, the President in his press conference states categorically that atomic weapons will be used only in case of a major war and not in police actions.

The chairman of the Senate Republican Policy Committee, Senator BRIDGES, persists, however, in stating that our national policy is to defend the offshore islands by dropping atom bombs on the mainland.

American policy runs hot and cold, uncertain and confused. Surely if these policies are indefinite and uncertain to the American people, they must be even more so to our allies and enemies.

On Monday, March 14, the official custodian of the Yalta papers in the State Department said their publication would adversely affect the Nation's security and our relations with our allies. On Wednesday, the Secretary of State, after conferring with Senate Republican leaders, expressed his astonishment at the revelation that the Yalta documents were in the hands of one of America's leading newspapers. On Wednesday night the documents were ordered released to the Nation's press. The White House expressed no knowledge of the release of the papers, and in fact the Presidential press secretary stated the President was not aware of their release.

This series of events reveals an unbelievable lack of coordination between the President and the State Department, and a degree of irresponsibility that exposes our Nation before the eyes of the world as erratic, unpredictable and politically immature. Regretfully, this same degree of uncertainty and confusion prevailed concerning the proposal of Senator GEORGE, chairman of the Senate Foreign Relations Committee, in suggesting a meeting of the heads of state of the United States, the Soviet Union, Great Britain, and France.

For at least 2 days the State Department clearly stated that Senator GEORGE's proposal was in line with the foreign policy of this Nation. The President, at least through Monday and Tuesday of the last week, felt such a conference was premature. On Wednesday, March 23, the White House and the Department of State double checked their signals, and came to the conclusion that in due time such a conference would be desirable. Since then, at a recent press conference, the President seemed to qualify his earlier approval.

These policy gyrations and conflicting statements can only add to the feeling of uncertainty and indecision as to American policy.

Perhaps we need a thoughtful reappraisal of what we are now doing—and what we should be doing.

Instead of alienating our friends through diplomatic blunders geared to domestic political expediency, now more than ever we should be seeking to strengthen our ties of unity and solidarity with our allies, to maintain a common front for preservation of the free world.

Instead of Presidential appointees deliberately stirring up the fires of domestic political controversy, now more than ever they should be devoting their attention to achieving some semblance of unity within their own party and within the Nation on vital foreign policy issues that affect the destiny of our Nation.

Instead of playing right into the hands of Red China's propaganda and helping turn Asians against us by our publicly brandishing a big club in threats to use atomic warfare, now more than ever we should be bending every effort to convince Asia our purpose is peace, not war—development, not exploitation.

Instead of letting the Communists choose their own grounds for a new international "showdown" where we may be forced to stand alone, now more than ever we should be taking the initiative in diversionary moves of our own to put the Kremlin on the defensive and upset its carefully calculated timetable of Pacific strategy.

The Yalta papers, internationally:

What kind of reckless diplomacy is it to needlessly insult your friends when you have nothing to gain and everything to lose? What possible constructive purpose could release of these documents against the wishes of England have in the present tense state of international affairs? As a result of this colossal diplomatic blunder, the free world's efforts for peace have been given a distinct setback rather than been advanced. Hereafter, frankness and candor will be ruled out of international negotiations. Diplomats of friendly countries will be as cautious as diplomats from unfriendly countries in dealing with the United States—and the cause of peace will suffer.

The Yalta papers, domestically:

Appeasement has never gained us any ground internationally, and it will not gain President Eisenhower or Secretary Dulles any ground trying to appease opposition forces within their own party. Trying to turn the clock back 10 years might divert America's needed attention from problems and failures of today, but it cannot divert the consequences of those problems and failures.

High sounding comments of the President against political exploitation of these documents cannot erase the responsibility of his own Cabinet appointee for releasing them for no purpose other than political exploitation. The President and his Secretary of State must accept responsibility for an apparent willingness to toss bipartisan foreign policy out the window, and risk playing deliberate politics with our country's future security.

About A-bomb threats:

Threats of A-bomb attacks might create caution in a country responsive to the fears and the will of its people, but have just the opposite effect on a country or a government holding human life cheap, unresponsive to any fears of its own people, and deliberately conniving to tag the label "warmonger" on the United States.

Nothing could serve the Kremlin better than to jockey the United States into a position of first using A-weapons against Asians, so that it can beat the drums of world opinion against us.

One American atomic weapon used on Red China would do more to turn Asia solidly against us, than all the propaganda the Communists have been able to contrive, and to them be well worth the price in human life it might entail.

Quemoy and Matsu:

The responsible leaders of our Nation are today in the process of making what may well be the most crucial and important decision of foreign policy since the beginning of World War II.

The issue is what should be American policy concerning the offshore islands from the Chinese mainland, namely and most important, the islands of Quemoy and Matsu. What do we do in light of our commitments to the defense of Formosa if the Chinese Communists attack these islands?

Yes; we are in a period of self-examination, of self-questioning, and this is as it should be. There is still time for thoughtful consideration and for careful planning. The time is short; the urgency of the situation cannot be overestimated, and the necessity for clear thought and definite policy is evident to everyone.

This decision rests with the President of the United States who is, under the Constitution, the Commander in Chief, and the chief spokesman of our Nation in foreign affairs.

Prior to the passage of the so-called Formosa resolution, the President stated to the Congress that he alone would make the decision as to American policy with respect to the so-called related positions and off-shore islands. Our President, during the past weeks and today, has been and is seeking guidance and sound advice. This is no time for partisan prejudices or political expediency. The issue of peace and war is in the balance. The relationships between ourselves and our allies is involved in our decision over the off-shore islands. Our whole position in the Far East has been brought into sharp focus. Our strategy in meeting the challenge of Communist aggression is subject to intensive evaluation. We cannot afford to make a mistake.

Powerful weapons of mass destruction are in the hands of both ourselves and the Soviet Union. Huge armies have been trained to combat effectiveness. The whole world awaits the decision. It is not right nor true to say that what may happen in the Far East is in the hands of the Communists. We have a part in this decision—we and our allies. And we must always remember that if we take upon ourselves the sole responsibility for making a crucial decision, we are not only involving our own Nation but, due to the dynamics of modern warfare and the terrible tensions that exist in the world, we are involving all people everywhere.

The outbreak of hostilities today in any part of the world could be the spark that ignites a world-wide conflagration. We cannot safely assume that hostilities involving the off-shore islands will be limited to that area. We cannot safely assume that the Soviet Union will not honor her treaty of mutual assistance with Communist China. Nor can we assume that because of our great assistance to the other nations and our alliances in Europe and the Far East that our allies will stand with us on this issue.

It is true that the President yesterday expressed his belief that the Rusisans would not enter should war break out in the Formosa Straits. But look at the position we would be in should such a war occur. We would be thoroughly and endlessly engaged with our forces in Asia, while the real center of world communism—the Soviet Union—would be unleased to grab the prize, Europe—the core of world strength.

Therefore, with prayerful thought and the highest degree of statesmanship that we as a nation and our leaders can bring to bear, we must patiently, carefully, and objectively arrive at a decision, and do it within a matter of days.

These things we know: The Communist Chinese have declared to the world that they will take the off-shore islands. These offshore islands have historically been under the dominion and jurisdiction of the government of the mainland. Presently, these islands are under the control of the Republic of China and heavily garrisoned. There has been sporadic fighting in and around these islands for the past 6 months. These are acknowledged facts.

There are those who feel that if the islands are to be lost to Red China this would be a stunning blow to the morale of the free Chinese forces on Formosa. Commanders are split as to how much American support it would take to hold these islands against Communist attack—or if it is possible to hold them. The Navy and the Air Force have stated openly that these islands can be held with just naval and air support, plus the Chinese Nationalist troops. The Chief of Staff of the United States Army has testified before committees of the Congress that to hold these islands would require American ground forces. No member of the Chiefs of Staff has testified that the islands are essential to the defense of Formosa. They are essential only if there is to be an invasion of the mainland of China.

But, I, for one, have been led to believe by our President and the Secretary of State that our Government will not engage in any military action designed for the retaking of the mainland.

The question may very well be asked then—why is it that the defense of Quemoy and Matsu is so much more important than the defense of the islands to the north of Formosa, which were evacuated, particularly if there is to be no invasion of the mainland. It has been stated by our military commanders that these islands are not essential to the defense of Formosa—and it is to the defense of Formosa that we have pledged American strength and resources.

Our declaration of defense for Formosa has not disrupted our relationships with our allies. The British agree with us on this, and there has been no protest from other friendly powers. The legal and historical position of Formosa as to a government on the Chinese mainland is entirely different from that relation to the offshore islands. The final disposition of Formosa has never been arrived at. It is one of the byproducts of World War II yet unsettled. The offshore islands, on the other hand, represent a land area involved in the Chinese civil war. There can be no doubt about that.

From the point of view of international law, Formosa occupies a different position. Therefore, our declaration of defense of Formosa against Chinese Communist aggression is in the interests of international law and order; is in the interests of the United Nations; and is a proper and honorable policy. Quemoy and Matsu are not in the same legal or moral position.

I respectfully suggest that with respect to the offshore islands, before any decision is made we carefully and frankly discuss this matter with our friends and allies. For example, what does the Japanese Government think about American participation in the defense of Quemoy and Matsu? What about our main ally, the British? The Canadian Government has made its position clear and has frankly stated we will have to go it alone. This should cause us to pause and think. Canada is like a brother to the United States. A more firm and noble ally we have never had. And yet, the responsible leadership of Canada has notified our Government, and notified its own people, that Canada will stand aside and not be a partner with us in any military operations concerning the offshore islands.

Have we consulted with the south Asian powers? What about President Magsaysay of the Philippines—a leader that represents the spirit of the new Asia, a staunch friend of the United States—what does he have to say?

The Secretary of State and the President owe it to the American people and to themselves to know exactly where these nations stand, and to seek their advice and counsel, before rushing headlong into conflict.

Our decision pertaining to the offshore islands likewise must take into consideration our future relationships with such countries as Indonesia, Burma, India, Pakistan, Ceylon, Thailand, and the other south and southeast Asian countries. It is fair to say that our relationship with many of these nations already is strained. The Prime Minister of India has spoken out forcefully against our policies relating to the offshore islands, and even to Formosa. We must keep in mind constantly that what we do now may very well determine what we ever will be able to do in Asia. I am sure that the men of the Kremlin and their partners in Communist China sense that in this crucial decision concerning the offshore islands they may well have discovered the Achilles heel in American Far East policy. It would be nothing short of tragic if a decision to defend the offshore islands should lead to a complete break between ourselves and the free Asian nations. It is ridiculous to assume that the defense of these islands is more important than a cooperative and effective relationship between the hundreds of millions of people of the free nations of south and southeast Asia.

These are some of the questions that appear on the international political scene. The answer is not easy, nor can anyone ever be sure that whatever decision we may arrive at will be the right one. Nor can we predict the future. All we can do, or should seek to do, is that which is right, which is legal, and which is honorable. Above all, whatever decision we make must be in concert with others. We must not stand alone in this area, nor can we condone statements by responsible political leaders to the effect that no white troops will be used if we should defend the offshore islands. Statements such as these do us irreparable damage in the Far East.

BIG POWER CONFERENCE

We are giving consideration to the desirability of a big power conference in an attempt to ease the world's tensions. If we are to participate in such a conference, it is absolutely essential that we go there in full agreement with our allies, with no major questions unsettled, in our friendly family of free nations. We must remember at all times that the Soviet will use any international conference to drive a wedge between us and our European and Asian

friends. We must be absolutely certain, before going to the conference table with the Soviet, that the United States, Great Britain, and France have come to a meeting of the minds, not only on the unsolved questions in Europe, but equally so on the problems and questions in Asia.

The decision about American policy concerning the offshore islands is the single more dramatic problem that faces us today. Unless we can reconcile our point of view on this limited but crucial matter, a big-power conference would only lead to further differences and confusion among the Allied Powers. The leaders in the Kremlin know that so long as the free world remains united, so long as we are able to reconcile our differences, so long as we are able to agree on fundamental and basic policies, the Communist conspiracy cannot succeed. The immediate and long range objective of Soviet strategy and diplomacy is to divide us, to split us apart, and above all to isolate the United States from our major allies in Europe and the Far East. This we must not permit to happen.

In the months ahead our Nation will be faced with many more critical decisions and difficult challenges. If we are to have a big-power conference then every conceivable effort must be made to go there from a position of strength—I mean strength based on cooperation and understanding between ourselves and our allies. I mean strength derived from a positive and constructive policy for the Far East as well as for Europe. I mean strength that is based on scrupulous adherence to the principles of international law. Yes, strength that comes from doing what is right, not doing what may be politically expedient.

And also the issue has an effect on our talk of disarmament. Our President has appointed a special adviser in the field of disarmament. We are now participating in the United Nations Disarmament Conference. What could be more tragic in view of all of these future challenges and present problems, than for the United States of America to become involved in hostilities, standing alone without friends or allies. All we hope for could go down the drain. A war with Red China over the offshore islands would not be conducive to a big-power meeting. A war with Red China over the offshore islands surely does not lead to disarmament. Such a war would not serve the purpose of integrating West Germany into the great NATO organization. It is abundantly clear to me that the diabolical plan of the Soviet Union is to force our hand in the Far East, if we permit it to be forced, over an area that is questionable as to its importance and that involves us with grave differences of policy with our allies. If the Soviet is successful in this tactic and strategy, we may well have forfeited our leadership, both in Europe and the Far East. It is not improbable to assume that in case of hostilities over the offshore islands, that the Soviet may well threaten every ally we have if they should accede to American pressure to intervene and join with us, the war may be extended and enlarged. I do not say this will happen—but I do say we must take these eventualities into account.

Such is the world we live in today. On that scene, other nations are troubled and looking for solutions.

Bandung Conference:

We are nearing the date of one of the most significant conferences in the world's history—the African-Asian Conference next month from which white people are excluded. Have we no better bid for support of this vital block of the world's people than the threat of atomic warfare? Where is any positive, constructive policy to be offered these people as evidences of our goodwill and peaceful intent, evidence of our understanding of their own aspirations and our willingness to cooperate in their own progress and development?

A positiive program for peace: Let me advance a suggestion.

Let us get away from the negative and move to the positive. Let's show the Asian peoples we recognize their importance under the sun by taking the lead in proposing India for a seat on the permanent Security Council of the United Nations.

Instead of just saying "No" alone to Red China on admission to the United Nations—and it is a "No" I have always supported—let us counter with a suggestion of our own that would give recognition to Asia without letting Communist power blackmail its way into the family of nations.

It is a reflection of a very rapidly disappearing past for the United Nations to continue to seat China as a permanent member of the Security Council. China at the end of World War II was a powerful ally. The Communist China of today is an enemy. The Nationalist China of today on Formosa is weak and not representative of the new Asia. Neither of these Chinas deserves a seat as a permanent member of the Security Council.

Our Nation should instead call for a revision of the United Nations Charter so as to give India the seat now held by China. Such a dramatic move would attract the attention and support of our friends all over the world. If the Soviet Union opposes this suggestion, our position in Asia would be strengthened. If our suggestion is accepted, we would have a strong, democratic Asian nation sitting in its rightful place of leadership in the councils of the world. Let us not forget that India was our ally during World War II. That India was one of the few nations making a contribution to the Korean conflict by providing ambulances and medical assistance. That India is a democratically elected nation committed to the principle of freedom. The only major defeat inflicted on the Communists in Asia in the last year was inflicted by Nehru against the Communists in India.

Such a bid to India—even evidences of our interest in creating such a bid—could have a powerful impact in our behalf at the African-Asian Conference.

Then let us strengthen our friends in that conference with our assurances of a positive, constructive development program for underprivileged nations—assurances of economic aid, technical assistance, an expanded exchange program to better understand each others' cultures.

On the economic front we have wasted valuable time in meeting the challenge of Communist infiltration due to economic distress, particularly in Asia. It is in this area where our participation through the United Nations, in technical assistance, in health and education programs, can check and push back the inroads of Communist political and economic aggression. Then, too, we must more boldly and meaningfully outline to the Asians the extent and degree of our own economic assistance to them, with particular emphasis upon long-term loans at low rates of interest for capital improvement projects. The development of new instrumentalities of international financing is a challenge to our political and economic statesmanship.

And let us strengthen them in that conference with assurances to the now neutral people of the world that this democracy will never start an atomic war but will stand firm on our resolve to swiftly retaliate in force against a nation that does risk starting one.

ABOUT CHOOSING THE GROUNDS FOR A SHOWDOWN

The time is long past when we can afford to back away from threats of Red aggression. But the time and place of any showdown need not be at Red choosing. It should be obvious that Soviet strategy now calls for forcing our hand at Matsu and Quemoy, in the hope of making us attack the Chinese mainland—a move which they could interpret as intervening in a China civil war, and a move which they know we might be compelled to make without the support of our allies.

What is to prevent us from taking the intiative ourselves by shifting the scene of decision to Korea, where international law is solidly on our side in view of Red China's violation of cease-fire agreements? What is to prevent us from calling the Kremlin's hand on such violations by calling on our Korean allies, through the United Nations, to enforce the Korean truce? Is it not reasonable to assume that a sudden buildup of our forces in Korea would do more to upset Red China's calculations about Formosa than anything we do about Matsu or Quemoy? Moving of our bomber squadrons into Korea, where they would be in ready striking distance of both Red China and Moscow itself, would give the Kremlin more cause for concern than any threat to use A-weapons on the Chinese people.

At the same time, our Nation should assume the initiative in an attempt to resolve the issue of Quemoy and Matsu peacefully, we should propose the neutralization and demilitarization of those islands. We can propose that the Formosa troops be withdrawn from Quemoy and Matsu if Communist China agrees not to occupy those islands. They can then be placed under the supervision of neutral Asian countries or the United Nations itself. Such a suggestion places us in a peace-seeking, rather than warlike, posture, and would give our allies in Asia an opportunity to seek a constructive solution which will secure our national security in Asia.

Voice of Thruston, Hand of J. Foster

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the April 1, 1955, issue of the Courier-Journal published in Louisville, Ky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VOICE OF THRUSTON, HAND OF J. FOSTER

What are they trying to do to our Thruston? No doubt the signature on that letter that Senator HUMPHREY scorned was the real signature of Thruston Morton. But we cannot believe that the opinions in the letter were his.

The letter was presumably a reply to Senator HUMPHREY, who had demanded to know who leaked the now famous Yalta papers to the New York Times one day before they were officially released, and whether the leak was a breach of security. The reply that Assistant Secretary of State Morton had to sign, in his capacity as State Department liaison officer, dodges the first part of the question altogether. It says that the papers had no security classification, but then it adds an astonishing hindsight excuse for the whole Yalta papers muddle:

Mr. Dulles had, according to this account, mulled over the thought that both Paris and

Bonn were preparing to ratify the German rearmament treaty, and that in the heat of debate some people were suggesting further talks with the Russians. So, publication of the papers, on 24 hours' notice and after an elaborately arranged plot to leak them to one newspaper, was soberly decided upon as a warning of "the dangers, as well as the possible values, of such talks."

We don't think our Mr. Morton could ever have concocted such a tale. It is so flimsy, so insulting to the intelligence of Paris and Bonn, as well as to that of Senator HUMPHREY and his fellow Americans that only a man capable of heroism beyond the call of duty would have put his name to it at all. No. We conclude, after doing a bit of mulling over ourselves, that while the voice may be the voice—rather strained—of Thruston, the hand most certainly is the hand of John Foster.

The Right-Wing Republicans

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

(Mr. HOFFMAN of Michigan asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HOFFMAN of Michigan. Mr. Speaker, some time ago the Speaker, the gentleman from Texas [Mr. RAYBURN], admonished the Republicans that they should not talk about a party of traitors, or the party of treason, or something of that kind.

Any statement, if such a statement was made, that the Democratic Party was the party of treason was, of course, an absurdity.

The Speaker quite properly, when this session of the House convened on January 5, gave us all to understand that we should be tolerant, rather than critical, when expressing an opinion of the opposition. Expressing that thought, he said:

> I want to say as I said on the stump last fall, that we as Democrats do not indulge in personalities; we are not an accusing kind of people; we do not have to be that way.
>
> It matters not what the heat may be, here or out there, we are not going to indict people en masse. (Daily CONGRESSIONAL RECORD, January 5, 1955, p. 8.)

Yet yesterday in the Washington Post I read this statement:

> The 73-year-old Speaker, first Democrat ever to be so honored—

Of course, that honor was richly deserved, and we all join in honoring him—

> lashed out bitterly at the Republican right wing. He termed it a disloyal opposition.

If I know what that term means, I am a right-wing Republican, and I would like to know what the Speaker meant when he implied I was disloyal because I am classified as a right-wing Republican. Disloyal to whom? To the administration? To my country?

I wish the Speaker would read what he said some time ago about being careful about our language, about not indicting people "en masse."

I know of many former and present Members of this House, Democrats from the South, some from the Speaker's own State, as well as many Republicans who have political views with which I am in full accord. Many of them might be accurately described as right-wing Republicans. They certainly are far to the right of many of the views announced and followed by left-wing Democrats and left-wing Republicans.

Since when has it become permissible to characterize a political opponent, for example one who does not accept the views of the gentleman from Texas, whatever they may be, as above criticism or opposition, as being disloyal.

If we concede, as we do, that the Speaker is a man of exceptional ability, unquestioned integrity and patriotism, it does not necessarily follow that all or many who have a thought which is not in accord with his thinking are disloyal to either the party or to the country.

The Struggle of Rabbits Versus Horses

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times of April 17, 1955:

THE STRUGGLE OF RABBITS VERSUS HORSES

International trade is helped a little by lowering tariffs here and there and by removing import quotas, but in the middle of the 20th century such steps cannot recapture the trade patterns of the 19th century which the nostalgic free traders long for.

MORE THAN OPEN DOORS

So those who applaud President Eisenhower's plea to Congress that the United States be made a member of a 34-nation Organization for Trade Cooperation ought not to expect too much of it; it is only a subsistence payment to a world economy which needs more than open doors to return to prosperity.

It would surprise some of America's free-trade theorists to learn that the raising and lowering of United States tariffs over the last 50 years was not reflected by decreases or increases in the value of American imports. Tariffs affected the kind of imports to some extent (for example, reduced the importing of English woolens), but in general protective duties changed the type of imports, not the quantity.

American imports are high at this time, and they probably wouldn't be much higher if we had no tariffs at all. There is plenty of room for imports to increase under the present tariff structure but other countries are not making the goods Americans will buy.

Our representatives abroad have counseled foreign producers to study American markets if they want to sell more in the United States. But it is fashionable in some foreign circles, nevertheless, to proclaim that American tariffs bar European goods, thereby creating the "dollar shortage" which compels the United States to give dollars to the trading countries so that they can balance their payments.

The "Trade, Not Aid" slogan in Britain originated among proud people who deluded themselves that they would get enough honest dollars in the United States if the tariff barrier weren't so high.

EXPRESSION OF EMPIRE

What the free traders—or freer traders—will not do is study the trade changes that have taken place within their own lives. Free trade was the practical expression of British Empire when Britain, the first manufacturing nation in the field, produced goods for the world in return for the world's raw materials. Tariff-free imports in such a setup were an economic necessity. Some British economists made a virtue of the necessity and tailored the philosophy of free trade to fit a special case which they believed would last forever.

But it didn't last forever. Other nations became industrial, and within our time the captive markets of colonial empire began to wither. The age of competition followed the age of free trade, and today Britain has some of the highest protective tariffs in Europe. If a country's propensity for free trade in 1955 can be measured by its tariffs, the United States would stand as a freer trader than most of her friends.

Several European countries have resorted to the same expedient to combat competition. They have organized currency blocks in the remnants of their colonial empires and have traded on price terms which they could fix. They owe money, much of the debt having been incurred in war, and they pay the debts by exporting goods to the creditors at prices based on the unrealistic valuations they put on their currencies.

An operation in a currency bloc trading area goes something like this: A borrowed three horses from B and foundered them. In due time B demands return of the horses. A says he has no horses now; he is raising rabbits. Rabbits, says A, are quite as valuable as horses; in fact, A has passed a law declaring that 1 horse equals 1 rabbit. B reluctantly accepts 3 rabbits from A (he would recover nothing otherwise), but he still wants horses. However, he can find no horse market in the world which will accept A's valuation of horses in terms of rabbits.

No American trader, of course, will give 3 horses for 3 rabbits. So A and B join in proclaiming that the United States has created a horse shortage.

VERY TENDER CONSCIENCE

The United States, having a very tender and foolish conscience, thereupon gives B 3 horses outright and tells him to keep his rabbits. Then A complains that the United States should not be giving aid but should be encouraging honest trade. Everything would be well, says A, if the United States would decently acknowledge that 3 rabbits are worth 3 horses.

In a general way, the trading blocs, which resulted because none of the trading countries will let their currencies find an honest relationship with the dollar, are responsible for the decline of vigorously competitive international trade in the world's non-Communist markets. Everybody has a law now declaring that the value of a rabbit equals the value of a horse.

The result is that the countries with artificial money cannot overcome what they call the dollar shortage. In their zeal to keep a corner on their controlled markets they have been compelled to abandon those markets which used to provide them with a large amount of their dollar exchange. The economists have been calling such markets the "third countries."

Many of the Latin-American States used to be third countries. The United States bought coffee from Brazil or bananas from Guatemala with dollars. The European manufacturing and trading countries then sold these third countries goods for the American dollars. Exchange balances were satisfactory.

UNDER NO OBLIGATION

But the European countries could not resume this trade, even after the postwar recovery was well along, because the third countries were under no obligation or compulsion to accept the overvaluation of rabbits.

Lower tariffs and fewer quota restrictions, even if the Organization for Trade Cooperation is able to bring them about, will not help much until all the currencies of the world have been honestly revalued in relation to the dollar. Freely convertible currencies would not make world trade free in the 19th century sense, but it would make it freer. The rest is in the future.

Are Local Service Airlines Being Treated Fairly by Civil Aeronautics Board?

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. MACK of Illinois. Mr. Speaker, a basic question of policy has arisen as a result of a recent decision of the Civil Aeronautics Board.

On December 22, 1954, the CAB ruled in favor of trunklines on route 106, which is a local service route between Iowa and Chicago. Local service carriers are able to handle this route and it clearly falls into the category of a local-service route. This decision concerns me greatly. If this pattern is followed, the CAB will gradually drive the local carriers out of business, thereby depriving many small communities of airline service.

I have received the following letter from the president of Ozark Airlines, which I would like to include as part of my remarks. The letter is as follows:

OZARK AIR LINES,
LAMBERT FIELD,
St. Louis, Mo., March 18, 1955.

Hon. PETER F. MACK, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MACK: January 25, 1955, I sent to you a letter of explanation, and a copy of Ozark's petition for reconsideration in reference to the Civil Aeronautics Board's decision December 22, 1954, on route 106, a local service route between Sioux City, Iowa, and Chicago, Ill. serving 8 medium sized cities. These cities have an average population of less than 54,000 and the average distance between them is 76 miles. Our company called this matter to your attention because we felt that there was a serious question of basic air transportation policy raised by the Board's decision. The question concerned the departure from the Local Service Airline policy by turning over a Local Service Route to trunkline carriers.

February 16, 1955, the Civil Aeronautics Board denied Ozark's petition for reconsideration, however, one week later, the CAB chairman testified before the House Interstate and Foreign Commerce Committee and before the Senate Interstate and Foreign Commerce Committee to the effect that the CAB needed further opportunity to improve the route systems of the Local Service Carriers before granting grandfather rights to these smaller airlines.

To our mind, there is such a complete contradiction between representations made by the Civil Aeronautics Board before Congress, and the actions of the CAB in the 106 case (where the CAB had an exceptional opportunity to strengthen the routes of a Local Service Carrier), that we have again petitioned the CAB for reconsideration and rehearing of this matter. We believe this is a matter in which the Congress has a very definite interest. Since you have listened personally to the CAB testimony as an active interested member of the House Committee on Interstate and Foreign Commerce last year and again this year, we thought that you also would share our bewilderment and our discouragement at the unexplained contradiction between what the CAB told Congress it was trying to do toward route improvement and what the CAB actually did in its 106 route decision.

As the attached petition for reconsideration points out, the present status of Local Service Route 106 is completely and hopelessly confused by the CAB's departure from policy and unrealistic approach.

In my opinion, neither the communities, nor the three carriers involved, are pleased with the present confused situation. The CAB, by attempting to force United Air Lines to serve Fort Dodge, Iowa, with a population of less than 30,000, is faced with the probability of a long involved court battle. The cities, which are being served unwillingly by Braniff, are not receiving a service tailor made to their needs.

This matter is of particular urgency to you and ourselves now, because if it is not settled properly this time, it will be 5 years before a similar opportunity presents itself. If the CAB is sincerely interested in improving the route systems of the local-service carriers, the first concrete demonstration of that interest is reconsideration of its decision in the route 106 case and the logical award of this local-service route to a local-service carrier.

From the point of view of the Congress in developing logically the local air-service program, and in reducing appropriations to support this program; from the point of view of these smaller cities which need a long-range program of air service suited to their specific needs; from the point of view of the carriers who are in business to perform specific types of air service, it is essential that the Civil Aeronautics Board, at this time, stay the effectiveness of its present decision in route 106, and grant reconsideration and further hearing to properly decide this case consistent with the representations it has made to the Congress.

We welcome the opportunity to provide further information to you.

With best wishes and kindest personal regards.

Very sincerely yours,
OZARK AIR LINES, INC.,
LADDIE HAMILTON,
President.

No Superinternational Organizations, Mr. President

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an article that appeared in the Wall Street Journal for April 18. This editorial raises the serious question as to the advisability of Congress approving an "Organization for Trade Cooperation"—OTC as it will now be known.

There is serious question, Mr. Speaker, that the argument advanced by the President is a sound one and Congress has the responsibility of giving his suggestion very close scrutiny:

ORGANIZATIONS AND ORDER

This newspaper thoroughly agrees with President Eisenhower that the elimination of restrictions on the movement of goods, services and capital among nations would have most desirable results.

The world's economies would be stimulated. Political and military cooperation would be considerably easier than it is now. And if those things were achieved the Communists would have suffered a setback if not a final defeat.

But whether those desirable objectives are to be reached by setting up an international organization to be known as an Organization for Trade Cooperation is a matter which Congress ought to study. Basically the presence of an international bureaucracy may be the antithesis of freedom.

Freedom of trade means that men can exchange goods and services over international boundaries free from restricting rules. It is the very nature of a body such as Mr. Eisenhower proposes to make rules.

You don't achieve freedom by setting up institutions. If we had, let us say, a Commission on Freedom of Speech it would be inherent in its existence that it would be decreeing what men could or could not say. It would be a restriction on freedom.

Very well, but it will be said that the world is beset by tariffs, quotas, and exchange restrictions and Mr. Eisenhower has proposed this international organization to get rid of them. But will it get rid of them? Or will it be forced to compromise, and by accepting some of them give to them a respectability that they do not now possess?

Two years ago Dr. Ludwig Erhard, the German minister of economics, warned that attempts to bring about integration through supra-national organizations is not order but disorder. True order, Dr. Erhard said, is most present when it is not noticed at all. Order does not depend on organization. The mere presence of an organization may be conductive to freezing those elements which are at the bottom of the disorder.

Senator BYRD, the chairman of the Senate Finance Committee, favors quick action to extend the Reciprocal Trade Act which gives the President power to revise American tariffs within certain limits. However, Senator BYRD intends to be careful that such extension should not be interpreted as congressional endorsement of the organization for trade cooperation or of the general agreement on tariffs and trade which the OTC would administer.

In favoring the extension of the Recriprocal Act but in insisting that the new proposals stand on their own feet, Senator BYRD, it seems to us, is on solid ground.

John Grounds, Who Knows Area, Says Echo Park Dam Should Be Built, and Refutes Many Stories About Site

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I would like to include an article which recently appeared in the Steamboat Pilot, of Steam-

boat Springs, Colo. This article, by John Grounds, a man having a great deal of personal knowledge about the general area of the Echo Park Dam, contains valuable background information on this important project. He was on the ground at the time many activities were undertaken, and he here spells out the important considerations as he views them. I suggest this review to the Members as an informative accounting of early developments concerning the Echo Park Dam site:

JOHN GROUNDS, WHO KNOWS AREA, SAYS ECHO PARK DAM SHOULD BE BUILT AND REFUTES MANY STORIES ABOUT SITE

(John Grounds, who spent many years in the Browns Park country and is a son of one of the pioneer cattlemen in that area, has written an article on the Dinosaur National Monument that has been sent to all the Senators for their information while considering the upper Colorado River development plan. Mr. Grounds now resides at Valentine, Ariz., and is vice president of the WF Cattle Co. He is a son-in-law of Mr. and Mrs. A. A. Curtis, of Steamboat. His statement on the Dinosaur Monument follows:)

In the past 2 years we have heard and read many angles and slants on the Dinosaur National Monument versus the Echo Park Dam site.

Many of the assertions and versions of the writers are erroneous or misinterpretations of what others have said.

It is impossible for anyone to realize how inaccessible this area really is until they've been on the ground.

There are 52 miles of river canyon within the monument and I've seen most of it many times due to occupational duties. My father was among the oldtime cattlemen who owned huge cattle empires. At times, cattle in his possession exceeded 20,000 head. His cattle grazed to the canyon bluffs throughout most of the present monument area.

Many of the more beautiful canyon sights can be seen only after hard rides on horseback.

There is a road from U. S. 40 leading north over Blue Mountain and down Pool Creek at Pat's Hole. From this point one can see the Steamboat Rock and the river junction of the Green and Yampa Rivers.

There is another road leading in from the Colorado State Highway 318 to the northern end of the monument. The nearest towns on this side are Rock Springs, Wyo., and Maybell, Colo. This north road leads into the entrance of one of the most beautiful of all canyons, the Lodore. This road was built by the Lodore Canyon Tourist Camps in 1936, and terminated at a boat landing. A boat line was maintained by the tourist camp. Passengers were carried by boat 3 miles down between the crimson walls of the Lodore to another established camp accessible only by boats.

I mention the tourist camp and the boat line as there is indeed much significance involved in the two items.

In many cases wars are declared and battles fought with few people knowing just why or where they actually started.

It was at this point that the enlarging of the Dinosaur National Monument first began taking shape.

The tourist camp in an effort to get better advertising, began searching for possibilities to have the canyon country set aside in a national park. They worked with members of the Lion's Clubs of Vernal, Utah, and Craig, Colo., to get the Park Service interested. They also engaged one of the foremost specialists of canyon photography and photographed points of interest throughout the entire canyon stretches.

Eventually officials from the Park Service came to investigate. They decided much red tape could be sidestepped by enlarging the Dinosaur National Monument rather than to organize a whole new setup for a national park.

In 1938 the enlargement of the monument became a reality. The original 80 acre plot set aside in 1915 by Woodrow Wilson was increased to 200,000 acres.

Now let us glance at the situation from the viewpoint of the Department of the Interior and the Bureau of Reclamation.

Back at about the turn of the century the Department of the Interior was spending time and money in search of a dam site in the thesa canyons. I have never seen records of this work on paper but can explain what everyone else can still see on the ground.

On arriving at the entrance of the Lodore Canyon there is a very noticeable straight line on the east side of the entrance running from a high ridge down to the river level. This is an old road built by the Government to get their machinery into the canyon. The road is too steep for automobiles. It leads to a little meadow right where the river enters the canyon walls. At the lower edge of the meadow there is a long rock foundation, apparently a cook shack, and numerous other foundations of smaller buildings. Only cellars are left intact. The surface structures have long since been swept away by ice jams and floodwaters.

On down along the canyon walls, accessible only by boat, are the locations, painted on the canyon walls, in black paint, of test holes. These holes were drilled from a barge into the river floor testing for the depth to bedrock. The location markings are numbered from 1 to 10 and located down the canyon for several miles. At one location are the words "Unfinished Hole."

This work was apparently no small operation for that day and age and probably required several years.

This canyon area and the land upriver within the intended lakebed was withdrawn from the Homestead Act and placed under the Bureau of Reclamation. However, prior to this withdrawal, most of the land of any value had already been homsteaded, as Brown's Park was considered a fine winter country as compared to the high mountain country around it.

Most of the settlers located their land on the river bottoms or, overflow land. Improvements on this land were at the mercy of the unpredictable Green River in the summertime. The high-water stage could usually be expected from about June 20 until July 1. In the wintertime the river took its toll of livestock along steep frozen banks and airholes in the ice. In the spring of the year local floodwater caused quicksand, one of the greatest river hazards to livestock. These drawbacks are not in Brown's Park alone but found more or less along all uncontrolled rivers.

It was only a matter of a few years until most of the homesteads were owned by a few large operators.

In the event that the Echo Park Dam is to be constructed, the Government will not have too much land and few owners to reckon with as compared with some sites.

It seems that the Department of the Interior has drawn its heaviest fire from conservationists denouncing the Department for suggesting the construction of a dam on Park Service land, if these people and the public knew and understood the truth about this matter it would be no longer an issue. When the Park Service began outlining the intended monument boundaries they had to obtain ground from the Department of the Interior which was still under the Reclamation Act for future dam sites.

The Interior Department was very cooperative and gladly released the land to the Park Service, with a provision: All power and dam sites reserved to the Bureau of Reclamation.

We have two proven businessmen, Secretary McKay and Under Secretary Tudor (who has recently returned to private business). Are writers going to continue heaping abuse on the shoulders of these two men for the location of this dam site?

We have a point that is being asked by thousands of people. Why should the Government enter into direct competition with private enterprise? No one believes more wholeheartedly in private enterprise than I do. We have to establish a boundary between Government business and private enterprise when a conflict arises. If a private company builds this dam, hydroelectric power is about all they have to sell. They will probably operate to a higher peak of efficiency than the same Government staff but they won't be able to foot the bill for at least 2 or possibly 3 generations as the dam will be out of proportion to their needs. If the Government builds the dam the tax dollars will be reimbursed to the extent of hydroelectric power (which will be sold to private distributors) plus the benefits that will be reaped by thousands of taxpayers living on highways and roads with businesses and establishments that will prosper for generations to come by the influx of tourist traffic to visit a great dam in a beautiful monument. Still another, irrigation water for many areas and water to allow expansion of cities. These items plus the generated power and numerous other phases of human life benefited by the dam are clear cut evidence that the Echo Park and other dam sites of the upper basin plan are national improvements to benefit taxpayers throughout the land.

These inland projects are also defense measures in case of war.

Writers opposing the upper basin projects usually elaborate on the cost to the taxpayers of $909,339,300, or roughly $1 billion, spent and gone.

At any rate this money is to be spent in our own country for our own labor and material and will be distributed over a period of about 30 years to complete the upper basin project.

If the estimates are correct on our growing population, that, by 1975 our census will exceed 200 million people within the United States, we had better not allow the upper river project plan to slide into many more pigeonholes. After the completion of the entire project, the upper basin States will not be able to attain maximum stages of development for 50 to 75 years so time is wasting if we intend to stand on our own feet with the ever-enlarging figures of our future needs.

We have the Colorado River compact drawn up in 1922 allotting each State their share of the river water. None of the States, according to the compact, shall gain a right by usage of another State's water, thus allowing the States to bide their time for developing water use.

The river line between the upper and lower basins is at Lee's Ferry.

In the compact the average flow of the Colorado River at Lee's Ferry was decided to be 15 million acre-feet of water per year.

The upper basin is to deliver below Lee's Ferry 7½ million acre-feet of water per year.

The fluxuation of the river is enormous, during drought years, it is calculated at less than 5 million acre-feet flow per year. Deep snow years in the upper basin States will cause a year's flow to reach 25 million acre-feet of water past Lee's Ferry.

These figures are proof that the lower basin would have a much greater dependable amount of water if the upper basin project was carried out. The present figures show about 60 percent of the Colorado River water flowing into the Gulf of California unused.

To sum up the "law of the river" (Colorado River compact), things look well enough on the surface. Nothing of serious consequence has turned up to suggest defeat or loss of rights to the upper basin States within the life of the "law of the river," a span of 33 years but now let us remember

the fact that three dams are completed in the lower basin and development is at hand.

If the lower basin has time to develop to their capacity of allotted water than proceed beyond that quota which would be the natural thing to do if there was a surplus of water, then, with their possession and prior usage of the excess water any law contrary to this action would be of little value to the upper basin States.

To say that any State would overstep their water share is only a suggestion. We are badly in need of a suggestion of some type to fill in a gap, and the gap is this: I have received a number of letters from various committees and associations telling me to write my Senators and Representatives to block the upper river basin projects. They generally support 2 main reasons: (1) "Our taxes will be raised"; (2) "California may not get her rightful share of Colorado River water."

These letters and pamphlets under different headings probably point to one central organization and merely a shrewd scheme to get people to act when they see so many groups all thinking alike. Anyone contemplating action after receiving literature of this nature should do some studying for themselves. The mentioned literature doesn't necessarily indicate that the State of California is backing up this maneuver, but the said maneuver may create a damaging effect on legislation in favor of the upper basin project.

Senator O'MAHONEY, of Wyoming, recently wrote a very accurate article on the Echo Park project.

A great amount of accurate information is released on the back of an excellent map of the Dinosaur National Monument. This map has been obtained at a very reasonable price at United States Department of the Interior, Geological Survey, Denver Federal Center, Denver, Colo.

There is very little firsthand information on all the Yampa and Green River Canyon. To see the sights from the top of the canyon walls one must go through many hardships and spend much time and money; to see the canyons from the rivers he goes through the hardships of making portages around dangerous rapids and being wet continuously. Some say that the Yampa River is easy to run in a boat. That I don't know. I will say that "easy" is not the case on Green River. The fall of the river, the volume of water, and the size and number of boulders are too great for a boat on its own. At one point in the Lodore Canyon, at low-water stage, almost the entire river current goes under the west wall.

The Ladore Canyon received its name from Robert Southey's Cataract of Lodore, and very befitting it is.

Until the Echo Park Dam quiets the rushing, roaring, white waters of the canyons of Yampa and Lodore, it will mean nothing to tourists and sightseeking joyriders who have little time to spend in one place.

JOHN GROUNDS.

VALENTINE, ARIZ.

Americanism Is Brotherhood

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1955

Mr. HUMPHREY. Mr. President, there is a growing indication that our young people are fully equipped to discuss and meet the serious problems affecting our democracy.

I ask unanimous consent to have printed in the Appendix of the RECORD an essay written by one of my young constituents, Miss Karen Turner, entitled "Americanism Is Brotherhood."

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

AMERICANISM IS BROTHERHOOD

"We the people of the United States in order to form a more perfect union; establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessing of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Here in America we are very fortunate because we have more freedoms and rights. This is a country of humanitarian interested, God fearing men; a country of great ideas worked for and sought for by everyone. Freedom of religion and free education are of greatest importance.

The church plays a most important part in the life of the average American. The close relationship between the American and his church is fostered by everyone's right to choose his or her own denomination, Catholic, Protestant or whatever it may be. We are not forced to belong to any certain religion.

We practice our religion in any way that we choose. We may even organize and manage our own local church parish. Catholic, Mormon, Baptist, Methodist, Jew or any other creed, white, black, red or yellow race, they all may and do mix with mutual respect and admiration. Can there be a finer demonstration of brotherhood in fact and theory.

All men are created equal and therefore are entitled to equal rights. Equal rights in government, work, religion, but especially in education. Nationality, race, creed, color, wealth or social position, they are no barriers in America's free, public school system. From kindergarten through college practically, free education is the birthright of every American that seeks to take advantage of it.

"Give me your tired, your poor,
Your huddled masses yearning to be free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest tossed to me.
I lift my lamp beside the golden door."

The Statue of Liberty lifts her lamp beside the golden door of opportunity symbolizing the bonds of friendship between this country and people everywhere. Americans are every nationality, race, and creed. French, Swiss, Scotch, German, Irish, Norwegian, and all other nationalities of the world make up America, therefore an American is a nationality all its own, it is the nationality of all nationalities.

Providing a home for immigrants has always been a part of America. America's attitude toward the wretched displaced persons of Europe is one of the glorious pages of history. We not only practice brotherhood at home, but we extend our hand across the seas.

These people are not as fortunate as others so there has been a special program set up to help them get started in a better life in a new country. The program tells them about American history and teaches them the English language, even homes and jobs are found for these people.

Here again brotherhood is shown, because there is no restriction of race, creed, or religion of the immigrants. Who has the right to say the Negro isn't as good as the white? Who has the right to say the Negro is better than the white? No one, because they are all equal. Who has the right to say that one nationality is better than another? They cannot be in America.

America strives for brotherhood, brotherhood among men in this country and brotherhood among the countries of the world. It not only believes in brotherhood but it believes in world peace. That is why the United States is a member of the United Nations.

The purpose of the United Nations is to maintain international peace and security, to develop friendly relations among nations, to cooperate in solving international, economic, social, cultural, and humanitarian problems, and promoting respect for human rights and fundamental freedoms. The most important fact is that the United Nations is a center for harmonizing the actions of nations in attaining these common ends.

We believe that all men are created equal, life, liberty, and the pursuit of happiness, the four freedoms, the point 4 program, the Marshall plan, the American dream—these are all part and parcel of the American people and their history. They are all evidence of our applying the principles we stand for.

The United States is working for world peace and national peace. The United States is working for brotherhood between nations and brotherhood between men, this goes to prove that—

Americanism is brotherhood.

Increase the Minimum Wage

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the Retail, Wholesale, and Department Store Union.

INCREASE THE MINIMUM WAGE

(Statement of Representative EMANUEL CELLER, before the Retail, Wholesale, and Department Store Union, CIO, Washington Hotel, April 19)

By word and deed, the administration is making no bones of the fact that it wants to put the skids under labor. After many protestations concerning the liberalization of the Taft-Hartley Act, passed over President Truman's veto, no action has been taken.

The administration policy is to shift as much power as possible to the States. This abdication of Federal responsibility thus gives big business in the States greater opportunity to break the back of labor. As a result right-to-work laws have been passed in Arizona, Arkansas, Georgia, Iowa, Nebraska, North Carolina, North Dakota, South Dakota, Tennessee, Texas, and Virginia. Before the advent of the Eisenhower administration only one State—Florida—had passed such a statute. The election of a Republican administration in 1952 gave great strength to the antilabor forces. This is self-evident to labor, to business, and to the public. In essence, these right-to-work laws for practical purposes, forbid all forms of union security—the closed shop, the union shop, and any form of contract which would bind workers to the union for any period of time. These right-to-work laws are tantamount to a denial of the right to organize and bargain collectively. This is not freedom as the proponents glibly characterize the right-to-work laws. This is license for management to have its own way with the individual worker on terms of its own choosing, without need to answer to the collective protection of the labor union.

Some time back, Secretary of Labor Mitchell stated that he did not support these right-to-work laws. When questioned about Secretary Mitchell's statement, President Eisenhower said that this is merely an expression of personal opinion on the part of his Secretary and that he did not necessarily subscribe to nor deny Mr. Mitchell's thinking on the subject. To labor, this is a less than satisfactory reply because labor itself knows the issue is clear that right-to-work laws are antilabor laws. There can be no hedging on that.

Back in 1937 President Roosevelt, keenly aware of widespread wagecutting, increase of the workweek without overtime pay, asked that the Congress enact a Federal fair labor standards law. In doing so, he said: "A self-supporting and self-respecting democracy can plead no justification for chiseling workers' wages or stretching workers' hours. Our problem is to work out in practice those labor standards which will permit the maximum but prudent employment of our human resources to bring within the reach of the average man and woman a maximum of goods and of services conducive to the fulfillment of the promise of American life." This is the standard toward which all men must work, not for the sake alone of the individual laboring man and woman, which in and of itself is of prime importance, but for the sake of the country so that this country may march forward to the ideals proclaimed by the Roosevelt message.

In 1949 a Federal minimum wage of 75 cents an hour was established. It was inadequate then; it is shockingly inadequate now. Yesterday I introduced two bills: 1. Increasing the minimum wage to $1.25 an hour; 2. Removing the exemptions for retail establishments and processors of food and tobacco.

Why the increase to $1.25 per hour? Because:

1. Living costs have increased by 14 percent since January 1950, but since the lowest income group suffers the greatest price rise, for such group living costs have increased by at least 18 percent. Hence the 75 cents an hour is worth today only 65 cents an hour, or about $26 a week. In realizing the total picture, we must include not only the rise in prices but the rise in social security deductions since 1950 and the additional sales tax in many States.

2. While the 75-cent level has remained, productivity has increased at least 20 percent and the gap between what a man is paid and a man produces widens, and the glaring injustice of the 75-cent wage emerges from the gap.

3. Since January 1950 there have been five general wage increases in our major industries, ranging from some 39 to 53 cents per hour, of increase alone. This of course does not include fringe benefits, pensions, life insurance, sickness, and disability benefits which have been added to the payroll. There is a completely unrealistic relationship between the 75 cents an hour established by law and the existing wage structure of American industry.

It has been proven that even a working woman who lives with her family must have an hourly minimum wage of $1.22 according to the New York State Department of Labor, if the health, morale, and general economic welfare of the country are to be protected. Can the richest Nation in the world stand by and say it cannot afford a Federal hourly minimum of $1.25? Yet these are the facts. In 1953 we produced a record $365 billion worth of goods and services, yet 23 percent of all the families had total money incomes of less than $2,000.

The reasons for poverty are many—disability, old age—low rural incomes, prejudice and so forth. The fight against poverty must have many weapons, some of them subtle, some of them more direct; the most direct, the least complicated, the simplest to effectuate, would be to increase the Federal minimum wage to $1.25. An adequate minimum wage would not only affect the workers themselves but would raise the economic standard of the country generally. It means increased purchasing power, increased demands, from which inevitably all industry and all labor must benefit.

By extending coverage through the elimination of the exemptions for retail establishments and food and tobacco processors, such workers would no longer be in the position of job inferiority and would bring low wages areas into proper ability to compete with other areas with more than a living wage for the workers. Secretary of Labor Mitchell, in testifying before a Senate Labor subcommittee, went on to say that he knew of no sound reason why the minimum wage should not be extended to employees of chain stores, hotels and moving picture chains, including about two million in all. He said that of nearly 1,500,000 retail establishments, only 31,000 or 2 percent are in interstate commerce, but that the 2 percent employ 34 percent of those in business. "They are obviously," he said, "engaged in commerce affecting more States than one. Such commerce is appropriate for regulation by the Federal Government." I wonder if once again his remarks in testifying before a Senate Labor subcommittee will be characterized as personal?

We have witnessed in the past few years the springing up of ghost towns formerly inhabited by traditional business. The New England States and New York State particularly have been hard hit by the movement of industry out of these regions to the south.

I am giving you the facts, but you know them better than I do. You have lived with them in terms of bread and butter, and medical bills, shoes for the children, rent, and education. No amount of statistics can convince as can following the life of a single worker through a single day. No chart, no graph, no table of figures can convince as can the sight of a supper table of a worker and the sight of his clothes in the closet. America's lowest paid and neediest citizens are excluded from a proper share of this increase in the national wealth. This is wrong, cruelly wrong, and we cannot stop until these wrongs are righted. The American heritage belongs to all of us. The American dream belongs to all of us.

Petaluma Chamber of Commerce Endorses Trinity River Power Development by Private Enterprise

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include a letter from the Petaluma (Calif.) Chamber of Commerce endorsing development of power on the Trinity River by private enterprise.

By their April 5 action this organization has alined itself with many others in my congressional district and in other parts of northern California in support of the proposal to allow private enterprise to develop and operate power facilities on the Trinity River. The advantages lie in less construction costs to taxpayers, and in the return of millions of dollars in tax revenue to Federal, State, and local governments.

In appearing before a subcommittee of the House Interior and Insular Affairs Committee last week, I urged power development by private enterprise be adopted. This would serve the best interests of all concerned and, in support of that position, I submit the following:

PETALUMA CHAMBER OF COMMERCE,
Petaluma, Calif., April 6, 1955.

Upon completion of an intensive study of the Trinity project, this chamber of commerce has taken the following action at their regular meeting April 5, 1955:

The Petaluma Chamber of Commerce board of directors urge that should the Trinity project proposed by the Bureau of Reclamation be accepted our legislators give full consideration to the P. G. & E. Trinity partnership plan before any Government operation of powerplants is considered.

We consider the above proposal a decided advantage to the Federal Government.

Cordially,

CLAUDE D. BRADFORD,
Manager.

Misleading Diversions

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. MULTER. Mr. Speaker, a new tax dedline reaches us tomorrow, April 15.

The following item from the Brooklyn Bar Association publication, the Barrister, written by my good friend, Stanley Kreutzer, is therefore, apropos:

MISLEADING DIVERSIONS—A TAX ADDRESS: MODERN VERSION

Twoscore or so years ago, our fathers sent forth upon this Nation a new tax, conceived in liberty and dedicated to the proposition that all men accumulate plenty. Now we are engaged in great calculations, testing whether this taxpayer or any taxpayer, much confused and much impovernished can long endure.

We are met on Form 1040, of that field. We have come to allocate a substantial portion of our income to a final resting place with those now designated to spend our funds. It is altogether anguish and torture when we do this. But in a larger sense, we cannot evade, we cannot cheat, we cannot underestimate this tax. The collectors (clever and so forth), who recheck it, transcend far beyond our poor power to add and subtract.

Creditors may little note, nor e'en remember what we pay here, but the Bureau of Internal Revenue just won't forget that we report here.

It is not for us, the taxpayers, to question the tax which our representatives so nobly spend. It is rather for us to be here consecrated to the great task remaining before us—that from these vanishing dollars, we increase our devotion to those remaining; that we here highly resolve that next year will find us in a higher bracket; so that the lawyer, harrowed and underpaid, shall have time, ability, and money to figure our more deductions; and that this tax, on the people, by the Congress, for the Government, shall not drive us from the earth. (With apologies to another author)

Probation Officer's Comments on Children in Trouble

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise my remarks, I include in the RECORD a recent radio address by Mr. Charles Eliot Sands over station WVOM.

This very interesting speech deals with the problem of juvenile delinquency and is presented by one who has the experience to treat of this subject with penetrating observations.

Mr. Sands has summarized his point of view very ably, succinctly, and well and I think his views would be very helpful in many places throughout the Nation.

PROBATION OFFICER'S COMMENTS ON CHILDREN IN TROUBLE

(Radio address by Charles Eliot Sands, February 4, 1955, Morgan Memorial Church of All Nations, over station WVOM)

As a probation officer for some years at the Boston juvenile court, I have observed quite a large number of so-called bad boys and their families, over a considerable period. These boys have been individuals, and some of them individualists, no two alike in mental ability, physical power, family upbringing, emotional adjustment, or experiences. However, if we leave out of consideration the children who get into trouble only once, or perhaps twice, and consider only the delinquents who more or less continuously break the law, we find that this group has certain characteristics which I should like to discuss briefly.

The most commonly observed trait and one which I believe to be basic is that they are unhappy. A fair number have really good mental ability, but they are not really good at anything—in school, in athletics or competitive games, in craftsmanship, or in art. In most forms of activity they tend to be mediocre to poor. Physical and mental deficiencies in some cases contribute to this, but not in general. A second contributing cause to this feeling of unhappiness may be the sense of insecurity resulting from discordant and irregular family life. Children need from their families essentially regular attention—warm affection and encouragement, and kindly but firm control and discipline. Children are not mature enough to be permitted to go their own ways; they must be guided and supervised. The parent who neglects his family for the bottle is no worse than the parent who from pressure of affairs or business has so little time to spend with the family, that the children grow up without necessary parental attention. Neglected children are unhappy children whatever may be the cause of the neglect. A third factor sometimes contributing to the delinquents' unhappy state is the development within him of a feeling of hostility, merited or unmerited, against some member of his family or less unusually, an outsider, a teacher, a policeman, or perhaps a probation officer. The working out of this resentment may take the form of delinquent acts of all sorts, and against people completely different from the original object of the resentment.

The conclusion is forced upon me that a large number of the boys and girls whom we see, misbehave for reasons of prestige or getting attention. They want to be considered as amounting to something by somebody. They don't want to be ignored. They greedily snatch the newspapers to read accounts of their crimes, even though names of juveniles are not printed. One of my most pathetic—and aggravating probationers, only recently is alleged to have remarked when he saw the account of the shooting of the filling station owner north of Boston, "I'll make the headlines yet." It is this desire to be noticed—for standing in the group to which they belong, which is their own undoing. There would be no point in "pulling a job" as they say, unless they told others about it—and that is usually what brings about their arrest. Policemen presenting complaints against children in court frequently begin their statements with: "As a result of a conversation," and continue perhaps, "I went to the home of the defendant who was in bed, but got up and showed me where he had hidden the articles he had stolen from so and so." In very few cases is the culprit able to refrain from bragging about his job; and prosecutions continue to be begun "as a result of a conversation." Among other characteristics frequently met within our delinquent population is an apathetic attitude, a lack of thought for the future, a sense of futility and discouragement, with regard to work involving sustained effort and interest, largely the result of irregular upbringing and lack of parental attention. The necessity of military service has been used by many of these boys as an excuse for not seriously attempting to find a steady employment. Many of them have actually found themselves in the service and acquire the maturity they lacked—in the regular life, duty, and opportunity for recognition afforded by the Armed Forces.

Some of the boys are influenced by hero worship. It is not uncommon for one boy to state that if his friend is to be sent away, he should go too Recently a bright youngster whom I knew, though he was not on probation, came to the office where my probationers report each week, to inquire about his friend who, already on probation, had got into more serious trouble He wanted to be committed if his friend was, and to prove his right to be committed recited a list of three breaks in which he had taken part, though no complaints had been made to the police I subsequently verified that he had been telling the truth.

For those of us who are parents, there is much to be learned from observation of children such as these. First, we learn the necessity of spending time with our children, of recognizing their actions by appropriate praise and reprimand as the case may be, of checking on their whereabouts, and their companions, but principally finding the time to be with them. It is important to set and maintain standards of honestry, truthfulness, duty, and consideration for others, to inculcate reverence for the spiritual values and truth which religion has passed on down through the ages. Such a task is difficult enough for both parents working in harmony to accomplish. When one of the parents is missing, or unable or unwilling to perform his duty, the burden on the other is greatly increased. I have the greatest admiration for the valiant efforts being made by those mothers who are handicapped by the loss of the husbands, to bring up their children to be God-fearing and law-abiding. They deserve every help, and our social agencies, Department for the Aid to Dependent Children, the Big Brother and Big Sister organizations, guidance centers, the Family Society, Morgan Memorial Goodwill Inn, and many others do a great deal to lighten their load.

In the last analysis courts such as the one I serve, and criminal courts in general, are a measure of our own inadequacy in the bringing up of our children. Courts or similar institutions we shall always have with us, but I find it somewhat shocking to contemplate that general observance of the Golden Rule would render all criminal courts obsolete.

The American Free Press Is the Voice of Freedom

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include an editorial from the April 4 issue of the Santa Rosa (Calif.) Press-Democrat.

This editorial, entitled "Two Battles Waged for Minds of Man," compares the benefits to man as epitomized in the American free press—in contrast to the enslavement of man which is the goal of the captive press in countries dominated or controlled by communism.

The function of the American free press is to enlighten mankind and encourage his self-advancement by his own efforts. The captive press, on the other hand, distorts the truth and preaches a continuous barrage of propaganda designed to weaken individual thought and bring about enslavement and privation.

Our hometown newspapers are the constant defenders of the freedom and dignity which are the rights of every American. They accurately report and encourage our progress as individuals under a free way of life.

The difference between a constructive free press and a destructive captive press, is aptly defined in the following editorial:

TWO BATTLES WAGED FOR MINDS OF MEN

As you know, a vital part of communism's present war against the free world is for men's minds. Brainwashing, the brutal combination of inducing physical exhaustion while utilizing mental suggestion is only one phase of the battle to capture the minds of people.

Within Communist countries, the captive press and the captive radio are used to deprive the people of knowledge of true conditions in the free world, and to convince them that serfdom is the most free and most enjoyable way of life there is.

In the free world, Communist propaganda overlooks nothing to capture the minds of men. It seeks to incite class warfare in the free nations, to persuade people that the Reds are peace-loving, to discourage prudent readiness for enemy attacks.

Just by way of contrast, you might give a little thought to the uses of persuasion in the free world, contrasted to those in the Communist world.

In the American press, you will find many advertisements. In them, manufacturers, distributors and dealers are busy improving the American standard of living by creating mass desire for better and more convenient living. They tell you all about the new automobiles, the new labor-saving home appliances, the new clothing, the new homes. Their object is to persuade you to acquire these things. When you do so, you are increasing your own standard of living—and at the same time creating jobs for the people who make or build the things you buy.

In the Soviet press, you will find little or nothing designed to increase the standard of living or make things easier for the people. Instead, you'll find a continual propaganda barrage designed to scare the people into being willing to do without even the most

elemental necessities of life. The objective is to persuade people to do without consumer-goods, not to persuade them to enjoy more of them.

There seems to be two battles for the minds of men going on in the world. The Communist one is to persuade people to accept privation. The one in the free world is to persuade people to enjoy more of the good things of life.

Twenty-two Thousand Six Hundred and Sixty-three Red Spies

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to have reprinted hereinbelow an editorial appearing in the Shreveport Times, on Friday, April 15, 1955, entitled "Twenty-two Thousand Six Hundred and Sixty-three Red Spies." I feel this will be of interest to all Members of the Congress. The editorial is as follows:

TWENTY-TWO THOUSAND SIX HUNDRED AND SIXTY-THREE RED SPIES

FBI Director J. Edgar Hoover told a House Appropriations Subcommittee a few days ago that Communist Party membership now comprises 22,663 in the United States. That is a decrease of 2,337 during the past year.

Some people still contend that 22,663 Communists in a population of more than 160 million is insignificant and unimportant. Mr. Hoover pointed out that these 22,663 are hardcore Communists, going deeper and deeper underground every day, becoming more and more difficult to catch in their activities, and carrying on their subversive and anti-American work endlessly.

In other words, there are 22,663 known representatives of an enemy who at the same time are pledged to destroy the American form of government by force.

It would not be stretching things too much to say that in this bloc of 22,663 we have actually 22,663 enemy spies. And they are enemies and representatives of an enemy regardless of whether the technical state of affairs between nations is war or peace.

Mr. Hoover added that the FBI estimates that for every known, working Red there are 10 fellow travelers and sympathizers. That means 226,630 Reds and assistants to the Reds. A fifth column or Trojan horse force of nearly a quarter of a million rabid and rampant workers against American Government and its liberties and freedoms is something that is important, indeed. It presents a grim situation.

Mr. Hoover says that new Federal laws against Communists and communism plus legal reverses in cases of communism in the Federal courts, have sent the Reds deeper and deeper underground and have made it more and more difficult for the FBI to keep track of them. He is not referring to such laws as the Smith Act, under which more than 100 Communist leaders at various levels have been sentenced to prison, but to laws which outlaw the Communist Party or which would make public activities by it illegal.

It is difficult to tell where to draw the line statutorily in regard to communism or any form of anti-Americanism. Legislation against any ideology usually defeats its own purpose. Efforts to control fanaticism by statute rarely get far. Yet somewhere there must be a line drawn—a line of law. Mr. Hoover has raised the point—without specifically arguing either side of the case—that some present Federal laws make it harder for the FBI to keep track of 22,663 known Communist Party members than it was to keep track of more than 100,000 party members when that was the total 10 years ago.

There is another angle to national security which deeply concerns Mr. Hoover and the FBI. That is the fact that there are 229 known alien subversives at large in the United States, potentially dangerous individuals that the Government has been trying unsuccessfully to deport.

A House investigating subcommittee under Democratic Chairman ROONEY, of New York, has come up with a report on this situation which is quite disturbing.

The report states, for one thing, that it was almost impossible to get information about these 229 alien subversives from the Immigration and Naturalization Service.

At first the Service said that all 229 were under constant surveillance. But a check developed that 18 of the 229 were missing, with no knowledge whatever by the Service of where they may be. The check by the subcommittee further revealed that actually there was virtually no check by the Service on the remaining 211.

This comes at a time when bleeding hearts and duped friends of immigrants and subversives are making light of the danger of subversion and are trying to destroy the McCarran-Walter Act, which is aimed at preventing immigration to this country of persons who are likely to become subversives when they get here.

Mr. Hoover said that he does not have enough men in the FBI to keep constant check on the known alien subversives, much less on the 22,663 members of the Communist Party and the estimated 226,000, including their friends and fellow travelers.

All of this raises the question of whether the United States is not really losing in the fight against subversion and subversives instead of gradually winning through cleaning them out of Government posts.

Bill Introduced Providing for Burial of the Six Participants in the Famous Iwo Jima Flag Raising Near Its Memorial

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. CELLER. Mr. Speaker, I have this day introduced a bill to provide burial ground for the six valiant men who participated in the historic flag raising on Iwo Jima on February 23, 1945, close to the Marine Corps War Memorial. The magnificent photograph taken by an Associated Press photographer brought the courageous action of these men to the dramatic attention of every American, and epitomized the heroism and dauntless spirit of all the marines who ever fought in battle for our country. The Marine Corps War Memorial Foundation, through private subscription, raised the money to build this breathtaking monument and it seems both fitting and proper that the men whose images are emblazoned on it, should be permitted to lie forever within its sight. Three of the men lost their lives during the later phases of the battle, and the fourth passed away this year, after having found difficulty in postwar adjustment. Two are alive and well and we wish them every happiness that life can bring.

I hope this bill will find instant favor in the Congress; its purpose is clear and manifest.

If We Back Down

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article, written by Joseph Alsop, which appeared in his column, Matter of Fact, in the New York Herald Tribune of April 15, 1955:

IF WE BACK DOWN

TAIPEI, FORMOSA.—Partly because of the extraordinary vacillations of the Eisenhower administration, trouble on Formosa must certainly be expected if Quemoy and the Matsus are finally surrendered to the Communists.

Try to do what our present policymakers seem never to do. Look at the record of American action on the issue of the offshore islands through the eyes of those most directly affected and you realize at once that the danger of demoralization here on Formosa is bound to be considerable.

Item one on the record is President Eisenhower's famous "unleashing of Chiang Kai-shek" and his sharp attack on the Truman administration for pursuing precisely the policy that the Eisenhower administration has now embodied in the Formosa treaty. To give reality to the "unleashing," the American policymakers strongly pressed the Generalissimo to occupy the offshore islands in force.

Until this pressure was applied in 1953, even Quemoy was rather lightly held. Everyone on Formosa assumed that the island positions were expendable before they were occupied in force. It was by American request, then, that the Generalissimo in effect committed himself, before his army and his people, to defend the offshore islands with all his power.

Item 2 on the record is the quick switch that the Eisenhower administration made last fall as soon as the Chinese Communist threat to the islands became serious. Overruling 3 of the 4 Joint Chiefs of Staff, President Eisenhower decided that the islands which the Generalissimo had committed himself to defend by American request were now to be abandoned without a fight.

The result was the administration policy paper widely known in the inner circles as '54/40—No Fight. As decided by the President, this paper took the firm position that the United States would not assist in the defense of the offshore islands.

But in January came item three, when '54/40—No Fight was suddenly junked in favor of a new decision to abandon the Tachens, but to defend Quemoy and the Matsus. This new policy was so firmly agreed on that on January 19 Secretary of

State John Foster Dulles formally promised Chinese Foreign Minister George Yeh that Quemoy and the Matsus would be publicly guaranteed by the President himself.

According to Dulles, the President was going to give this public guaranty as soon as the Congress had passed the Formosa resolution. On the strength of the minutes of the Dulles-Yeh conversation, American Ambassador Karl Rankin also publicly forecast a guaranty of Quemoy and the Matsus here in Taipei. Meanwhile other American military and political leaders were making fighting noises of the kind that were also heard in Washington in the early stages of the Dien Bien Phu crisis.

Finally, the fourth item in the record was the President's repudiation of his Secretary of State's promise; his refusal to give any public guaranty of Quemoy and the Matsus, and the resulting adoption of the policy—or is it the nonpolicy?—of keeping them guessing. This phase has lasted to the present day, with such incidents as Admiral Carney's background talk about atomic war by April 15 to give it spice.

From this truly fantastic record of continuous tergiversation, one point stands out very clearly. The importance that Quemoy and the Matsus have now acquired in the eyes of Formosa and of Asia is marked "Made in America." We might have got away with abandoning the islands after pressing the Generalissimo to occupy them. But we could not and cannot get away with abandoning the islands after the much publicized January decision to defend them. The first half of the Dien Bien Phu pattern, of big bold, brave talk, has again been traced out in Washington. If we also repeat the second half of that pattern, following the big, bold, brave talk with a quick slink when the chips are down, the effect will be shattering in Asia. And it will be most shattering of all here on Formosa.

With some reason, in view of the record, an American refusal to aid in the defense of the islands will now be regarded here as a shocking betrayal. It can at least be expected to produce the kind of anti-American manifestations that occurred at the time of the Tachen evacuation. And they are likely to be much more serious than the proausterity riot at a Sino-American charity fashion show which was then organized by the more antiforeign group in the Government.

How much further the thing will go, is far more difficult to tell. On the one hand, there is the record of 1950, the last time when the Communists were seriously threatening to attack this island. In the period before the outbreak of the Korean war ended the threat to Formosa, there were the most widespread and alarming signs of disaffection here.

Among a considerable number of traitors in key places, the most significant was the deputy chief of general staff, Gen. Wu Shieh. Gen. Wu Shieh led a considerable group recruited within the general staff and in other key positions, and he was in direct radio communication with Peiping.

According to well authenticated report, Wu Shieh and his group might never have been caught if they had not actually dared to hold an after-hours meeting in the government palace itself. A clean-up coolie blundered into the meeting with his mop and pail. One of the conspirators over-excitedly shot him on the spot. The noise brought the guards, and so the plot was revealed, and Wu Shieh was executed early in June 1950.

There is no doubt at all that the Peiping government is now trying to encourage new treacheries here on Formosa. The return to Communist China of the Generalissimo's old favorite, Gen. Wei Li-huang, was part of a well-planned and well-organized effort. Other such returns are to be expected. Part of the same effort, too, is the prominence accorded the turncoats already in Peiping. In the reorganization of the Peiping government, ex-associates of Chiang Kai-shek have been given over a score of places on the Communist National Military Council.

On the other side of the ledger, meanwhile, there is the stern and efficient police job that has been done on Formosa by the Generalissimo's son, Gen. Chiang Ching-kuo. However much key persons may be tempted to throw in the sponge if America abandons the islands, the fact remains that treachery on Formosa is no longer the easy business it once was.

Balance the strictness of Chiang Ching-kuo's police against the evidence on the other side, and you get a very real doubt. It is certain that if the United States does not assist in the defense of the offshore islands, the military and political demoralization here will be severe. But it is uncertain, because of the prevailing police measures, whether this demoralization will lead to more openly serious consequences. Most probably it will not, but the risk cannot be altogether ignored.

Death of a Monumental Man

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein an editorial which appeared in the Newark Star Ledger of Tuesday, April 19, on the passing of Albert Einstein:

DEATH OF A MONUMENTAL MAN

There is a biblical quality to the story of Albert Einstein.

Like Moses, he was driven from his home, he fought against enslavement and for freedom, and he lived to see the downfall of his would-be conquerors. The armies of the Pharoah perished in the sea, and the armies of Hitler perished under tons of bombs, shells, and rifle bullets.

The ugly excesses of Hitler forced Einstein to flee to this country. We welcomed him, and he repaid us many, many times over.

It was Albert Einstein who put us on the path to the atom bomb. It was his research into mass and energy which paved the way for nuclear fission experiments. But that wasn't all.

Other men of science, who knew of the progress in nuclear research in Germany, tried to make our Government aware of the danger. When Einstein joined their appeal, the picture changed. His prestige gave President Roosevelt the courage to embark on what might have been the costliest wild-goose chase in history. Two billion dollars were spent to create the first atom bomb. FDR knew that the time and money might have been utterly wasted. Einstein's words gave him the prod—and the prop—he needed.

Thus, had Hitler not driven this man out of Germany, Der Fuehrer might have had the atom bomb first.

Albert Einstein said some things and did some things which raised eyebrows. He was not a conventional man. He wore his hair long, and his sweaters were shabby. Very often he spoke out on topics that he really knew little about. He never seemed to realize that idle chatter took on significance when it was Albert Einstein who was chattering.

Now that he belongs to the ages, the things that raised eyebrows will be easily forgotten, and they should be. What the world will remember are his monumental contributions to science.

Politically Speaking

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. BUDGE. The following is a pertinent and timely analysis of the recent address given by Secretary of Interior Douglas McKay at San Francisco. The analysis was written by Mr. John Corlett, staff writer of the Idaho Daily Statesman at Boise, Idaho, and appeared in the newspaper under date of April 13, 1955:

POLITICALLY SPEAKING

In a speech in San Francisco only recently, Interior Secretary Douglas McKay pointed out that the Nation's natural resources are a basis of conflict between two opposite philosophies of government—one that would develop them under the free-enterprise system, the other that would create a Federal bureaucracy to develop them under Government controls.

This battle between these two opposite philosophies basically is the issue in the Hells Canyon controversy.

McKay in his speech pointed out that the original policy of the Government was to place the Nation's natural resources into private hands for development. Here are his words on this point:

"Once, nearly all of that vast area (west of the Allegheny Mountains) was Federally owned. It was the public domain and it embraced 1,462,000,000 acres.

"Directives from Washington could have controlled the destiny of each acre. That vista has always been one to arouse the desire for power of advocates of a gigantic Federal monopoly over our natural resources.

"In other parts of the world today this philosophy of government monopoly has created a living nightmare for hundreds of millions of unfortunate people.

"In the United States, however, the enduring doctrines laid down by our Founding Fathers have assured development of our resources in a creative manner in accord with the basic tenets of a free society.

"There were never any doubts in the minds of the people or their leaders in those early days as to what should be done with the vast expanses of the public domain. From the very beginning the policy was clear. Public land should be transferred to private ownership for settlement and development as rapidly as possible.

"During the first century and a half of the Nation's growth, a billion acres of the public domain were disposed of—or, to coin a phrase, were given away. The 'giveaway' took various forms. First there were public sales to raise funds to support the new government. Land was given away in the form of bounties to war veterans. Grants were given away to the States in aid of education; to encourage development of railroads; and for internal improvements. Pioneers who had settled the wilderness were allowed to buy their holdings at giveaway preemption sales.

"The most successful of the giveaway programs was developed during the Presidency of Abraham Lincoln by the passage of the Homestead Act of 1862.

"The West was settled under this law. Under it American citizens were encouraged to brave the dangers and hardships of the frontier to become owners of the land on which they settled.

"Under the homestead laws we gave away some 285 million acres of the most fertile soil in the United States. Under the mining laws of 1876, Congress provided for the giveaway of the richest of the mineral resources of the United States.

"Prospectors have been and still are encouraged to seek out hidden mineral resources under the open public lands. The miner can stake out a claim on the vacant land. If he finds minerals and develops them he can get a deed to the land.

"Some prospectors strike it rich. A far greater number do not. They 'give away' years of backbreaking toil and hardship and, in the end, their nonproductive claims revert back to the United States.

"As vacant fertile lands became scarce the Congress encouraged additional thousands of settlers to move westward through enactment of the desert-land acts, the timber-claims acts, and literally thousands of other public land laws, many of which although obsolete, still remain on the statute books.

"And so the Nation developed, prospered, and grew stronger year by year. The bulk of the public lands and the resources they contained passed into private hands where the Founding Fathers intended them to be. Under the free enterprise system those resources were poured into the economic lifeblood of the Nation. Great cities and industrial centers spread out over the lands homesteaders had once farmed.

"The minerals, ferreted out by the prospectors, poured from mines, developed with private capital, to provide the raw materials for the world's mightiest industrial machine.

"The productivity of our farmlands under enlightened agricultural practices continues to grow.

"The natural resources of our Nation, in which you, and I and all the people have a stake, are in good hands—in the hands of forward-looking private citizens of the United States of America. Almost all of our known mineral resources are privately owned. About 95 percent of our oil and gas production comes from privately owned land. About 85 percent of our timber production comes from privately owned forests. And about 71 percent of the surface area of the United States is privately owned.

"Those facts are not pleasing to some people. They don't like the way the country was developed. They believe they could have done a much better job. They can point to abuses that occurred in the past—abuses which all of us recognize and deplore—to support their contention that the development of this Nation has not been perfect.

"The rest of the world may think our forefathers did a pretty good job, despite their shortcomings, but not apparently some of our home-grown exponents of all-out Federal domination."

Look for the Light

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I submit the brief article Look for the Light, by Russell Davenport, that appeared in This Week magazine of April 17, 1955:

LOOK FOR THE LIGHT
(By Russell Davenport)

In today's world, the United States is faced with a far greater task than most Americans have hitherto visualized.

This task cannot be defined just in terms of action. It cannot be achieved with dollars, however many we spend. Nor with atomic bombs, however many we manufacture. Nor can it be brought about by increased zeal and cleverness in psychological warfare.

These things are necessary, of course, since without them the entire free world would be exposed to the threat of Soviet force. To counter that threat we must have force at our disposal.

But this is only part of our task. American leadership may be likened to a stone of many facets, which is a thing of little value unless, like a faceted diamond, it is suffused with light. It is the light, and only the light, that can give meaning to American power.

We do not have to reach for this light: Its source is within ourselves. Something of its nature can be gleaned from the famous incident when a friend asked Abraham Lincoln how it could be that both the North and the South should expect God to be on their side. Mr. Lincoln replied, in effect, that he could not pray with much confidence for God to be on his side; his constant prayer, on the contrary, was that he should be found upon God's side.

Whatever may be our religious convictions, we can find the clue to our present task in that attitude of mind. For the light which has now become indispensable to American leadership is the light that is always kindled when men seek in a dedicated manner to relate themselves—not merely to their needs and prejudices—but to truth.

Nixon's Trip

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Monitor, a Catholic newspaper published in San Francisco, Calif. This article, which appeared on March 18, 1955, discusses Vice President Nixon's highly successful trip to Central America.

The editorial follows:

NIXON'S TRIP

We are delighted that our country at long last has seen fit to turn a respectful gaze toward our Latin American neighbors. Vice President NIXON'S extensive trip to Central and South America may wake up some of our reactionary politicians to the need for changing the stupid policy pursued by us for so many years toward Latin America.

There has been a rampant anti-American feeling throughout Latin America which stems from insults they have endured in the past and from a lack of appreciation of their nationalist sentiments and their pride in their ancient culture.

Latin Americans have found it difficult to stomach the air of superiority assumed by their northern neighbors. They resent the North American's overlording attitude, particularly when they recall that the South American attempted to educate the native while the North American simply massacred the native—a peculiar claim to enlightenment as far as the South American is concerned.

They wonder about our logic. They notice, for example, that we constantly talk about our love of democracy and hatred for totalitarianism. But they also notice that the Export-Import Bank establishes a $60-million credit to help set up a steel mill for dictator Peron.

One of the historic weaknesses of our political position in Latin America has been our penchant for going out of our way to curry favor with the worst representatives of totalitarianism. Then we wonder when even the peon scratches his head and murmurs, "Crazy Americano."

Perhaps the greatest stumbling block placed in the way of mutual understanding has been our refusal to recognize the status of the church. The church, in Latin America, is a social force, a basic unifying bond inseparably associated with the national concept.

It is the one thing common to the vast majority of the people. And it is the one thing we will not recognize. Rather, we have given our support to the professional liberals who have done nothing but cause trouble throughout the continent.

What crimes have been committed in the name of fraternity.

Fair Labor Standards for American Workers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, fact sheet No. 1 prepared by the research department of the Textile Workers Union of America, CIO, on "Fair Labor Standards for American Workers." I do hope that the Congress will act to increase the minimum wage during this current session of the 84th Congress.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

FAIR LABOR STANDARDS FOR AMERICAN WORKERS

SEVENTY-FIVE CENTS MINIMUM IS NOW OBSOLETE; MODERNIZATION OF ACT IS ESSENTIAL

The 75-cent minimum wage was adopted in 1949 as a compromise measure. The House Committee on Education and Labor reported that it was inadequate. Not only was it insufficient in 1949, but it has grown obsolete by reasons of changes in our economy since that time.

1. The cost of living has risen

The rise in the cost of living has made the current rate obsolete. The Consumer Price Index as reported by the Bureau of Labor Statistics rose by 14 percent between January 1950 (100.6) and November 1954 (114.6).

It has however been recognized, and previous studies have shown, that the price rise for the lower income groups is likely to be greater than for the group of urban wage earners and salaried clerical workers surveyed by the Bureau of Labor Statistics for developing buying patterns. A previous study for the period from 1935 to 1944 showed a 1.4 percent price increase for the income groups we are herewith concerned, for each

1 percent rise for the group in the Bureau of Labor Statistics survey. If we allow a 25-percent margin, the cost of living for the substandard workers has risen more nearly 18 percent. Correction must be made for this rise in the cost of living.

2. The 19-percent rise in the man-hour productivity of the economy must be reflected in the minimum wage

The Joint Congressional Committee on the Economic Report reports that the man-hour productivity rose in our private economy by some 15 percent from 1949 to 1953 (from $2.302 in 1949 to $2.641 in 1953 on a 1953-dollar basis). On an average annual basis the rise was 3¾ percent. In all likelihood this rate of improvement was maintained in 1954 so that the total rise in productivity since 1949 amounts to 19 percent.

Many workers now enjoy the benefits of the rising national productivity through specifically negotiated provisions called "improvement factors." With the growth of our national productivity the minimum wage should also reflect this rise in our economic proficiency. The Federal minimum wage should be adjusted by this amount.

3. The Federal minimum wage should be corrected for the rise in the cost of living and the growth in national productivity

The cumulative effect of the rise in the cost of living and the growth in national productivity would lift the Federal minimum wage by 41 percent. The direct application of this adjustment would demand a minimum of at least $1.06.

4. General wage increases have lifted America's wage structure since 1950 and require at least comparable adjustments in the Federal minimum wage

The major American industries have raised wages 5 times since January 1950 when the 75 cents minimum was made effective. The total of these increases varies from 38.5 cents to 52.5 cents on basic wages (table I). In addition workers in these industries have enjoyed tremendous advances in fringe benefits which are not directly reflected in the basic wage.

The overall average hourly earnings of production workers in the manufacturing industries have risen from $1.418 in January 1950 to $1.83 in December 1954, a gain of more than 41 cents per hour. In face of this immense advance in all American manufacturing industries, the 75 cents minimum has definitely become obsolete.

5. Minimum wages in union contracts are far above 75 cents

The prevailing minimum wage rates established through collective bargaining are far above 75 cents per hour.

Minimum wages in organized plants

Woolen and worsted textiles	$1.21
Synthetic yarn (American Viscose)	1.30
Aircraft (Lockheed—California)	1.44
Meatpacking (Armour)	1.47
Steel (United States Steel)	1.57
Shipyards (Bethlehem—Atlantic)	1.61
Automobiles (General Motors)	1.75

Source: Bureau of Labor Statistics.

They in fact exceed $1.25 in many industries. A comparison between the actual minimums and the legal minimums shows how unreal the latter has become for broad segments of American industry.

6. Fair labor standards demand a "more adequate minimum wage"

The inadequacy of the current minimum of 75 cents was attested to by the legislative committee at the time it was adopted. It is not enough merely to correct for the rise in the cost of living or the increase in national productivity. We must also advance our minimum to establish wage levels more nearly approximating a decent American living standard. We can abolish substandard conditions not by keeping pace with the above changes, but by advancing more nearly to a level of adequacy.

One level of adequacy is that provided by the citys worker's family budget for 4 persons, calculated by the Bureau of Labor Statistics. It is described as providing the "necessary minimum with respect to items included and their quantities as determined by prevailing standards of what is needed for health, efficiency, nurture of children, social participation and the maintenance of self-respect and the respect of others." This "necessary minimum" was priced by the United States Bureau of Labor Statistics for 34 cities in the United States in October 1951. The annual cost varied from $3,812 to $4,454. (See attached table II.) On the basis of a full work year of 2,000 hours, it would require a minimum rate of $1.91 to earn enough to meet the lowest budget figure ($3,812 in New Orleans) as of October 1951. Price rises of 2 to 3 percent since that date mean that the current hourly earnings needed are approximately $1.95.

Another level of minimum adequacy is that provided by the emergency budget for a family of four compiled by the Works Progress Administration. It is described by WPA as follows:

"The emergency budget is for an emergency standard, which may be necessary under depressed conditions * * * (It) is a direct concession to conditions produced by the depression, constructed in recognition of the fact that there are circumstances under which families can and do cut costs temporarily without physical discomfort. Followed over a long period, the practices called for in the emergency budget may prove harmful to both health and morale.

"The emergency level (which is below the maintenance level which represents normal or average minimum requirements for industrial, service, and other manual workers) takes into account certain economies which may be made under depressed conditions * * * The emergency level allows more exclusively, though not entirely, for material wants (in contrast to the maintenance level which 'also gives some consideration to psychological values'), but it might be questioned on the grounds of health hazards if families had to live at this level for a considerable period of time."

The above description of the emergency budget by those who constructed it indicates the dangerously low level at which it is set. There can be no dispute that workers whose earnings do not allow this standard are definitely predestined to poverty and substandards of living.

The annual cost of this buget on the basis of November 1954 prices would be $2,430; it would require a minimum rate of $1.22 for a worker working 2,000 hours a year to meet the emergency standard.

Finally, the adequacy of the minimum wage can be measured against the standards established under State minimum wage laws. In New York State, "the cost of a standard which provides minimum adequate maintenance and protection of health" was found by the State Department of Labor to be $2,442 for a working woman living with her family as of September 1952. This would require an hourly minimum of $1.22, assuming 2,000 hours of work per year.

TABLE I.—*General wage increases in major American industries, 1950–54*

Industry	1950	1951	1952	1953	1954	Total
Aircraft (United)	13 cents plus [1]	14 cents plus [1]	9 cents	11 cents plus [1]	5 cents plus [1]	52 cents plus.[1]
Aluminum (Alcoa)	10 percent (average 14¼ cents).	12 cents plus [1]	20 cents plus [1]	8½ cents plus [1]	5 cents	50¼ cents plus.[1]
Automobile (GM)	10 cents	14 cents	8 cents	7 cents plus [1]	3 cents	42 cents plus.[1]
Automobile (Ford)	11 cents	14 cents	8 cents	7 cents plus [1]	3 cents	43 cents plus.[1]
Bituminous coal	8¾ cents plus [1]	20 cents	23¾ cents plus [1]			52½ cents plus.[1]
Electrical (GE)	10 cents (plus 1 cent inequity).	15½ cents	9 cents average	5¾ cents average	5 cents plus [1]	45¼ cents plus.[1]
Farm equipment	13 cents	14 cents	9 cents	2 cents	6 cents	44 cents.

One Hundred Banks Control Half United States Bank Deposits

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following item written by Ed Wimmer, president of Forward America Publishing Guild and vice president of the National Federation of Independent Business:

ONE HUNDRED BANKS CONTROL HALF UNITED STATES BANK DEPOSITS—LOCAL MERGER OPPOSED

(By Ed Wimmer)

If approved by stockholders and the Government, the merger of Lincoln National Bank of Cincinnati, with the Fifth Third Union Trust Co., will drive another nail into the coffin of the banking democracy that helped to build one of America's greatest trading centers.

Absorption of the Lincoln National would chalk up the eighth merger of Cincinnati banks in the last 4 years, and according to a conversation we reported some weeks ago, another consolidation of two prominent banking institutions is in the serious talking stage. All of these mergers were protested in this column, and we carried our objections to the Comptroller of the Currency, the Federal Reserve, the Banking and Currency Committee, Department of Justice, and to Members of the House and Senate—who are now taking the bank merger fight into the Halls of Congress itself.

Similar steps will be taken by our office to halt the Lincoln National-Fifth Third marriage, on the grounds that present trends to concentration of banking and business in fewer hands has already put the United States far down the road to socialism. Since World War II, more than 600 of the Nation's banks have disappeared in mergers. The 100 largest banks now control more than 50 percent of all United States bank deposits. Trans-America controls 43 percent of all the deposits in California, 44 percent in Oregon, 78 percent in Nevada, 20 percent in Arizona, and 5 percent in Washington.

On the corporate front, one-tenth of 1 percent of the corporations (1946) owned 49 percent of all corporate assets, while 12 percent controlled 98 percent of all corporate assets. More than 50 percent of the major newspapers have folded up or merged since 1920, and during this same period of so-called progress, the number of dairy plants, bakeries, breweries, steel mills, mine owners, automobile companies, soap manufacturers, flour mills, tire makers, and other lines, have been reduced accordingly. Every day we hear more and moer about a "big three," "big four," or "big five"—all the while prattling about free enterprise and the American way.

William Baxter, the most realistic economist in the country, has viewed this trend as leading to certain disaster. He says that "no prosperity in any part of the world, under any political regime, can continue when it is so cockeyed that the big fellow is taking over while the independent retailer, banker, manufacturer, and wholesaler is falling by the wayside." Baxter called present day competition becoming more and more the law of the jungle, and he points out that what we see in the auto industry as a result, "will be repeated in one line after another."

In recent months this column has been putting more emphasis on the moral issues involved in the exchange of goods and services, and in all steps taken to preserve the status of the independent enterpriser. We have argued consistently, that Christian and economic progresss is an inseparable problem, thus making unfair competition a violation of Christian principles. Recently the Churches of Christ issued a statement to this effect, declaring:

"The union of economic and political power is a dangerous road, whether it leads to complete state control of economic life, or control of the state by centers of economic power. * * * Christians should be guided by their ethics to seek such practices as will serve most fully the three values of justice and order and freedom."

The independent bank, independent business, and farm, represent the three pillars of a free society, and it should therefore be clear that if cutthroat competition, monopoly power or any other force is tending to weaken or destroy these pillars, then the world conquest of the Communists is made that much more certain. It is to be deplored that more independent bankers and businessmen do not rise up and defend themselves and their country against such threats as I have mentioned, but have the majority of the people ever resisted evil—until catastrophe was at their door?

We hope the stockholders of the Lincoln and Fifth Third Banks will refuse the stock bribes and soft berths of the new bank combine, and like the stockholders of the Bank of Ludlow, Ky., vote against this merger.

New Thinking on Our Asia Policies

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. UDALL. Mr. Speaker, world attention is focused this week on the Nations of Africa and Asia who are meeting in Bandung to discuss their mutual problems. Of the free countries represented there, India is potentially the strongest ally of the democracies.

With good reason, we in this country are exasperated at times by the statements and actions of Prime Minister Nehru and his associates. At other times it is likely that we have misunderstood his motives and objectives, so perhaps it is well that we make a fresh attempt now to understand India and its leaders.

This effort may prove eminently worthwhile. Former Ambassador Chester Bowles, just back from India, reports spectacular progress in its economic program. Too, he notes that the Indian Communist Party was dealt staggering blows in recent elections. These developments are favorable to the cause of freedom, and, whether we like it or not, India seems destined to be the keystone nation for the democracies in the so-called Asian arc. This is reason enough why we should practice self-restraint and renew our efforts to understand Nehru and the people of Asia.

With these thoughts in mind, I present herewith two recent articles which discuss different aspects of the Asian problem. The first is a challenging report entitled "Memo on Our Policy in Asia" by Chester Bowles which appeared in the New York Times magazine on April 10. The second is a vivid piece on Nehru which appeared in the April 8 issue of Commonweal magazine and was written by Father Jerome D'Souza, S. J., who formerly represented India at the United Nations. Few better attempts have been made than Father D'Souza's to explain the Indian Prime Minister to the American people.

Here is the first article:

MEMO ON OUR POLICY IN ASIA

(By Chester Bowles)

I returned from a recent trip to Asia profoundly impressed with the progress being made in India and Burma, and in certain respects, in Pakistan. The picture in India is particularly heartening. The Indian economy is growing stronger and more productive year by year, the Nehru Government is as stable as any in Asia, the Communist Party has suffered serious reverses, and everywhere there is a sense of sober confidence about the future.

But I also found much in south Asia that was worrisome. No thoughtful person could fail to be disturbed by the low state into which our position has fallen, by the steadily growing power and prestige of China, and by the gap which exists between the views commonly expressed in America and those held by other non-Communist peoples.

I do not want to overstate my pessimism, much less to sound irresponsibly alarmist. I write only after sober reflection on the manifold, mixed impressions I have had in recent weeks, and after considering carefully the qualifications which must always be placed against such general judgments.

Reluctantly, I have concluded that our position in Asia will continue to deteriorate unless we modify sharply many of the concepts that we now seem to hold most firmly. Otherwise the day may not be far distant when we shall find the balance of power in Asia, and eventually the world, shifting inexorably against us.

I do not think it is too much to say that the danger to American objectives and interests is as great today in Asia as it was in Europe in 1947. Moreover, many of the fundamental advantages which we held then in Europe are not now available to us in Asia.

What follows is a 10-point memorandum setting forth the basic factors in the present crisis as I see them—and some suggestions as to what I believe can and must be done about our relations with non-Communist Asia. The weakness of our position in regard to Matsu, Quemoy, and Formosa, dangerous as it is, simply reflects these broader problems which must soon be faced.

1. The halting of communism in Asia is essential to the stability not only of that part of the world but also of the Middle East and Europe. Once the free world starts to crumble, it could go fast. In our present situation Lenin's observation that "for world communism the road to Paris lies through Pekin and Calcutta" has a dreadful validity.

2. Communist China's prestige and influence are steadily increasing throughout Asia, even among those who are ideologically opposed to communism. Asians are impressed by Red China's growing economic and military strength and by the fact that she is achieving a strong sense of political unity, ideological discipline, and patriotic morale.

3. We have dangerously minimized the influence of Red China because we have failed to understand the nature of Peiping's appeal to non-Communist Asians. From bitter experience we Americans have developed a justified, but stereotyped picture of the Peiping Government. We see a country allied

with the Soviet Union, and bitterly opposed to our interests, a country whose doctrines and practices, steeped in cruelty and dishonesty, we deeply dislike.

Most non-Communist Asians are also aware of these facets of the new China and in varying degrees are repulsed by them. But this impression is often obscured by other aspects of modern China which have a fundamental appeal in Asia. These peoples see China as a nation which has participated in the common struggle against Western domination and which shares with other Asian nations such basic problems as poverty, illiteracy, and lack of industrial development. Throughout Asia there is widespread admiration for the vigor with which Red China is attacking these problems.

Moreover, there is a steadily growing, anti-white racial consciousness, particularly in south Asia, which finds a powerful rallying point in the Chinese slogan, "Asia for the Asians," and which will be vigorously exploited at the forthcoming Asia-African conference in Bandung, Indonesia. Thus a majority of non-Communist Asians have arrived at a picture of Communist China which, although still not fully crystallized, is dangerously different from our own.

4. Communist China's dynamic rate of development, her strong appeal to many Asians, and her bitter antagonism to the United States make her at least as great a potential threat to the stability of Asia as the Soviet Union itself. China's huge population in a limited land area would produce important geopolitical pressures regardless of communism. Her dwindling margin of potential increase in food production makes it likely that within the next 10 years she may be sorely tempted to expand into the rich and relatively empty lands of Burma, Thailand, Indochina, Malaya, and Sumatra.

5. American military power supported by Formosa and South Korea plus an alliance which includes only such Asian nations as Thailand, Pakistan, and the Philippines, is unlikely to contain Chinese ambitions during the next 20 years. On the military maps these five nations appear as a formidable ring, but they include only 12 percent of Asia's people, and their power does not appear decisive.

The Chinese seem to have no idea of the destructiveness of atomic power. Mao's success has conditioned him to place his reliance on ideology, propaganda, central organization, and mass armies. He is probably correct in assuming that atomic slaughter of Chinese civilians would turn the world against us.

6. For the long haul, an affective counterbalance to China can only be provided by Asian nations strong enough and dedicated enough to defend their independence. The heart of such a counterbalance must eventually lie in India and Japan. Thus these two nations are the primary key to the peace and stability of Asia in the next generation.

As the French discovered in Indochina, the decisive power lies not in bombs, but in people. Between them India and Japan have one-fifth of the world's population. They also hold the strategic geographical positions on the periphery of the great Asian land mass. They have 75 percent of Asia's total industrial output, millions of skilled and potentially skilled workers, and India has vast natural resources. With her long religious and cultural heritage, India offers by far the most significant counterforce to communism in Asia. If she and Japan should slip under Communist domination, the rest of Asia would go, too.

7. India, like most other non-Communist Asian countries, is developing emotional ties with China. This is happening in spite of india's rapid economic progress, the lessening of the internal threat from communism, and the confidence of her leaders that they can meet the economic demands of their people through democratic means. And it is happening in spite of India's opposition to communism as an ideology.

At the same time India and America are drifting steadily apart. Three weeks of intimate discussions with Indian political, business, and religious leaders have convinced me that in a psychological and philosophical sense the gap between our two countries is already perilously great. Reports from Japan indicate the same unhappy development there. The Hatoyama Government was elected on a platform which promised the best from both worlds. If that government eventually fails, the drift of Japanese foreign policy is not likely to be more favorable to us.

8. The fact that the Soviet Union is now willing to provide economic aid for non-Communist Asian nations provides a further complicating element. Competent Soviet technicians are beginning to move into India, in some cases, I was told, following the refusal of the United Kingdom and the United States to meet urgent Indian requests for assistance.

Recently India turned to Russia for help on a steel mill after unsuccessfully seeking loan capital in the United States. Plans for a large mill are now well advanced, with Soviet capital assured. Within a few months, I was told, 200 Indians will be receiving advanced training in industrial management and technical planning in Moscow in connection with this one project. Since we have refused to offer the massive, long-term loans which India requires to meet the bold industrial goals of her Second Five Year Plan, India may feel forced by the heavy political pressure for rapid progress to turn increasingly to Moscow.

9. The ominous deterioration of America's position in Asia stems from many complicated factors among them the things we say as well as the things we do. Here are some of the major forces working against us:

(a) Many non-Communist Asians, tragically, have come to consider us a militaristic people because most of the things they hear about us are of a military nature. A recent survey of the newspapers in the Indian state of Hyderabad revealed that 82 percent of all mentions of America in a single month involved military subjects, many of which were reports of belligerent-sounding speeches by American military, governmental, and congressional leaders.

Most south Asians place their principal faith in the strength of people and ideas, and tend to discredit the power of weapons. They contrast the success of the militarily weak government of free Burma in suppressing a formidable Communist rebellion, with the failure of massive French military power in colonial Indochina backed by $3 billion of American military aid.

Asians feel that their future will be largely determined by their ability to create inner political and social stability through economic reform and development. Most of them admit that communism is a military danger, but they believe that a more immediate danger lies in Communist subversion feeding on lack of economic progress.

(b) Most Asians are convinced that we are violating, in our conduct of foreign affairs, those principles on which our Nation was based, and from which many new Asian nations borrowed freely in establishing their own constitutions. Asians are particularly critical of what they believe to be our continued compromise on the issue of colonialism. Many of them charge us with tying our Asian policies to Asian leaders whose economic, social, and political views are part of the discredited feudal past. Their Hindu and Buddhist religious beliefs lead them to believe that evil cannot be conquered by evil, and that we have lost sight of this fact.

(c) The Indians in particular believe that their judgment on Asian affairs has been proved by experience to be at least as good as our own. They cite these examples:

In September 1950 they warned us that Red China would enter the Korean war if the United Nations Army crossed the 38th parallel; in July, 1953, after heavy casualties, we settled for a truce at approximately the point where they had urged a cease-fire nearly 3 years earlier.

They prophesied that French military power could not hold Indochina even with unlimited American equipment. Their proposal for an Indochina cease-fire in January 1954, was abruptly rejected on the grounds it would aid the Communists. Three months later came the fall of Dienbienphu and the total collapse of the French armies.

They insisted that Chiang could not invade China without involving American forces in a major conflict.

Against this background most Indian leaders are greatly irritated by what they believe to be our failure to consult them or even to treat their views with respect. They are also annoyed by our assurance that the major objective of our Asian policy is to "save them from communism." They consider this approach to be patronizing and tactless, and to ignore the success of their own vigorous efforts to curb internal communism by creating the conditions under which a free society can survive.

(d) These formidable obstacles to understanding are compounded by the fact that most Asians, particularly the south Asians, are ignorant of the events which led up to the cold war impasse. While we were being conditioned by the harsh realities of the Stalin-Hitler pact, by the repudiation of the Yalta agreements, by the rejection of the Baruch atomic plan, by the coup d'état in Czechoslovakia, and by Soviet armament in the face of our disarmament, most non-Communist Asians were caught in the turmoil of their own independence struggle. They were largely oblivious to world events.

(e) Most Asians resent our efforts to force them to choose sides in the cold war. They point out that for 150 years we held ourselves aloof from the struggles of Europe and entered World War II only when we were attacked.

(f) Our energies and fears are concentrated on communism as the primary menace. But many of the present south Asian leaders, because of their own independence struggle, which often involved long jail sentences for them, are more deeply concerned with white colonialism than with Communist imperialism.

10. And yet there is solid ground for hope. Despite the tense attitude of South Asians, their sharp criticism, their frank disillusionment with our country, I am convinced that a deep underlying bond of respect and potential friendship continues to exist. With skill and sensitivity there is still time in which to build on that foundation.

On my recent trip I was struck by the concern with which Indian and Burmese officials descussed American-Asian relation, by the admiration which they continue to express for our democratic heritage, and by the friendly response I received to a blunt speech before the Council of World Affairs in New Delhi on "What is Right With American Foreign Policy." Although most of the audience may have disagreed with my thesis, they vigorously applauded my willingness to speak out frankly.

This reservoir of goodwill, however, is not bottomless. We will run grave risks unless we can soon bring our views into closer harmony, not only with those of most Asians but with those of our Western allies. If free Asia slips away, the support of the majority of Europeans will be difficult if not impossible to hold. The rush for the Communist band wagon will be heavy.

If this long-range analysis of our position in Asia is even partially valid the question arises, "What can we do about it?" It is

impossible in limited space to suggest more than the general direction which our policies might take.

In my opinion, we should start by frankly facing the fact that our ability to influence future events in Asia is strictly limited. India, Japan, and all of Asia may eventually end up under Communist domination, even though we do all the right things. They may remain independent and a growing source of democratic strength and stability, even though we do all the wrong things. Our role is at best marginal.

That margin, however, may be decisive and we cannot afford to throw it away. What we are now losing is our ability even to affect the final result, plus an opportunity to create a partnership with India, Japan, and the South Asian nations—a partnership which might conceivably determine the balance of power for several generations.

As I see it, we must continue to base our Asian policy on the assumption that the Atlantic Pact is the foundation stone of our national security. This means that we must give careful consideration to the views of our Western allies on Asian problems. The situation is complicated by the fact that their views are more radical than our own in dealing with Communist China and more conservative than our own in dealing with colonial problems.

Our present policy is correct in its insistence that a line be drawn against Communist aggression in Asia as in Europe and that this line be defended at whatever cost. However, it is essential for the line, wherever drawn, to be morally as well as physically defensible, and to have the clear support of our European allies and at least the unspoken approval of the great majority of non-Communist Asians.

If, as I believe, our present difficulties are as much the result of our words as our actions, we must find some effective means of reducing our public emphasis on the military aspects of foreign policy. For practical purposes this means a moratorium on warlike speeches and statements by military leaders. American military power must at any cost be kept at peak efficiency. But if we are to convince the world that we are genuine seekers after peace, our foreign policy statements must be less militaristic and less thundering.

Our diplomacy faces a particularly difficult challenge. Its objectives would seem to be, first, to achieve whatever degree of stability and coexistence the Communist powers will allow us; and second, to place on them the onus for whatever cold war differences and tensions continue to exist—and it would be folly to assume that they will not continue. The achievement of this double objective is by no means impossible. It will, however, require a quite different approach in our speeches, public statements, and diplomatic discussions.

In dealing with Asia and indeed with our allies in Europe we must start, not with our interpretations of the world situation, correct though they may be, but whenever possible with the interpretation of those non-Communist nations which may eventually determine the balance of power. Any manufacturer who failed to adopt this basic tactic in selling his products would not long remain solvent. Through diplomatic channels we should frequently discuss the tactics of peaceful solution with such Asian leaders as U Nu, Nehru, and Hatoyama, as well as with Churchill, Eden, and Adenauer.

In order to bring ourselves into a closer relationship with the non-Communist nations of Asia, it is important for us to develop a tenable colonial policy which faces the realities of the present world situation, and yet which remains responsible and practical. Africa requires a fresh, imaginative new look. We must approach Africa as Africa and not simply as a projection of Britain, France, Belgium, and Portugal. Our consideration of Indochina as a projection of France, rather than as an Asian question in its own right, has already cost us dearly.

In our information work we should, I believe, place greater emphasis on a positive affirmation of democratic faith and less emphasis on negative, fear-ridden anti-communism. Our information program should respect the first rule of experienced advertisers and start, not egotistically with what we want to sell, but tactfully with what others want to buy.

We must work earnestly and patiently to find a common ground with India and Japan. While living up fully to our other commitments we must develop a priority approach toward these two key nations; without them a free, stable Asia is impossible.

Economic holding actions may be necessary to keep some of the weaker countries from falling apart, but a major share of our aid should go to those nations which have demonstrated growing strength in their own right and which have the potential strength to determine the future. Again, may I emphasize, that this means India and Japan, and, to a growing extent, Pakistan. There is pressing need for a comprehensive aid program which will enable us to work as partners with such nations in their own economic development.

In the present deteriorating situation an adequate loan-grant-technical assistance program is at least as important as the equivalent effort devoted in Asia to military defense. Those who thoughtlessly or in the name of economy seek to block this effort may carry a heavy responsibility when the history of the present period is written.

It will be particularly tragic if we fail to find a means of harnessing America's industrial genius to the clamoring needs of fast developing, modern India. If we allow the Russians to beat us at our own game—industrial development overseas—it will be the ultimate folly.

I am aware that these proposals which I have made amount to a heavy shift in the present emphasis of our Asian policies. I am also aware of the contrary pressures which clamor for the attention of our policy makers.

The putting out of immediate fires in Asia is indeed a necessary objective of American foreign policy. But what we urgently require is a long-range policy geared to the basic realities of present Asian power and potential Asian power, which eventually will write the history of our generation.

A Fresh Attempt To Understand India and Nehru

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. UDALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the second article on Nehru from the April 8 issue of the Commonweal magazine:

NEHRU OF INDIA

(By Jerome d'Souza)

It is probable that no foreign statesman puzzles the American public so much as does Pandit Jawaharlal Nehru, Prime Minister of India. There are, of course, those who do not admit being puzzled; they are sure that Nehru and his most prominent adviser on foreign policy, Mr. V. K. Krishna Menon, are crypto-Communists secretly playing the game of the Communist countries and unwilling to come out in the open in order the better to serve their purposes. It is not much use entering into a discussion with these people. I address myself rather to those who are generally sympathetic to India, realize the importance of her role in the defense of democracy, and yet find the declarations of Mr. Nehru, his comments on international affairs, his frequent disagreement with the stand taken by the United States, exasperating or frustrating.

The perplexity of many in the United States over Nehru's intentions has been increased by recent events. Foremost among them was the Prime Minister's visit to China and his public tributes to the achievements, and to the peaceful intentions, of the Communist regime. Then there is his strong disagreement with, if not active opposition to, the policy of the Western Powers in building up an anti-Communist Southeast Asian Defense Organization. On the domestic front, Pandit Nehru, soon after his return from China, declared that the objective of the Congress Party, hitherto said to be the setting up of a welfare state, was the creation of a socialistic pattern of society in which there would be social ownership of the more important sources of production and a better distribution of wealth and goods. All these seemed to be undisguised moves toward the left, leaving little room for neutrality or nonalinement. But to confound those who believed this came, soon after, Nehru's exceptionally vigorous denunciations of the Communists in India, his stern warnings against their use of violence, and his withering sarcasm for their old-fashioned and unprogressive dogmatism. To crown all this has come the resounding victory of the Congress Party in the Andhra state elections, fought on the issue of Communist versus Congress policy. Before the elections the Communists had 46 members in a house of 146. Now they have 15 in a house of 196.

What is the American observer to think of all this? Is it possible to discover a coherent pattern in this maze of apparent contradictions? I think it is possible to do so, and, owing to the relevance of the subject to the problem of international peace, I think it worth while to attempt it.

Pandit Nehru is not a cold intellectual whose approach to public affairs is that of the doctrinaire, manipulating abstract ideas without allowing the play of temperament and personality. Courage and sincerity are at the root of Nehru's character. His policy is the expression of that character, and its apparent contradictions are the projections of his efforts to see the light and follow it as he sees it. Hence to understand his policy we must understand the man, the qualities of his mind and heart, and the marks that life and its varied experiences have left upon him.

The basic thing to know about Jawaharlal Nehru is that he is a warmly sympathetic man whose instinctive approach to men and things is one of liking and understanding. Antipathies and hatreds are not the moving impulses of his life. His is not a negative but a positive character. He is for something, and only against its opposite because that is unavoidable; his instinct is not to worry about the opposite. This makes it difficult for him to be a strong party man. He sees too much of the other man's point of view to be intolerant. He speaks much and on all sorts of occasions. Yet he never gives the impression of making set speeches but always of thinking aloud, of making an effort to explore a problem along with his hearers. It is this which makes him a fascinating speaker, with a power to capture an audience unique in the country. A journalist once described him as the Hamlet of Asia. There is an element of profound truth in this. It explains his attractiveness as also his curious hesitations and uncertainties.

The outstanding fruit of his sympathy is his passionate love of the masses of India, once politically subject, and still very poor. Nehru discovered this India of the peasant and the worker in adolescence, after his upbringing in a rich family and a long spell of education in England—Harrow and Cambridge. When he returned to India he came under the spell of Mahatma Gandhi and consecrated all his time and energies to the task of Indian freedom. For him, and for Gandhi, freedom was not for the sake of power and the development of national pride but for the happiness of the masses, for the struggle against poverty, ignorance, and disease. Rather too sweepingly he attributed all these ills to foreign domination and foreign exploitation. But from the very beginning, freedom and social justice, political liberty, and some degree of economic well-being, have been indissolubly linked in his mind. All the paradoxes of his future action and speech arise from this double passion, the passion for liberty and the passion for social justice—for equality in the measure that it can be attained.

The passion for liberty, with special emphasis on liberty of speech and of thought—this is Nehru's major motivation. It is based upon the liberal tradition which he imbibed from his English education and from his opposition to the Press laws in India, which landed him repeatedly in British prisons. Moreover, the English liberal tradition came to him impregnated with pride in scientific and material progress. It gave him that tendency to intellectual relativism, that insistence on the dynamism of life and ideas, on the continued shifting of values, which would be disturbing and would make for opportunism in politics if they had not been guided in him by a strong sense of permanent moral values. This sense is no doubt the fruit of Nehru's Hindu background, and of his close association with Mahatma Gandhi. But his love of liberty makes him an unequivocal adversary of the Communists and their adhension to dogmas he considers outmoded and to economic theories he thinks are not applicable to the present epoch. And, incidentally, his opposition to dogma limits his sympathy for the Catholic Church for which he has, on other grounds, very considerable respect.

Next, there is Nehru's passion for human equality and for social justice. Now many reasons exist why this ideal of social justice cannot be realized in India by private effort. There are caste conventions and prejudices which perpetuate social injustice and which can be ended only by the action of the state. Hence the suppression of untouchability by law, as in former times the prevention of suttee and of child marriage. Then again as regards material improvement, there is in India a lack of industrial tradition, and an insufficiency of private capital to insure the fullest utilization of national resources so as to increase production and raise the standard of living of the masses. Hence the need for the Indian state to undertake many enterprises itself. Pandit Nehru has always believed in planning. Even before the independence of India, he had been instrumental in setting up a planning committee under the aegis of the Congress Party. The Planning Commission of Independent India and our two 5-year plans are the realization of that early dream. In this belief in the need for and the efficacy of planning, Pandit Nehru's faith in scientific methods for industrial progress and his love of the poor are combined in equal measure.

The system of democratic planning and state control which India has adopted has undoubtedly been influenced by the example of England. It is this faith in a planned economy which has led to widespread appreciation of the achievements of Russia and China in the industrial and social fields. The conviction that we have much to learn from those countries is honestly held by many in India, and sedulously spread by others. Hence, too, the popularity of Nehru's foreign policy which, while it is based upon the desire not to be involved in a possible third world war, implies more sympathy for, or at any rate less antipathy to, the Governments of Russia and China than is possible in other democratic countries.

We should be able to see why, in spite of the fundamental identity between India and America as regards devotion to the democratic ideal, there are points of divergence which Pandit Nehru cannot help emphasizing in his declarations of policy and in his intervention in international affairs. The American economy has developed in conditions of the widest industrial freedom. American resources and the actual and potential wealth of America are such that the widest differences of wealth need not interfere with general well-being and the maintenance of social and personal equality. The land of the millionaire has not ceased to be the land of the common man and of the most unconventional mingling of high and low. In India, however, it is impossible to achieve the same results by employing the same means. The historical antecedents in the two countries are totally different.

There are other dissimilarities between America and the India of Nehru's dreams, which increase the sense of divergence. Though not a believer in religion in the ordinary sense of the term, Pandit Nehru is very far from being a materialist in his practical approach to life. His appreciation of the things of the spirit, his love of science and art, his profound sense of history, and his personal austerity and simplicity of life are essential elements of his complex personality. Hence the practical materialism and the pursuit of comfort and pleasure, which to him seem characteristic of America, cannot but repel him. He certainly does not believe that the American way of life, particularly in those aspects which tend to be most easily imitated abroad, is a good or practicable model for India.

To aggravate these divergences on what may be called the attitude on life, there is definite disagreement between India and America regarding the means of preserving peace, and on United States policy toward the eastern bloc. There is no doubt at all that the objective of America is the preservation of peace, just as it is the objective of India. But America is convinced that this can be done only by the maintenance of military strength and by impressing upon the Communist bloc that aggression would mean a losing war for them. Nehru, however, believes that the policy of rearmament and the threat of massive retaliation leads only to a suicidal race in armaments, and that the negotiation of military agreements increases rather than diminishes the danger of war. Which of the two views is based upon a correct understanding of the psychology of the Communist powers? Possibly both are right: the Communists might not have held out any hope of coexistence if western strength was not so formidable; but now that they do talk of it, a reexamination of western policy may be desirable.

Whatever the reasons, India believes that the Communist powers are actually as much in need of peace as is the Democratic bloc, and that if mutual fears of aggression were eliminated the two sides would settle down to some kind of practical coexistence. India is convinced of this more particularly in regard to her own relations with China. Hence her support for the recognition of China and her efforts to live in friendship with her. India does not feel that she needs to arm herself against possible attack by China, at least not to the extent of entering into a military alliance with the West and accepting foreign military aid. She believes that Panchshila, the five principles of peaceful coexistence and mutual noninterference, can regulate her relations with China for good.

Behind this attitude on rearmament and military alliance, is there on the part of Pandit Nehru and the Indian people generally something of the traditional pacifism characteristic of India and reflected in the teachings of Mahatma Gandhi on Ahimsa, or nonviolence? This is more than probable. In the better minds of India there is an instinctive horror of violence and bloodshed. For Pandit Nehru this horror is reinforced by his passionate pity for the poor and his conviction that the masses, rather than the rulers of the country, have to pay for war. Weapons of mass destruction are for him the embodiment of evil as he once described the atom bomb. Though there are significant expressions of opposition in India and in the Indian Parliament to Nehru's attitude toward China, and warnings of the need to arm against possible Communist aggression—warnings strengthened by the ominous approach of China to the Indian frontier from the vantage ground of Tibet—it is safe to say that the vast majority of Indians support the Prime Minister's policy toward China and the problem of southeastern Asian defense.

The areas of divergence between India and the United States have been further widened by the decision of the American Government to give military aid to Pakistan. Nothing in recent years has done so much as this to strain relations between India and the United States of America. In addition to being another instance of the American policy of safeguarding peace by military alliances, this particular alliance had repercussions on the internal policies of the Indian subcontinent. It modified the balance of power between India and Pakistan and gave an advantage to Pakistan in the discussion of questions which divided India and Pakistan, particularly the problem of Kashmir. Undoubtedly the intention of the American Government was not to strengthen Pakistan against India, nor would it countenance the use against India of the military aid thus given. But the spokesmen of Pakistan made no secret of their feeling that the aid strengthened their bargaining position in their dealings with India. Indians generally did not believe that America would be able to control Pakistan to the extent of preventing all use against India of the aid given. Dr. Syngman Rhee had shown to Pakistan how even the one at the receiving end of the bargain could act independently, and cause serious embarrassment to America. The opposition in India was unanimous. All shades of public opinion were agreed in condemning the American move—the Congress Party representing the government, the Hindu right wing and the Communist left wing representing the opposition. What was undoubtedly a diplomatic victory for the United States of America was offset by a serious loss of good will in India.

An improvement of relations between India and the United States is certainly desirable. There are points of similarity between the two countries and identity of interests on most points which make collaboration between them natural and mutually advantageous. But is it possible under present conditions? I believe that a slight modification of these conditions will bring about an immediate amelioration.

There must, of course, be an easing of international tension, which will diminish the occasions for the two to be ranged on opposite sides. There must be improvement of relations between Pakistan and India. Both these eventualities may not be so unlikely as some may be inclined to believe. Moreover, it would seem that there is already a shift in the emphases of American foreign policy involving the eclipse of some of the more prominent advocates of toughness. In

fact, the resolute moderation and wisdom of General Eisenhower in his approach to international problems, his role in preventing crises on several occasions, have increased Indian respect and friendliness for America. This can certainly be augmented by more mutual tolerance in evaluating the policies of each other. But the underlying causes of divergence between the two countries make it clear that under present conditions, and under Pandit Nehru's leadership, there is little chance of India's abandoning her policy of nonalinement. The United States must understand this and work from there.

Gen. Peyton Conway March

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SHORT. Mr. Speaker, in 1898, a fews days before the Battle of Manila Bay, I was born in the Ozarks of Missouri, when most proud parents named their horses, cats, dogs, and kids after Admiral Dewey. I suffered that common fate by being named after the Admiral at the very time that Peyton Conway March saw action in the assault and capture of Manila.

By the time I was able to read I learned not only about Admiral Dewey, but became interested in Peyton March, who had seen action with the admiral and became interested in him not only as a great military leader, but also as a human being.

At that time, as a youngster, I little realized that it would ever become my privilege to meet and know Peyton March personally. That time, however, came.

For 15 years, Mrs. Short and I lived only 2 or 3 blocks from him and his beloved wife Cora, and I count it one of the greatest privileges and rarest opportunities of my life to have become not only well acquainted with him but to know him and to love him. To really know Peyton March—and not to many people ever did—was to love him. Underneath his tough skin was a warm and friendly heart, a courteous, kindly, and gallant gentleman.

Yesterday we buried one of America's greatest soldiers, patriots, and citizens of all time. The outpouring of both military and civilian people was an attest to his goodness and greatness. Even those who disagreed with him in life were present to pay their sincere and genuine respect and admiration to an outstanding leader.

Peyton C. March was a man of steel. He possessed an iron will and uncompromising conscience, an inflexible devotion to duty and boundless energy. Forever he will remain the epitome of the true soldier. He was a stern and strict disciplinarian—but he never made demands on others that he did not make upon himself. He drove himself hard and he drove everbody around him hard. At times he may have seemed petulant, impatient, irascible, and ruthless, but always he acted in the high manner which he felt was best for his country.

Stiff and straight as a ramrod unto death at 90 years of age, he refused to be pushed around by anybody. At times he was defiant. Presidents, Secretaries, and Congresses did not frighten him.

Peyton March was a man of unconquerable courage, indefatigable energy, and utter devotion. He was not perfect, but he always strived for perfection. Nothing but the best would ever satisfy him. Duty and service to God, country, and his fellowman were the watchwords of his life.

In the dark hours of World War I it was his brilliant intellect, his organizing genius, his administrative ability, his unfailing faith and tireless labors that transported more than 2 million men to France—when our methods of transportation were much fewer and slower than they are today. It was an incredible accomplishment which seemed next to impossible in those days. He cut through Government redtape without hoping to make friends, and realizing at the time that he would make some enemies, in order to get a great and important job done.

General Pershing, my fellow Missourian, could never have accomplished what he did on the battlefield without the drudging efforts that General March put forth on the home front.

The glamorous and spectacular publicity and boxcar headlines never appealed to Peyton March as much as doing his job well without pomp and public acclaim.

Mr. Speaker, General March had a fine family. His father was a great scholar who taught at Lafayette College and bequeathed to his illustrious son many of his scholarly instincts and talents. Peyton March himself was a great scholar and an avid student of history. His impatience with those less fortunately endowed should be forgiven because of his rare accomplishments. His two lovely daughters are married to two distinguished and outstanding retired generals of the United States Army, Lieutenant General Joseph Swing, now Commissioner of the Immigration and Naturalization Service, and Major General John Milliken. These generals won their own spurs in their own rights and never depended upon General March for personal advancement. General March's present and second wife Cora, a brilliant woman and a devoted wife, all but worshiped him. Their life together was most happy and successful. To her and to all the members of his family we all extend our deepest appreciation and sympathy.

Mr. Speaker, I wish that I might say something to assuage the sorrow of these dear ones and the many friends who mourn the passing of General March. All of us can take comfort and inspiration from the noble life, rugged character, and unselfish service which Peyton C. March rendered undyingly to his country.

Under leave to extend my remarks I include the following newspaper articles that fairly, but inadequately speak of this great American—scholar, soldier, patriot, servant of his God, his country, and all mankind. Following these articles is the 91st Psalm, the passage of Holy Scripture which General March loved best and cherished most:

[From the Washington Post and Times Herald of April 14, 1955]

GENERAL PEYTON MARCH IS DEAD HERE AT 90

Gen. Peyton Conway March, Army Chief of Staff in World War I and America's oldest general, died at 5 p. m. yesterday at Walter Reed Hospital. He was 90 years old last December 27.

Death came peacefully to the tough, outspoken, loyal military leader in his third-floor suite overlooking the formal gardens of the hospital where he had been confined to a bed or wheelchair since he broke his hip 14 months ago.

His attending physician said he died of a degenerative condition of old age. His wife, Cora, was at his bedside.

The general amazed the Germans in 1918 by achieving the almost incredible task of ferrying more than a million doughboys to Europe to crush the foe. Later he won the Distinguished Service Cross for leading a charge on enemy breastworks in France.

CLASHED WITH PERSHING

The dynamic militarist was, however, overshadowed in World War I by his bitterest rival, Gen. John J. Pershing, who headed the Allied Expeditionary Force.

His verbal clashes with Pershing broiled on after the war ended. In 1921, after he lost his title of full general, being relegated to major general, he slipped into retirement. He continued to live a vigorous life, making his home in a spacious apartment with his wife at 1870 Wyoming Avenue NW.

But he avoided the public spotlight and was soon to be known as the forgotten soldier. In his vesper years, however, words of sage advice again came from his lips. At the outset of World War II, he advocated a cross-channel invasion with an Allied army of 3 million. He took sharp issue with Gen. Dwight D. Eisenhower.

In 1930, General March regained his full rank, and in 1948, upon the death of "Black Jack" Pershing, he became the highest ranking officer of World War I.

General March's peppery temper and outspoken criticism did not gain him many implacable enemies. Among his fellow officers he had always enjoyed the reputation of being a brilliant military officer, organizer and strategist.

Secretary of Defense Charles E. Wilson said in a statement last night that "the long and distinguished career of Peyton C. March is a lasting inspiration to the people of our country he served so long and faithfully. The Nation has lost a great American, whose military career will be long remembered."

Secretary of the Army Robert T. Stevens said:

"General March had a distinguished military career, spanning 33 years during which his leadership was an inspiration for all with whom he served. Long after he retired in 1921 as Chief of Staff, his devotion to the Army caused him to serve as a valued adviser on military matters."

INSPIRING LEADERSHIP

Gen. Matthew B. Ridgway, Army Chief of Staff, said March's "military record reflects an inspiring leadership which contributed immeasurably to the firm foundation on which our Army stands today."

Gen. George C. Marshall, former Secretary of State, Secretary of Defense, and World War II Army Chief of Staff, said March "was throughout his lifetime devoted to the interests and welfare of the Army." He said March played "an important and difficult role" during World War I and that "his contribution to that conflict and studious de-

velopment of plans for demobilization were of great significance."

Born in Easton, Pa., December 27, 1864, March graduated from the United States Military Academy June 11, 1888. Before he became Army Chief of Staff on May 29, 1918, he had served in France as artillery commander of the AEF.

MADE GENERAL IN 1918

March first saw active service in the Philippine Islands in 1898 when he participated in the assault and the capture of Manila. Later, he was detailed to Tokyo, in March, 1904, as military attaché on duty in the field with Japanese troops in the Russo-Japanese war.

When the United States entered World War I, he was a colonel on duty with the Second Division at Fort Bliss, Tex. He sailed for France in May of that year. The following year May 25, 1918, he was elevated to full general.

At his Wyoming Avenue apartment, which was studded with maps and files, March was an assiduous reader and had retained remarkable mental as well as physical agility.

His entire family was together with him last on December 27, where the rail-thin, goateed general observed his birthday with a quiet family party.

Beside his wife, he is survived by 2 daughters, both married to retired generals— Lt. Gen. Joseph M. Swing, Immigration Service Director, 3055 Foxhall Road NW., and Maj. Gen. John Millikin, 5915 Ramsgate Road, Woodacres, Md. Three grandchildren also survive.

Funeral arrangements were not completed last night.

[From the Washington Post and Times Herald of April 19, 1955]

ONE-MILE CORTEGE AT MARCH FUNERAL

Gen. Peyton Conway March, America's oldest general, was buried yesterday in Arlington Cemetery amid pomp and circumstance reserved only for the Nation's greatest military heroes.

The World War I Army Chief of Staff died Wednesday at Walter Reed Hospital. He was 90.

Top military, civilian, and foreign dignitaries headed a mile-long funeral cortege bearing the body from downtown Washington.

Included in the special honor guard following the caisson were Vice President Richard Nixon, Bernard Baruch, Marine Corps Commandant, Gen. Lemuel C. Shepherd, Jr., Army Gen. John E. Hull, Army Lt. Gen. Robert L. Eichelberger, and Representative Dewey Short, Republican, of Missouri.

Baruch was chairman of the World War I War Industries Board while General March was Chief of Staff.

A 400-man cadet battalion from the United States Military Academy, the United States Army Band, and the Third (Old Guard) Infantry Regiment led units of all the armed services in the hour-long march from 15th Street and Constitution Avenue NW.

Tanks from the Third Armored Cavalry, Fort Meade, Md., and an airborne field artillery battery from Fort Bragg, N. C., made up part of the procession down Constitution Avenue NW., across Memorial Bridge to the memorial entrance to the cemetery.

The general's body, borne in state on a caisson drawn by six white horses, was followed by a riderless black horse with stirrups turned backward in the traditional military service.

On a hilltop overlooking the Potomac, Brig. Gen. Frank A. Tobey, Army Deputy Chief of Chaplains, conducted Presbyterian graveside services.

The service, in a grove of maple trees under a cold, gray sky, began as the band sounded Ruffles and Flourishes, then broke into a medley of hymns. General Tobey read the service and led in prayer as soldiers, sailors, marines, and airmen held the American flag taut over the coffin.

The flag was folded and presented to General March's widow, who stood with Lieutenant Gen. Stanley Embick and other comrades of the late general near the coffin.

The military units presented arms and a 17-gun salute from one of eight 105-millimeter howitzers in the cortege echoed over the hills.

General March was born in Easton, Pa., and was graduated from the military academy in 1888. He saw action in the assault and capture of Manila in 1898. He became Chief of Staff in 1918 after organizing the movement and supply of the American Expeditionary Force in Europe. He retired in 1921.

[From the Washington Evening Star of April 16, 1955]

GENERAL MARCH

Gen. Peyton C. March was the beau ideal professional soldier. His whole life—90 years of it—added up to make a great military career. An honor graduate of West Point, he commanded the Astor Battery in the Philippines in 1898 and returned to the islands to work under Arthur MacArthur in the guerrilla campaigns which resulted in the capture of Aguinaldo in 1901. With the Japanese he saw the Russians beaten at Yalu and Liaoyang in 1904—terrible battles which taught him the importance, in war, of "force, force to the utmost."

This was the philosophy General March put into practice in World War I. The first of his missions in that struggle was to organize the artillery in France. Secretary of War Newton Baker called him home to be Chief of Staff and to weld the Regular Army, the National Guard, and the National Army into a single fighting power. The story of how 2 million men were carried over the Atlantic to smash the Kaiser's mailed-fist defenses and compel his surrender and abdication has been told repeatedly. It may be summarized in the words which General March himself used: "We did it."

But the principal architect of the institutional side of the victory was not the rough, tough, hard, sharp, sarcastic, provocative mechanician some critics supposed. Washingtonians who were his neighbors found him, instead, a courteous, kindly, friendly, modestly chivalrous person. He had his own ideas, his own fashion of getting things accomplished, and he did not like to be crossed. Yet it also was true that he could pull in harness, was a skilled cooperator, and in hundreds of instances a faithful friend of fellow officers. Above all, General March was a patriot. He loved his country and its people.

PSALM 91

He that dwelleth in the secret place of the most high shall abide under the shadow of the Almighty.

2. I will say of the Lord, He is my refuge and my fortress: my God; in Him will I trust.

3. Surely He shall deliver thee from the snare of the fowler, and from the noisome pestilence.

4. He shall cover thee with His feathers, and under His wings shalt thou trust: His truth shall be thy shield and buckler.

5. Thou shall not be afraid for the terror by night; nor for the arrow that flieth by day;

6. Nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday.

7. A thousand shall fall at thy side, and 10,000 at thy right hand; but it shall not come nigh thee.

8. Only with thine eyes shalt thou behold and see the reward of the wicked.

9. Because thou has made the Lord, which is my refuge, even the most High, thy habitation;

10. There shall no evil befall thee, neither shall any plague come nigh thy dwelling.

11. For He shall give His Angels charge over thee, to keep thee in all thy ways.

12. They shall bear thee up in their hands, lest thou dash thy foot against a stone.

13. Thou shalt tread upon the lion and adder: the young lion and the dragon shalt thou trample under feet.

14. Because He hath set His love upon me, therefore will I deliver Him: I will set Him on high, because He hath known my name.

15. He shall call upon me, and I will answer Him: I will be with Him in trouble, I will deliver Him, and honor Him.

16. With long life will I satisfy Him, and shew Him my salvation.

A National Flower

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a very interesting article by my friend and constituent, Miss Alvhild V. Holmes, entitled "A National Flower."

Miss Holmes, a talented writer, is a strong advocate of the laurel to be our national flower, and her cogent article in the Worcester Telegram, which was forwarded to me by the distinguished executive editor of that outstanding publication, Mr. M. H. Williams, forcefully sets forth her views. I am also referring this statement for the consideration of the committee considering House Joint Resolution 102.

A NATIONAL FLOWER

(By Alvhild V. Holmes)

Senator MARGARET CHASE SMITH has introduced a bill calling for a law to make the rose the official flower of America. Her fellow Senators have referred it to the Judiciary Committee.

Congresswoman FANCES P. BOLTON is also in favor of the rose as the official United States flower, and offered an identical bill to the House of Representatives. "The United States," she said, "is the only major country in the world without a national flower, and I feel we should add this symbol to the national identification of the United States."

Now far be it from me to malign any flower, particularly a flower so beautiful as the rose. I admit that my garden would be incomplete without its roses, and they are well worth the extra care and pampering they require.

But so far as a national flower is concerned I feel that the rose would be the worst possible choice. And for many reasons.

In the first place, the rose is the national flower of England. Why should we steal the official flower of England when there are hundreds of thousands of other flowers to choose from—almost any of which would be better suited to represent our country than the rose?

The rose is a tender hybrid which must be constantly coddled and pampered if it is to give satisfactory results. That characteristic is not typical of our Nation.

A few years ago a nationwide radio program (the Garden Gate, CBS) conducted a poll among its listeners. The laurel won overwhelmingly as a selection for a national flower. A petition was sent to Congress for a national flower, naming the laurel as the winning selection. But a war was in progress, and this petition probably was forgotten under the stress of more pressing legislation.

The laurel is a far more suitable symbol of our own hardy race. It grows and thrives under the most difficult conditions. It is native to every State in the Union. Its blossoms are star-shaped. They contain two of the colors of our American flag—red and white.

The laurel climbs undaunted up our mountain sides. It requires no care and pampering by any human agency. It defies the elements, and will stand any degree of temperature. It scoffs at adversity. It is ever green and contributes beauty to our countryside the year round.

I am sure that all students of Nature, and of horticulture, will feel that the rose would be a most thoughtless choice as an official United States flower. A choice in which beauty alone is considered. The short-lived beauty of a tender, pampered plant that will not thrive except under the most favorable conditions.

The rose is the favorite flower of both Senator SMITH and Congresswoman BOLTON, but where the selection of a national flower is concerned, the many millions of Americans should have an opportunity to express their opinions.

Don't get me wrong. I love my roses. Come spring, I will be out in my rose garden removing huge piles of spruce and pine boughs which have served as winter covering. During the months to come I will be carrying many bushels of mulching material and many buckets of water. I shall ceaselessly battle their multitude of enemies with dust blower and spray gun. And though my stockings and aprons be slashed to ribbons, and I may be bleeding from a dozen wounds, I shall still say that my roses are worth it.

But the rose as a symbol of our national identification—definitely "No."

Hon. John E. Nelson

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. SHORT. Mr. Speaker, when I first came to Congress as a youngster in 1929, one of the men I first became acquainted with was Hon. John E. Nelson, of Maine. He had served with high distinction and great honor in this body for 10 years, and few men impressed me as much as he did.

John Nelson possessed not only Yankee shrewdness, Southern chivalry, Midwestern warmth, and hard sense, but also the daring and adventuresome spirit of the Far West, and he also displayed a comprehension and understanding of our national problems which few men then or now possess. Always he fought for the interests of his own constituents, but he never overlooked or neglected the needs of others.

Modest in victory, strong in defeat, John Nelson worked hard in committee and was an able debater on the floor of this House. He was devoted to his family, helpful to his friends, and loyal to his country. He followed in and upheld the fine tradition of the statesmen whom Maine has given to this Nation. I shall not attempt to enumerate these great men of Maine, but John Nelson will follow along with Thomas Brackett Reed, James G. Blaine, Hannibal Hamlin, Frank Fellows, and others.

We are indeed fortunate to have serving with us today John Nelson's fine son, CHARLES NELSON, a respected and valuable member of our Committee on Armed Services. Like his illustrious father, CHARLIE knows the necessity for hard work, and is following faithfully in the footsteps of his distinguished father.

To our understanding and cordial colleague, CHARLES NELSON, of Maine, to all the family and many friends of John Nelson, we extend our sincere sympathy and can truthfully say that earth's loss is Heaven's gain.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. RODINO. Mr. Speaker, by unanimous consent heretofore granted, I insert herewith in the RECORD, a communication addressed to me by Mr. J. W. Hall, national secretary of the American Material Handling Society in support on my resolution, House Joint Resolution 231, providing for a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL
HANDLING SOCIETY, INC.,
Toledo, Ohio, April 18, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I would like to offer, in support of your resolution, House Joint Resolution 231 "A National Better Material Handling and Packaging Week," the following excerpt from a letter written to me by Donald W. Pennock, vice president, material handling division of the Society for the Advancement of Management.

He writes, and I quote: "The material handling division of the Society for Advancement of Management confines its activities to the management aspects of the materials-handling field.

"Its educational efforts are addressed primarily at management and college groups.

"We consider materials handling as a very important part of America's business picture. It is a tremendous activity, being experienced in one form or another, in over 2 million industrial and commercial establishments alone. Where improperly treated, it is the greatest single crippler of American manpower. Where properly adopted, its technological advancements offer the greatest immediate potential profit-making available to American industry.

"Perhaps the greatest achievement of the Society for the Advancement of Management Material Handling Division has been its work in helping material handling men of all societies and interests to find more areas of agreement. This has contributed substantially to inter-society cooperation among the big four of the Material Handling Society world, namely SAM, AMHS, SIPMHE, and ASME.

"Society for the Advancement of Management has been particularly active in presentation of material handling subjects of national interest in United States areas where intense material-handling activity has been indicated.

"It has created a means of enabling men to keep the technical and management phases of material handling education abreast of each other, and of bringing management closer than ever before to understanding the work and dreams of the material handling technician and engineer.

"Through its material-handling conferences, SAM has helped focus the attention of American management on the exceptional opportunities offered by modern material handling methods and equipment. This has contributed regular support to the efforts of the $2 billion dollar material handling industry, and of at least 23 magazines and 135 colleges, which have been working toward the advancement of the welfare and growth of the material handling profession.

"The Society for the Advancement of Management is presently preparing an award for annual presentation to that individual making the greatest and most significant contribution to the field of materials handling. It is believed that this award will, in a few years, achieve a position of such honor and national acclaim that it will encourage our best United States material handling engineers and management men to contribute importantly to the advancement of American industry."

As this letter is indicative of the interest that this management organization manifests in the material handling field, may I request that it be entered into the CONGRESSIONAL RECORD as a part of the effort to establish a National Better Material Handling and Packaging Week.

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

Hells Canyon

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. BUDGE. Mr. Speaker, during the first week of this month a subcommittee of the Senate Interior and Insular Affairs Committee held so-called grassroots hearings in the Northwest on the much-publicized Hells Canyon controversy. The editorial comments on April 8, 1955, of the two newspapers published at Portland, Oreg., give an interesting sidelight on those hearings. The following are from the Oregon Journal and from the Oregonian:

[From the Oregon Journal of April 8, 1955]

HELLS CANYON, POLITICAL FOOTBALL

The Journal long has contended that the Hells Canyon project should be evaluated on a realistic engineering-economic basis. But the project has become so involved in politics and emotion that it has been virtually impossible to do so.

This was never clearer than it became during the so-called grassroots hearings of the subcommittee on interior and insular affairs at Boise, Lewiston, Pasco, and Portland this week.

These hearings fairly reeked with emotion and politics.

They produced no new light on the engineering and economic factors on which a high Hells Canyon issue should be judged.

Instead, they gave Democratic proponents—especially Senators MORSE, NEUBERGER, MURRAY and friends—another soapbox from which to exploit the public versus private power issue.

It set Democrats against Republicans, reclamationists against public power factions.

It laid the groundwork for a 1956 race between Senator MORSE, one of the principal sponsors of the Hells Canyon authorization bill, and Governor Patterson of Oregon, who accepted Morse's challenge by openly and forcefully alining himself with the Hells Canyon opposition.

And we're quite sure Senators MORSE, NEUBERGER, MURRAY and friends planned it that way.

In such an atmosphere, it is impossible to judge S. 1333, the bill authorizing an all-Federal high Hells Canyon project, on a factual basis. And that's too bad for the Northwest, which sorely needs power and which sees the meeting of this need stymied by political horseplay.

To us the preponderance of credible evidence appears to be against a high, all-Federal Hells Canyon project, and to that extent in favor of private company, low-dam development of the middle Snake. Here are the reasons:

High Hells Canyon will cost a great deal of money. The two factions can't agree on the exact amount, any more than they can agree on anything else, including the time of day. But it's $400 million at least—not counting transmission lines or any assistance Hells Canyon might give the Mountain Home reclamation project in Idaho.

Even if the authorization bill were approved by the Congress—and we don't think it could be—what chance do you think we'd have to get Federal money for this tremendous and highly controversial project? Virtually none. And even if money were available to start work today, it would be 8 or 10 years before power could be produced.

Before we could get it built, we'd be in the power bind. And for that matter, the 1947 plans for Hells Canyon would be obsolete, as obsolete as the 308 report in which it is included and which is now almost 10 years old. On an engineering basis, the longer it would take to build high Hells Canyon the less valuable it would become. With the advent of more modern steam and nuclear power, its principal value might be for peaking purposes only.

Thus as a practical matter high Hells Canyon is a lost cause. So why beat our brains out over it?

Furthermore, we agree with Governor Patterson that high Hells Canyon is out of place in the logical timetable of Columbia Basin development. Other projects (John Day or Libby, for example) are more urgently needed, projects on which all factions could agree, projects which, frankly speaking, would be more beneficial to Oregon.

Finally, we believe that if storage is the prime consideration at Hells Canyon, as proponents maintain, why not develop it elsewhere, particularly on the upper Columbia or the Clearwater, where it would be more effective and is more urgently needed than on the Snake?

If we had all kinds of Federal money and no one else were interested in developing the middle Snake, it might be a different story. But we haven't, and private capital is ready to do the job, and do it promptly. For this reason we hope the Federal Power Commission grants Idaho Power Co. its permit to build three middle Snake dams.

We could then forget Hells Canyon, the disruptive political issue, and get on with the job of producing necessary power. The sooner the better, say we.

[From the Oregonian of April 8, 1955]

HELLS CANYON ROADBLOCK

The peripatetic hearings of the Senate's Interior Subcommittee on the Hells Canyon Dam bill—Boise, Lewiston, Pasco, and Portland in the space of 3 days—added nothing factual to the record. But the committee was neither looking for nor asking for facts. It asked for expressions of opinion. Witnesses who attempted to substantiate their opinions with factual data were in the minority.

Obviously, the purpose of the hearings was to bring the question of a Federal high dam versus a private utility's three lower dams more sharply to public attention. The Democrats sponsoring the high dam bill want that. This is frustrating to those who oppose the high dam for a variety of reasons and to those who believe the bill is faulty or that Hells Canyon should not have priority over other dams.

A result of the hearings was to broaden the cleavage between those who see Hells Canyon as the gleaming monument to all-Federal development of the Columbia Basin's water resource and those who demand that we get on with power development, one way or another, to prevent a critical shortage in the 1960's.

Senator MORSE, the principal sponsor of S. 1333, the Federal high-dam bill, made it abundantly clear that he intends to use Hells Canyon as a political symbol, as he and other Democrats have used the Dixon-Yates contract and "tidelands" oil. He has condemned in advance as "prejudiced" the Federal Power Commission, which has yet to rule on Idaho Power Co.'s three-dam plan.

"The only place to fight this out," said Senator MORSE, "is in Congress, and, next year, may I say, at the crossroads of the State of Oregon."

This statement, besides disclosing one of his planks for his 1956 campaign, recognizes that unlike the John Day project, a high dam in Hells Canyon has not yet even been authorized by Congress. Should S. 1333, which does authorize the project, be accepted in both Houses of Congress and by President Eisenhower, money to start construction would have to be voted by Congress next year.

It is, to put it mildly, misleading for Senator MORSE to say that a high dam would be ready to begin storing water by 1959 and full storage attained by 1961 "and its at-site and downstream firmup" be available that year.

For comparison, 1961, is the completion date set for The Dalles dam on which construction started in March, 1952. And completion of Chief Joseph dam is scheduled for December, 1958—almost 10 years from the start of construction. The first two generating units at The Dalles will go on the line in November, 1957—5 years after start of construction. The first three units of Chief Joseph will begin operating in September, this year—more than 6 years after work started.

There is virtually no hope of even starting the planning—which takes from 1 to 2 years—on a high Hells Canyon dam unless the present authorization bill is adopted this year and until after appropriations are voted in Congress next year. On the other hand a million dollars voted by this session of Congress for John Day planning—or even less, to permit the Army engineers to use funds on hand—would put completion of the already authorized John Day project years ahead of Hells Canyon.

The vicious part of the Democrats' concentration on Hells Canyon as a political symbol is that it is throwing a roadblock before orderly construction of dams on the Columbia's main stem—in which John Day has the highest priority, would provide the greatest benefits, and would be the cheapest to build.

Cruel Betrayal of the Polish

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

Mr. PHILBIN. Mr. Speaker, March 28 marked the 10th anniversary of the treacherous betrayal of 16 Polish underground leaders whom the Soviet authorities in Poland arbitrarily apprehended, flew to Moscow and imprisoned and sentenced without due process of law in June 1945.

So far as we are able to ascertain, four of these Polish leaders are still detained in Soviet prisons and it seems appropriate and urgent at this time that our Government and the United Nations should demand their release.

A short summary of the background and developments in these cases will be helpful in understanding the monstrous unfairness and injustice of their plight. So far as I have been able to ascertain, the following is a factual account of the events leading up to their imprisonment and long confinement against the terms of the Yalta agreement and contrary to every rule of good faith that should obtain between nations.

In accordance with the Yalta agreement, the Moscow-sponsored provisional government of Poland had to be reorganized on a broader basis with the inclusion of leaders "from Poland itself and from Poles abroad."

Mr. Molotov and the Ambassadors of the United States and Great Britain, residing in Moscow, were entrusted with the task to cooperate in the forming of a new government along the above lines.

It was assumed from the very beginning by the American and British Governments that the most prominent leaders of the Polish underground, at that time hiding in Poland, would eventually enter the coalition. During the war they had fought, in close cooperation with the Polish Government in London, a bitter struggle against the Nazi occupants and thus had largely contributed to the Allied war effort.

At the request of the British Secretary of State, the Polish Government in London disclosed for transmission to the

committee in Moscow the names and whereabouts of the Polish Vice Premier and government delegate for the homeland, and of the three members of the Home Council of Ministers. The Allied government gave assurance that they would do everything possible to insure the safety of the Polish underground leaders.

A short time after the Polish Vice Premier, Mr. Jankowski, and the last commander of the disbanded home army, General Okulicki, were approached by Colonel Pimenov, of the Soviet NKWD, with a request to attend a meeting with Colonel General Ivanov, a representative of the high command of the White Russian front. This invitation was confirmed by letter, on March 10, to Mr. Jankowski and General Okulicki. The purpose of the meeting, in Colonel Pimenov's own words, was "the clarification of the atmosphere and the coming into the open of the democratic Polish parties in order that they may take part in the general current of the democratic forces of independent Poland." Although absolute personal safety was granted by the Soviet representative, the 16 Polish underground leaders, when they arrived on March 28, 1945, at the meeting place, were arrested and flown to Moscow and imprisoned there.

The Soviets committed in cold blood another act of shameless felony. It was only on May 5, 1945 that the official Soviet agency Tass announced the arrest of the Polish leaders. This happened during the San Francisco Conference, and Molotov himself confirmed the news.

The British and United States Secretaries of State expressed grave concern to Mr. Molotov, and asked for full explanation. Their intervention remained nevertheless without response, and on June 18, 1945, a trial of the Polish leaders was held in Moscow by the military colleagium of the Supreme Court of the U. S. S. R.

Following sentences were passed:

First. Maj. Gen. Leopold Okulicki, born 1898, commander of the Polish Home Army succeeding Gen. T. Bor-Komorowski, after the Warsaw rising—10 years prison.

Second. Jan Staniskaw Jankowski, born 1882, member of the Christian Labor Party and Vice Premier of the Polish Government in London, appointed delegate in Poland—8 years prison.

Third. Adam Dien, born 1899, member of the underground government, Peasant Party—5 years prison.

Fourth. Staniskaw Jasyukowicz, born 1882, National Party, member of underground government—5 years prison.

Fifth. Kazimierz Puzak, born 1883, leader of Socialist Party and speaker of underground parliament—18 months prison.

Sixth. Alexander Zwierzynski, born 1880, National Party, deputy speaker—8 months prison.

Seventh. Kazimierz Daginski, born 1890, Peasant Party, deputy speaker—6 months prison.

Eighth. Staniskaw Nyerzva, born 1905, Peasant Party—4 months prison.

Ninth. Zbigniow Stkpuzkowski, born 1904, leader of Democratic Party—4 months.

Tenth. Eugoniusz Czarnovski, born 1904, leader of Democratic Party—4 months prison.

Eleventh. Jösef Chacinski, born 1889, leader of Christian Labor Party—4 months prison.

Twelfth. Francissek Urbanski, born 1891, secretary of underground parliament, Christian Labor Party—4 months prison.

Thirteenth. Staniskaw Michalowski, born 1903, Democratic Party, proved innocent.

Fourteenth. Kazimierz Kobylanski, born 1892, National Party, proved innocent.

Fifteenth. Jösef Stemler Dabski, born 1892, interpreter of Polish delegation, proved innocent.

Sixteenth. Antoni Pajdak, member of Socialist Party and of underground parliament was not tried in public, and the sentence, in his case, was not disclosed.

It is to be noted that in accordance with Soviet procedure the penal sentence is counted as from the day of arrest.

General Okulicki, Jankowski, Jasiukowicz, and Pajdak did not yet return to Poland. Okulicki should be released on March 28, 1955. Jankowski should have been freed on March 28, 1953, and Jasiukowski on March 28, 1950. According to information, Pajdak was sentenced by administrative decree to 5 years, and if so, had to be freed on March 28, 1950. It should be stressed that the fate of these four prisoners remaining in Soviet Russia is still unknown.

The remaining leaders were brought back to Poland after the period of their detention in Soviet jails had elapsed. Puzak and Mierswa were rearrested in Poland, sentenced, and Puzak died in prison. Czarnowski, Urbanski, and Chacinski died in Poland; the fate of Bien is not known, as well as of Zwiorsyoki and Stemlor-Dabski. Michazowski and Kobylatski acquitted during the Moscow trial, were again arrested in Poland, and are detained in prison. Stypuskowski is in England and H. Bagisaki lives in the United States of America.

In connection with the 10th anniversary of this shameless act perpetrated on March 28, 1945, against the 16 Polish underground leaders steps should be taken to, first, ask for full information as to the fate and whereabouts of these 4 leaders still kept in Soviet Russia; second, demand their release from prison; third, insist on the liberation of the underground leaders who have been submitted to new ordeals by the Moscow-sponsored regime in Poland after their return from Russia.

I urge, therefore, and sincerely request the State Department to make appropriate inquiries and efforts in these tragic cases.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenloopor, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wisconsin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Appropriations

Messrs. Cannon (chairman), Mahon, Sheppard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Fernandez, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Lanham, Deane, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Murray of Illinois, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Phillips, Scrivner, Coudert, Clevenger, Wilson of Indiana, Davis of Wisconsin, James, Ford, Miller of Maryland, Vursell, Hand, Ostertag, and Bow.

Committee on Armed Services

Messrs. Vinson (chairman), Brooks of Louisiana, Kilday, Durham, Rivers, Philbin, Hébert, Winstead, Price, Fisher, Hardy, Green of Pennsylvania, Doyle, Wickersham, Miller of California, Bennett of Florida, Holtzman, Mollohan, Lankford, Huddleston, Short, Arends, Cole, Johnson of California, Gavin, Norblad, Van Zandt, Patterson, Cunningham, Bates, Hess, Nelson, Devereux, O'Konski, Bray, Wilson of California, Osmers, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Banking and Currency

Messrs. Spence (chairman), Brown of Georgia, Patman, Rains, Multer, Addonizio, Barrett, O'Hara of Illinois, Mrs. Buchanan, Mrs. Sullivan, Messrs. Fountain, Reuss, Mrs. Griffiths, Messrs. Ashley, Vanik, Davidson, Bell, Wolcott, Gamble, Talle, Kilburn, McDonough, Widnall, Betts, Mumma, McVey, Hiestand, Nicholson, Oliver P. Bolton, and Bass of New Hampshire.

Committee on the District of Columbia

Messrs. McMillan (chairman), Harris, Abernethy, Smith of Virginia, Klein, Teague of Texas, Davis of Georgia, Morrison, Dawson of Illinois, Williams of Mississippi, Steed, Wier, Jones of North Carolina, Rutherford, Simpson of Illinois, O'Hara of Minnesota, Talle, Miller of Nebraska, Auchincloss, Allen of California, Kearns, Patterson, Gubser, Broyhill, and Hyde.

Committee on Education and Labor

Messrs. Barden (chairman), Kelley of Pennsylvania, Powell, Bailey, Perkins, Wier, Elliott, Landrum, Metcalf, Bowler, Chudoff, Mrs. Green of Oregon, Messrs. Roosevelt, Zelenko, McDowell, Thompson of New Jersey, Udall, McConnell, Gwinn, Smith of Kansas, Kearns, Velde, Hoffman of Michigan, Bosch, Holt, Rhodes of Arizona, Wainwright, Frelinghuysen, Coon, and Fjare.

Committee on Foreign Affairs

Messrs. Richards (chairman), Gordon, Morgan, Carnahan, Chatham, Zablocki, Burleson, Hays of Arkansas, Mrs. Kelly of New York, Messrs. Dodd, Hays of Ohio, Donovan, Jarman, Byrd, Selden, Pilcher, Williams of New Jersey, Chiperfield, Vorys, Mrs. Frances P. Bolton, Messrs. Smith of Wisconsin, Merrow, Judd, Fulton, Jackson, LeCompte, Radwan, Morano, Mrs. Church, Messrs. Adair, Prouty, and Bentley.

Committee on Government Operations

Messrs. Dawson of Illinois (chairman), Holifield, McCormack, Chudoff, Brooks of Texas, Holtzman, Mollohan, Fountain, Hardy, Blatnik, Jones of Alabama, Garmatz, Moss, Kilgore, Fascell, Mrs. Griffiths, Messrs. Reuss, Hoffman of Michigan, Riehlman, Mrs. Harden, Messrs. Brownson, Meader, Brown of Ohio, Lipscomb, Reece of Tennessee, Younger, Knox, Krueger, Jonas, and Minshall.

Committee on House Administration

Messrs. Burleson (chairman), Byrd, Friedel, Ashmore, Hays of Ohio, Jones of Missouri, Rhodes of Pennsylvania, Lesinski, Smith of Mississippi, Dowdy, Long, Alexander, Thompson of New Jersey, ———, LeCompte, Morano, Schenck, Carrigg, Harrison of Nebraska, Corbett, Bennett of Michigan, Hillings, Oliver P. Bolton, Lipscomb, and Halleck.

Committee on Interior and Insular Affairs

Messrs. Engle (chairman), Aspinall, O'Brien of New York, Rogers of Texas, Mrs. Pfost, Messrs. Haley, Shuford, Powell, Edmondson, Metcalf, Christopher, Sisk, Udall, Diggs, Rutherford, Mrs. Green of Oregon, Messrs. Miller of Nebraska, Saylor, Wharton, Berry, Dawson of Utah, Westland, Pillion, Young, Hosmer, Rhodes of Arizona, Budge, Chenoweth, Utt, Mrs. Farrington, Messrs. Bartlett and Fernós-Isern.

Committee on Interstate and Foreign Commerce

Messrs. Priest (chairman), Harris, Klein, Granahan, Carlyle, Williams of Mississippi, Mack of Illinois, Roberts, Moulder, Staggers, Dollinger, Rogers of Texas, Dies, Friedel, Flynt, Macdonald, Hayworth, Wolverton, Hinshaw, O'Hara of Minnesota, Hale, Dolliver, Heselton, Bennett of Michigan, Hoffman of Illinois, Beamer, Springer, Bush, Schenck, Carrigg, and Derounian.

Committee on the Judiciary

Messrs. Celler (chairman), Walter, Lane, Feighan, Chelf, Willis, Frazier, Rodino, Jones of North Carolina, Forrester, Rogers of Colorado, Donohue, Fine, Brooks of Texas, Tuck, Ashmore, Quigley, Boyle, Reed of Illinois, Keating, McCulloch, Miss Thompson of Michigan, Messrs. Hillings, Crumpacker, Miller of New York, Taylor, Burdick, Curtis of Massachusetts, Robsion of Kentucky, Hyde, Poff, and Scott.

Committee on Merchant Marine and Fisheries

Messrs. Bonner (chairman), Boykin, Garmatz, Robeson of Virginia, Mrs. Sullivan, Messrs. Thompson of Louisiana, Miller of California, Kluczynski, Byrne of Pennsylvania, Bell, Tumulty, Davidson, Zelenko, Clark, Ashley, Machrowicz, Tollefson, Allen of California, Seely-Brown, Sheehan, Van Pelt, Ray, Mailliard, Dorn of New York, Pelly, Cederberg, Baumhart, Chase, ———, Bartlett.

Committee on Post Office and Civil Service

Messrs. Murray of Tennessee (chairman), Morrison, Davis of Georgia, Rhodes of Pennsylvania, Lesinski, Dowdy, Alexander, Moss, Robeson of Virginia, Mrs. Pfost, Messrs. Fascell, Tumulty, Kilgore, Holifield, Rees of Kansas, Corbett, Mrs. St. George, Mr. Gross, Mrs. Harden, Messrs. Cretella, Gubser, Broyhill, Cederberg, Henderson, and Johansen.

Committee on Public Works

Messrs. EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1955

Mr. BUTLER. Mr. President, September of this year has been designated as John Marshall Bicentennial Month by the action of the 82d Congress, and extensive ceremonies will commemorate the 200th anniversary of the birth of the great Chief Justice, John Marshall.

Chief Justice Marshall firmly implanted the precepts of judicial review in our constitutional system. History records this commentary of 1833 which has become a lasting tribute and memorial to his great wisdom and genius:

> Your expositions of constitutional law enjoy a rare and extraordinary authority. They constitute a monument of fame far beyond the ordinary memorials of political and military glory. They are destined to enlighten, instruct, and convince future generations and can scarcely perish but with the memory of the Constitution itself.

In this setting, and as a member of the John Marshall Bicentennial Commission, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Chief Justice of the United States, Earl Warren, delivered at the College of William and Mary, at Williamsburg, Va., on September 25, 1954.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY EARL WARREN, CHIEF JUSTICE OF THE UNITED STATES, AT MARSHALL-WYTHE-BLACKSTONE COMMEMORATION CEREMONIES, COLLEGE OF WILLIAM AND MARY, WILLIAMSBURG, VA., SEPTEMBER 25, 1954

It is our pleasure today to honor great men of another day, men who have contributed much to our national life and to the civilization of which it is a part. We speak of them, of course, in gratitude, but we have another reason, even more personal to present-day Americans and in keeping with the necessities of our time. We meet here to strengthen our own convictions concerning government and law; to fortify our belief in a government of laws and not of men. We seek rededication to the cause of justice, between individuals, between citizens and their sovereign, and between the nations of the world. We reach for perfect justice, but we do not expect to grasp it, because history, both profane and divine, teaches us that as long as time and human nature exist there will be issues to decide, causes to adjust. We learn from Holy Writ that even the angels quarreled and that Satan and his angels were banished to darkness for their wrongs. We know that the path of justice in every time and place has been rough, tortuous, and uphill. No nation has yet reached the summit. Exact justice has not been achieved. No mortal has embodied all its principles. We recognize, however, that civilizations of the past have advanced it; nations in all ages have made contributions to it, and individuals have either evolved or formulated or synthesized principles of justice in a way that has challenged the admiration and emulation of people in many lands—people who are interested in that kind of government which is premised upon freedom and the dignity of the individual. We honor those nations for their accomplishments and revere the memories of such individuals for their contributions.

As Americans, we are proud of our system of government and our standards of justice, although we claim neither originality nor perfection for them. We, too, have had our great men who have made contributions to the sum total of human knowledge in the field of justice. We do not deify them. Like the sages of other countries, they were people, subject to all the limitations of human beings. As a nation, we make no pretense except to a passion for justice based upon the dignity and rights of the individual. We stake everything we have on our belief that only through this kind of justice can there be order and contentment within nations and peace between countries of the world. We believe this kind of justice is the rightful heritage of every human being and that it is his right and duty to achieve it.

For three and a half centuries Americans, using the experience and wisdom of older countries from which we or our forebears came, have endeavored to develop in this section of the world a system of government and a body of law that will accord justice to everyone. We have made mistakes—many of them. People have at times succeeded in using our system for selfish and even oppressive ends. We have often been required to wipe some things from the slate and start again. At times we have been close to failure but we have never failed in our climb toward the pinnacle of true justice. And we are climbing today to meet the test of Thomas Jefferson that "The most sacred of the duties of a government is to do equal and impartial justice to all its citizens."

We do not assume that justice is indigenous only to our soil or in our own people. Waves of passion, prejudice and even hatreds have on occasions swept over us and almost engulfed us, as they have the people of other lands. In our efforts to guard against these things, we have called upon the wisdom of the ages. We have accepted unblushingly the contribution of those intellects of other nations and ages who, in accordance with the circumstances under which they lived, have placed foundation stones in the temple of justice.

Our own symbol of justice, the home of the Supreme Court of the United States, honors great nations of lawgivers. It is of Grecian architecture of the Corinthian order so loved by the Romans and used by them in a countless number of their public buildings. In the courtroom itself, we give public recognition to the lawgivers of all ages. On the frieze of one wall are the figures of ancients who made their contribution before the birth of Christ: Menes, Hammurabi, Moses, Solomon, Lycurgus, Solon, Draco, Confucius, and Octavian; and on the opposite wall the figures of those who came after Him: Justinian, Mohammed, Charlemagne, King John, St. Louis, Grotius, Blackstone, Marshall, and Napoleon. The most significant to us, of course, are the figures of those who expounded the two systems that are the most alike of any because premised on the affinity of lineage, language, concept, and emulation, the British and American. They stand side by side, William Blackstone and John Marshall. These men were contemporaries although not known personally to each other. The one had not been out of England; the other lived almost his entire life within a few miles of his beloved Virginia.

While Blackstone was writing his commentaries on the law of England, Marshall was studying the great events of history upon which the rights of Englishmen were predicated in order to establish here a comparable system of justice. At that time, he and his compatriots were concerned not so much with a better system of justice than the English system as they were with having the same rights as Englishmen. A few years later he fought with Washington at Monmouth, Brandywine, and Valley Forge to establish here a Nation for that purpose. Blackstone expounded the law of England as it had developed by tradition, charter, statutes, and judicial interpretation for a thousand years. Marshall expounded our Constitution, a document of 5,000 words, only a dozen years old, but which had been designed to establish for all times a more perfect Union of States that had but recently achieved their independence. That Constitution was an experiment in the science of government. Many people believed it to be a dangerous experiment. Many feared it and believed it would become another instrument of oppression. It was approved by the States only by the narrowest of margins. No one was certain if or how it would stand the test of time. One of the signers of the Constitution said, "Constitutions are not the same on paper as in real life." It fell to the lot of John Marshall to translate our Constitution from paper into real life, to enable it to meet the problems of a new, poor, war-tired, and divided country. To say that it took wisdom, foresight, patience, and courage to do this task is trite. But it is nonetheless true, and he did it for 34 years during the most formative and politically turbulent period of our national history, leaving at his death a greater imprint on our legal institutions than any American to this day has ever made. We honor him today at the beginning of the 200th year since his birth in testimony of the lasting and universal veneration in which his work is held.

It is appropriate that this recognition should be given him in his beloved Virginia where he lived all his life and in whose service he offered his life for the new Nation he envisioned, in whose legislature he labored for the Constitutional Convention, where he worked for ratification of the Constitution, and which State he represented in the Congress. It is also fitting that this ceremony should be held at beautiful and historic College of William and Mary where he received his only formal education under the benign tutelage of George Wythe, then occupying the first chair of law in this country. John Marshall was not an orthodox student. Born in the wilderness, he learned

from his parents and from an occasional tutor, but largely from the life of his time and from the great men of Virginia in the causes for which men struggled in those days. What men he encountered in his native State—Washington, Jefferson, Madison, Patrick Henry, Mason, Monroe, and a host of others immortal in United States history. Whether these men agreed in politics or not, they all had great minds, were passionately devoted to their own political philosophy and each sharpened the minds of the others either through friendly intercourse or political contention. Marshall was the beneficiary of these associations as much as any American of those days, whether it stemmed from the adoration he had for his beloved chief, George Washington, or from his almost lifelong political strife with his kinsman, Thomas Jefferson.

We are most fortunate that we can have with us on this occasion Dr. Goodhart, master of University College, Oxford, where English law was first taught and where Sir William Blackstone taught and wrote his commentaries. And how greatly we are honored by having with us on this occasion the Lord Chief Justice of England whose historic position makes him the guardian of the rights of all Englishmen as those rights have come down to them from Magna Carta, the Petition of Right, the Bill of Rights, and the Acts of Parliament. It gives us a sense of comradeship in a very troubled world.

John Marshall has rightly been called the "expounder of the Constitution." It was new to the point of being without precedent when he became Chief Justice January 6, 1801. The Nation was poor as a result of years of warfare. Means of communication between the States were sadly lacking; there was no national economy; our standing among the nations of the world was deplorable; the States were divided in interests and politics; men held passionate views concerning the relationships between the three branches of Government and between the Federal and State governments. The leaders were men of powerful intellect and passionate convictions. There were those who would center most power in the Federal Government. There were those who would leave practically all power in the States. It was Marshall's mission in life to pursue a course somewhere between those two extreme positions through the construction of the new Constitution in a myriad of cases that arose during his 34 years as Chief Justice. He had spent a horrible winter at Valley Forge with Washington, and the weakness of the Government under the Articles of Confederation had seared his soul. He believed in a strong, central government—Federal supremacy in all matters within the domain of the Federal Government. He believed the Constitution should be construed liberally to accomplish that end, and he confirmed the power of Congress to do so in these historic words:

"Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited but consist with the letter and spirit of the Constitution, are constitutional."

He believed that if we were to remain a nation we must have a national economy, and that any strong economy must be based upon the scrupulous performance of contracts, and the orderly regulation by the central government of commerce among the States and with other nations. He realized that if we were to command the respect of the world, we must meticulously fulfill our international obligations and honor the treaties we make. All of these desired results he achieved through decision after decision until they became embedded in our law.

But perhaps the greatest contribution he made to our system of jurisprudence was the establishment of an independent judiciary through the principle of judicial review. In a case instituted the first year of his incumbency, he rooted this fundamental principle in American constitutional law as our original contribution to the science of law.

This and many other of his decisions aroused a storm of protest as being beyond the words and intent of the Constitution, but for 34 years in accordance with his belief, stone by stone, he built the foundation of our constitutional structure, and he constructed it sufficiently strong to support everything we have since built upon it. In those 34 years of his incumbency, he wrote 519 of the 1,106 opinions handed down by his Court.

He did not go with the tide of public opinion or the course of politics. Often his opinions were contrary to both, but he continued to build, patiently, logically, courageously. His sense of duty is epitomized at the time of the trial of Aaron Burr, which he conducted fearlessly in spite of the intense feeling of the public and the national administration against the defendant. In the conduct of that case, as a circuit justice, he said:

"That this court dares not usurp power is most true. That this court dares not shrink from its duty is not less true. No man is desirous of becoming the peculiar subject of calumny. No man, might he let the bitter cup pass from him without self-reproach, would drain it to the bottom."

And he did his duty in that case, unpopular though it was.

He lived with this conviction, throughout his long career. When his work was done and he passed away in Philadelphia on July 6, 1835, in the 80th year of his life and the 35th of his Chief Justiceship, he was acclaimed by friend and foe alike as a man of virtue and great accomplishment.

His long-time friend and illustrious associate, Joseph Story, said of him:

"Chief Justice Marshall was the growth of a century. Providence grants such men to the human family only on great occasions to accomplish its own great end. Such men are found only when our need is the greatest. His proudest epitaph may be written in a line—'Here lies the expounder of the Constitution.'"

The people of Philadelphia accorded him a hero's farewell, and as his body was borne along the streets to the dock for transmittal to his beloved Virginia, the Liberty Bell tolled from the belfry of Independence Hall. Then a strange thing happened. A great cleft appeared in the side of the bell, and like Marshall's voice, it too became still forever. It was taken down and placed in the Hall. It remains there today for all to see—the symbol of our liberty—while the memory of John Marshall abides with all of us as that of "the great Chief Justice," and "the expounder of our Constitution."

Gov. James F. Byrnes, of South Carolina

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the State, of Columbia, S. C., on April 17, 1955, dealing with the tribute paid to Gov. James F. Byrnes at a testimonial held at Aiken on April 16.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HONOR GUEST BYRNES URGES FIRM STAND—HIGH TRIBUTE PAID RETIRED SOUTH CAROLINA GOVERNOR BY OVER 800—AIKEN RECALLS START OF GREAT SERVICE CAREER

(By Bob Pierce and Reese Daniel)

AIKEN, April 16.—More than 800 persons tonight paid tribute to James F. Byrnes in a rousing testimonial in the city where he started 45 years of public service.

The honor guest, himself, in a climatic speech, praised the progress of the South in racial relations, hit indirectly at the United States Supreme Court segregation decision, urged a "stand firm" policy on proposed four-power conference.

The text of Mr. Byrnes remarks follow:

"When I left the office of governor some members of the press were generous enough to make complimentary statements about my public service. No words were more appreciated than the statement of John Temple Graves, that after serving for years in the national Government, I could 'come home again.'

"Certainly, nothing could be more pleasing to me than to come home to Aiken, where I first became a candidate for public office and receive from you such a cordial welcome. The people of Aiken have always been good to me. I shall always be grateful to them.

"From the bottom of my heart I appreciate the generous statements of the friends who have spoken tonight.

"I confess, however, that while listening to the speakers I have been a little depressed. I feared my friends were under the mistaken impression that I was now to be counted among the departed instead of the retired. However, I have been comforted by the thought, based upon recent press stories, that some very prominent persons in the city of Washington evidently do not count me among the departed.

"I am indebted to the Chamber of Commerce for arranging this dinner.

"When the chairman of the committee wrote that April 16 had been fixed for the dinner, and hoped it was agreeable, I replied in the affirmative. Neither then nor later did these businessmen mention to me any political subject.

"I regret that this dinner should have so disturbed some of our friends in Washington. Their dinner has not bothered me. I hope it has not bothered you.

"From the printed list of public offices held by me, you know my life has been a busy one. I recall still another job. While living here I found time to join A. K. Lorenz in publishing the Journal and Review. Then it was a semiweekly publication. When I got into politics, I got out of the newspaper business. Then the Journal and Review began to grow. Now it is a progressive daily, published by the able Mrs. King, and I boast that I was once connected with the organization.

"Much has been said of my service in public office. The opposition I aroused while in office was exceeded only by the loyalty of my friends.

"The man who serves in public office soon learns that he cannot please all the people all the time. If he tries, he will please nobody.

"He should realize that the best politics is no politics.

"If he intends to make public service a career, he should do what he believes to be right and hope to convince a majority of the people of the rightness of his decision.

"Early he should realize he cannot seek riches and at the same time hold public office. He must decide whether his goal shall be to make money or to render public service.

"In this State our democratic primary elections are really democratic,—spelled with a small "d." In these elections, Democrats, Republicans, Socialists—men and women of all political faiths—can vote.

"The man who is nominated in the Democratic primary, is in effect, elected, because those who participate in the primary are pledged to support the winner in that primary.

"He owes his election to the people. He is obligated to them and not to any national political organization.

"The system has many disadvantages but at least one advantage. The successful candidate is independent. No political organization or political boss can tell him how to vote. In fact, it would be difficult for a man to be elected to office if he can be successfully labeled the candidate of a boss.

"During the period of my public service we have witnessed remarkable progress in this State.

"We will agree that during the past 40 years the Southern Negro has made greater progress than has any race in world history. It has been accomplished only by the cooperation and help of the white people of the South.

"I am proud of that progress. I hope it will continue, notwithstanding the efforts of those misinformed and misguided people who would endanger its continuance by seeking to change overnight by judicial decree the laws of our States and the customs of our people.

"We are proud, too, of the educational advancement of our white people. That progress has been reflected in the electorate. Education has made difficult the success of the demagog. Increasing educational opportunities have brought about increasing independence.

"In the Democratic convention in 1952 leaders of the national party did not listen to the protests of southern Democrats against the adoption of the loyalty oath. But the voices that could not be heard in the convention were heard in the election. This week the press advises us that next year the party leaders will change the rules of the convention and abandon the loyalty oath.

"I hope the leaders of the Republican Party will note that change of heart by the Democratic leaders. I hope they will realize that today when southerners say they are no longer 'in the bag' politically they mean they are not 'in the bag' for either the Democratic or Republican Party.

"They are determined hereafter to use the brains God gave them to promote that which is best for their country and their States. They will place the welfare of the country above the success of any political party.

"Listening to the eulogies by my friends, I realize you permitted me to participate in national and international affairs during one of the most interesting periods of the history of our country. It included service in the House of Representatives during World War I. It included service in the Senate during the great depression. In the Senate I saw the beginning of World War II.

"I was happy in my service upon the Supreme Court. However, when asked by President Roosevelt to serve during the war in the capacity he called 'Assistant President,' I did not hesitate to resign.

"As I talk in this personal way to old friends, I should like to say, as a matter of history, that when the end of the war was approaching and I resigned as Director of War Mobilization, President Roosevelt told me he regretted having asked me to leave the Supreme Court to help him, knowing how service upon the Court appealed to lawyers. He said he expected an early vacancy on the Court and intended to appoint me to fill that vacancy.

"I reminded the President that he had not asked me to resign; that he asked that I take a leave of absence. I felt that would be unwise, would hurt the Court, and insisted upon resigning. To his offer to reappoint me to the Court I said that would give his political enemies an opportunity to charge that he was complying with a previous agreement to reappoint me, and I would not accept it. This was in March 1945, 2 days before the President left for Warm Springs, where he died.

"I would not on this occasion attempt to discuss my services as Director of War Mobilization and, particularly, Secretary of State. I do say that in the light of the current discussions about another four power conference, my experience taught me that peace depends not upon what is written in agreements at the conference table, but what is in the hearts of the men at the table. What is in their hearts can be better judged by what they do than by what they say.

"I agree with the President, that before he sits down with Soviet leaders to discuss what should now be done to put an end to the cold war, the Soviets, by their actions, should have some concrete evidence that they want to meet in the interest of promoting peace and not for propaganda.

"The President's attitude of firmness and Soviet fear of a rearmed Germany has influenced the Soviets to agree to end their occupation of Austria. The action is encouraging but does not justify the praise bestowed upon them.

"In October 1943, the Soviets joined Britain and the United States in a declaration that Austria should be restored as an independent state. At Potsdam, in 1945, I heard Stalin say that reparations should not be demanded of Austria.

"Despite these declarations, the Soviets have occupied Austria for 10 years. They now demand reparations. For 10 years they have held thousands of Austrian prisoners of war in violation of international law. For 2 years, whenever I met with the Soviets, I pleaded for a peace treaty for Austria. They would not even consider the request. The efforts of my successors likewise failed.

"When they now agree to do what they should have done 10 years ago, it is only because they fear a rearmed Germany allied with the West.

"The President may decide to attend a four power conference. But I hope our Government will stand firm and remain strong, because the Soviets have respect only for firmness and force.

"The praise heaped upon me tonight has made me grateful and humble. If I thought there was justification for even a part of it, if as Director of War Mobilization, I contributed to the success of our war effort; if as Secretary of State, I helped the Western World to a keener appreciation of the danger confronting us; if, as governor, I made a worthwhile contribution to the program of industrialization, and, above all, to the education of our children, I would indeed be happy.

"In any happiness I might experience, the people of this community and this State must share, for it is they who gave me the opportunity to render public service.

"Like all of you here tonight, I could live elsewhere. But I would rather live in South Carolina than any place on earth. I am proud of its past and confident of its future. I love the State because of what it is. I love the people because of what they are and I love them for what they have done for me."

Senator THURMOND said: "There are so many things so well known about the man we honor here tonight that few things could be said which are not already familiar to all of you. However, there are several things, I am sure, the gentlemen who are to speak will talk about that all of us do not know about Governor Byrnes.

"Often it is true that great men grown in greatness in direct proportion to the distance we stay away from them or they grow in greatness with time after they are no longer in the public eye. Governor Byrnes is not like either of these two kinds of men.

"He is one whose greatness is realized even more when we are close to him. His ability and integrity have always stood unquestioned as he has been subjected to the constant scrutiny of critical appraisal throughout his career of 45 years.

"It is true that time has enhanced our respect for him, but not because we have been looking back on some one no longer active in public life. It has been because as he continued in public office, we have been better able to recognize the qualities covered by a simple modesty becoming one of such stature.

"Governor Byrnes gave up world renown to return home and earn for himself greater recognition and greater appreciation by taking up the responsibilities of a critical period in South Carolina history.

"Sometimes the facing of day-to-day problems, such as some of those which confronted him, was more difficult than the more remote and less tangible matters of world affairs. I am sure that he encountered no harder problems nor any less susceptible to solution than some of those he faced during the 4 years he served South Carolina as governor.

"I suspect there were times when he would not have been unhappy to have exchanged the governor's chair for a place across the table from old acquaintances who spoke in foreign languages.

"But whether James F. Byrnes occupied a chair at the conference table in Moscow, in Paris or in London—or whether he occupied the governor's seat—or sat on the Supreme Court—or at the President's right hand—or in the United States Senate, or in the House—he always kept a perspective which many covet but few attain.

"Whatever he has been and whatever his mission, Governor Byrnes has had the thoughtfulness and has taken time to remember those around him. He has made their problems his problems, he has made himself responsible for doing good for his fellow South Carolinians and for his fellow men.

"Many who attain high position—yes, even greatness—lose the relationship of friend to friend with the people they represent. But Governor Byrnes has deepened and strengthened the ties of friendship among the people of his native State, even though for long periods he seldom had the pleasure of seeing them and participating in the friendly relationships which he so deeply enjoys.

"I hope that he will have the opportunity in the years to come to catch up on those moments he has given up in past years while he so unstintingly served his State and his Nation."

Tribute to the Exiles of Freedom

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1955

Mr. O'MAHONEY. Mr. President, on Sunday evening last I was privileged to deliver a talk to the Christian Democratic Union of Central Europe, at the Carnegie Endowment Hall, New York City. The talk was entitled "Tribute to

the Exiles of Freedom." I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRIBUTE TO THE EXILES OF FREEDOM

(Remarks of Hon. JOSEPH C. O'MAHONEY, before the Second International Congress of the Christian Democratic Union of Central Europe, at the Carnegie Endowment Building for International Peace, New York City, April 17, 1955)

Scarcely 2 weeks ago announcement was made by a Lithuanian newspaper in Chicago of the death of Canon Antanas Petraitis, a Christian martyr to the communistic terror. It was 14 years ago, serving as pastor in the Lithuanian community of Erzvilkas, that he was arrested by the robot agents of the dictator at the Kremlin and subjected to unspeakable tortures designed to crush his will and destroy his soul. He was one of the few survivors of the death march to the Cherven Forest, where thousands were shot down because they were deemed dangerous to the plans of the dictatorship because they preferred death to the loss of liberty.

I pay my tribute tonight to this noble priest, and to all others of the Baltic peoples who were the first victims of the vast plan of Soviet Russia to conquer the world. These men and women, who had the spiritual capacity to resist inhuman torture rather than surrender the freedom with which they were endowed by their Creator, have given us and all the people of the world the example that must be followed before liberty can triumph over force. They are not forgotten by the exiles who have escaped from Central Europe and who have gathered here to keep alive the basic concept of individual freedom which all christendom has cherished for 20 centuries.

With humility and a deep sense of my own inability to pronounce a fitting epitaph for those who have already made or are still to make the sacrifice of their lives in this struggle, I have accepted the invitation to speak here tonight and shall try to outline some of the facts which it seems to me we must never forget if civilization is to survive this, its most terrible crisis. Note I do not say if religion is to survive, because of that I have no doubt. The soul of man cannot be liquidated by the tortures of the tyrant because it is the breath of God. Men were made free by their Creator. This knowledge has sustained the people of Europe and the people of all countries to which the message of christendom has gone. It will sustain them now but we must all know that the triumph of the spiritual over the evils of materialism can be permanently won only by those who are willing to sacrifice the temporary material values of life in order to preserve the eternal values bestowed by God Himself upon every human soul.

The struggle in which we are involved is the conflict between the spiritual and the materialistic. The human race, through all written history, has made frequent compromise with the evil of materialism, and has endured wars in the hope that they would speedily pass away, that peace would be restored, and that mankind would once again return to the pursuit of spiritual and cultural objectives. But compromise has failed. The Napoleonic Wars ended at Waterloo in 1815. Not until 55 years later did the Franco-Prussian War begin. Only 44 years of peace intervened before World War I broke out and, after 4 years of the most terrible military slaughter in all the previous history of mankind, all the peoples of the world cherished the hope that with the foundation of the League of Nations peace among men had at last been attained, but only 21 years elapsed before the Second World War was launched in 1939. With vastly improved engines of destruction, with mounting casualties, with war raging on land, on sea, in the air above, and in the deep oceans underneath, the capacity of man to destroy himself reached its zenith. When the shooting stopped, once again men cried peace, but there is no peace. The few treaties which have been written and the termination of the shooting have not yet revealed how war may be abolished and justice among men and nations attained. In the 140 years which have elapsed since the capture of Napoleon, the intervals of peace between wars have been growing steadily shorter, and no answer has yet appeared to the question every man asks in his heart how can permanent peace be attained?

There was a time when wars were fought by only a portion of the population and under rules that save the open city from destruction, when women and children were spared. These were days when poets would have us believe that knighthood was in flower. There was chivalry, there was tolerance during the small wars fought during the Christian era, but we live in a time when such rules of warfare have utterly disappeared. This century has seen the development of planned total war in which not only the men in uniform are involved in conflict but when the unarmed civilian population has no protection from ruthless attack. In the war against Japan, this Nation dropped the atom bomb at Hiroshima and Nagasaki. It was the ultimate in force. It stopped the fighting but it did not bring peace.

It should be plain to us, therefore, why even the greatest of military leaders tell us that war is outmoded. It was Napoleon, when his days of battle and conquest were over, who confessed as he looked back upon his life that he was amazed at "the impotence of force to organize anything." Even the most successful of modern military leaders see the futility of force as Napoleon did. "There are only two powers in the world," he said, "the spirit and the sword. In the long run the sword will always be conquered by the spirit." Napoleon died, an impersonation of the failure of force, but wars continued.

In our generation another great military leader who in World War II led the forces of the allies in Asia, Gen. Douglas MacArthur, came to the same conclusion. I was in the House of Representatives on the 19th of April 1951, when he spoke to the Congress of the United States about war. He was the commander of all the forces of the allies in Asia when, on September 2, 1945, on the battleship *Missouri* he accepted the surrender of Japan. All the memories of his experience in two World Wars were fresh in his mind when he spoke to the Congress. I give you his testimony:

"I know war as few other men now living know it," he told us, "and nothing today is more revolting. I have long advocated its complete abolition as its very destructiveness on both friend and foe has rendered it useless as a means of settling international disputes."

"Useless," he said it was, having in mind the capture of the Philippines by Japan while he was the commander, having in mind his return and his recapture of the Philippines, having in mind the dropping of the bombs and the surrender of Japan. He then quoted from his utterance made on the deck of the battleship *Missouri* when Japan surrendered.

"Military alliances," he said, "balances of power, leagues of nations, all in turn failed, leaving the only path to be by way of the crucible of war." He was explaining why World War I had failed to bring peace to the world and why, when the Second World War occurred, we felt compelled to enter it and use all the inventions and weapons that science had achieved. He had seen at first hand what total war means and so he quoted from that speech on the battleship *Missouri*, giving us a message which we can forget only at the peril of losing the great western civilization which is the world's heritage from Christianity.

"The utter destructiveness of war now blots out this alternative," he said, meaning, of course, the use of the most destructive weapons the human mind can conceive. Some other alternative than force, he was telling the world, has to be found, saying:

"We have had our last chance. If we will not devise some greater and more equitable system, Armageddon will be at our door."

It is not necessary to depend solely upon the opinions of the great generals of the world. I could recite here how Alexander of Greece, when he had no more worlds to conquer, tried to turn to thoughts of peace. I could tell the story of the Christian concepts of Gen. Ulysses S. Grant and Gen. Robert E. Lee when the great trial of the Civil War came to an end in this country. But I shall be content to give you the facts which show that force defeats itself.

Even the dictators eventually kill one another off. Of Lenin's inner circle, only he and Stalin survived to die natural deaths. The others were liquidated. A dozen ministers were purged. High officials in the Communist Party central organization, more than half of the Communists who wrote the Soviet Constitution, military leader after military leader, all of them experts in torture, ruthless and faithless, were themselves the victims of the dictatorial system they were trying to enforce upon the world. It is a system which cannot last because it is a system without faith. It believes in neither God nor man, and because of this lack of spiritual faith it consumes its own adherents.

What then is the alternative to which MacArthur said man must turn? What is the method by which in this century the spirit will conquer the sword, as Napoleon predicted? Perhaps it is too simple to be understood. Surely no one knows better than the descendants of the people of Western Europe the great spiritual triumphs which marked the civilization of Christendom. All the terror and slavery of paganism were unable to crush the spirit and the will of the people who had the faith to believe in and the courage to live by the principle of the Christian religion that God lives and calls to those who will to be free.

Society, any society, is an organism which reflects the spirit of the individuals who constitute it. The relationship between God and man is the relationship between God and every man. When into any society there enters the materialism of paganism, that society inevitably falls to lower standards of character and morality. We have lived in a time in which too many individuals have set aside the concepts of religious faith and have worshiped before the image of the Golden Calf. That is the symbol of materialism. But it is not the symbol of the millions of the people who have received and accepted the heritage of Christendom.

The men and women who founded this country, the United States of America, were men and women of deep religious faith. That was why they wrote into the Declaration of Independence the plain and specific recognition of the fact that man has certain inalienable rights which were given to him by the Creator.

The men and women of the Baltic States and of Europe also have cherished the same faith. It was this deep conviction that enabled them to stand unyielding before the faithless and cowardly minions of the Communist dictators and endure the most inhuman torture rather than sacrifice that share of divinity which they had received from the Creator.

The conflict between the spiritual ideology and the ideology of materialism which now threatens the world with a third global conflict is essentially a moral struggle for the independence of the souls of men. It is not at all a struggle for wealth and power. It is a struggle to preserve the basic concepts of tolerance among men, mutual recognition of the dignity of the human individual faith, hope, and charity, the virtues recognized by all Christians and the Fatherhood of God.

This, if I understand the motives and purposes of the exiles of freedom, is the faith you hold. It is the faith for which you have sacrificed and your relatives and friends have suffered and died. It is the faith which binds you together in this organization, an organization which makes a link between the people of America and the people who live behind the Iron Curtain and along its fringes as well. It provides a means by which as individuals we can all carry the message of Christendom to all other individuals with whom we come in contact. No people want war, but wars come. Perhaps it is because leadership has been inadequate to the task of creating the organization that is capable of preserving peace, or individuals, faltering in their faith, have been willing for selfish and temporary gain to make a little genuflection to the Golden Calf.

You and your associates possess the moral fiber which every individual of every nation desiring to be free should possess. Moral fiber can be disseminated throughout the world by the example every believer in the spiritual motivation of mankind can give to those with whom he comes in contact.

The individual who, in this crisis of civilization, falls below the standards of faith in the spiritual concepts of Christendom weakens by that failure the moral fiber of every nation which really loves and wants freedom. Every such individual impairs the capacity of his nation to participate in the struggle of the free world against the evil forces of totalitarian dictatorship that have been released against it, but he who adheres to the spiritual concept of Christian civilization adds to the strength of freemen everywhere.

The character and morality which are cherished in our daily lives, in home life, in business and professional life, the faith we cherish in the bond between man and God, these and these only are the means by which the spirit shall eventually triumph over force.

Organized as you have organized them, men and women living by the faith that is in them can build a barrier of spirit that Communist force can never overcome.

Remarks of Senator Goldwater at Commissioning of U. S. S. "Hassayampa"

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1955

Mr. MARTIN of Pennsylvania. Mr. President, yesterday the distinguished junior Senator from Arizona [Mr. GOLDWATER] honored the Commonwealth of Pennsylvania by his presence at the commissioning of the U. S. S. *Hassayampa*, which is named for a river in the State of Arizona. He delivered a very interesting and able address, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR BARRY GOLDWATER AT THE COMMISSIONING OF THE U. S. S. "HASSAYAMPA," PHILADELPHIA, PA., APRIL 19, 1955

As we gather here this afternoon in sight of one of the landmarks of American history to commission this new ship, you might well wonder about the name that has been chosen. Surely to most of you here as to most people east of the Rockies the name Hassayampa brings nothing quickly to mind except that it is unusual and somewhat hard to spell. There is even serious question in my mind if many of you have ever heard it used before in conversation or have seen it printed in a story or on a map. Consequently, I approach my pleasant assignment this afternoon with mixed feelings—one, that my remarks might be educational to most of you, but, even more dominant, the feeling of humility, in that this name, Hassayampa, is one that every Arizonan knows and of whose history is deeply and rightfully proud.

Hassayampa is the name carried by one of Arizona's few but famous rivers. We are a dry State when measured by the standards of rainfall and moisture; ours is not a State of vast water resources, ours is primarily a desert area. Even our forests, and they are vast and among the largest in the world, are classed as desert forests because there are not many bubbling streams marking their soft carpets nor does one find moss and fern, usually associated with such growths of trees. Natural lakes are few but those we have sparkle with the exuberance of diamonds among the dark green of the pines. It is easy, then, for one to imagine the enthusiasm we Arizonans have for our lakes and for our rivers and, recognizing that, you can imagine how proud we out there were made when it was announced that this fine new ship was to carry the name of *Hassayampa*.

I said that this was a river. Yes, but not just another river. It is a special one, for within its banks flows the water that we need so greatly for our lands, and along its banks has occurred much of the history of this great State.

It is a lonesone river. Its birthplace is in a small canyon high up on the northern slopes of Mount Union, a peak rising over 7,000 feet into Arizona's glorious blue sky. It is fed by springs and by the melting snows of winter and by the sometimes gentle and sometimes violent rains of the summer months. Up high in those mountains, as it flows over rocks and soft sands, it tells a murmuring tale that has lulled me to sleep many a night as I have camped by its side. It tells of the men who first came to its headwaters to mine gold. It tells of the now ghost town of Senator where men gathered as they sought the yellow richness which the Hassayampa carried from ancient rocks. It breathes the wonderful story of nearby Prescott which was the first capital of our State, where our laws were written, where our early government was hewn out of argument and debate by solid American men who saw in this new country a place where their families could be reared in the American tradition. It whispers the stories of men made rich and men made poor and men who were strong and ruthless and men who were strong and peaceful. It is a wonderful story to hear and many and many a time my memory carries me back to the days of youth and to the upper Hassayampa and its bed lined with the pines whose tips touch the sky and go into the heavens to seek God.

But this is not all of this river; it is a lonesome river I have said, but it is also an ambitious one, for it would not die in those peaks, but sought the arid lands below where its waters could do more for men than just provide the carrier for gold. So it left those peaks for the greenness of the lower mountain valleys where the cattle would come to drink of its waters, down past the settlement of Waggoner it went, and then, leaving the cool and vast valleys it ventured out onto the desert floor of southern Arizona where it soon wore its own roadway of sand and rock. Here developed a battle with the sun as to whether or not this stream would carry its load above the earth or whether it would have to go to the coolness and the sureness of traveling beneath its sandy bed. The sun often wins out and for many miles of its travels across the desert one cannot see water but one knows, as generations of desert dwellers have known, that a scooping out of the sand will bring into that bowl cool and abundant water for drinking. In fact, one of the meanings of this famed word has been ascribed to the Indian meaning "water that is hidden." As one crosses this stream at Wickenburg on Highway 60, if one is a stranger, one might wonder why a bridge here at all for here the water is hidden. It is hiding from the ever-present suction of the sun who seeks its cool waters for its own empty daylight skies, but this stream, which is empty, can fill quickly. As the great thunderheads of summer fill their black bellies with the moisture stolen from a thousand lakes and vast oceans and meager streams, and finally disgorge themselves over the homeland of the Hassayampa and its smaller tributaries, this usually docile stream fills to the banks with raging and often damaging water, roaring and tearing its way down its mountainous course, carrying tree and rock before it, out onto the vast desert and past Wickenburg to lose itself finally in the dryness of its lower bed as the sky gives no more.

Wickenburg. This is the one settlement of any size on the banks of this lonely stream, but it is one of the West's most fabulous places. Its history goes back to the beginning of the West and to the swaddling days of our Territory. Just a few months after Arizona became a Territory of the United States, Henry Wickenburg, in 1863, discovered a vast cache of gold that the earth was tenaciously holding in her grasp. The resulting mine became known as the Vulture, and from it man took millions of dollars worth of gold. The mine needed a mill, and the waters of the Hassayampa provided the water to run it. It also furnished the growing town of Wickenburg, named after the obscure miner, with water for its population. The town grew fast, and by 1866 was large enough to have been considered as a site for the Territorial capital. Nearby, other mines were established, the Congress, the Constellation, and the Mack Morris, and all of them added to the new stature of the town of Wickenburg. It was a robust town, peopled by men and women of the hearty nature of our early pioneers. They were happy in this new town, and as the gold started to be exhausted, they did not wish to leave the banks of their friendly river, but sought, instead, new ways to perpetuate their community's prosperity and growth. The railroad came, and with it Wickenburg became a cattle-shipping point. The ranches grew, and so did the town, but then came modern man and his way of life, and the oldness of our western towns began to disappear before the chrome and gilt of newness, but not this place where the West had so long been a part of the daily lives of its people. Here the West stayed, and today it is the guest-ranch capital of the world, a city seen daily by thousands, a city where one finds all the newness of this age, but sees and senses always the true and real spirit of the West. Here, the high-heeled boot is not just part of a uniform, but it joins the large hat and the open shirt in their adornment of people whose "hello" is meaningful and whose "good day" comes from the heart long before it gets out of the mouth. Here it is warm in the winter and warm in the summer, but over all this warmth of nature is felt the warmth of people who, above all else, want to remain just people. Theirs is no desire for tall smokestacks, or the rat-tat-tat of the rivet gun, or the hustle that goes with the change

they would rather not have. They know that as long as man lives he will have a desire for peace and quiet and the calm reassurance of real friends. They know that this place on the banks of the river whose name this ship proudly carries can be that Shangri-la, can be a port where men can always come who come in the spirit of the West, seeking happy relations with neighbors who want the same. Wickenburg is the old with just enough of the new thrown in to make life comfortable according to our modern standards. It is the new, with an abundance of the old thrown in so that we can remember the faith and the hope and the spirit which made our West great. And the lonesome Hassayampa flows past it, sometimes under the sand and sometimes over the sand, as it goes on to its eventual union with the Gila River many miles below where the desert has given way to man's conquering march of reclamation.

That is the river whose name you will carry, but the tale cannot end there for the name itself has special significance in the minds of Arizonians. Many tales have come down through the years about the potent characteristics of the waters of the Hassayampa. We aren't quite agreed as to which fable is correct and history has not given us much help, either, in her constant tests. One version of it has it that he who drinks above the trail is ever truthful, while he who drinks below is lost to truth. In fact, some of my fellow Arizonians say that to call a man a Hassayamp is to call him a liar, but as I said, history has not been faithful to that and I have seen many truthful men whose life's liquid came from that stream and I have seen many of the other category who never quaffed its waters. Then there is the little poem of Orick Jackson's that denies a man the right to drink downstream or upstream as his choice for future veracity.

"You've heard about the wondrous stream
they call the Hassayamp.
They say it turns a truthful guy into a
lying scamp.

"And if you quaff its waters once, it's sure
to prove your bane,
You'll never forsake the blasted stream, or
tell the truth again."

This afternoon, as we face this most pleasant task, I have related to you a bit of the history and charm of this river, Hassayampa. I told you that the Indians called it hidden water, but they also construe its ageless name to mean beautiful water and that is the name I want to recall as we dedicate this ship to the useful purposes it will pursue. This bottle of water has been sent here by the people of Wickenburg. I hope it retains a prominent and perpetual spot in the wardroom so that those who sail this ship might be ever mindful of the pride we Arizonians have in that name, and be mindful too of the new pride which we will carry in our hearts as this ship cleaves the oceans of the world. Thus, the waters of the Hassayampa will go around the globe, seeking everywhere an answer to the question that has always been asked about the veracity of those who partook, for you see that answer has never come forth, since only honest men and women, dedicated to the perpetuation of our American way of life have lived along its course. What happened to those who partook and wandered on we do not know, but we do know that through truthfulness, honesty, and devotion to our fine cause our State has grown to great stature and her people to great respect. It is my wish, and I but reflect the wishes of the people of Arizona, that the course of this ship be ever honest, ever true, and that the close association with this great name will bring true at least a line of that poem I read. "You'll never forsake the blasted stream," and I assure you that neither it, nor the State I represent, will ever forsake you.

Proposed Revision of United Nations Charter

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. SPARKMAN. Mr. President, on Monday of this week former President Harry S. Truman made a statement before a subcommittee of the Committee on Foreign Relations studying possible revision of the United Nations Charter. It was a clear, forceful, and very thought-provoking statement. I ask unanimous consent that it be printed in the Appendix of the RECORD, together with an editorial appearing in this morning's Washington Post and Times Herald, entitled "Truman on the U. N."

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HARRY S. TRUMAN

Senator GEORGE, members of the committee, Senators, it is a pleasure and a privilege for me to testify before you today. I am grateful to Senator GEORGE for his invitation.

I understand that the subject you have under consideration is the amending of the Charter of the United Nations.

The United Nations is now almost 10 years old. This has been a rough and stormy decade for an organization dedicated to the cause of world peace. Since the Charter was signed in San Francisco, an international situation has developed which in many ways is far more serious, far more dangerous, than the international rivalries which produced World War I and World War II. The present international situation is worse than the one which wrecked the League of Nations and rendered it ineffective. Nevertheless, one of the most significant things about the world situation today is that the United Nations still exists. It is still a functioning body with a powerful influence. In spite of dissatisfactions and dissensions, none of the great powers has withdrawn. Whatever its weakness and difficulties, the United Nations is a power to be reckoned with, and no aggressor can afford to ignore it.

This, in and of itself, is a great achievement. The mere existence of the United Nations after a period of such terrible international tension, is an important and hopeful fact. It demonstrates the tremendous underlying desire of all peoples for international peace.

I will go even further than this. I believe that if we had not had the United Nations, the events of these last 10 years would again have plunged the world into unlimited international warfare. The fact that we have not had such a war is attributable in considerable measure to the existence of the United Nations.

In my judgment, the United Nations is an indispensable force for peace in the world today.

It is true, of course, that the present status of the United Nations does not correspond to the high hopes which were held for it when it was first created. Nevertheless, those of us who helped to set up the United Nations knew that it would have a long and difficult task. We did not go overboard on the assumption that once the Charter was signed, world peace was assured forever.

I remember very well the circumstances under which the United Nations was created. The first question that was asked me after I took the oath of office as President at 7:09 p. m. on April 12, 1945, was whether I wanted the San Francisco Conference to open as planned on April 25. I answered at once that nothing should interfere with that conference. It was my firm conviction on that night just 10 years ago that the establishment of the United Nations was absolutely essential to the maintenance of world peace and I knew that the great majority of the American people felt the same way. I recall my surprise that there should be doubt in anyone's mind about holding the San Francisco meeting to draft the United Nations Charter on schedule.

I soon found out that the eagerness we felt in the United States for the success of the San Francisco Conference was not felt universally. Representatives of the Soviet Union had participated in the preliminary meetings at Dumbarton Oaks, and Stalin had pledged the support of his country to the United Nations at Yalta.

But the victory in Europe now seemed certain, and the Soviet leaders seemed to feel that they could turn their backs on their promises. They implied that the United Nations was not so important after all, and that Foreign Minister Molotov would not attend the San Francisco meeting. This looked to me like a double-barreled challenge: First, would we accept without protest the breaking of an understanding that the Foreign Ministers of the principal powers would attend, and more important, could we permit the Soviets to torpedo the Conference by openly showing a lack of interest?

Just because the end of the war in Europe was in sight I had no intention of ignoring agreements that had been made during the heat of combat. The United Nations idea was too important for the future of mankind to be treated in an on-and-off fashion. I informed Premier Stalin that it was imperative for Foreign Minister Molotov to attend. The Soviet leaders reconsidered, and a few days later I had a rather frank meeting with Mr. Molotov in my office on his way to join the San Francisco Conference.

I explained to him at that time the unshakable desire of our people for an organization that could effectively solve political problems before they broke into conflict, and that could assist governments to improve the well-being of peoples throughout the world. I expressed these same thoughts in equally vigorous terms to Premier Stalin at Potsdam a few weeks later. Stalin was, I believe, extremely impressed with the overwhelming vote of 89 to 2 by which the United States Senate approved the charter on July 28. He, and many others, apparently had felt that the United States would lose interest in the rest of the world as soon as the fighting was over and would repeat the mistakes made after the First World War.

Speaking as a private citizen, I am very proud that the support for the United Nations, declared so vigorously by the Senate that day in 1945, has been staunchly maintained by both Houses of the Congress ever since then.

We knew at the time the United Nations was created that we were having difficulties with the Soviet leaders and that our difficulties might increase. We were determined, nevertheless, to go ahead with the creation of the United Nations and to get the Soviet Union into it, committed to the principles of international peace which are expressed in the charter. Without such a commitment on their part we believed that the United Nations would not be successful. Looking back now, I think this was the correct course. We were striving to prevent the East-West split which has now become known as the "cold war." We were striving to set up an organization which would bridge the split. Of course, no charter, no constitution can wipe out a power conflict. We must not blame the United Nations for all the bad things that have happened outside the United Nations and in violation of its principles. Soviet membership in the United Nations has been

an advantage to the cause of peace, because the peoples of the world have been able to compare the Soviet's conduct to the standards of international peace laid down in the charter and to see that the Soviets have violated the basic ideals of mankind.

When the charter was created at San Francisco, we did not believe that it was perfect. We were surprised that a charter could be agreed upon at all by so many different nations and peoples. In my address to the closing session of the United Nations Conference in San Francisco I said:

"That we now have this charter at all is a great wonder."

I also said:

"This charter, like our own Constitution, will be expanded and improved as time goes on. No one claims that it is now a final or a perfect instrument. It has not been poured into any fixed mold. Changing world conditions will require readjustments, but they will be the readjustments of peace and not of war."

And at that time we clearly left the door open for improvement.

I am sure the charter is susceptible of improvement. That is true of all documents written by human hands. But we ought not to underestimate the difficulties and dangers involved in trying to get improvements at this time. And we ought to be extremely careful not to lose what we already have in the United Nations, because what we have now is very essential to world peace.

We should consider that the circumstances were more favorable to getting agreement out of 50 different nations in 1945 than they are now. Difficult as it was then, and imperfect as the result may have been, it was far easier to set up the United Nations in 1945 than it would be to set it up today.

This was the world situation in June 1945: We were still fighting a world war. We had finished the war in Europe, but a long, bloody struggle appeared to be ahead in the Pacific and in Asia. We did not know how long it would take or how many casualties it would cost. We were just finishing the battle for Okinawa. The great army which the Japanese had on the continent of Asia was still untouched. The Japanese Air Force, Navy, and land forces were being concentrated for the defense of the Japanese islands. Weakened though they were by our successes in the Pacific, they were still capable of a fanatical defense of their homeland. Secretary Stimson informed me that it could cost 1 million American casualties to take Japan.

All around the world nations were prostrate and exhausted from 4 years of conflict. In this atmosphere of suffering, uncertainty, and continued fighting, the people yearned for peace. Statesmen were under pressure from their peoples to make concessions that would bring peace to the world. Peace and an end to suffering were the universal cry, even on the part of the Russians, whose losses had been among the worst suffered by any nation.

These were the circumstances in which the charter was drawn up and signed. I do not have to point out that it would be much harder to get similar agreements from national leaders in 1955 than it was in 1945. And I respectfully suggest that this is something you should always have in mind when you consider amending the charter today.

We signed the charter at San Francisco with a clear realization that the charter itself was not enough to guarantee world peace. As I said in addressing the closing session of the United Nations Conference, we had created a great instrument for peace and security, but we must now use it.

During the intervening years, we have used the charter, and we have found in it not only defects and inadequacies, but unsuspected resources. We have discovered some virtues which we did not know it possessed.

In spite of the obstruction of the Soviet Union and its satellites, we have had the united will and the firm determination of a great number of nations to make the charter work. And their will for peace has been so strong that they have used the charter in ways not foreseen at San Francisco. For example, let us take the history of the Security Council. On this organ of the United Nations most of the job of keeping the peace was intended to rest. However, the frequent use of the Soviet veto rendered the Security Council virtually powerless to meet any serious international difficulty. Consequently, in 1950, a good deal of the burden of keeping the peace was shifted from the Security Council to the General Assembly. This was done without an amendment of the charter but by the so-called "Uniting for Peace" resolution. Under that resolution, the General Assembly undertook to make recommendations for maintaining the peace where the Security Council was paralyzed by the veto.

This was an important change.

The fact that the General Assembly under the charter cannot require action by the member states but can only recommend action, is not so important as it seems. In any critical situation where a nation may be called on to use its armed forces or to apply sanctions, there must be assent. Few nations are going to go into that sort of a situation unless they feel they ought to do it. And a recommendation of the 60 nations, constituting the General Assembly, may be more effective as an expression of world conscience than the command of 11 nations on the Security Council.

I am not saying that the charter would not work better if it were possible for the Security Council to perform the functions that were envisioned for it, but I am saying that the veto power has not made the United Nations powerless to keep the peace.

I do not wish, at this time, to get into the technical problems of amending the charter. I believe that we should think about them. I believe that we should study them. If the majority of the nations desire a review conference, I do not think we should oppose it. I only believe that we should approach it with caution and with full realization that it may be impossible to get any worthwhile changes under present circumstances. If we go into such a conference with inflexible demands for particular changes, we can be sure that we will encounter strong Communist opposition, and there may be strong differences of opinion among the free nations, and the net result of such a clash may be concentration by the peoples of the world on the defects rather than on the virtues of the charter and a weakening of the United Nations just when strength is most needed. This could do very great damage so far as the effectiveness of the United Nations is concerned.

I do, however, think we should practice vigorously the idea expressed at the signing of the charter in 1945—the idea that we must use the United Nations to make it work. Wherever we can, we should use it. And we should use it now by bringing before the General Assembly the current threats to world peace.

Aside from questions of aggression and armed conflict, there is another wide area in which we should use the United Nations to the utmost—that is the area of social and economic betterment and progress.

An outstanding feature of the charter is the emphasis it puts upon international cooperation to promote higher living standards, full employment, and economic and social progress. One of the most important parts of the United Nations is the Economic and Social Council. This council has the responsibility for promoting international cooperation in the economic and social field, and for coordinating the work of the other international agencies specializing in particular fields of work, such as health, agriculture, and communications.

One of the reasons for the world crisis we are living through is the tremendous upheaval—in social and economic terms—among the peoples of the poorer or less developed parts of the world. Most of these peoples have lived for centuries very close to the margin of existence, with little hope for progress or improvement this side of the grave. In the last hundred years two tremendous things have happened to them. Contact with the highly developed nations has shown them that other peoples can overcome poverty and misery—that progress and improvement are human possibilities. The growth of population, however, has tended to make them even worse off than they have been. Added to these factors, the spread of western political ideas has given them an irresistible desire to be free and self-governing. The upheaval resulting from these changes has remade the face of Asia in our lifetime, and it is now changing the face of Africa.

We want to see these peoples advance and prosper. For many decades now, through our humanitarian institutions, we have extended a helping hand to the peoples of the less developed countries.

Today, we should realize that no force on earth can restore the old pattern in Asia and Africa. We cannot put the rising flood of human aspirations back into the ancient channels.

We can, however, help it to achieve its goals. And that will be to the advantage of the United States as well as to mankind as a whole.

This was what I had in mind when I proposed a program of assisting underdeveloped areas as the fourth point in my inaugural address in 1949. And this same concept of assistance on the path of progress underlies the economic and social activities of the United Nations.

In the years since 1945, nothing has happened to make economic development and technical assistance less important. Indeed, I think they are more important to world peace now than they were then. We should be doing more in the economic and social area than we are doing. We should stand, in the minds of other peoples, for the concept of orderly and rapid social and economic progress.

In this field, we have the answer to communism. In know-how, in the raising of living standards, in economic development, we can beat the Communists from the start. There is no atomic stalemate, no military standoff in this part of the struggle against communism. We ought to sustain a really significant program of aid in the economic development of Asia and Africa and Latin America. While we must, of course, continue our military programs for our defense and the defense of the free world, a vigorous program of economic development may, in the long run, prove to be more decisive.

In this effort the United Nations, with its economic and social organs and the specialized agencies, can be a great help. Providing technical and economic aid through international agencies offers difficulties in administration and often presents irritating problems. But an international agency sometimes can do things that direct United States aid cannot. The Soviets, in their propaganda, are trying to discredit our aid programs as an imperialist plot. But that kind of propaganda cannot be raised against the United Nations. Very often the governments of the underdeveloped areas are highly sensitive, and will accept U. N. help when they would reject United States aid. The question of who gets the credit is much less important than the need of the underdeveloped nations to get ahead, and to relieve the terrible social pressures that are pushing them toward revolution or communism.

We should, therefore, encourage the United Nations and the specialized agencies, in their economic and social activities, and support them fully. Wherever they can reach the poor and the suffering better than the United States Government can, we should encourage them to do so. I hope we will not cut the United Nations technical assistance program this year.

In conclusion, gentlemen, I urge you to continue to give your strong support to the United Nations. It is helping to build up international understanding and friendship among people by the nations working together on economic and social problems. It serves as a conscience for mankind. More than once it has kept the peace where a serious outbreak threatened—as it did in Iran and in Indonesia. And in the fateful summer of 1950, when the aggressor broke the peace of the world in Korea, the United Nations met the challenge. For the first time in history, an international organization organized effective collective resistance to armed aggression. This is the great lesson of Korea.

I'm sure the United Nations can be improved upon. If we continue to give it our firm support, I'm sure it will be improved upon. But let us be everlastingly careful not to throw away the good and great instrument we already have in a search for something better.

[From the Washington Post and Times Herald]

TRUMAN ON THE U. N.

Former President Truman talked with restraint and good sense about the role of the United Nations in the present world situation and about the problem of revising the U. N. Charter. He took note of the many weaknesses and imperfections in the charter and expressed the wish that the United Nations could be a much stronger instrument than it is for putting down aggression and maintaining peace. But this did not blur his appreciation of what the U. N., with its limited powers, has been able to accomplish.

The complaint most often heard against the United Nations is that it has been rendered powerless by the Soviet veto in the Security Council. Consequently, there is much demand for abolition of the big-power veto. Mr. Truman was realistic in saying that the U. N. would never have come into being without the veto. Neither Russia nor the United States would have accepted a charter without the reserve power the veto provision gives. It follows that talk of abolishing the veto is so much wasted breath. Mr. Truman pointed out that it would be more difficult to secure agreement on the charter today than it was in 1945. We do not think there is a chance that the Senate would agree to an amendment that would permit the Security Council to order military action against an aggressor without specific acquiescence of this Government.

However, the veto ought to be eliminated in regard to the admission of new members, and that should not be impossible of attainment. Also, numerous improvements in the U. N. can be made by strengthening the capacity of the General Assembly to act against threats of aggression when the Security Council is moribund, as at present. The fact that the Assembly has to act through recommendations and consent of a majority of its members is not an insurmountable handicap, as the experience in Korea proved. If there is a will among the law-abiding nations to act against aggression, they can do so through the Assembly under the uniting for peace resolution. This line of development within the U. N. ought to have every encouragement.

While moving toward improvements of this sort, Mr. Truman cautions us "not to throw away the good and great instrument we have in search for something better." This is sound advice. And the best means of upholding and strengthening the United Nations is to make it a positive force for peace and to invoke its powers as effectively as possible whenever there is a threat of coercion by armed force.

Los Angeles Phenomenal Growth

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. McDONOUGH. Mr. Speaker, the industrial growth of the city of Los Angeles has matched the phenomenal rise in population, and today Los Angeles is not only one of the largest cities in our Nation, it is one of the most important industrial centers in the United States.

Anyone who has visited Los Angeles in the last few years must find it hard to believe that a scant hundred years ago this area was part of the last frontier of our growing Nation. In 1850 when it was incorporated and made the county seat, it had a population of 1,610.

By 1900 the entire State of California only boasted a population of 1,500,000, but with the turn of the century the boom began, and by 1950 Los Angeles had a population of 1,957,692, greater than the population of the whole State of California just 50 years earlier. And during the last decade alone, population in Los Angeles increased by more than 48 percent.

Industrial growth has also soared, and Mr. Carl P. Miller, president of the Los Angeles Chamber of Commerce, reviewed the spectacular industrial development of the city in an article which appeared in the April 18 edition of the Los Angeles Times.

In this article Mr. Miller gives an excellent factual report of the industrial development of Los Angeles, past and present, which he predicts will continue to develop at a rate which should place Los Angeles ahead of Chicago as an industrial center by 1970.

The following is Mr. Miller's review:

LOS ANGELES INDUSTRY GROWTH SEEN AS UNRIVALED—CHAMBER OF COMMERCE HEAD TELLS OF RAPID CLIMB OF EMPLOYMENT IN AREA

"Los Angeles is the industrial capital of the West," said Los Angeles Chamber of Commerce president, Carl P. Miller, yesterday, commenting on the latest report of the chamber's research department which documents Los Angeles industrial development since 1919.

"The factual analysis of the Los Angeles metropolitan area's development points to an industrial growth unrivaled in modern history," he commented.

RAPID GROWTH TOLD

"This industrial boom has put Los Angeles ahead of Philadelphia and Detroit, surpassing Philadelphia in mid-1952 and Detroit in early 1954. Populationwise we expect to pass Chicago in 1960, and assuming no major change in trend, it would seem safe to predict that we will pass Chicago industrially by 1970.

"This marked industrial growth has occurred during the last 15 years. Based on wage and salary workers in all manufacturing in the Los Angeles metropolitan area, a total of 77,500 employees were engaged in manufacturing back in 1919; 127,000 in 1929, and 173,000 in 1939."

EMPLOYMENT CLIMBS

"In 1949, employment climbed to 378,000 in spite of predictions to the contrary. This represents a net 10-year increase of 206,000 employees or an average increase of more than 20,000 per year. The industrial climb during 1940 was about 4 times greater than the rate during the twenties and thirties.

"Our rate of industrialization so far since 1950 is 2½ times the rate during the spectacular forties and about 10 times the rate in the thirties and in the twenties. Since 1950 we have added to the Los Angeles metropolitan area what amounts to an industrial Boston, or an industrial St. Louis."

POINTS TO MAGNITUDE

"It is no wonder that our eastern friends or we here in its midst do not fully recognize or appreciate the magnitude of this development. It has happened too fast to be believed. The publication of the 1954 Census of Manufacturing will go a long way toward convincing everyone that this industrial explosion in Los Angeles is a fact.

"Los Angeles now accounts for 64 percent of all manufacturing employment in California," Miller continued, "and 42 percent of all industry in the entire 11 Western States. There is more than twice as much manufacturing employment as in the States of Washington and Oregon combined, four times as much as in the San Francisco-Oakland metropolitan area, and more than 50 percent more industrial employment than in the entire State of Texas."

DEVOTED TO INDUSTRY

Proportionately, the local economy devoted to industry is approximately 32 percent of the total local employment in manufacturing as compared to Chicago's 35 percent, New York's 31 percent, Detroit's 44 percent, or Philadelphia's 39 percent.

Miller observed that Los Angeles' strategic position as a trade center coupled with its diversified economy will allow Los Angeles to absorb more manufacturing and prevent its becoming overindustrialized and too dependent on a few industries. Few areas can supplement and help balance their manufacturing development with basic industries other than manufacturing as can Los Angeles, he said. Agriculture, oil and gas, mining, fishing, motion pictures, and tourists contribute largely to balancing its economy.

Amendment of Civil Aeronautics Act

SPEECH

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2225) to amend section 401 (e) (2) of the Civil Aeronautics Act, as amended.

Mr. KLEIN. Mr. Chairman, it is evident that there is very little, if any, opposition to this legislation. The committee was unanimous in approving it. But I wanted to point out one facet of this

problem that is not covered by this legislation.

Although this legislation does not apply to helicopters I have noted with great satisfaction the great strides that are being made by the certificated helicopter carriers particularly in the commercial field. It is recognized that this new and radically different type of transportation is being ably developed.

Passenger helicopter service, on a scheduled basis, is now a reality and has been for nearly 2 years, with American aviation leading the way.

New and larger and more economical equipment is already in the air. Greater density of population in our large metropolitan areas means that the helicopter is now a part of our everyday life, both for commercial as well as civilian defense reasons.

In addition, the civilian fleets now in operation have already proved an invaluable training and testing laboratory for our armed services.

We are confident of the continued rapid growth of scheduled helicopter service and I hope that legislation similar to that being considered today be considered for the certificated helicopter lines.

May I say to the chairman of our committee that in the near future we should consider comparable legislation with regard to helicopter service. These certificated helicopter carriers who are in the field at the present time are up against the same difficulties and uncertainties as the small feeder airlines that we have been discussing here, and I hope that before long we can consider similar legislation with regard to the helicopter service.

Did Roosevelt Era End With His Death?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting article which appeared in the Boston Sunday Globe, April 10, 1955, by John Harris, regarding the dynamic leadership of Franklin D. Roosevelt:

DID ROOSEVELT ERA END WITH HIS DEATH?—WHEN THE PRESIDENT DIED, 10 YEARS AGO THIS WEEK, THE MILITARY CAMPAIGN WAS ABOUT WON—THE STRUGGLE FOR MEN'S MINDS MUST BE DECIDED NOW

(By John Harris)

Humble men and women, many of them Negroes, stood on Pennsylvania Avenue outside the White House just a decade ago and shed tears. They had gathered silently, reverently, for no evident reason save a feeling of shock and intense personal grief at the sudden, sad news from Warm Springs, Ga.

President Franklin D. Roosevelt, vacationing there, had suffered a stroke and died.

The passage of 10 years has served to temper many of the emotional reactions, not all of them by any means sympathetic, to the dynamic leadership Roosevelt gave this Republic for a period longer than any President in our history.

END OF ONE ERA

As we now look back we recognize clearly that his death came as an era was about to close—the costly beating down of Fascist power intent on world conquest, the ruthless power which Winston Churchill so scathingly and tellingly denounced as the "Hun."

This life-or-death challenge to our freedom, which Roosevelt called our generations rendezvous with destiny, was faced and the military victory was won.

But was that an end, a solution?

During the last days and weeks of World War II, many a serviceman said jestingly: "I'm glad this war is over and now we can go back to fighting the Civil War." Others in service, more perceptive of the antagonistic forces that have dominated this century dolefully suggested: "Don't throw away your uniform—you may need it soon."

The challenge of one totalitarian power, the Fascist, was followed by the challenge of another totalitarian colossus, the Communist.

Thus when Franklin D. Roosevelt died an era did come to an end and another began. Unfortunately the two were almost twins, alike in their militant menace and implacable, sardonic opposition to our democratic way of life.

These two eras, in the broad prospective of time, are in reality two phases of a continuing antitotalitarian struggle in which Roosevelt, 10 years after his death, has still a vital part.

DEPRESSION AND FREEDOM

To maintain there was an end in 1945 is to insist upon an illusion.

When future historians, unencumbered by the partisanship which often befuddles accounts of current events, set about writing the record of the Roosevelt period, two of the main chapters will be on Roosevelt as a leader in the wars against depression and against totalitarianism.

These are not to be taken as separate accomplishments. They were intimately intermingled in the free world's fight for survival. We have only to think back to the desperate plight of our country in 1932—millions without jobs, breadlines, banks about to close their doors, people dismally prophesying that Roosevelt would be either a successful President or our last President.

But the social and economic reforms which have become closely connected with Roosevelt's name and memory were not exclusively his. In some similar form or other they were tried in many other countries during the same period of the fateful 1930's. They have been worked over and modified since. A basic core of them has remained in Europe and here.

Perhaps many are still tentative and subject to more changes. After all they have been products of a time of violent changes and of a desperate struggle to fit our ancient forms of society into the utterly changed conditions of the 20th century and yet to preserve the basic principles of our ideals and beliefs.

ANCIENT AND MODERN LESSON

This struggle still continues, but part of it has already been won.

When the war crisis came, this Nation was able to become the arsenal of democracy and supply the planes, tanks, and guns that blasted down the Fascist totalitarians.

Roman rulers long ago learned that empty stomachs make people restive, dangerous, a prey to demagogues and adventurers. That lesson applies to modern as well as ancient times. In the struggle to persuade people of other lands to embrace the teachings of democracy, our greatest ally is their sharing at least some of the simple blessings of life. Social and economic improvements abroad, an American export, cannot fail to win recruits to the free world. Men with a choice do not choose chains.

A third important chapter of the Roosevelt period will undoubtedly be his devising the United Nations, which is still, after 10 years of effort, more a promise than a fulfillment.

There was historical continuity in this endeavor. Roosevelt had served under Woodrow Wilson who sought futilely, in the League of Nations, to design an instrument for world peace.

In Roosevelt's quest for the United Nations there was also a historical necessity made more urgent by experiments he fostered, but which did not bear their fearsome fruit until after his death: the atomic bomb, which has brought thermonuclear weapons which could, we are told, make our planet uninhabitable.

DOUBLE LEGACY

The world has then a double legacy—an instrument, however imperfect, for contriving a permanent peace; and a weapon that may have already made worldwide conflict unthinkable.

Winston Churchill, who has just retired from the summit as an East-West meeting he so long sought has become a possibility, assured the West it could win in an atomic onslaught but we would be "victorious on a heap of ruins."

Mankind looks anxiously to its leaders to acknowledge these facts of the atomic age into which the struggle between totalitarians and the free world has extended. Ultimate victory would then rest with those who shall win rather that destroy the minds of men. There is no sane alternative.

And in order to win the minds of men we must prove that democracy is flexible enough and strong enough to give us a world order freer, richer, and better than totalitarianism. This is the struggle which began in the early 1930's and which must be won in the 1950's.

Nearly 1 Million Jobless Coal Miners and Dependents Need United States Help

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. VAN ZANDT. Mr. Speaker, according to Mr. Thomas Kennedy, vice president of the United Mine Workers of America, there are now 200,000 unemployed coal miners with nearly 700,000 dependents in the bituminous and anthracite coal industries of the Nation.

Mr. Kennedy furnished this information on April 15, 1955, to the Senate Subcommittee on Labor and Public Welfare which is holding hearings regarding the cause of unemployment in the coal and other industries.

Mr. Kennedy testified as follows before the Senate subcommittee:

My name is Thomas Kennedy, vice president of the United Mine Workers of America. I appear before this committee to give you a rundown or a recapitulation of the unemployment situation in the anthracite and bituminous coal regions of the United States, together with some comments and suggestions.

We had a survey made of unemployment in the coal industry, together with the number of dependents affected thereby, and also the average number of days worked per week by those that are still employed in the industry. This survey covers 27 districts of the United Mine Workers of America located in some 20 States. These figures show as of the first of February that 180,650 men

were unemployed in the coal mining industry. According to our own reports for the month of March, there were 207,000 unemployed. Conservatively speaking, I would put the figure at 200,000. The number of dependents affected by this situation is 669,776.

The average number of days now being worked by our employed workers is 3.2 per week. In many of our districts thousands have exhausted their unemployment benefits and surplus food is being supplied to many of them by the Federal Government. However, these figures do not report the whole picture because when we take into consideration the population of the various coal producing States and the number of people unemployed therein, we find that the economic situation of the entire State is adversely affected. For instance, at least 20 million individuals are affected by the lack of work in the coal mining industry in the States of Pennsylvania, Kentucky, and West Virginia, and in other States where coal is produced. If we take Pennsylvania as an example, we find that unemployment in the coal mining industry is so pronounced it became necessary for the Governor of Pennsylvania, Hon. George M. Leader, to recommend to the general assembly to increase the tax for unemployment compensation and to outline additional plans to help out in the coal fields. The bill was passed.

Some of the factors responsible for this situation can be readily found, as for instance the importation of waste or residual oil and the dumping of this fuel on the eastern seaboard at prices which can be declared as completely unfair in competition with solid fuels. Adding further to the shamefulness of the situation is the fact that most of this residual oil comes from Venezuela, a country which is dominated by a military dictatorship form of government, and where freedom and independence are denied to all working people. As one delves into the root of this problem, many factors are discovered which are completely amazing. For instance, one of the generals from Venezuela was recently decorated in Washington by the Secretary of the Army, Robert Stevens. Why special honor should be paid by our Government to a representative of a dictatorship form of government is rather hard to determine. Furthermore, the matter becomes more confusing when one takes into consideration the fact that the principal military objectives of the Venezuelan Government are to put labor unions out of business and place all labor leaders in jail. Down through the years, some of the actions of the representatives of our Government have certainly provided grounds on which any number of protests could be lodged, and it is my opinion that the medal which was awarded to this general from Venezuela could be placed in the same category as the Gilbert-Sullivan medals worn quite frequently by any number of smokeless generals.

As this committee well knows, residual oil displaced over 30 million tons of coal in 1954. This situation cannot be corrected by the imposition of a tax, in our judgment, but it could properly be regulated by the adoption of a quota system which we strongly favor on the basis of a 10-percent regulation. Another factor involved in our problem is the importation and dumping of natural gas. Recently the White House issued a statement on this practice under the caption, "Sales Below Cost by Interstate Pipeline Companies," and the report goes on to declare this practice to be unfair competition and inimical to a sound fuel economy. To sum up our views relative to the natural-gas situation, I quote from a report which we issued under date of March 13, 1955:

"Under the section 'Sales Below Cost by Interstate Pipeline Companies' the general recommendations have substantial value, if affirmatively implemented by congressional legislation. The widespread practice of the gas pipeline companies in making sales below actual cost is so ruthless and devastating in its effects upon the coal industry that it, upon its face, 'constitutes unfair competition' and is 'inimical to a sound fuels economy.' As an illustration, a quick look at the practice of using natural gas as raw boiler fuel makes this 'inferior use' of an irreplaceable and rapidly diminishing natural resource stand out like a sore thumb. As stated in the Paley report in 1952, it must be clear (although the present report does not specifically treat the subject) that 'The desirability of eliminating low value general uses (such as boiler fuel at points distant from the fields) as rapidly as possible is universally recognized.'

"In the face of this 'universally recognized' fact, the Federal Power Commission continues to allow and the pipeline companies continue to 'dump' gas for raw boiler fuel purposes at an ever-increasing rate. While no definite distinction (from facts presently at hand) can be absolutely drawn between 'boiler fuel use' and what may be some justifiable uses in industry, there is available a pretty fair guide as to what is happening. According to a Bureau of Mines 'mineral year book' the total industrial consumption of natural gas in 1940 was in excess of 995 billion cubic feet. In 1952, this had increased to approximately 3½ trillion cubic feet—an increase of 246 percent. In 1940 electric utilities reporting to the Federal Power Commission used approximately 183 billion cubic feet of natural gas as boiler fuel. In 1953 this had increased to over 1 trillion cubic feet—an increase of 446 percent. There can be no question as to the need of conserving natural gas in this country, so surely some way should be found to put a curb on the extravagant and wasteful use of this gas as boiler fuel. Certainly this practice of the gaslines should be prohibited, for its continuance is unquestionably unfair competition and is ruinous in its effects on the anthracite and bituminous coal industry."

The question of coal freight rates is another item that is referred to in the report from the White House and I quote our views pertaining to this situation from our statement of March 13 as follows:

"Coal freight rates recommendations are general. Vigorous compulsory action by the Interstate Commerce Commission and other governmental agencies is necessary and urgent to remove the excessive and disproportionate contribution that coal rates are making to meet the cost of other unprofitable services of the railroad industry."

The Government fuel purchasing policy also needs correction. It is also a factor that contributes to unemployment in the coal mining industry. Another question that should receive serious consideration is the tax situation. For instance, in the depletion tax setup there is a 27½ percent writeoff on oil and gas, where as the figure is only 10 percent as it concerns coal mining. Our exports of coal should and could be built up to 30 million tons, if we had any sense to outline a proper policy. We should have a national fuel policy that would treat all fuels on a fair, equitable, and just basis, and where each could find its proper and logical place in our economy. The Government should also take steps to inaugurate a plan whereby new ways could be developed for uses of coal.

I think it is also wise and important to bring to your attention the fact that our Government readily admits coal mining is a basic industry and is in reality a national defense industry. The United Mine Workers of America is concerned and we have always contended that if this country ever becomes involved in an emergency, we would be on a coal economy almost overnight, not only to help ourselves, but also for the benefit of our allies. Down through the years this fact has been proven over and over again. As conditions now exist in the coal mining industry, however, we could not properly rehabilitate some of our shutdown mines and put them in working order to the point where we could meet the fuel requirements of our Nation or of our allies in much less time than 6 or 8 months of preparation. In fact in many instances, the preparation of some of our mines would take a great deal longer. Just what could happen in the meantime as a result of this unpreparedness is unthinkable.

Adding to the irony of the situation is the fact that some of our citizens like Paul Hoffman of the Studebaker Corp., and Charlie Taft, "the Duke from Cincinnati," both sound off rather frequently as free traders and seem to be more interested in foreign trade than American prosperity or securseems to be the chief apologist to Europe ity. Looking over the situation, Hoffman seems to be the chief apologist to Europe and Asia for everything we do in this country, whereas Taft is the chief apologist for everything we do concerning Latin America. It would seem to us that both of these individuals should be more interested in the United States first, and to remember that we must remain strong in order to help those who are weak.

On the international front, it is our judgment that the first thing which should be done in Europe, Asia, and Latin America is to build up the purchasing power and living standards of the people to a point where they will be able to buy the products of their own industry. It is a well known fact that these people cannot do so now. If the standards of living and wages in Europe and Latin America could be improved from 15 to 20 percent, it is our opinion that such steps would do more to bring about stability and relative prosperity in those countries then all of the money we pour into them in our efforts to help them.

That, gentlemen of the committee, sums up some of the views and some of the collective thinking of the United Mine Workers of America with respect to the coal situation in the United States. We look to the present Congress to come up with some new ideas and some plans to stabilize coal mining in our country and we sincerely hope that some of the suggestions that we have outlined here today will merit consideration and attention by this committee and later by the United States Senate and the House of Representatives.

The time to do it is now.

Tax Refund Bill Discussed

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. SIKES. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an article which appeared in the Panama City News, of Panama City, Fla., Friday, March 18, 1955, which gives an analysis of a bill introduced by me, H. R. 2879, to amend section 6415 of the Internal Revenue Code of 1954, so as to provide that fishingboat owners who have been required to pay a transportation tax may now obtain a refund since the courts have

held that the statute did not apply to fishing boats in the first place.

The enactment of H. R. 2879, or of some similar measure, appears desirable because of the following facts and circumstances:

The statute (sec. 4261, I. R. C.), while enacted and effective in 1941, was not applied to fishing boats, at least in my district, until about 1946, or later. The decision in *Smith* v. *U. S.* (110 F. Supp. 892), in part, reads:

> Section 3469 was enacted by Congress and became a law September 20, 1941. This section imposed a tax for the transportation of persons by rail, motor vehicle, water or air within, and, under certain conditions without, the United States. The record in this case is not clear as to when the Internal Revenue Bureau attempted to apply the section to charter party operations by fishermen, but so far as this case is concerned, the record shows that no tax was ever imposed on plaintiff until 1951 and the complaint in this case alleges that in 1951 the tax was imposed at some places and not others where charter boats operated. The complaint alleges also that the tax imposed at different places varied materially. From the record in the case it may be safely stated that no serious effort was made by the Bureau of Internal Revenue to impose and collect the tax on charter parties prior to 1950.

The law imposed a tax on "transportation" and on nothing else. Obviously a man riding a plane, train or bus from Miami to New York would be subject to the tax because "transportation" is clearly and unmistakably performed. "Transportation" is the clearly designated article, here activity, on which the tax was imposed or levied. The law made no mention about any tax on "fishing," the principal and primary activity here involved.

About the year 1946, or subsequently, it seems that someone in the Internal Revenue Service, precisely whom appears to be unknown, concluded that "fishing" was "transportation" and therefore taxable. In a more or less irregular manner, assessments were made accordingly and when not paid as demanded warrants for distraint were executed and liens were filed in the public records of the boatowner's county, all of which resulted in financial embarrassment to the taxpayers, adversely affected their standing in the community, socially, professionally and otherwise and finally led to a reduction of his bank account or cash on hand in a substantial sum since some assessments were in excess of $1,000.00 This procedure appears to have reached a climax in 1951 after the fishing industry had employed an attorney in 1950 who immediately protested the tax, pointed out that if the statute, as a matter of law, imposed any tax, the rate of the tax on a $5.60 fishing fare was, or should be, only about six cents rather than the sum of sixty cents as demanded by the Internal Revenue Service at Panama City, Florida.

With the employment of counsel in 1950, the boatowners were informed and advised that the law did not impose any tax on fishing. A rather extensive investigation followed extending over an area of several States from Louisiana to Florida. This inquiry readily disclosed the lack of uniformity in assessing and collecting the tax on fishing boats. In some areas no taxes were being imposed while in other places, as in Panama City, the tax rate was fixed by the Internal Revenue agents at 60 cents for each $5.60 fishing trip. It is not clear how, or why, the tax agents presumed to fix the tax rate at sixty cents in Panama City unless it was because the boatowners denied any tax liability and refused to pay any tax.

In any event, when counsel was retained by the boatowners the first order of business was to establish a fishing fare at Panama City at $5.60 per person which sum did not include any tax. With the determination of the $5.60 rate, exclusive of any tax, the boatowners then proceeded to determine their tax liability, acting on the assumption that the law did, in fact, impose a tax on fishing. Their findings and conclusions, after an analysis of their operating costs, the approved method of ascertaining a tax liability in such cases, was that the tax varied on different occasions and on different boats depending on a number of facts such as boat value, size, type, load capacity, season of year, winds, tides, etc. The average tax, however, was found to be approximately six cents per person or one-tenth of the sum demanded, and in some instances collected, by the Internal Revenue Service. A few boatowners who employed counsel and established the fishing fare at Panama City in 1950 at $5.60 per person, exclusive of any tax, paid the tax, under protest, at the six cent rate, filed a claim for its refund and in a few cases have received a refund in full of all taxes paid, as well as penalties and interest resulting from late filing of returns or delayed payment of the tax illegally assessed. This group has been fairly and equitably treated insofar as refunds will accomplish fair and equitable treatment. There is another group, however, who did not have the benefit and advice of counsel, who, when liens were filed against them, in order to save their boats and other property from seizure and forfeiture, paid the tax, including penalties and interest as demanded by the tax agents. It is this group which my bill H. R. 2879 is designed to help. They were directed, by the tax agents, in no uncertain terms, to "collect" the tax. They were misinformed as to the law, that is, if we may assume that the Court in *Smith* v. *United States* (110 F. Supp. 892) has correctly determined the law. In that case the Court said:

> Clearly an operation of this character is not transportation upon which a tax may be imposed under the provisions of section 3469.

Parenthetically, I may say that section 3469 of title 26, United States Code, is now section 4261. This group were told that their fishing operation was subject to the tax and that they must collect it. They assumed they were correctly informed by the tax agents and concluded that the tax was included in their fishing fare of $5.60 but their charge for a fishing trip of $5.60 was the same identical sum as other boat owners who, on the advice of counsel, were not collecting any tax but paying at the 6-cent rate under protest, which sum has since been refunded. The group without counsel's advice who were misinformed by the Internal Revenue Service, paid the tax at the 60-cent rate and have been denied a refund. This group will not be unjustly enriched, if and when a refund is made to them since there was a more or less fixed fee of $5.60, exclusive of tax, on all boats. It is the group that was compelled by the Revenue Service to pay a 60-cent tax that my bill is designed to help. To deny a refund to them it seems would result in discrimination prohibited by the fundamental law of the land.

The news article reads as follows:

PANAMA CITY MAN ELECTED BY BOATMEN

Florida Boatmen's Association, Inc., yesterday elected J. E. Brunson, of Destin, president of the organization and at the same time named S. Walter Anderson to the post of vice president.

The officer election was held at a meeting of the Boatmen's Association at Destin which saw unanimous adoption of a tax-refund bill introduced in Congress by Congressman BOB SIKES.

The boatmen also adopted a three-point legislative program which will ask the legislature to (1) place fishing, a food-producing industry, in the same class with farming for the purpose of taxation; (2) exclude fish bait from the sales and use tax; and (3) exclude the cost of construction, sale, and repair of boats from the sales and use taxes.

The Sikes bill will require the United States Treasury to refund taxes which the courts have held illegally collected from some members of the Boatmen's Association, a tax that other members were not required to pay. When Congress imposed a tax on transportation the law was applied to party fishing boats—but a Federal court has since ruled that fishing boats are not transportation within the meaning of the law.

In fighting the illegally imposed tax, attorney for the association pointed out that no collection effort was made for several years after the law was adopted and even then was not collected from all boatmen at the same rate.

Total collections amount to approximately $100,000, since 1941, the year the transportation tax law was passed, David W. Palmer, association attorney, pointed out last night.

In introducing the refund bill, Congressman SIKES declared:

"The law was enacted in 1941 but no effort was made to apply it to fishing until 1950, according to a court decision. As the law was not uniformly imposed in all areas and in view of the fact that refunds have been made in some cases but denied in others, the bill is designed to provide equal and uniform treatment taxwise to all citizens."

The Boatmen's Association is represented in Panama City by Attorney W. G. Cornett.

No Conservation Then

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edi-

torial from the Memphis Commercial Appeal:

NO CONSERVATION THEN

A number of Midsouth tributary floods have inspired the "headwaters enthusiasts" to sound off on their favorite argument that all floods can be controlled if somebody—preferably the Federal Government—will build enough little dams and reservoirs on all the creeks and bayous that feed into the rivers that make the floods.

Maybe so, but we can't help thinking about Gracilaso De La Vega and what he saw in 1543. It was the building of a flood. As De Soto's diarist, he was with that explorer on the bank of the Mississippi just below the mouth of the Arkansas. He recorded that at the beginning the river "overflowed the wide, level ground between the river and the cliffs. Soon it began to overflow the meadows in an immense flood and as the land was level, without any hills, there was nothing to stop the deluge."

The Spanish diarist has left a complete and vivid account of how it took the flood 40 days to crest. "On each side of the river the water extended over 20 leagues of land, and all of this land was navigated by canoes, and nothing was seen but the tops of the tallest trees."

De La Vega saw one of the greatest floods which had ever occurred in the lower Mississippi Valley, and in an era when there had been none of the abuses to which all floods are now being attributed by some. There was no deforestation to speak of. This was an extremely lush valley with an overabundance of the type of plant life which pins soil down. Conditions favored saturation rather than runoff, yet the Spanish explorers looked upon one of the biggest of recorded Mississippi River floods. There had been a tremendous runoff despite all of nature's retarding devices.

The truth is that there is no single cure for floods. What would work for one valley might not work for another. Realistic flood control calls for both big and small dams, huge reservoirs, small impoundment areas, good erosion control, and sound land management practices. Floods cannot be cured or controlled by theoretical fads.

The Postmaster General's Disregard for the Law

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. DEMPSEY. Mr. Speaker, because the Members of this honorable body are today considering H. R. 4644, a measure which gives the Postmaster General unusually broad authority to reclassify Post Office Department employees, I feel it incumbent upon me to bring to the attention of the House certain circumstances that cause me a considerable amount of misgiving in supporting such legislation. Despite the recent vehement protests by the Postmaster General before congressional committees that political considerations do not enter into his administration of personnel matters and his assertion that there is less politics in the postal service today than at any other time in history, I find it most difficult to reconcile his statements with the facts I am presenting to you. They convince me the Postmaster General has utterly disregarded the law.

If ever political consideration and connivance have entered into the appointment of a postmaster—or rather the failure to appoint one—the record with regard to Portales, N. Mex., stands out as a shameful example.

The postmaster at Portales retired on April 30, 1953. An acting postmaster was named and an open competitive examination was called, with the closing date set for August 11. On December 18, 1953, a register of three eligibles, all with 10 percent disabled veterans' preference, was sent by the Civil Service Commission to the Post Office Department. After a delay of 6 months, during which the Postmaster General made no appointment, the examination was reopened on June 16, 1954, at the request, according to civil-service records, of six applicants who claimed to be disabled veterans. Three of them took the reopened test. Three others failed to prove eligibility as disabled veterans. Two of the three who took the test were held ineligible for lack of required experience. The other, who had not taken the first examination, flunked the reopened test.

On October 5, 1954, the identical register of eligibles that had been sent to the Post Office Department on December 18, 1953, was sent again by the Civil Service Commission. Again no appointment was made by the Postmaster General, although all of the eligibles were disabled veterans, with passing marks of 87.5 up to 97.25 percent, and, further, notwithstanding the requirement of law that there be no delay in postmaster appointment.

On January 24, 1955, nearly 4 months after the second register was in the Postmaster General's hands and more than 13 months after he had received the identical first register, no appointive action had been taken by him. Strangely enough, neither the officials in the Post Office Department nor in Civil Service would tell why the second long delay, although frequent reguests were made by my office for an explanation. The answer came, however, in the form of a telegram from the man who had flunked the first reopened test, requesting a second reopening, so the register of eligibles was sent back to Civil Service on January 26, 1955.

The man who flunked the first reopened test again failed to make the required grade in the second reopened examination with the result that the original list of eligibles, carrying the names of the same three disabled veterans, has been returned again to the Post Office Department by the Civil Service Commission. Yet no action has been taken because, as was explained to me by the Post Office officials, "we are waiting for recommendation from the Republican National Committeeman in New Mexico." They have been waiting for 1½ years. The Portales post office has had no duly appointed postmaster for 2 years. The people of Portales have been denied the service that can be rendered only by an administrative authority which has permanency of tenure. Officials of veterans' organizations in New Mexico have protested strongly about this discrimination against three disabled veterans who are entitled to preference under our law.

Not only has the Postmaster General given his sanction to this gross violation of the Veterans' Preference Act but he has ignored the mandate of Congress as contained in the law concerning appointment of postmasters, which states that they shall be appointed without undue delay.

The Postmaster General cannot plead ignorance of this willful disregard for the law and the rights of these disabled veterans because I discussed the Portales situation with him 3 months ago. At that time he said he would conduct an inquiry into the matter and advise me. To date I have not heard further from him. I can only assume that by his silence he is seeking to cover up his wilful maladministration. If it is to be his continued policy to play politics at the expense of disabled veterans and of proper administration of post offices under his direction why does he not come out openly and say so?

Not only should we safeguard the provisions of H. R. 4644 with regard to classification of employees by a proper amendment to require the Postmaster General to give the Congress detailed reports of the actions he takes, but I believe we should go further and authorize a thorough investigation by the House Post Office and Civil Service Committee of such apparent law violations as are indicated in the situation at Portales.

It is evident that the Postmaster General feels that he is above the law, that he has dictatorial authority over his Department. He has indicated that by his take it or leave it attitude in appearing before congressional committees with regard to this legislation, particularly in respect to the pay increase of postal employees. Therefore I feel that it behooves us to see to it that the Congress retains sufficient control over the administration of the Post Office Department to prevent further disregard for its mandate as expressed in the law. The rights which we have provided for veterans, particularly the disabled, should be fully safeguarded. It is manifestly our duty to see that they are.

Truman Peps Up Two-Party System

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes which appeared in the Washington Evening Star on April 19, 1955:

TRUMAN PEPS UP TWO-PARTY SYSTEM—REFRESHING WARMTH IN NATIONAL POLITICS SEEN IN FORMER PRESIDENT'S VISIT

(By Thomas L. Stokes)

It was nice to have Harry Truman back in town for a few days—and how refreshing.

Since he went away 2 years ago Government has become aloof and stuffy, and sort of exclusive, lacking the human warmth he gave it. It's become more of a private affair, like a board of director's meeting behind closed doors, or a session of the Joint Chiefs of Staff, very hush-hush. Government doesn't seem so close to people any more.

It's funny that you don't realize what has happened often, what is missing, until it suddenly becomes very clear, just as when Harry Truman came back, and moved about our city and among the folks, friendly and smiling—and then you could understand.

You wouldn't think the spirit of one man could so permeate something as big as a whole government.

You suddenly realized, too, what is missing from our national politics, which has been so full of high-minded talk about "bipartisanship" and "cooperation" and "goodwill" that it became chilly and cheerless and boring.

Not until Harry Truman came back, and got himself a platform, and made one of his bristling speeches full of stout adjectives and burning indignation and honest concern for what government ought to do about plain folks—why, you wouldn't know we still had the two-party system in this country.

In just one speech he brough tthe two-party system back—but it probably left town again with him. Always amusing is the way he stirs up Republicans whenever he opens his mouth, and they are crying now to high heaven about his criticism of the Eisenhower administration as if it were a crime. Then you remember the names they used to call him. But he could take it.

He seemed hale and hearty again, and maybe he can take the two-party system on tour later and show it to the people and bring some life back into our politics which is so much a part of our national life.

When Harry Truman came back, you had the feeling he was coming back home—and yet this is not his home. That's out in Missouri. But he had become a part of this community, and never seemed just a transient. To so many people this city is just a place to hire a furnished house and a caterer and a butler to give cocktail parties to other people also here temporarily—though to lots of us it is home, and the home town. Harry Truman had become a part of that home town.

That explains the friendly feeling that people for whom Washington is the home town have for him, which was so obvious in the warmth toward him by people wherever he appeared on his visit, and for the question heard so often:

"It's good to have Harry back, isn't it?"

They crowded up to where he sat at the long table at the big Democratic dinner for Speaker SAM RAYBURN Saturday night to say hello and to bask for a moment in his smile. So great did the congestion become there that the chairman had to plead with the people to clear away so the waiters could get through to serve the $100 dinner.

So it was wherever he went. He packed the Senate caucus room when he appeared there to testify about the United Nations. It was very plain from the rousing, standing ovation he got when he entered the big room that the audience had come to see him and not to hear about the United Nations, though he had some very sound sense about that international institution which was created at San Francisco early in his administration.

He arrived early and took the witness seat on the side of the long committee table across from the seat he had occupied for so long as chairman of the famous Truman committee that had investigated various aspects of our defense and Second World War program when he was a Senator from Missouri. As various Senators would come over to speak to him and he would rise to greet them, the audience would break out in applause again.

What must have warmed his heart was the spontaneous and noisy ovation he got from crowds in the Senate gallery—tourists from everywhere—when he entered that Chamber and took the seat on the back row which had been his for 10 years. When he rose to speak briefly, he got another boisterous round of applause from the gallery, as well as from his colleagues on the floor.

About the only place this VIP tourist did not visit was the White House. He has not been invited there since he left, though he has been in the city before. The present occupant of the mansion was not in the city, but down at Augusta, Ga.

But Harry Truman did not seem to mind not going there. He knows how it looks inside and his old friends who worked with him are not there anymore.

Democrats' Thomas Jefferson Was Really a Republican

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following article which appeared in the Thursday, April 14, 1955, issue of the Fauquier Democrat, Warrenton, Fauquier County, Va.:

SOMETHING TO THINK ABOUT: DEMOCRATS' THOMAS JEFFERSON WAS REALLY A REPUBLICAN

(By L. M. Hamilton)

My column last month, in which I referred to the coincidence between the $20 tax cut proposed by the Democratic leaders in the House and a $20 bill which bears the portrait of Jackson, has brought me many comebacks. Some, possibly most, have been complimentary; others have been unmistakably uncomplimentary. To one of the latter I owe the inspiration for what I have to say this week.

My semihumorous reference to Jackson's having been promoted to a place of equal honor with Jefferson—at $100 a plate—by the New Dealers and the Fair Dealers drives one of my critics to near apoplexy. He accuses me of being "a Republican in disguise" and of being a carpetbagger who ought to go back where I came from.

Please bear with me while I reply to my choleric friend and try to open his eyes to some facts of proven history about Republicans and Democrats.

The first Republican Party in this country was that set up by Jefferson and his anti-administration colleagues. It was very shortly named the Republican-Democratic Party, sometimes reversed into the Democratic-Republican Party but popularly known simply as the Republican Party. (When Jefferson first ran for the Presidency against John Adams in 1796, contemporary accounts refer to him as the Republican candidate who was defeated by the Federalist candidate. When he was first elected President in 1800, he was still referred to as a Republican. Jefferson's unstinted support of the French Revolutionary cause may make this assumption of the adjective Republican more easily understandable, for the establishment of La Republique made the word common to all ears. It was his home-spun antipathy toward what he regarded as the aristocratic tendency of Washington, Adams, Hamilton, and other Federalists which led him to stress the democratic angle.

If we pass quickly over the next 244 years, we find enemies of Jackson forming the National Republican Party. Led by Henry Clay and John Quincy Adams, this party succeeded in defeating Jackson and electing Adams in 1824. With Jackson's successful comeback in 1828, the National Republican Party faded out of the picture and Jackson started the first of his two terms as a Democrat, to be followed by Van Buren.

Not until 1854, after the Kansas-Nebraska bill had driven various splinter parties known as Free Soilers, Abolitionists, and Know Nothings into coalition with erstwhile Whigs and Jeffersonian Democrats, does the name Republican recur. Then, at the memorable meeting in Ripon, Wis., when a name was sought for the new party which had just been born, that part of the name of Jefferson's party which had been discarded by Jackson was chosen. Thus was the Republican Party of today baptized by disgruntled Jeffersonians 101 years ago.

Until the New Dealers took over the Democratic Party by abrogating the two-thirds rule (which had given the "solid South" some control over the party which had been for over 70 years the defender of Jeffersonian tradition) Jackson was just one of several ex-Presidents. That political hucksters should need to set up a new patron saint is easy to understand. The New Deal and the Fair Deal are both far more reminiscent of Jackson and Van Buren than they are of Jefferson, Cleveland, or Wilson.

I happen to be one of those—and I believe they are legion—who feel that the traditional differences between Democrats and Republicans have long been lost sight of by both.

Today expediency—political expediency—seems of paramount interest to so-called leaders on both sides. In their efforts to cater to envy, to generate bias and to satiate selfishness they appear to be totally blind to national interest and political integrity. If one promises the moon, the other goes further by promising a fuller moon; if one claims to be liberal the other claims to be willing to be ultraliberal.

What party is left to which people of conservative political faith can turn? Only on a State basis can one find a standard to which to repair; on a national basis there is none from a partisan point of view. The nearest thing we have had to a bipartisan administration in my lifetime has as many stalwart defenders among the Democrats of Jeffersonian tradition as it has carping critics among registered Republicans.

I beg my critic to reexamine the tenets of his political creed. Let me point out to him that when Washington won our independence, Missouri was not even a colony.

Federal Control of Natural Gas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. ALGER. Mr. Speaker, it is a matter of great concern to me as a Texan to see the governmental invasion of free enterprise, and I would like to call this matter to the attention of my colleagues through the following resolution offered by the Dallas Geological Society:

RESOLUTION BY THE DALLAS GEOLOGICAL SOCIETY

Whereas following the decision in the Phillips case, the Federal Power Commission by various orders has taken jurisdiction of

the producers and gatherers of natural gas; and

Whereas the producers and gatherers of gas are not public utilities by nature, and the fixing of field prices is unsound and against the best interest of the producer, the consumer, and the general public; and

Whereas such regulation will destroy the incentive to search for gas reserves, resulting in less gas to the consumer and higher prices; and

Whereas such regulation of the producers of gas is a threat to free enterprise and promotes a strong bureaucratic central government: Now, therefore, be it

Resolved, That the Dallas Geological Society, assembled in regular meeting at the Baker Hotel, city of Dallas, on January 5, 1955, hereby calls upon the appropriate Federal officials and members of the Texas delegation in Congress to vigorously work for the enactment of clarifying and remedial legislation providing that the Natural Gas Act does not apply to the production and gathering of natural gas, the local sale of gas by producers or gatherers, and the price received by the producer or gatherer from such sale; be it further

Resolved, That a copy of this resolution be published and placed in the hands of the representatives of the State of Texas in the Congress, and that each individual member of this society work for the enactment of the legislation herein mentioned.

G. FREDERICK SHEPHERD,
President.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the Hillsboro Sentry-Enterprise, Hillsboro, Wis., March 24, 1955. This very fine editorial deals with a portion of our foreign-aid program.

I feel it would be well for all to read what Editor Edwin Shear has to say:

FOREIGN AID

Speaking recently at a dinner in La Crosse, a man who had served as an officer in the Korean war rather sadly commented that the majority of South Koreans do not like Americans and that they are very critical of the Yankee way of doing things. This was one man's impression of the attitude of South Koreans even though the United States has helped and is continuing to help the South Koreans at great expense in human life and effort and the expenditure of millions of dollars.

In the last issue of Coronet, an Italian author, Indro Montanelli, explains why Americans are unpopular in Italy. Comparing Americans and Italians the author says that Americans are "better intentioned, more candid, more trustful of others, and ready to see the good rather than the bad side of things."

But does the Italian author say this is because Americans are naturally better? Oh no, he says that Americans are "only the beneficiaries of certain circumstances, due to chance and good luck rather than to their merits." Thus—according to this reasoning—if it be that Americans are more generous, more sincere, more charitable, more trusting—it is not to their individual credit, but only because of our democratic and capitalistic system which produces our good fortune and our humane outlook. One gets the impression that Americans who demonstrate international charity are greatly envied and roundly hated for the good will and kindliness that motivated that charity.

The speech about Korea and the article about Italy are admittedly the result of isolated observations. They may or may not reveal the facts of attitude as they truly exist—but they do give a fleeting glance at some of the anti-United States feeling that exists in the very lands that America has helped.

This Nation has sent billions in aid across the oceans to help both allies and former foes. This was the money of taxpayers who worked to earn the dollars which liberal-handed national administrations have given away. Too often the payment for this assistance has been resentment and noncooperation.

One begins to wonder if the pouring out of financial aid has been worth the expense and effort. It seems very discouraging to have generosity repaid with jealousy and hate. Is it asking too much to request that Federal agencies begin to review some of the assistance given to foreign countries, to discover whether such assistance is resulting in winning friends or potential enemies for the United States?

We know, of course, that many of these nations are selling their friendship to the highest bidder—and that to keep them from either going over to the Red side or being swallowed by the Communist menace, America must continue to pour money into these needy lands. The idea is basically all right and the Marshall plan has demonstrated that it will work. The only questions are—how efficiently does such a plan win good will, and how long can the United States keep on paying out money for the support and rehabilitation of other nations?

Prof. Norman Neal: Fighting Badger

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, today I would like to call attention to a situation that existed in our Foreign Operations Administration and its predecessor for some time, which resulted in a waste of American taxpayers' money and unfair dealing with some of our friends abroad. At the same time, I would like to pay public tribute to an intrepid professor of agronomy at the University of Wisconsin who battled bureaucracy, refused to be strangled by Government redtape, and almost single-handedly brought about a correction of the unsatisfactory situation previously existing.

That man is Prof. Norman P. Neal, of Madison, Wis. It has been my pleasure to work with him and help him in a small way in this task. Others who have assisted have included Dean Rudolph K. Froker, of Wisconsin's College of Agriculture, as a member of the Commodity Credit Corporation advisory committee, and Raymond H. Lang, head of the nationally known seed company in Madison, Wis. But the rest of us have sort of run interference for Professor Neal; he carried the ball over the goal line.

For some years Wisconsin has pioneered in the development of hybrid seed corn and its varieties have won international recognition. Wisconsin experiment stations have cooperated with a number of our friendly European nations since 1947 in efforts to help them establish satisfactory corn stocks.

In the past few years, the University of Wisconsin exported to Italy parental foundation inbred and single cross seed valued in excess of $25,000 to facilitate production of hybrid seed of Wisconsin varieties in that country. Notable progress has been registered.

In addition to Italy, Wisconsin has furnished a very substantial volume of both breeding stocks and parental foundation seed stocks to The Netherlands, France, Switzerland, Spain, Portugal and Greece.

In 1954, I received complaints that through American funds supplied by FOA, another European country was importing Wisconsin hybrid seed corn under very questionable circumstances. The corn was not raised in Wisconsin, was not certified as being Wisconsin hybird seed corn, and was being purchased for a little over $2 a bushel, whereas true Wisconsin hybrid seed corn was selling for $9 to $12 per bushel. Agriculture officials in our State notified me that in their opinion there was not sufficient true Wisconsin hybrid seed corn raised outside Wisconsin to supply a 64,000 bushel order. They pointed out that one bidder offered to supply 600 bushels of a certain Wisconsin variety whereas only 26 acres of that variety had been raised in all of Wisconsin.

"It was reported that one of the suppliers from outside Wisconsin who furnished seed for export actually sold a mixture of all of his reject seed from all varieties," Professor Neal wrote me. "I am firm in the conviction that if the United States Government is financing the purchase of hybrid seed corn for export, it should do so only on the basis for seed that complies in respect to varietal purity. If such seed is not worth planting in this country, it is not worth planting elsewhere. It not only is an injustice to the farmers of the importing country, but also is a shameful squandering of American taxpayers' money, as well as a travesty of the American sense of fair play and America's equity in world affairs."

From my investigations in Washington, I learned that seed corn FOA was sending to Europe in 1953 and 1954 was inspected only to determine if it would germinate, if it had been treated for disease, and was free of weeds. The only assurance FOA had that the European country was receiving its requested Wisconsin hybrid seed corn was the supplier's statement that it corresponded to Wisconsin types.

The amazing thing about all this to me was the attitude generally expressed by FOA officials: "What is the difference, as long as no one is kicking about it?" One Washington official sought to dismiss the matter with the statement that "the supplier is happy, the buyer is not

complaining, and the only people making any complaint are you folks in Wisconsin."

Eventually, however, complaints began to be heard, reports from FOA inspections in Europe were not so favorable, and the European buyers began to demand that they get what they requested, even though the money was coming from Uncle Sam.

"Because of the significant role that Wisconsin hybrids have played in the past, and now play in European corn culture, we feel keenly the existence of practices that, in our judgment, prejudice not only the reputation of Wisconsin corn hybrids, but even more importantly, the prime objectives that are basic to the very existence and purposes of the Foreign Operations Administration," Professor Neal wrote me last year.

This year, there is a different story to tell. European nations in their specifications have been requiring official certification, tagging and sealing of the seeds. In consequence, a substantial portion of the seed order has been filled in Wisconsin, and the buyers may be certain that they are getting Wisconsin hybrid seed, and not feed corn corresponding to Wisconsin types. Wisconsin growers assure me they are sending only first class seeds to their farmer friends in Europe. There seems no question that better crops will follow, and our friends abroad will have a better opinion of Uncle Sam's agriculture as a result, thanks to Professor Norman Neal of the University of Wisconsin.

The Late Pete Jarman

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. GRANT. Mr. Speaker, in the early morning hours of February 17, 1955, this Nation lost a distinguished and intrepid soldier, statesman, and diplomat. I lost a dear and valued friend with whom I had the honor of serving in Congress from 1938 to 1949.

Pete Jarman left behind a record of accomplishment which time and age shall never dull, which shall always remain prominently in the memory of those who knew and loved him.

Pete served as a lieutenant in the First World War in France with distinction and honor. He fought courageously for the honor and ideals of his country, and until his death he sustained a deep and active interest in military affairs, ever mindful of the continuing need of a strong United States in the face of alien threats to its security. From 1924 to 1940, he served as division inspector of the 31st Infantry Division, and in 1927 was elected commander of the Alabama Department of the American Legion.

This great American came to Washington in 1937 as a Member of the 75th Congress. Immediately he distinguished himself as a statesman of peerless courage and sagacious foresight, as a faithful representative of the interests of his people in the Sixth Alabama Congressional District. As his colleague I had the privilege on numerous occasions of observing and admiring his tireless and conscientious endeavor in the interests of his district, State, and country.

In 1949 Pete was named United States Ambassador to Australia. As a friend and former colleague who was personally acquainted with his ability and convictions, I regarded this appointment as one of significant wisdom and foresight. And most assuredly my confidence and expectations were never blunted. I doubt that the United States has ever before enjoyed the position and prestige in Australia as that manifested during Pete's ambassadorship.

From various and sundry sources, the appraisal of Peter's attainments as Ambassador to Australia was the same—outstanding. In this connection, I was told by Dr. Bob Jones, founder of the Bob Jones University in Greenville, S. C., that on one of his evangelistic trips to Australia he was profoundly impressed everywhere he went in that country by the reception of Government officials and people in all walks of life to Pete's representation of the United States. Dr. Jones was very high in his praise of Pete's achievements in this foreign land.

Yet Pete left behind more than the memory of his warm friendship and dedicated service to his country. Pete left behind a person who was always at his side in spirit and faith and inspiration. The union of Pete and Miss Beryl Bricken, lovely daughter of the late Honorable Charles Bricken, presiding judge of the Alabama Court of Appeals, was as formidable as their equally shared ideals and aspirations. Pete and Beryl constituted a partnership that never deviated from their individually elected roles as public servants and ministers of the American way of life.

Soldier, statesman, and diplomat, Pete Jarman was laid to rest in the Arlington National Cemetery with military honors. As the last reverberations of the volleys fired at his graveside spent themselves in the far-reaches of that hallowed ground, I am sure that those in attendance felt that Pete had come to rest among friends. He is now with the other soldiers and great Americans who have given their very best for their country.

Our Country's Aim Is Peace

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BOLAND. Mr. Speaker, the editors of the 19 Scripps-Howard newspapers from throughout the Nation gathered in the Nation's capital yesterday. Out of that meeting came a timely warning and some sage advice to the leaders of our Government. No one who is sincerely interested in maintaining peace throughout the world can find fault with the statement that came from that conference. "Our country's aim is peace" is the theme that this distinguished gathering of molders of public opinion would proclaim to the world. The Washington Daily News today highlights in a front-page editorial the kind of action our Nation should follow. I recommend it to the Members of this Congress:

OUR COUNTRY'S AIM IS PEACE

Editors of the 19 Scripps-Howard newspapers meeting here yesterday agreed unanimously that a dramatic restatement of America's position in relation to world affairs is due soon.

The editors concluded that it is high time something be done to dampen the widespread notion—which seems to be shared even among some of our friends and allies—that America is hellbent for war.

After hearing detailed reports from Scripps-Howard foreign policy experts, after many hours of discussion which expressed the viewpoints of men representing communities from coast to coast and from the Great Lakes to the Gulf of Mexico, the editors formulated this statement of Scripps-Howard policy:

America should take the peace initiative away from Moscow. We should prove to civilized opinion that we, more than anybody else in the world, want and need peace because we, above all others, have more to lose by war.

This is a job which the President of the United States can do far better than anyone else.

The time and place also are of vital importance. And they are near at hand—as if made to order.

In June the United Nations will hold a special commemorative session in San Francisco on the 10th anniversary of the signing of the charter. Many of the Foreign Ministers of the world—maybe even Soviet Foreign Minister Molotov—will be there.

We respectfuly suggest that it would be fitting for President Eisenhower to open that conference in person with an appeal for a new effort to establish peace. He should put before the world America's case for peace in a new and vivid light.

It would be a chance for the President again to demonstrate the lengths to which the United States is willing to go to attain peace. He could—

Offer to disarm to any limit the other powers would be willing to go under strict regulation.

Propose to ban mass-destruction weapons if others would agree to cheat-proof supervision and inspection.

Suggest that the United States would agree with others and with adequate guaranties of compliance to limit the proportion of key resources that could be used for arms so that more could go into peaceful goods.

Reiterate the right of civilized peoples everywhere to governments of their own choosing, at free elections, by secret ballot and without outside interference.

Emphasize that we seek nothing that belongs to anyone else; that there are no strings attached to our offers; that all we ask in return for reciprocal arms reduction is the dropping of iron and bamboo curtains—the opening of frontiers not only for international inspection teams but also for plain ordinary people.

The President could catalog the peaceful moves by this country, its participation in peaceful projects, and its genuine desire to do more. He even could recall his 1953 offer to devote a large percentage of the savings from any real disarmament to a world fund

to help man enjoy the fruits of this tormented old earth.

He would have to emphasize, of course, that the United States was not seeking abject appeasement. Distasteful as military life is to Americans, they also know—as the President himself has so aptly put it—that a soldier's pack is not nearly so heavy as a prisoner's chains.

President Eisenhower has done all this before. But it is now 18 months since his atoms-for-peace proposal to the United Nations and 2 years since his last full dress speech on peace. Efforts to attain peace and to portray the United States in its rightful peaceful role require constant stimulation.

All we seek is peace. But the Communists claim they want peace and we want war. Too many people, unfortunately, believe the Communists.

Ten years ago this June the hopes of man were focused upon the newly born United Nations. Ten years of bitter experience in a divided world has tempered those hopes.

But that experience has not lessened the hope that surges in all men's breasts that somehow, someway, somewhere a way will be found to implement the first line of the U. N. Charter—

"We, the people of the United Nations, determined to save succeeding generations from the scourge of war."

At San Francisco next month, President Eisenhower has an ideal place before the United Nations to remind the entire world that American policy is peace and that America is prepared to go to great lengths and to make great sacrifices to attain it.

Sugar Quotas

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Hallock Lions Club of Hallock, Minn.:

RESOLUTION

Whereas the sugar industry is a vital and necessary part of the agricultural life of Kittson County, Minn.; and

Whereas quota provisions incorporated in the Sugar Act of 1948 as temporarily expedient still are in force, denying the historic right of this industry to grow with our Nation; and

Whereas the domestic sugar industry has, through important technological progress, increased its own productivity per acre by some 20 percent since establishment of fixed marketing quotas in the Sugar Act of 1948; and

Whereas the combination of rigid marketing restrictions and increased productivity per acre is forcing injurious acreage reductions and other sharp constrictions of the domestic sugar industry; and

Whereas these pressures not only are acting to the severe and unwarranted detriment of the domestic sugar industry, but also are having a depressing effect upon the economic life of Kittson County: Now, therefore, be it

Resolved, That the Congress of the United States be, and hereby is, petitioned to provide for immediate quota increases for the domestic industry and restoration to the domestic industry of its historic right to share in all future increases in United States sugar requirements; and be it further

Resolved, That the secretary of the Hallock Lions Club is hereby instructed to forward copies of this resolution to the Senators and Representatives elected to the Congress by the people of Minnesota, and to the Secretary of Agriculture, Secretary of State, and the Secretary of the Interior.

Passed by the Lions Club of Hallock, Minn., on October 28, 1954.

R. PAPPEN,
President.
ORLIN C. HANSON,
Secretary.

Japanese Rice Negotiations

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. GATHINGS. Mr. Speaker, I wish to commend our Secretary of Agriculture, the Honorable Ezra Taft Benson, for standing firm against the dictates of our State Department in the matter of the Japanese rice negotiations. I am informed that at a meeting of the Council on Foreign and Economic Policy yesterday the views of Mr. Benson prevailed and under these negotiations some 2,250,000 hundredweight of rice will be released to the Government of Japan under the provisions of Public Law 480.

These objections in the past on the part of the Department of State have created grave apprehension in the ranks of agriculture. There have been rumors that the Department of State has concluded agreements with certain Asian nations pledging that we would not seek markets in southeast Asia and that we will subvert the intent of the Congress of the United States when we enacted the Agricultural Trade Development and Assistance Act of 1954, known as Public Law 480.

The specific action of the State Department in opposing sales of rice under Public Law 480 in the southeast Asia markets gives credance to these rumors. The views of the Department of State in this instance would deprive our American rice industry of a market that contains one-half of the world's population and constitutes the greatest rice market of all time.

If the State Department can make such agreements and the Congress does not protest and take action to curb the Department's power, we may see other agreements made depriving us of the opportunities and privileges of selling our goods in world markets.

Mr. Speaker, even with the release to the Japanese Government of this 2,250,000 hundredweight of rice, there will still be a total supply of 15 million hundredweight available for export. We cannot deny this rice to world markets—especially the great southeastern Asian market, where rice has been the staple for centuries. We cannot limit our trading activities at the will and demand of the Secretary. For such an action would destroy our American rice industry.

Such an action in one commodity can lead only to similar actions on other commodities—and we would soon see the destruction of our agricultural economy—and with it, the collapse of our Nation's strength.

If the Department of State succeeds in keeping our rice out of far-eastern markets, it may just as well put on a campaign against export of cotton, tobacco, and wheat in various parts of the globe.

A few days ago a great outcry was raised because the Secretary of State fired one man. This action on the part of the State Department has the effect of depriving untold thousands of families in the United States of their jobs—because just as surely as this policy of the State Department is permitted to prevail then we will see the end of the American rice industry as we see it today. We have already suffered drastic cutbacks in rice acreage across the Nation—and this action on the part of Mr. Dulles and his nonagricultural experts in the Department of State would make it necessary to further reduce rice acreages by a large percentage in 1956.

Mr. Speaker, I have opposed appeasement throughout the time that I have been privileged to serve in the House of Representatives. I do not believe in appeasement. Nor do I favor this policy of the Department of State, which is, in my humble opinion, nothing more than economic appeasement.

Reciprocal trade, a bulwark of our American foreign policy, cannot be a fact if our Department of State, in the secrecy of negotiations, gives away our export markets and exerts veto powers over actions of other branches of our Federal Government seeking to implement Public Law 480.

Back in September the President issued an Executive order stating it to be the policy of the United States to dispose of our surplus agricultural commodities on a competitive world market. Yet, for some reason, the Department of State, while recognizing this order, seeks to restrain agreements under Public Law 480 and speaks belittingly of "subsidized sales."

Mr. Speaker, there has been introduced in the House H. R. 5568 which would pin down the intent of the Congress in reference to Public Law 480 and would prevent the Secretary of State from exerting such veto powers. I favor this bill and I urge the Congress to take speedy action in adopting this bill to protect our agricultural families and to keep open the channels of world trade.

I wish to commend again the firmness of our Secretary of Agriculture. He has done a valiant work to save markets for our agricultural commodities. I trust that he will continue to stand firm, and I do hope that next week when the Dodge committee meets again that they will heed the intent of the Congress and refuse to permit the Secretary of State to give away our export markets and disrupt our domestic agriculture.

Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions pertaining to construction of the high Federal dam in Hells Canyon:

Whereas the supply of hydroelectric energy in the Pacific Northwest has presently forced the curtailment of production of aluminum and other goods essential to defense and national prosperity; and

Whereas reliable surveys indicate that by 1960, unless adequate steps are taken now, this region will face even more critical shortages; and

Whereas advance planning for the integrated development of the water resources of the region, as represented by the findings and recommendations of the Army's 308 report, calls for the construction by the Federal Government of a high dam at the Hells Canyon site on the Snake River; and

Whereas such a dam, operated as an integral part of the Bonneville system, will bring untold benefits to downstream areas in the form of increased power production and flood control: Therefore be it

Resolved, That Friendly Grange, No. 897, go on record requesting immediate enactment of S. 1333, which would authorize the construction, operation, and maintenance of the Hells Canyon Dam by the Federal Government; be it further

Resolved, That copies of this resolution be sent to Senators MORSE and NEUBERGER, of Oregon; Senator MANSFIELD, of Montana, the chairman of the Senate Insular Affairs and Interior Committee; Congresswoman EDITH GREEN, of Oregon; the National Hells Canyon Association, and to the Oregon State Grange.

MILDRED NORMAN,
Master.
CLAIRE ELLIOTT,
Secretary.

Approved March 24, 1954.

INTERNATIONAL ASSOCIATION
OF MACHINISTS,
MOUNT HOOD LODGE NO. 1005,
April 8, 1955.

Hon. EDITH GREEN,
The House of Representatives,
Washington, D. C.

DEAR MADAM: It is the wish of the membership of Mount Hood Lodge No. 1005, International Association of Machinists, to be placed on record as endorsing and supporting House of Representatives bill 4730.

It is our belief, and history has proven, that Federal contract and operation of such projects in the Columbia River Basin are most desirable.

With sincere approval of your past efforts on behalf of this bill and best wishes for future success, I remain,

Very truly yours,
RALPH F. KAUFMAN,
Financial Secretary.

RESOLUTION

Whereas there is at this time an effort being made to substitute a plan for multiple low dams for the Government proposed high dam in the Snake River, and the high dam being necessary for the development of the Columbia River to its fullest capacity; and

Whereas for the past several years, since the beginning of this development, we have seen the benefits accruing from the low cost electricity to the people of the Northwest, particularly to the small farm operator; and

Whereas under Government control this increase in the use of electricity has demonstrated the fact that the public utilities have had the major part in the growth of the Northwest and in bringing to us the many advantages of low cost power; and

Whereas with even the low rates for electricity, the dams are returning to the Government amounts of money annually to insure the repayment in the allotted time all of the cost of the dams; and

Whereas the high dam is a part of the system of development which takes into consideration the multiple use of water for production of electricity and also the great added advantage of flood control, irrigation, and water transportation, as well as recreation facilities; and

Whereas the construction of low level dams would break the chain of planned development of the rivers, give a smaller amount of development, result in a higher cost of electricity to the present and future users, and

Whereas the entire Northwest area is dependent to a great extent on the furnishing of cheap power to many present and potential manufacturers, as well as the small independent users of electricity; and

Whereas the past has shown us that the private power interests are more interested in profit than development, and that they have failed to make the moves necessary to get cheap power to a large number of people: Now, therefore, be it

Resolved, That Siletz Valley Grange, No. 558, earnestly urges that every effort be made to see that the orderly and planned development of the Columbia River and its tributaries be carried out for the benefit of all the people as opposed to a comparative few; and be it further

Resolved, That the full development of this area will be hindered by substituting the low dams for the high one.

This resolution passed by the members of Siletz Valley Grange, No. 558, at the regular meeting April 4, 1955.

WALTER POMPEL,
Master.
J. E. BLOOM,
Committee.

RESOLUTION

Whereas Senate bill 1333 has been introduced in the United States Senate for the construction of Hells Canyon Dam on the Snake River Canyon by Senators MORSE and NEUBERGER and many other Senators; and

Whereas to get the full benefit of all the possible power energy, flood control, irrigation, navigation, recreation, and all other accruing benefits to all the people of the Northwest for more industries and fuller employment for an ever-increasing army of working people: Therefore be it

Resolved, That the Women's Division of Labor Leagues for Political Education of Portland, Oreg., so sincerely endorse and pledge full support of United States Senate bill 1333; and be it further

Resolved, That those Senators be sincerely commended for their progressive action in introducing Senate bill 1333.

A. E. LARSON.
C. J. LASALLE.
ARVILLA E. LIVERMORE.
MARY L. BISHOP.
HELEN BLAKE.
PEARL POTTER.
FLAVIA SKINNER.
ZOE WILSON.

Whereas the necessity for building the high Federal dam in Hells Canyon, on the Snake River, is very vital at this time; and

Whereas this high dam will provide flood control, storage, and unlimited electric energy for the Northwest; and

Whereas the shortage of electric power now present in the Northwest makes it imperative that this high dam be authorized and started now: Therefore be it

Resolved, That Westland Grange, No. 827, in regular session this 8th day of April 1955, does urge immediate action on S. 1333, and asks this Congress to pass legislation authorizing the start of this high dam in Hells Canyon; and be it further

Resolved, That a copy of this resolution be sent to our Representative in Congress, to Senator JAMES E. MURRAY, GRACIE PFOST, and the executive secretary of the Hells Canyon Association.

W. B. SMITH, *Master.*
LILLIAN M. SMITH,
Secretary.

A Rose on F. D. R.'s Grave

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Trainman News of April 18, 1955, entitled "A Rose on F. D. R.'s Grave."

The article is as follows:

A ROSE ON F. D. R.'S GRAVE

We rejoice along with all mankind that victory is within civilization's grasp in the war against that dread, crippling disease whose chief victims have been children.

The eternal gratitude of all the peoples of the earth, all races, colors, and creeds, is due Dr. Jonas E. Salk and the many other scientists who played roles in the development of the antipolio vaccine which now promises to wipe out some of the death and suffering in this unhappy world of much death and suffering.

We are certain that as soon as possible and practicable, the United States will make the vaccine not only available to all the peoples of the world but see to it that they get it. Polio, like all other disease, knows no colors, no creeds, no national boundaries, and no political differences. It knows children, and attacks children—and children are everywhere. Here is one scientific advance, unlike nuclear fission which has inspired fear of us, that can and should make friends for us. If it does that, then maybe we won't be saving our children to sacrifice them later to war.

The Brotherhood of Railroad Trainmen humbly expresses its thanks to Dr. Salk and the host of others who have finally made this momentous achievement. We speak for more than 200,000 railroad families who live in the cities and way points of the United States and Canada, wherever the silvery threads lead, and whose hopes for a happier, healthier life are lifted.

We are proud that this great scientific advance was made in America. And it is not without a small bit of satisfaction that it was made with our participation and cooperation. As an organization, and as individuals, we helped spark the March of Dimes, stimulated interest in the National Foundation for Infantile Paralysis, and went down the line 100 percent in every drive and appeal. Many others were with us, from labor, from management, from all parts of our society. The success wouldn't have been possible without everyone's help.

One important thing for the entire world to note is that the antipolio drive, the research, all was voluntary and selfless.

The war on polio was started by Franklin D. Roosevelt, a great President and humanitarian who himself had been afflicted with it. His great heart gave the campaign impetus and inspiration, and it was fitting that victory was achieved and announced on the 10th anniversary of his death. It was like putting a rose on his grave.

H. R. 5115

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. PELLY. Mr. Speaker, our colleague, the distinguished gentleman from Florida [Mr. SIKES] recently introduced H. R. 5115, to prohibit the disposal by contract or Executive order of work traditionally performed by civilian components of the Department of Defense unless it can be proven that the disposal is economically sound and that it will not endanger our national security.

This measure interested me, Mr. Speaker, because I have received protests in connection with the curtailment of certain types of activities performed by the Puget Sound Naval Shipyard in the legislative district I have the privilege of representing. I am sure other Members of Congress have had similar protests.

On receiving these protests I made appropriate inquiries and was advised it was the policy of the Department of Defense to foster free competitive enterprise and to avoid the use of Government-owned and operated commercial and industrial type facilities. I was further advised that pursuant to this policy, the Navy had issued directives providing for study of such activities in our naval shipyards.

The criteria to be used in eliminating any Government operation I was informed would be on the following basis:

The necessity for meeting the military demand at all times without delay, particularly where abnormal or fluctuating military demand makes private sources or operation impractical to the extent that the current or mobilization need cannot be met.

The absence of private facilities of sufficient capacity located within a reasonable distance from the point of demand.

The need for maintaining facilities for the training of personnel (for operation in a zone of action or advance base or overseas operations where commercial facilities will not be available) where an organized training program for the type of skills involved, specifically requires the use of the facility in question.

The danger of compromising information which would aid potential or known enemies, or which would otherwise be prejudicial to the interests of the United States, where adequate provision can be made only through Government operation.

Any other criterion demonstrating a particular Government operation to be in the public interest.

In compliance with these directives, and based upon the criteria set forth therein, the laundry services at the Puget Sound Naval Shipyard have been discontinued, box and crate manufacture has been curtailed, and the office machine repair shop will be closed, effective June 15, 1955. In addition, studies are presently being undertaken to determine the desirability of continuing the acetylene, oxygen and nitrogen plants, the automotive repair shop, the tree and garden nurseries, and the photographic equipment and chronometer repair facilities.

The Navy assured me that implementation of the above-mentioned policy is being carried out with due regard to the importance of maintaining our naval shipyards in a condition of readiness to accomplish their appointed tasks both now and in the event of a future national emergency.

The Navy further assured me that when services or the manufacturing of items required at Puget Sound are curtailed in the shipyard, these items and services will be contracted for with local private firms when practicable.

Mr. Speaker, I want to point out one glaring omission in the criteria which I just recited as having been given me by the Navy, which is covered by H. R. 5115; namely, the transfer of work to a private contractor would have to be economically sound. Efficiency and economy require the integration of many operations. Some of these may be such that individually they could be performed by private contractors outside of Government property, but it seems to me, if you are going to follow the Navy's criteria, the net result could greatly increase cost and reduce efficiency. Take automobile repair as a case in point. In a Government garage work can be performed when cars are not in use. This cuts down on the total number of automobiles required; also, by upkeep and preventive attention, the overall repair cost is greatly reduced.

I do not want to appear in the position of opposing competitive free enterprise. After all, I have supported elimination of costly barge lines and other Government operations directly competitive with private enterprise and costing the taxpayers vast sums of money. But I think Congress should watch our purse strings and be sure the Department of Defense is not going off on an ideological spree. I hope the Armed Services Committee will take a careful look at this whole matter.

The Sugar Industry

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Kennedy (Minn.) Chamber of Commerce:

RESOLUTION

Whereas the sugar industry is a vital and necessary part of the agricultural life of the Red River Valley of the North; and

Whereas quota provisions incorporated in the Sugar Act of 1948 as temporarily expedient still are in force, denying the historic right of this industry to grow with our Nation; and

Whereas the domestic sugar industry has, through important technological progress, increased its own productivity per acre by some 20 percent since establishment of fixed marketing quotas in the Sugar Act of 1948; and

Whereas the combination of rigid marketing restrictions and increased productivity per acre is forcing injurious acreage reductions and other sharp constrictions of the domestic sugar industry; and

Whereas these pressures not only are acting to the severe and unwarranted detriment of the domestic sugar industry, but also are having a depressing effect upon the economic life of the valley: Now, therefore, be it

Resolved, That the secretary of the Kennedy Chamber of Commerce is hereby instructed to forward copies of this resolution to the Senators and Representatives elected to the Congress by the people of Minnesota, and to the Secretary of Agriculture, Secretary of State, and the Secretary of the Interior.

Passed by the Kennedy Chamber of Commerce, April 13, 1955.

ROBERT PETERSBURG,
President.
WILLIS LILLIQUIST,
Secretary.

A Trip on the Inter-American Highway

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BOW. Mr. Speaker, the New York Times of Sunday contains an extremely interesting account of a trip on the Inter-American Highway written by Hon. Robert C. Hill, our very able Ambassador to the neighbor Republic of San Salvador.

Robert Hill has served as Ambassador in both Costa Rica and San Salvador, and I am proud to number him among my friends. He is young, energetic, capable—just the man we need to represent the United States in the important task of cementing our friendship and building mutual respect in Central America.

From his own experience, driving up from San Salvador, Ambassador Hill gives us good reason for supporting the President's recent proposal to complete the Inter-American Highway. I ask leave to include his article as a part of my remarks:

DRIVING UP FROM SALVADOR—OUR AMBASSADOR TO THE GOOD NEIGHBOR REPUBLIC REPORTS ON A TRIP ALONG THE INTER-AMERICAN HIGHWAY

(By Robert C. Hill, United States Ambassador to El Salvador)

President Eisenhower has urged strongly that the Congress give its most favorable consideration to accelerated completion of

the Inter-American Highway to Panama. Recently, he wrote the Vice President and the Speaker of the House, calling attention to its importance and to the economic development of the countries through which it passes. He also pointed out that the road will help increase trade and improve political relations among these countries and the United States. I believe the President's recommendations warrant the most careful consideration.

I first traveled the Inter-American Highway when I was assigned as Ambassador to Costa Rica. The highway in Costa Rica is all-weather and passable from the capital, San José, north to Managua, the capital of Nicaragua. A good portion of it is concrete paved. After I was transferred from Costa Rica to El Salvador. I again drove the Pan-American Highway between San Salvador and Tegucigalpa, the capital of Honduras. There again I found a passable all-weather road, the paving of which is now underway.

My travels along these portions of the highway made me want to see more of it, and it wasn't too long before my wife and I began planning a trip to the States via the highway from San Salvador.

TALL TALE

Every so often you hear about some intrepid adventurer who, with four-wheel-drive jeep, Thompson submachine gun, sleeping bag, and K-rations, has managed to drive the highway. When interviewed he usually says something like: "Well, it really wasn't anything once I managed to fight off the savage natives and recover from the attacks of tropical insects."

Some of these stories are, of course, exaggerated. It would be an equal exaggeration, however, were I to say that it is now possible for a tourist to leave the southern border of the United States and drive south to the Panama Canal Zone along a fully paved all-weather highway. The truth lies somewhere in between these extremes and in between the gaps where the road is yet to be built.

The only preparation we made for our recent trip was to make sure that our 1953 car was in tiptop condition. We didn't buy a gun. We didn't buy camping equipment. We didn't buy any special clothing. We did purchase a tankful of gas and acquire an Esso map and on March 8 began what turned out to be a wonderful trip.

It is a journey which I am certain will interest thousands of people in the United States. It convinced me that early completion of the road will be in the interest of both inter-American economic development and hemispheric security.

COFFEE COUNTRY

We drove north on an all-asphalt highway through beautiful coffee country until we reached the Guatemalan border. Ezalco, the famous Salvadoran volcanic mountain, exploded as we were traveling along the highway, and that beautiful sight—the volcano erupts every 10 or 15 minutes—made the road trip interesting and very worthwhile.

In Guatemala we were impressed by the beauty of the country—the rolling plateaus and the Guatemalans in their colorful native costumes working in the fields.

The highway from the border to Guatemala City is all-weather gravel. Asphalting and paving are now under way. The distance is 174 miles, which we traveled easily in 5 hours. We spent the night in the capital and in the morning we encountered the first of our "troubles." Our battery was dead as a doornail. However, this we shortly discovered could not be attributed to wily jungle savages, but instead to a friend of ours who had borrowed our car the evening before and neglected to turn off the light switch.

We purchased a new battery (spare parts are available for practically all cars in each of the Central American capitals) and took off for the Mexican border city of Tapachula. The distance is 220 miles, and that was the difficult part of the trip.

ROUGH ROAD

At times we had to slow our car to 5 miles an hour, but although the road was rough it was always passable. I might add that in the entire trip, with 5 persons in the car and 14 pieces of baggage, we did not hit bottom until we crossed the bridge at Laredo, Tex.

The scenery from Guatemala City to Tapachula is spectacular—tall mountains on both sides of the road, beautiful lakes, and thick pine forests like those in northern Maine.

We had been advised to carry firearms but we decided instead to fly a small American flag on our front bumper. This created considerable interest, and in the back country of Guatemala we received many a viva las Estados Unidos. When we stopped for gas the car would be surrounded by curious, friendly Indians who asked many questions about our trip.

We had no difficulty in finding food. The motels are moving with the highway and are already as far south as the Guatemalan border.

One must plan to cross the Mexican-Guatemalan line before 6 p. m., as the border closes at that hour and does not open until 6 a. m. Border crossing in Central America is easy; all one needs is a tourist card and papers showing that the tourists own their car. We spent the night of March 9 at Tapachula where we found very fine accommodations.

RAIL CONNECTION

In the morning we had to make arrangements for our car to be transported via freight car to Arriaga, Mexico. It cost $41 for 4 tickets on the train and the automobile, plus a charge of $2.50 for loading and $2 for unloading the car. Travel on the train through picturesque southern Mexico was very comfortable. The trip took 12 hours.

We noticed that there was no dining car on the train. Shortly after we got underway, a man came through the train hawking soft drinks. He showed up every 10 minutes for the rest of the trip.

Lunch on the train was a wonderful experience. We pulled into a small town and, descending from the train, found ourselves surrounded by hawkers of tortillas, black beans, baked, fried, and boiled chickens, and savory smelling cuts of meats which were being broiled over hot charcoal fires. We made our selection (finding it impossible to resist buying also bouquets of cut flowers) and returned to our seats to eat. It is hard to describe the pleasure one gets traveling along through southern Mexico at a slow pace, eating fried chicken and gazing at the scenery.

We arrived at Arriaga at 8:30 at night, and were disappointed to find there were no hotel accommodations and gasoline. After dinner we were able to locate a gallon of lighter fluid and nine gallons of kerosene which we used to get us over the mountain and back onto the Inter-American Highway where we were able to find a filling station.

STOP AT TEHUANTEPEC

We drove on to Tehuantepec and spent the night there. On this part of the trip, we found accommodations and gas available everywhere. The next day we drove to Oaxaca and stayed there overnight and the next morning drove in to Mexico City.

From Mexico City we drove to Tamazunchale where we had good accommodations, and the following day we drove to Laredo, about a 12-hour trip. We had no unusual incidents on the highway. Much of the scenery is like traveling through Utah, Nevada, and Colorado. The people are very friendly, the accommodations good, and the officials most courteous all along the way.

Rural Mail Carriers Lead Interesting Life of Service

EXTENSION OF REMARKS
OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. H. CARL ANDERSEN. Mr. Speaker, the rural mail carriers of our country are post-office employees and public servants in the best sense of the words. An interesting story of the work and experiences of one of them appeared in the March issue of the Farm Journal. It is entitled "Confessions of a Mail Carrier."

The article was written by Josh Drake, Jr., with Richard C. Davids.

I am sure that the readers of the CONGRESSIONAL RECORD and the Members of Congress will find the article informative and interesting:

CONFESSIONS OF A MAIL CARRIER

(By Josh Drake, Jr., with Richard C. Davids)

(Josh Drake enlisted as a private in the infantry in World War II, came home with the Silver Star, Bronze Star, and Purple Heart—took a job as rural mail carrier in Oklahoma. We think his article speaks for mailmen across the United States, so if your mailman hasn't already sneaked this copy of Farm Journal to read, show him this story.)

One day last summer I found this note in a mailbox on my route: "Josh—I can't get the car started—I've got to get groceries, and the men folks are across the river with the tractors—Alice."

Back at the farmhouse a half mile down the lane, Alice Flynn was sitting in her car waiting for me. I drove up and gave her car a push. Just as it started, our bumpers hung. In all my years of pushing cars for boxholders, I've never seen bumpers locked the way they were.

Down at the barn I found a big wrecking bar, with which I pried, twisted, and pulled but no go. Finally I jacked up one car while Alice pried with the bar. That worked, and I continued on my route—an hour behind schedule.

A day never passes that I don't do something like that. Thank God I can.

I haven't always felt that way about my job, or the people I serve. In fact, I started this job on the outs with the world. I came back from World War II minus my right hand, part of my left, and with 35 pieces of shrapnel in my legs. I, Josh Drake, the athlete, who'd been so full of dreams.

All those big plans were out the window now. Might as well drive the mail—not much else that a cripple could do. I was morose and sullen those first few months.

But people along the way didn't seem to notice. On a sweltering day there'd be notes like this:

"Josh, if you have the time, there's cold lemonade for you at the house."

Or they'd meet me at the mail box with iced tea and cookies.

Gradually I saw that my daily visits meant something to them. I was more than just a delivery man that the Government paid to drive those 62 miles every day.

They needed someone to laugh and joke with, someone to run an occasional errand for them in town.

Slowly, patiently they made me see that just about the greatest gift to man is to be needed, to be able to help out others.

I've helped write English themes, deliver medicine, change tires, fix pumps, run cattle out of fields.

I've even found lost children. I saw 3-year-old Johnnie Holt one day following his dog across the road into a willow thicket a mile from his home. It was cold, so I put boy and dog in my car and drove them home.

Not a soul was in sight, so I honked my horn. Scared nearly frantic, Johnnie's mother came running across the field from hunting for her boy.

But if children along the route are sometimes a problem, they're always my greatest pleasure. From the time they can toddle out to the mailbox, they're my pals.

One of my favorites was Roy Kelly, a boy who was in love with big words. His mother had ordered an air rifle for him, and the very next morning he met me at the mailbox to pick it up. I tried to explain that it would take a week or 10 days.

But every day for a week he met me, and each time, I disappointed him.

On the eighth day Roy stood on tiptoe and looked at the big pile of parcels in the back of my car.

"Mr. Mailman," he said, "are you sure my gun isn't there?"

"Roy," I said gravely, opening the door for him to look inside, "you can read. Look for yourself. But I am deeply hurt to think you would question my honesty."

Roy went through the packages without looking up.

"It's not your honesty I'm beginning to wonder about," he said, "it's your sufficiency."

The next day the air rifle came. I started honking my horn half a mile from the house. The little rascal heard me, leaped off the porch, and came hot footing it out. He couldn't talk as he ripped the parcel to shreds.

It was worth a day's pay to see the look on his face as he pulled out the gun, carefully turned it over and over, then slowly lifted it to his shoulder and aimed, squinting from its shiny newness, at a fence post.

Suddenly he looked up at me and said, "Mr. Mailman, I'll bet you're the most sufficient mailman in the whole world."

That boy is a character. The day after he finished his first year in school, he showed me his straight-A report card and proudly said he'd been "emoted" to the second grade.

To the older folks, I guess I'll always be Josh Drake's boy, or Junior, despite my 37 years. You see, I was born and raised on the route I serve.

Last December, Mrs. Nichols, a sweet old lady, called my wife on the phone.

"Honey," she said, "does Junior make a commission on the stamps he sells?"

My wife told her that I got a straight salary and mileage, but no commission.

"Then I'll buy my stamps in town," she said. "I just didn't want Junior to miss out if he could make anything on these 20 packages I'm sending my grandchildren."

There's an old fellow named Flynn on my route who raises wolfhounds and some of the prettiest Bantam chickens you ever saw. Every few months he loads his hounds in a trailer and goes wolf hunting, sometimes for 2 or 3 weeks.

When he goes, he leaves a note for me to feed his prize Bantams. By now I know most of those biddies by name.

You find yourself doing little things like that, things the Post Office Department doesn't know about—much less require—probably rather you wouldn't do. Folks size up a new carrier pretty fast. If he's a stickler for the rules, they'll be careful not to ask favors. If they like him, they're soon treating him like one of the family, and won't hesitate to ask for help.

But I've been paid tenfold for every extra mile and every extra minute. Farm people have ways of paying a rural carrier. If I have car trouble, they lend me theirs, or take me to town for parts. To offer to pay is an insult.

The man with the wolfhounds? Last fall after the road past his place had been graded, he pulled me through a mile of mud that was nearly knee deep. Each morning he'd be waiting on his tractor. I told him I was pretty sure I could get through, but he insisted.

"No use tearing up your car," he said. He pulled me for 6 days—so fast that I was barely behind schedule.

That woman whose car I helped start makes the best fruit cakes I ever tasted. For the last 7 years, there's been a big one in the mailbox before Christmas, along with a note that means more to me than she'll ever guess.

And so it goes. Some days it seems I take as much out of the mail boxes as I stuff in: fruit, vegetables, sausages.

I remember one winter day in 1948. I plowed through one snowdrift after another and had to dig out or be pulled out with tractors. I finished my route 4 hours late.

Nine different patrons met me with sandwiches and hot drinks. I had to gulp down one sandwich after another under the watchful eyes of kind ladies, all sure I must be starving.

What a privilege it is to matter to such wonderful people.

During the last two wars, the rural mail carriers of America were asked to do a special job, that of carrying in person, night or day, that fateful message which began: "We regret to inform you." It was the most painful job a rural carrier ever did.

Every morning that I sorted mail during the Korean war, I lived in fear of finding such a telegram. But the Lord was kind to my patrons, and although three boys were wounded, all returned home.

This is my chance to say thanks—for my job and my friends, and what they've done for me.

And to the kids, my great pals, always helpful. A while back, I had a flat in front of the Sexton mail box, and Roxie, a cute little 4-year-old, came out to help. She was so eager that, in order to get her out of the way, I said: "Roxie, if you want to help, why don't you get a bucket of water and fill my radiator?"

She hurried away, pigtails flying, while I congratulated myself for my tact.

I changed the tire without further interruption. When I had let the car down, I said: "Roxie, did the radiator need any water?"

"Yes, sir," she said. "The front radiator didn't hold but a cupful, but the back radiator held a whole bucket."

You guessed it. My gas gage registered 6 gallons—2 of them water. I finished the route in Roxie's father's Ford.

The Indian Problem

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Commissioner Scott offered the following resolution, and moved its adoption:

"Whereas the deplorable condition of the American Indian has again been brought before the citizens of Minnesota and this county board; and

"Whereas the well meant efforts of a board member to solve the problem by giving a job to an unemployed Indian can only be a temporary solution to a single case while there are thousands existing in America, and

"Whereas the white settlers of a previous century seized from the original owners, by force and superiority of weapons, land, minerals, timber, and power sources of untold value; and

"Whereas our attitude toward conquered peoples has changed, and instead of appropriating the wealth of the conquered, we rebuild the bombed homes and public buildings, rehabilitate the sick and wounded, and restore the shattered economy of the conquered nation; and

"Whereas our debt to the former owners of this broad land is greater than to the Nazis, the Japanese, and others conquered in recent wars: Now, therefore, be it

"*Resolved*, That we call upon the President and the Congress of the United States to take immediate steps to alleviate current suffering among the Indians and to appoint a commission for a thorough study of the Indian problem to the end that all may be trained to become employable and self-supporting, and that attention to the problem of the original Americans be given priority to the subject of displaced persons from foreign lands. Integrating the Indian into our economic life will do much to erase from our history one of its blackest pages."

The question was on the adoption of the resolution and the roll being called, there were five yeas and no nays, as follows:

Ainsworth, yea.
Christensen, yea.
Hanson, yea.
Scott, yea.
Chairman Matthews, yea.

Resolution adopted.

Rearming of Western Germany

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. GEORGE. Mr. President, during the recent consideration of the Paris protocols, the Committee on Foreign Relations received a statement from Mr. James P. Warburg, which should have been inserted in the printed committee hearings on the subject. I therefore ask unanimous consent that this statement from Mr. Warburg, together with his letter accompanying it, be printed in the Appendix of the RECORD.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *March 16, 1955.*

Hon. WALTER F. GEORGE,
Chairman, Foreign Relations Committee, United States Senate Office Building, Washington, D. C.

MY DEAR SENATOR: I understand that your committee is going to hold hearings on the Western European Union agreements in the near future. I do not wish to request a hearing, but having testified on a considerable number of occasions before the Senate Foreign Relations Committee with regard to our European policy, I should like respectfully to submit the attached statement for your consideration and for possible inclusion in the record.

I do not request a hearing because the question before your committee is whether or not to recommend ratification. I could not, in good conscience, recommend against

ratification at this stage of the game because the United States has gone much too far in urging other nations to ratify to make a withdrawal possible. I should, however, like to repeat in the shape of the attached statement the major points of the warning against our present policy, which I have on various occasions in the past submitted to your committee.

Very respectfully yours,

JAMES WARBURG.

PAPER PRESENTED TO WINTER CONFERENCE OF THE CANADIAN INSTITUTE ON PUBLIC AFFAIRS AT TORONTO ON MARCH 26, 1955

(By James P. Warburg)

My point of view about rearming West Germany can be stated in four words.

I am against it.

I have written and spoken in opposition to it for the past 7 years, in your country as well as in my own. I shall go on opposing it so long as there remains the slightest chance of preventing it from coming to pass.

In this brief opening statement I shall confine myself to making a few categorical assertions which are open to challenge and which I am prepared to defend with supporting argument and evidence. First, two military assertions:

1. The only reason for rearming Germany is the belief that Western Europe cannot be defended against Russian invasion without German troops. This is, no doubt, true. But it is also true that Western Europe cannot be defended against a Russian invasion with German troops—least of all if the German contribution to western defense is limited to 12 divisions in order to prevent the Germany Army from outweighing that of France. The fact is that the only way to defend Europe against a Russian invasion is to prevent that invasion from being launched.

2. The only reasonable case for maintaining that 12 German divisions would make the difference between a defensible and an indefensible Western Europe rested upon an assumption which has been invalidated. This assumption was that, with both sides in possession of nuclear weapons, neither side would use them for fear of reprisal. Therefore, it was argued, conventional ground forces would regain their former importance. This never very realistic assumption was knocked into a cocked hat when the NATO Council declared on December 18, 1954, that, in the event of a Russian attack, the NATO forces would at once use tactical atomic weapons, to offset superior Russian conventional strength. Field Marshal Montgomery had already made this quite explicit in a lecture delivered on October 21 in which he had said:

"I want to make it absolutely clear that we at SHAPE are basing all our operational planning on using atomic and thermonuclear weapons in our defense. With us it is no longer: 'They may possible be used.' It is very definitely: 'They will be used, if we are attacked.'"

It is, therefore, perfectly clear that if Russia launches an invasion of Western Europe, world war III, fought with atomic and hydrogen bombs, will have begun. In such a war 12 German ground divisions will afford about as much protection to Western Europe as a World War II Anderson shelter will afford to your family. So much for the military argument.

Let me turn now to the political side:

1. The consummation of any plan to rearm West Germany as a member of the NATO alliance will foreclose all hope of ending the partition of Germany in the foreseeable future.

2. So long as Germany remains partitioned, it will remain a time bomb ticking in the heart of the European community.

3. Given the existing balance of power, neither Russia nor the West can hope to gain control of all of Germany, except perhaps through a war which would leave little worth controlling in Germany or any other part of Western Europe.

4. The key to a European peace settlement is the peaceful reunification of Germany on terms which will eliminate it as a bone of contention and provide the maximum assurance that it will not again become a pawn, partner, or prime mover in aggression against either East or West.

5. An all-German settlement of this nature demands that Russia abandon its hope of gaining control of Germany through undemocratic processes and that the West abandon its demand for a German military alliance. Russia has indicated its willingness to retreat from the position taken a year ago at the Berlin Conference. The Western Powers have never given the slightest indication of willingness to retreat from their demand that a reunified Germany shall be free to enter the NATO alliance.

6. No plan for making the rearmed two-thirds of a permanently partitioned Germany into the keystone in the arch of West European defense will command the wholehearted allegiance of the West European peoples, so long as the possibility of reaching an all-German settlement has not been fully explored. Neither the French, the German, nor the British Parliaments would have ratified the EDC or WEU treaties, were it not for fear that the United States would withdraw from Europe altogether if West Germany were not somehow rearmed. Parliamentary ratification in these circumstances creates not a situation of strength but a situation of dangerous weakness.

7. Once the West Germans have been given sovereignty and the right to rearm, they will have obtained from the West all that the West has to give. They can then achieve the liberation of their 18 million compatriots and the recapture of their lost lands in the East only by war or by negotiation with Russia.

8. To the extent that the Western Powers obstruct negotiations with Russia, they will alienate the Germans and turn them toward the East.

9. If, while they still have the power to do so, the Western Powers do not negotiate the reunification of Germany on terms which immunize it against Soviet seduction or penetration, the Germans will sooner or later take matters into their own hands. In that event, the terms of reunification may well be such as to constitute a serious danger to the West.

Finally, let me add one observation as to Germany itself.

The German people are not ready to be trusted with a military establishment. If given arms before they have developed a far more firmly established democratic tradition, their nation is likely once more to become "not a state possessing an army but an army possessing a state." For this assertion I can give you two authorities: John Foster Dulles and Konrad Adenauer. Both of these gentlemen stated what I have just said as their chief reason for supporting the now defunct European Defense Community. Chancellor Adenauer used this argument to obtain ratification of EDC by a reluctant parliament. Secretary of State Dulles made an eloquent speech to Mr. Molotov at the Berlin Conference a year ago, warning that a national German army would constitute a terrible threat to peace. Both are now striving with might and main to create that army.

In summary:

There is no valid military reason for West German rearmament. If there ever was one, it was destroyed on December 18, 1954.

From the political point of view, the ratification of WEU merely restores the bargaining position which was destroyed by French rejection of EDC. Unless that bargaining position is used to bargain before a West German army actually comes into being, the future of Europe will rest in the hands of the Bonn Republic. The nature of that young republic is, at best, wholly unpredictable.

The conclusion is, I think, obvious.

Price Support and the Wisconsin Dairyman

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1955

Mr. WILEY. Mr. President, each week there arrives in my office, as in the offices of other legislators, a great variety of daily and weekly newspapers from my State.

One such newspaper is the Sharon Reporter, published weekly in Walworth County, Wis.

On the front page of its most recent issue, it carried the grim story of an aroused meeting of grassroots dairy farmers who had, in my judgment, very rightly assembled to protest the inadequate return which our farmers are getting for milk. Some 400 to 500 farmers crowded the local grange hall to ask over their problems and to try to get some action upon them.

The farmers pointed out that in the last 3 years their milk returns have dropped $1.50 per hundredweight, and that right now Wisconsin dairymen are receiving only approximately $3.25 per hundredweight, which is less than 7 cents a quart. That is certainly a meager return for the farmer's labor—7 days a week, 52 weeks a year—and for his heavy investment in cattle, machinery, and buildings.

These facts point up problems which I, for one, have raised on the Senate floor time and time again, and which I have reviewed in detail with the Department of Agriculture and other Federal authorities.

I congratulate the farmers of the Sharon area for taking steps to secure justice for the great dairy segment of our economy, and I pledge my own continued efforts toward that objective.

I send to the desk the text of an editorial which was carried in the April 14 issue of the Sharon Reporter which described this grassroots meeting. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FARMER IS UNHAPPY ABOUT HIS PRICE FOR MILK

The price being paid the farmer in the Chicago milkshed for his milk is the most important matter in his mind at this time. One must admit as much, after witnessing the assembly at Grange Hall last Tuesday night.

To bring 420 farmers out to an 8 p. m. meeting, after they had worked in the fields all the day, is a Herculean feat. But the "protesting farmers" announcement of a meeting to discuss the matter on a real grassroots level did just that.

It took county sheriff's deputies to handle the traffic; there were cars parked almost a mile on either side of the hall. One farmer told us, "I parked my car a mile away, walked to the hall, then couldn't get in." The writer had trouble edging his way through the packed hall to a position where he could get within camera range.

"Keep farm organizations out of this," Mike Dorocke, who did much of the speaking said. "We aren't here for the purpose of battling them. We want, instead, to do what we can as producers to get a more equitable share of what the consumer pays for fresh milk in the Chicago market area."

There was ample opportunity for all to be heard. At times it was hard to hear, and a tap of the gavel from the chairman was necessary to maintain order. But this was the real "grassroots"—these were not polished organizers who had called this meeting to order.

W. T. Carlson of Walworth presented a letter from Colorado's Department of Agriculture to prove that dairymen in the Loveland-Greeley-Longmont area get only $1.42 for grade-A milk—and their farms are worth $200 to $400 per acre. "Things could even get that bad," he said.

There was a definite majority of those present who believe the lawmakers in Washington can help to improve the local milk price situation. Of course some spoke openly in opposition of "going to Washington for help," but the assembly returned to the majority desire to do just that.

So they distributed mimeographed letters. These are to be signed by producers and members of their family and mailed to their Senators and Congressmen. "We want no handouts, but demand a decent livelihood," they say in part. "We will fight through the ballot box for our rights and justice."

If nothing more were to come of the meeting, the very fact that 420 turned out should stir all those concerned with dairying to the point of doing whatever is humanly possible to get the milk producer his fair share of the retail price.

But more may come soon from this meeting. There was a committee of producers formed—farmers from Sharon, Elkhorn, Clinton, Delavan, Harvard, Capron, and Alden. This committee will determine to keep the ball rolling—to carry the fight for a fairer share of the consumer's milk dollar along, until they feel the results of their fight in the milk checks.

Pan-American Day

EXTENSION OF REMARKS
OF
HON. THURMOND CHATHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. CHATHAM. Mr. Speaker, on the occasion of another Pan-American Day I again want to assure our friends south of us in this hemisphere that we are bound by ties more solid, more sincere, and more understanding than ever before. We form a great bloc of free nations under God, and with God's help we will go forward together for better lives and all those things that mean peace and prosperity under a Christian system.

Mr. Speaker, I want to pay my personal tribute to Rev. Joseph F. Thorning for his unceasing work to further cement our relations with our southern neighbors. He is always in the forefront of every movement that tends toward closer cooperation, and how fortunate we are to have such a man giving of his time and talents to this most worthy cause.

Dismissal of Edward J. Corsi

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. LEHMAN. Mr. President, one of the most reputable fraternal organizations in America, the Order Sons of Italy in America, recently directed its national head, George J. Spatuzza, to send a telegram to President Eisenhower commenting on the dismissal of Mr. Edward J. Corsi, and on the question of our immigration and citizenship policies. In this telegram, Mr. Spatuzza urged the President to support changes in the McCarran-Walter Act, with particular reference to the national origins quota system.

Mr. Leonard H. Pasqualicchio, national deputy of this same lodge, sent a supplementary telegram to President Eisenhower concerning this whole matter.

I ask unanimous consent that these 2 telegrams, copies of which were made available to me by the Order Sons of Italy in America, be printed in the Appendix of the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

CHICAGO, *April 12, 1955.*

Hon. DWIGHT D. EISENHOWER,
President of the United States,
Washington, D. C.:

News of the dismissal of Edward J. Corsi as Special Assistant to the Secretary of State on Refugee Problems came as a shock to every member of the Order Sons of Italy in America. They join me in protesting the unfair, unwarranted, and unjust treatment accorded to this great American, whose devoted public service to the Nation and to his State has endeared him to his fellow men. Indeed, to no better man could the refugee program have been entrusted to than to Corsi, who the Secretary of State described "the best qualified man for the job."

We fear that the success of the refugee program so dear to your heart and to the hearts of the freedom-loving people is now in danger. Therefore, we respectfully beseech you to take effective steps to expedite its accomplishment. And in the name of justice we respectfully request your benign intercession to the end that changes be effectuated in the McCarran-Walter immigration and nationality law, particularly to the national origin faze of it, so that said law may be in consonance with the American principle of fair play and to democratic ideals.

GEORGE J. SPATUZZA,
Supreme Venerable, Order Sons of Italy in America.

WASHINGTON, D. C., *April 13, 1955.*

Hon. DWIGHT D. EISENHOWER,
President of the United States,
Washington, D. C.:

Supplementing the telegram sent you by Supreme Venerable George J. Spatuzza, of the Order Sons of Italy in America, regarding the dismissal of Mr. Edward Corsi, as special assistant to the Secretary of State, as national deputy of the organization in Washington, I have been requested to inform you of the hundreds of complaints received here from all parts of the country, protesting the disgraceful dismissal of Mr. Corsi. The Order Sons of Italy, organized over 50 years ago, and now having thousands of members in 37 States of the Union, considers such an action a direct insult to Mr. Corsi and to the 10 million Americans of Italian origin. We respectfully suggest that you take a personal interest in this matter.

L. H. PASQUALICCHIO,
National Deputy, Order Sons of Italy in America, Washington, D. C.

The Anniversary of Bataan Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. LESINSKI. Mr. Speaker, at this time of the year in 1942 a battle was raging in the Philippines. In both American and Philippine history the defense of Bataan will long be remembered, not only as a chapter in the story of man's struggle against tyranny but as a crowning testimonial to the historic friendship between Americans and Filipinos. Today the government and citizens of the Philippines are meeting the challenges which confront their independent republic with that same courage demonstrated on the battlefield at Bataan.

We in the United States are prone to look upon the Philippines somewhat as a father looks upon a son who has grown into manhood. While recognizing the maturity and independence of the Philippines, we retain those bonds of amity which have their foundation in a tradition of close association of our peoples. We take pride in the fearless energy with which President Ramon Magsaysay and his government act in the welfare of the new republic.

In our relations since Philippine independence was proclaimed in 1946 there has been evident a spirit of cooperation both in achieving the domestic aims of the Philippine Government and in jointly supporting the aims of the free world in Asia.

In the forefront of the problems with which the new Republic has been confronted have been those relating to the Philippine economy. There has been the need for rehabilitation and reconstruction in the wake of the damage inflicted by the war. There have been a myriad of economic and financial problems which are closely related to independence itself and to the withdrawal of the United States. There have been problems related to the general economic development of the Philippines including the expansion of light industry. Perhaps at the very heart of these complexities has been the haunting question of the ultimate effect of independence

upon Philippine trade, a trade based upon the export of Philippine sugar, hemp, hardwood, and other products to the United States on a preferential tariff basis.

The United States did not leave the Philippines to cope alone with these economic problems. Since independence it has offered its economic assistance. Among other measures taken, it has been considered in the best interest of the two countries that a tariff not be imposed on imports from the Philippines. We have recognized that both countries benefit directly from this trade and, in the larger view, that the building of a strong Philippines is in the interest of the United States and the free world.

In addition to its economic development, the Philippine Republic since independence has made great gains in the development of its political institutions and in further enhancing the public welfare. A Communist-inspired rebellion has been dissipated by the combined use of force and such constructive measures as homestead grants and land reforms. The firm alinement of the Philippines with the countries of the free world is reflected in the initiative taken in the development of the Manila Pact for the collective defense of Southeast Asia and in the Pacific Charter.

The people of the Philippine Islands are building a democracy in the Pacific. They are facing their present difficulties with vigor and courage—the same qualities they manifested in such a conspicuous manner 13 years ago in the defense of Bataan.

Building Boom Fits the Needs of Our Time

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article, which appeared in the current issue of the Correlator, a magazine published by the National Association of Home Builders. This article is a condensed version of a speech by George C. Johnson, president of the Dime Savings Bank of Brooklyn, delivered before group V, Savings Banks Association. It is a clear delineation of the housing problem today, and represents a thoughtful and logical answer to critics of the expansion of home building:

WHY THE OUTCRY ABOUT OVERBUILDING?

(By George C. Johnson, president, Dime Savings Bank of Brooklyn)

I am becoming quite concerned with recent articles in newspapers and magazines to the effect that present financing for homes is too liberal, and that the Nation's home mortgage debt is too high. Some of these conclusions seem to be based on a superficial examination of insufficient statistics, and they ignore many basic economic facts. Liberal mortgage credit, soundly applied on the basis of a borrower's ability to pay, is one of the strongest props we have for a prosperous national economy.

It is very true that mortgage lending today is on a far more liberal basis than at any time in the past, but these loans are sound. The long-term self-amortizing mortgage with low downpayment has proved the greatest single factor in putting good homes within the reach of families in every income bracket. Is this bad?

Less than a month ago, I heard an economist say that we are building too many homes for sale; that because there is no particular encouragement from government or elsewhere to build rental housing, families are being forced to buy homes. Induced might have been a better word than forced. I wonder if that economist, and others who share similar views, realize that the American family has an inherent desire to own a home of its own. I wonder why these people fail to realize that the purchase of a home with an amortized mortgage is a form of systematized saving, and to recognize the fact that home ownership is a basic part of our economy.

Some of the economists who say we have too liberal mortgage lending terms use the argument that the present rate of family formations is not large enough to support a building volume of a million-plus homes a year. Naturally, formations of new families do have an ultimate effect on the demand for homes. However, I think it is an entirely erroneous premise to use the rate of family formations as the only yardstick.

In trying to learn at what stage family formation becomes a factor in the home-buying market, I have raised the question: Does the couple that gets married this year immediately go out and buy a home, or does that couple buy a home next year, 5 years from now, 10 years from now—or when?

I believe I have the answer: It is the family with children which is the biggest factor in the market for homes—not new marriages in themselves.

I found this answer in an examination of the last 500 mortgage applications filed at my bank. These included homes selling from $10,000 to $42,000. This survey showed that 84.2 percent of those 500 families had one or more children. Of the 15.8 percent who have no children, a vast majority are older couples. Very few were newly married, and these were in the higher income brackets.

Another revealing survey was made by a large-scale home building firm on Long Island last year, following completion of a 480-home operation. This showed the average age of the head of the family buying these homes to be 32.3 years. I consider this particularly revealing because it should refute the claim made by some alarmists that "mere kids are being enticed to buy homes because of easy credit terms."

The Census Bureau estimates that 600,000 new households were formed last year. In 1953, the number was 800,000. In 1952, the estimate was 1 million. Nevertheless, in each of those 3 years, the home builders of America built and sold more than 1 million homes.

If we accept the theory of those who assert that the declining rate of family formations should immediately lower the rate of dwelling unit production, and thereby disregard all other demands for homes, the Nation should have built only 600,000 homes last year. Instead, a total of 1,215,500 dwelling units was produced, and, in most areas, all were immediately occupied.

That brings up a very important consideration that seems to be overlooked by the people who contend that we are confronted with an overproduction of housing.

In the area in which members of the Group Five Savings Banks Association operate, very, very few homes are built on speculation. No builder wants to be, or can afford to be, left with an inventory of unsold homes. Therefore, the general practice of development builders in this area is to erect 1 or 2 exhibit houses and then sell 25 or 30 homes from these models. Only after purchase contracts are signed for these houses, does the builder start construction.

On this subject of whether or not we are likely to overbuild, I would like to emphasize my belief that the market itself regulates the building volume. There is a certain and sure test. If people do not want homes, or cannot afford them, they will not buy, and builders will not build.

Also, the supply and demand for materials can serve as a brake on production. For example, suppose we look at just one key material—cement. If all the roadbuilding and other construction which is now scheduled gets under way, where is the cement to come from? Do we have enough productive capacity?

The word "boom" has recently been used very carelessly in connection with present housing activity—activity which has been moving at a rate of 1 million-plus dwelling units for each of the past 6 years.

I do not think we have a boom, in the popular idea of the term. Instead, it is natural expansion of our housing to meet the needs of a fantastically increasing population, with incomes to afford modern homes.

The 1955 total construction expenditure is estimated at 39.5 billions of dollars. At today's valuation of the dollar, the 1923–29 annual volume of construction was 24.2 billions of dollars. Does the difference between $39.5 and $24.2 billion, or $15.3 billion, constitute a boom? I think not; particularly when we realize that population has increased since the 1920's from 118 million to 162 million.

I also disagree with the theory of alarmists that the Nation's present home-mortgage debt of about $75 billion is too high. This is 25.1 percent of estimated national income for 1954. In 1940, the $17.3-billion mortgage debt was 22.7 percent of national income. But of equal, or perhaps greater importance, is that today there is a much broader base for carrying the home-mortgage debt than was the case 15 years ago. The debt is distributed among a far greater number of families. In the period from 1940 to 1950, the number of families responsible for payment of the mortgage debt had more than doubled. Furthermore, the mortgage debt in 1950 was only 96 percent of the income of the families living in their own homes, whereas in 1940, the debt was 166 percent. While we have no data beyond 1950, it seems reasonable to assume that this trend has continued.

I would welcome real proof—not theory—that this is inflationary, as some assert, or a serious danger to our economy.

It is very true that builders today have no difficulty in arranging mortgage terms that buyers can afford, which makes selling easy. This is due to a considerable extent to the splendid operations of the Federal Housing Administration and the Veterans' Administration home-loan-guaranty program.

The VA has done a magnificent job in helping war veterans acquire good housing. The FHA has done an equally fine job for the non-veteran. But it has long been recognized that the non-veteran was the forgotten man when it came to liberal terms for the purchase of a home. That is why the more liberal terms were written into the Housing Act of 1954. Now, less than 7 months since that law became effective there seems to be a concerted effort to eliminate these easier terms.

But of even more seriousness—and this is very definitely a builders' problem—is the well-defined movement in some quarters to abolish the FHA entirely. Suggestions to curtail the activity and functions of the FHA should be taken with a grain of salt. The source of these suggestions should be examined very carefully. Could some of these suggestions be made with a view to limiting competition? Have some of the opponents of the FHA an ax to grind, namely to exclude from the making of high ratio loans, all but the type of institution they represent?

Last June, I said publicly that the FHA has been the greatest single boon ever conceived to benefit the home-buying public. I want to reiterate that statement here today with all the force at my command. Those opposing the FHA and the VA have advanced the argument that today's low downpayments and long mortgage terms do not provide enough equity, and that the credit terms encourage families to buy homes they cannot afford.

What kind of reasoning is that?

The buyer is not approved for the loan if he cannot afford the carrying charges. Approval of credit and suitability of home to buyer is fundamental to this type of lending.

Any equity at all is better than a handful of rent receipts, and it has been the experience of my own bank where we have some $91 million, or about 19 percent of our total mortgage portfolio, invested in FHA-insured mortgages, that these home-buying families do establish equities. You would be surprised at the number and amounts of prepayments.

The more liberal mortgage terms now available create a much broader market for the builder's product. Limiting mortgage lending to conventional financing would deliver a body blow to the local, State, and National economy by restricting the volume of home construction.

One must remember that practically no rental housing has been made available in the price range that the average family in moderate circumstances can afford. Most of the rental housing has been either the Government-subsidized type for low-income groups, or the luxury type for high-income families.

However—and this must not be lost sight of—the one-family home builders, assisted by liberal financing terms, have been able to step into the breach and supply homes for families under terms that these families can afford. Also, home-owning families are the backbone of any community.

There is a basic economic brake on builders overextending themselves in the matter of sales. We made a study of sales and building operations at the end of January on builders' jobs we are financing. This covered some 11,000 homes. We found that sales were good in 82 percent of the jobs, fair in 14 percent, and poor in only 4 percent. This indicates that demand is still strong from the home-buying public and that apparently builders are really merchandising their product. I might add that in almost every case where sales were regarded as poor, it was near the conclusion of a development, or was a very small operation to start with.

It is imperative that costs should not rise to the point where buyers cannot afford the homes that are being built. But I doubt if the mortgage lenders will permit that to happen. We have the tools with which to put on the brakes when necessary.

Pan-American Day and Hemispheric Cooperation

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. LESINSKI. Mr. Speaker, April 14, 1890, was a historic day, for it marks the inauguration of what we know today as the Pan American Union. On Pan-American Day, as indeed on every other day in the year, the American Republics can be proud of the conception of pan-Americanism. Under it we demonstrate to the world that different cultural traditions can join in common cooperation, that 21 sovereign nations can respect each other's rights.

If pan-Americanism has been a success, this has been due in no small measure to the work over the years of the Pan American Union.

The pan-American idea derived its inspiration from the vision of Simon Bolivar, the Liberator, and from our own statesman, Henry Clay. Active American participation dates from 1890, when the first International Conference of American States was held here at Washington, under the able leadership of Secretary of State Blaine. As a result of that conference an International Union of American Republics was created, represented by a Commercial Bureau located in Washington. The name, Commercial Bureau, reflects the purposes of this early organization. It was not a political union; rather its purpose was the promotion of friendship and good relations among the republics of the American Continent, through the fostering of trade. In 1902 the Commercial Bureau was renamed the International Bureau of American Republics, and the scope of its activities was broadened. Finally, in 1910 the name of the Bureau was changed to the Pan American Union, which came in time to be the popular name for the broader Union of American Republics, of which the Pan American Union was but the agent.

As the popular embodiment of pan-Americanism, the Pan American Union was a most useful center of information on all topics of concern to the nations and peoples of this hemisphere. It provided import and export data, and general commercial information. It stimulated the exchange of students and professors, and promoted closer cultural relations among the member republics. While perhaps undramatic, these activities have contributed materially to the growth of hemispheric solidarity.

In 1948, the Union of American Republics was reorganized at the Bogotá Conference into the Organization of American States. The Pan American Union was designated as the central, permanent organ of the new organization. In this capacity it serves as the general secretariat for the Organization, and is thus of crucial significance to the efficient functioning of the Organization as a whole. Inasmuch as the United States bases its policy in this hemisphere on cooperation through the Organization of American States, the Pan American Union is of great significance for our policy as well. The mutual interests of all American states are bound up in its program and its operations.

Today the Pan American Union still serves as a center for the exchange of information and as the means by which individuals and private groups can become most directly apprised of the activities of the Organization of American States. It carries on the work assigned to it by the decisions of the various conferences and conventions of American Republics. Finally, and perhaps, of greatest importance today, is its work, together with other organs of the Organization of American States, in sponsoring programs of technical cooperation.

It is in such basic and vital activities as these that the Pan American Union is continuing today, as in the past, to serve the highest interests of world peace and progress.

Mental Hospital Facilities in Alaska

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. NEUBERGER. Mr. President, the need for mental hospital facilities in Alaska to treat the mentally ill in the Territory is imperative. The population of Alaska has boomed, with nearly 180,000 people reported in our northern Territory.

At the present time Alaska mental patients are transported thousands of miles from their homes to a privately operated hospital in Portland, Oreg. At the same time mental patients are forced to undergo confinement, frequently in outmoded territorial jails, while awaiting transportation to Portland. Commitment procedures are archaic and outmoded.

To meet the important need for mental facilities in Alaska, I have introduced Senate bills 1027 and 1028. Congresswoman EDITH S. GREEN has introduced identical bills in the House of Representatives.

I am very pleased to learn of the reported general support Secretary of the Interior McKay has given these bills, and I am especially pleased by the support afforded my bills in the city of Portland.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the columns of the Oregon Journal for April 12, 1955, which supports the immediate need for mental hospital facilities in Alaska and for urgent overhauling of outmoded commitment procedures.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALASKA NEEDS OWN MENTAL HOSPITAL

In general, we support Senator NEUBERGER's two bills (S. 1027 and S. 1028) to provide mental hospital facilities for Alaska in Alaska and for modernizing Alaska's obsolete commitment and treatment laws. And so does his stanch political foe, Secretary of the Interior McKay.

Since 1904 mentally ill patients from Alaska have been sent to Morningside Hospital in Portland, a privately owned and operated facility, for care and treatment. And while this hospital has an excellent reputation, it is generally conceded that Alaska has long since reached the point where it is entitled to its own mental hospital facilities.

It also is conceded by health authorities in the Territory and in the States, including the director of Morningside, that Alaska's

commitment procedures are "archaic and extremely inhumane."

Thus these bills, sponsored in the House by Representative GREEN, Democrat, of Oregon, attack both these problems simultaneously.

One of the problems, naturally, is that of cost, for both the construction of mental hospital facilities for outpatient and inpatient treatment, and for modernizing Alaskan commitment procedures.

But Secretary McKay suggests an answer: Annual Federal grants on a declining scale for the interim period; expenditure of $6,500,000 over a 10-year period for construction of facilities, and transfer to the Territory of 500,000 acres of public lands, including mineral rights, from which Territorial mental hospital costs could be paid. Senator NEUBERGER's hospital-construction bill merely provides for the appropriation of "such sums as may be necessary to carry out the provisions of this act." S. 1028 also suggests that Alaska eventually should assume responsibility for its own mental hospital program.

Based on our own observation of the handling and care of Alaska's mentally ill patients, some such program is imperative. The ordeal disturbed patients have been forced to go through while awaiting transfer to Portland—including incarceration in cramped and obsolete Territorial jails like ordinary criminals—is harrowing indeed.

That is one procedure S. 1028 would prohibit. Section 14 provides that persons ordered hospitalized in Alaska may be held in a local hospital or foster home or other suitable facility pending commitment, "but he shall not, except because of and during an extreme emergency, be detained in a nonmedical facility used for the detention of persons charged with or convicted of penal offenses."

In his speech before the Portland City Club the other day, Senator NEUBERGER predicted that if Secretary McKay would support his bills they would pass. Now that McKay appears to have done so, the chances of approval are at least good.

It's about time.

Twenty-Dollar Bid for Your Vote

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. McVEY. Mr. Speaker, under leave granted to extend my remarks, I should like to include an article published by the Fact Finder relative to the action of the Congress regarding the measure providing for a $20 income-tax deduction. This article embodies many sound arguments which should be of interest to those responsible for the fiscal policy of our Government.

The reactions of the Fact Finder follow:

TWENTY DOLLARS BID FOR YOUR VOTE

Remember how much you could buy for a dollar in 1939? You could walk out of a grocery store with a pound of coffee, a pound of hamburger, a dozen eggs, a quart of milk, a pound of shortening, and a loaf of bread. What's more, you'd have a few cents change.

Today you couldn't even get the coffee and bread for a dollar. And you'd have to pay another $1.90 to get the other items.

Just 15 years ago the average family of four could eat a week on $9.00 worth of groceries. Today the same food costs $24.00.

If that makes you mad, how do you think it affects people who have to live on fixed incomes, like annuities and pensions. Their life savings are being wiped out. Dollars they saved in 1939 are worth only 50 cents today, and even less when it comes to food. Inflation has been slowed down in the last 2 years; but the cost of living will rise again of the majority in Congress have their way to reduce income taxes by $20 a person without reducing the amount of money the Government spends.

You see, it was deficit financing—the Government borrowing to live beyond its income—that helped create this inflation. And if the Government reduces its income now without reducing its spending it will start up the spiral of inflated living costs all over again.

In playing up this tax reduction of $20 per person, dishonest politicians are playing with dynamide in order to get themselves reelected.

WHAT'S A DEMAGOG?

A demagog is a leader who claims to be for the people and promises them things that he can't deliver, or what will hurt the country, just to get their vote. Many demagogs in Washington have now led people to believe that the tax load could be lightened for the average man simply by adding more taxes to the wealthy people. Every honest American should answer the demagogs with these facts:

The major share of income taxes on individuals is paid by those in the $3,000–$10,000 bracket. This group now pays 48 percent, almost half, of individual income taxes.

If all income over $10,000 per year were confiscated, the total additional taxes would be only $4½ billion, or enough to run the Government for just 27 days.

If all income over $4,000 per year were confiscated, the additional take would run the Government just 2½ months. These figures are from a recent report by the Committee on Federal Tax Policy, which proves that our Government is mainly supported, not by rich people, but by the mass of people like you and me. Quote these figures the next time you hear some demagog promise to lighten the tax burden on the average person by "soaking the rich."

The only way we can ever get relief from high taxes is by making the politicians reduce Government spending. Here's what Government costs us today: If you are an average family man earning $4,500 a year and working the usual 8-hour day, the Tax Foundation says you work 2 hours and 35 minutes of every working day to pay your taxes, direct and indirect. They say that's longer than you must work to buy your food—high as it is today. It's almost twice as long as it takes to earn your housing costs. And it's four times as long as your clothing or transportation costs. So Uncle Sam is riding your back the heaviest of all.

A GREATER DEBT LOAD

What happens if politicians try to buy our votes by cutting taxes without reducing Government spending? Senator HARRY F. BYRD, the Democratic statesman from Virginia, is always pointing out the danger of continued deficit spending which increases the Federal debt. He says that our present debt of $280 billion is "equal to the full value of all the land, all the buildings, all the mines, all the machinery, all the livestock—everything of tangible value in the United States. We are now mortgaged to the hilt."

Senator BYRD says young men and women born in 1930 have lived under a Government operating in the red virtually all their lives—21 out of the last 24 years. Today the interest alone on the Federal debt takes over 10 percent of our total Federal revenue and now totals more than the entire expenditure of the Federal Government 20 years ago.

Some people say, "So what? Why worry about the debt? We only owe it to ourselves." We owe it to those who own Government bonds. Even if we hold Government bonds, it isn't good: We must pay extra taxes today to pay the interest on our own bonds.

Senator BYRD says, "Public debt is not like private debt. If private debt is not paid off, it can be ended by liquidation. But if public debt is not paid off with taxes, liquidation takes the form of disastrous inflation or national repudiation. Either would destroy our form of government."

Is it possible that this long-term program of spending to increase the public debt is an insidious plan to destroy our form of government? Socialist Tract 127 says, "To the socialist, the best government is that which spends the most money."

WHERE IS THE MONEY GOING?

In 1939 less than 5,000,000 persons were receiving a Federal check every month. In 1953 regular monthly Federal checks went to over 20 million.

In 1939 armament cost the American people $1½ billion. In 1953 such expenditures were over $45 billion. In 1939 no foreign land received any significant financial support from the United States, but in 1954 alone over 5 billion American tax dollars went to 54 foreign lands.

Some say we must spend this money for national defense. The wisdom of this spending for defense security is highly questionable, according to many experts on communism. But the strain on our ecenomic security, both nationally and individually, is a much more serious matter. The purchasing power of our dollar has been reduced 50 percent in 15 years. At this rate, by continuing this policy, the United States will be bankrupt in another 15 years.

What can we do about it? You and I can do this:

1. We can arm ourselves with the truth to resist the demagogues, who bid $20 for our vote.

2. We can pass the truth on to others, who need to know the facts, to protect their future, too.

3. Then all of us, armed with the facts, can speak up with courage and arouse millions of Americans into patriotic action.

4. We can act as a voting bloc of millions of informed Americans who will say to petty politicians and demagogues in both parties, "We're wise to you, mend your ways. Reduce Government spending at once, reduce inflation, then cut Federal taxes so that we can save more and every State and town can have more in local taxes for better schools, more for teachers, police and fire departments. We want statesmen instead of demagogues."

Thus, we, the people, will regain control of our Federal Government.

Valley With a Future

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. SPARKMAN. Mr. President, a few days ago Mr. David E. Lilienthal, who for many years was Chairman of the Tennessee Valley Authority, made a most interesting and informative speech

at Athens College, Athens, Ala. The speech was on the subject, Valley With a Future. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

VALLEY WITH A FUTURE

(Address by David E. Lilienthal at Athens College, Athens, Ala.)

It's now 22 years since I first came to live and to work in the Tennessee Valley. In these early days, my office was mostly in my hat; most of the time I spent "on the road," traveling up and down a region almost as large as Great Britain, getting to know the folks who live in the valley and their problems, as nearly as I could.

In those days, you and I talked chiefly about one thing. We talked about the future. We kept our eyes ahead. We laid plans and we worked hard, all of us, to make our dreams for the future come true.

What was the "future" 20 years ago is today's "present." And many, indeed most of our dreams, most of the things we looked forward to, planned for, worked for and often had to fight for, 20 years ago, have become realities. They're here. They are all around you. You can see the results on the hillsides, the pastures, the new homes and churches and hospitals and power lines and laboratories, and most spectacularly, of course, in the great factories and the majestic dams.

You are proud of these accomplishments. You have every right to be proud. And fair-minded people everywhere, of all sections and shades of opinion, share your pride. For this is an American accomplishment.

Moreover, you can take satisfaction in the fact that this great public works effort is paying for itself, paying in dollars, paying in a greater national defense, paying in economic and human benefits to the region and the country.

No Federal public works of this magnitude anywhere in this country is being paid for by the people directly concerned as fully or as rapidly as you are paying for the TVA—in your monthly power bills and in the greater Federal income taxes you are now in a position to pay.

But the people of the Tennessee Valley are not the kind who are content to live in the past or rest on their laurels, however great.

It was the future that interested you in 1933. It is your future that primarily interests you in 1955. It is about that future that I want to talk to you in this homecoming visit.

It seems to me appropriate to be talking with you once more about the future of the Tennessee Valley, in the setting of the campus of this beautiful and historic small college. For if there is one thing that symbolizes a forward-looking, hopeful, optimistic and youthful outlook on life—the outlook on life that thinks always about the future—it is education.

Athens College, its ambitions and hopes and needs for growth and development, represents and symbolizes the hopes and ambitions and needs of all other educational activities throughout the Tennessee Valley. The presence here tonight of a cross-section of the citizenship of this part of the valley who are enlisted to help Athens College get along toward its enlarged objectives is representative of citizens in other parts of the valley who, too, are working for the strengthening and development of education in their communities.

The friends of Athens College recognize that the spectacular growth and development of the valley's agriculture and industry and commerce must be accompanied by an expansion and acceleration of its facilities for the education of her young people. This is not for the limited purpose of training future employees of the valley's industries and businesses, though of course that is needed. The underlying purpose is not to supply industry with trained people, but to supply the needs of human beings for increased opportunity to grow and develop as individuals.

You cannot build a great future for this valley by great dams or factories alone. The greatness of a valley is measured by the stature of the individuals who live in that valley.

Whether the future of the Tennessee Valley is a great future will not be measured by statistics about the productivity of goods. It will be measured by the quality of the life of the people who live here.

If anyone has any doubt that simply achieving a high level of income, of having a great deal of money, is in itself and alone a very worthy objective, or that it guarantees a good quality of human beings, just let him take a look at some of the characters who forgather at Las Vegas, Nev., or Miami, Fla., or around the fleshpots of any great city, or smaller one, for that matter. There you can see people who demonstrate again today what philosophers and religious teachers and historians have known for hundreds and hundreds of years, namely, that there are many people who just can't stand prosperity. No, achieving a high level of income—by individuals or by a region—doesn't necessarily mean achieving high standards of life.

The Tennessee Valley as we think of its future, it seems to me, stands in somewhat this position: The objective of raising the level of income—the goal we talked about and worked at so hard over 15 and 20 years ago—may not have been fully realized; but clearly the valley is over the hump.

When we get together here again 10 years from now—and I hope all of us will be here, for I certainly intend to—we will be able to see better than we can tonight that our problem today is not how to obtain prosperity but what to do with it.

But the problem: What do we do with ourselves as we attain prosperity is essentially a problem for individuals. For it concerns individual goals, purposes; what it is that the individual values highly, his standards of conduct, what he chooses to do with his new-found leisure, and similar issues.

Our great issues now—and this is true of the country as a whole—are no longer primarily ones of new agricultural techniques, or how to use a river for navigation, or how to put electricity to work for us. The great issues for the valley's future are not such economic or engineering or business issues as these. Instead, they deal with individual life, the civic spirit of individuals, the development of character, of honor, of self-respect and respect for one's neighbors, of compassion, and of decency.

The future problems of the Tennessee Valley deal with the spirit of men, with the quality of human life that will develop, grow and flourish here in this magnificent region of America.

This is a great opportunity. In the process of rising to that opportunity, great responsibilities rest upon your existing institutions in two areas: the area we call religious and the area we call educational. It is concerning the educational area that we are gathered here tonight.

If I understand the temper and the mood and the capacities of the people of this valley—and I have certainly had an opportunity to learn about these things—you respond to great, simple, basic issues.

The TVA idea of the unified development of the physical resources of the region provided a great unifying central issue about which the valley's energies and loyalties rallied, during the 20 years past.

Looking to the coming years, what issue, what broad and fundamental program, is there that can, in time, take the place of that rallying cry of regional development?

I don't know what it will turn out to be. But will you permit me, as a former neighbor of yours, to suggest at least one component of that new objective for the valley? It is this: A determined, all-out effort directed to the development of the finest possible educational facilities and opportunities for the young people of the Tennessee Valley.

Nothing will give you greater satisfaction as individuals. Nothing will pay greater dividends in the creation of leadership. No single thing, except only religious conviction, will better protect the valley against the deterioration of character which too often accompanies the achievement of high material standards of living.

Most important, a great program of developing education at every crossroads, in every community neighborhood, on every college campus, will come closer than any other single thing, again excepting religion, to build strong the fiber of the spirit and integrity upon which, and only upon which, a great civilization can be erected.

We know and all agree, I think, that a region or a community whose support of its schools and libraries is niggardly is bound to stagnate.

I suggest the valley's folks ask themselves such questions as these:

Do the schools in our communities, rural as well as urban, offer programs that meet the needs of this new and changed valley? Are the programs of education the kind that stimulate and broaden the thinking of boys and girls?

Are the colleges and universities of our region expanding to meet the challenge of colleges in other areas, so that our young people will not have to leave home to get a modern education?

Are we making sure that those priceless assets—the exceptionally talented young person—can get a chance to go to school and college, even if he hasn't the money? Remember that your valley and the Nation must not, at our peril, waste or lose a single one of these rare individuals. Are there enough scholarships available to provide help to all those who need it to complete their education?

Are our teachers' salaries such as to give assurance that a fine type of person will be in charge of the guidance of our young people?

Visitors come to this valley now from all over the world to see what you have done. Since I left the TVA, I have traveled around the world a good deal. In the most remote and out-of-the-way parts of the world as well as in the centers of London and Paris, I found people intensely interested and enormously admiring of your achievements here. I found that they had taken the trouble to inform themselves about the TVA with a detail and understanding which I wish existed among more people in our Government in Washington, from the White House down.

Just as your physical and economic developments here are today looked upon as a great and inspiring model, the time may well come 10 years or 20 years hence when a program of development of education in the Tennessee Valley will also be looked upon the country and the world over as a great and insipring example.

From what I have said, I don't want it to be implied that I don't think you have any current problems, problems that deal with your economic development and growth. You certainly have.

Moreover I am fully aware of the controversy raging about how to supply the greatly needed additions to the valley's pow-

er system. So that I may not be misinterpreted as dismissing this as a matter of little consequence—which is certainly not my point of view—let me say some words about the future of the valley in relation to its power supply.

Your memory and mine are clear on one point: From the time in the summer of 1933 when I stood not far from where we are tonight and on behalf of the TVA accepted custody of the Muscle Shoals operation from the Army Corps of Engineers, TVA has never had enough power to supply the growing needs of a growing region. Never.

This is a tribute to the potentials for growth of this valley, and a commentary on the short-sightedness of the critics who always said we had a "surplus" of power.

So let's remember that it is nothing new, this chore of persuading the Congress, against both fair and unfair critics, that this valley needs more and more electric power.

In the second place, bear in mind that in its efforts to secure adequate power supply, TVA has had set-backs now and then, but they have always been temporary ones. Today you are the most highly electrified large region on the face of the earth. The TVA power system is the largest integrated power system in the world, and one of the best managed.

The high caliber of TVA's management, the low construction and operating costs attained by TVA engineers, are recognized and respected in almost every major industrial concern in this country. Don't forget too what the plain facts show: the Tennessee Valley region has won the confidence of the major industrial companies of this country as a place to do business.

Why have these great industrial companies located new plants here, representing a total investment so large as to be almost unbelievable? Because this valley is fast becoming and in a decade will definitely be one of the three leading industrial centers of this whole country. These concerns are here—and more of them are planning to come—because this valley is a good place for industry, a good place to make money.

And because this is a place to make money, these concerns will expand their operations here. About this there cannot be the slightest doubt. As they expand, auxiliary industries will grow up. This has been the record of the past; it is what the future holds.

Where is the electric power coming from to supply this great and steady and continuous growth?

Let me state my firm conviction on this score. In spite of all attempted roadblocks, this region is going to have the electric power resources it needs.

Nothing can stop economic facts—and the fact is the valley is growing and it needs more power. Its major industries are growing and they need more power.

Power from coal can be produced here in this valley at extraordinarily low cost. The industrial importance of this crucial fact is now becoming more fully realized.

Your valley's steam power costs are as low, or lower, than the costs in any place in the United States. You have the natural advantage of access to excellent coal reserves, and exceptionally low costs of transportation of that coal, largely by water, from the mines to powerplants along the Tennessee, Cumberland, and Mississippi Rivers.

Bear this in mind: the navigation aspects of the TVA, in cutting the cost of steampower, are now almost as important valley advantages for industry, as your hydroelectricity.

Moreover, those costs are likely to decline even further. Technical developments are just around the corner that can cut fuel costs for future powerplants, at the same time they provide the basis for major chemical industries based on coal.

Who will supply the capital for these power plants?

This certainly isn't the time nor place to discuss in any detail the several ways in which the needed capital can be raised.

It is possible that Congress by appropriations or TVA bond issues, or both, may provide the capital for expansion. Or it may conclude to provide appropriations for that part of the added power said to be required for the power-eating atomic energy program. After all, a power plant for the AEC operations at Oak Ridge or Paducah is as much a part of the atomic energy program as the gaseous diffusion factory that uses the power; those factories, of course, are all built with funds appropriated by Congress.

Congress may reflect on the fact that the Federal Government is getting a handsome money return from its investments in the TVA power system. Congress knows that when it directs TVA to build a power plant for national defense needs, it gets the services of the most efficient engineering organization in the country. Why throw away that public asset? And when TVA builds a power plant, as at Shawnee, Ky., the costs are not $51,000,000 over the estimates as they were at the Electric Energy Inc. plant just across the river at Joppa, Ill.; the scheduled completion dates are not months and months in arrears, as they were at Joppa. Congress has learned that TVA engineering saves the taxpayer lots of money.

The Dixon-Yates device is not an alternative way of providing power for the valley. I won't go into the merits of that scheme. Suffice it to say that the people of the valley have made it clear that they just won't have it; and there is no way by which your Government or TVA or AEC or Dixon-Yates can ram it down your throats.

Clearly, the Dixon-Yates method is out, as an alternative way of supplying power to this valley. It may supply Arkansas but not Tennessee.

But the demise of Dixon-Yates will not provide an affirmative answer. What other alternatives are there for providing the capital for economic power expansion?

The valley itself, through a region-wide, non-profit corporation, or by one or more of its municipalities, may decide to secure the funds and take over the function of building the needed steam-power additions to the TVA system, the power to be handled by the TVA itself. A good deal of thought has been given to this by the valley leadership, as you know.

Personally, I happen to think this is the best course, for the long pull, and the sooner the better. You are paying for these plants; you ought to own them. You ought, in my opinion, to put an end to this annual kicking around you've been taking.

But whatever the method of raising the funds and providing the huge amounts of power needed—and the answer will be known in a matter of a few months—of this one can be sure:

Where there is a great economic need for power, and that power can be produced, from coal, at a total cost of less than four mills a kilowatt hour, as you folks can in this valley, the capital will be forthcoming, and the power produced. From a long-range viewpoint, the future of this region will be a future of increased power supply for an assured growth.

The problem of power supply, and the other aspects of your economic problems will take hard work, hard thinking, determination, ingenuity, and steadfastness. But power supply and other economic and physical problems of the valley are not the theme of my remarks to you tonight. Nor are they, in my opinion, the most important nor the most pervasive issues as we look to the future. It is that conviction that has led me to talk to you tonight about education, education here at Athens College in Northern Alabama, education for the young people in every part of this new valley.

Years ago the valley rejected the idea that it was the country's "Economic Problem No. 1." We said instead that we were the Nation's valley of opportunity. So it has been. And it is still the Valley of Opportunity, the valley with a future. In that future the development of the valley's educational institutions should play the leading role.

The Bricker Amendment Battle Is On

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BOSCH. Mr. Speaker, I am sure that an overwhelming majority of American citizens would be fighting for the passage of Senate Joint Resolution 1, the Bricker amendment, if they knew about it and what it means in terms of preserving our sovereignty.

Under leave to extend my remarks, I include an article from the May 1955 issue of American Mercury, The Bricker Amendment Battle Is On, by Lucille Cardin Crain:

THE BRICKER AMENDMENT BATTLE IS ON

(By Lucille Cardin Crain)

Americans are the best-informed people in the world about things that concern them; yet more Americans know less about the Bricker amendment, again introduced in the Senate Joint Resolution No. 1 on January 6, than any other important issue of our times.

This is no accident. The master semanticists—the word-mongers and idea-manglers of the left—have planned it this way. They are carrying out Lenin's dictum on basic political issues, to confuse the vocabulary, and therefore the issue.

Yet the issue is quite clear. A Protestant clergyman who had studied the matter stated it succinctly when he said: "The future of every single person in the world—including you—has been planned by 18 people." These are the members of the United Nations Human Rights Commission, the 18 universal, all-purpose planners, who developed the Universal Declaration of Human Rights. The declaration would be made legally enforceable by the U. N. draft covenants on human rights. The U. N. Human Rights Commission had four avowed Communists in its membership—the delegates from Byelorussia S. S. R., the Ukrainian S. S. R., the Soviet Union itself, and Yugoslavia. The commission's chairman was Eleanor Roosevelt.

What, you ask, could these and other treaties proposed by the United Nations do to us if they were approved by the Senate?

This is what they could do:

You might no longer be allowed to own your own home.

You could be forcibly enlisted as a medical guinea pig.

You could be compelled, if engaged in a legal controversy, to appear in a foreign court, where there might be no jury, where there might be a secret trial—and without any right of appeal, your fate would be decided by a foreign tribunal, having at best only one American judge.

You could be restricted in your right to worship God.

These are only a few of the threats embodied in the United Nations Covenants on Human Rights. There is still time to protect ourselves, however, for the covenants still have not been submitted to the Senate.

But even if the United States were no longer a member of the United Nations, the U. N. has advanced the fantastic notion that we would still be subject to its power, because article 2, paragraph 6 of the U. N. Charter provides:

"The organization shall ensure that states which are not members of the United Nations act in accordance with these principles so far as may be necessary for the maintenance of international peace and security."

This is confirmed by A. H. Feller, former general counsel of the U. N., in his book, United Nations and World Community:

"Thus, the members of the United Nations have undertaken an obligation to require nonmembers to abide by certain principles to which these nonmembers have not specifically subscribed. In the light of orthodox rules of international law, this was an unprecedented and bold advance toward providing a general law for the whole world through the act of only a part of the states. These states, however, represent the overwhelming majority of the international community and there is every warrant for holding that they had the right to enact law for the entire community."

What rights this international body could invoke, and by what warrant, the U. N. general counsel did not specify. It should be borne in mind, however, that we are a U. N. member by virtue of an existing treaty—the U. N. Charter.

However, the U. N. is not alone in threatening our constitutional rights. Treaties, and innumerable agreements not even published, have been and are being constantly negotiated by our State Department. These also need to be brought under more specific constitutional and congressional restraint.

One of the most notorious of these existing arrangements is the Status of Forces Agreement, too hastily ratified by the Senate on July 15, 1953. This mischievous agreement fortunately has attracted considerable attention by now, and is giving the Senate some uncomfortable second thoughts on its action.

According to Senator JOHN W. BRICKER, of Ohio, it "gives away the inalienable constitutional rights of American soldiers who are offering their lives, if need be, to defend the very Constitution that I, as a Senator of the United States, am dutybound to support. The flag follows our soldiers abroad. The Constitution must likewise follow them. I cannot acquiesce in, or regard as permanent, the dangerous procedure established by the criminal jurisdiction provisions of the NATO Status of Forces Agreement under which, for the first time in American history, American soldiers abroad are subject to trial under foreign law and denied the constitutional protections to which they are entitled."

Efforts are now under way to test the constitutionality of this treaty, and the power of Congress to rescind a treaty also may be invoked.

How did this abandonment of American sovereignty and American rights come about? Under the Constitution, the President, with the advice and consent of the Senate, may make treaties with other countries. The proper subject matter of these treaties, necessarily, is in the sphere of international relations. It is abundantly clear that the Founding Fathers never intended otherwise.

Now, however, treaties and executive agreements are being perverted by the internationalists to deal with internal matters affecting personal and States' rights. Under our Constitution, only the Congress and the States should have the power to make laws dealing with these internal matters. It is this abuse of the treaty power which has come to be known as treaty law.

The precedent was set in a series of cases decided by the Supreme Court, some of the most pertinent of which go back to the 1920's. In these, the Supreme Court upheld international agreements which overrode State laws, and disregarded what had previously been considered as the "unalienable rights" with which all men are "endowed by their Creator," in the American view. Because the matters at issue did not involve large numbers of citizens, these decisions provoked little comment. They did, however, tend to justify officeholders in recent years in subscribing to the dangerous proposals already mentioned.

Some recent cases should prove arresting. For instance, a Virginia produce merchant was sued by the present administration for $150,000, not because he had violated any Federal or State law, but because, it was claimed, he had sold Canadian potatoes for food rather than only for seed in violation of an international agreement effected by an exchange of letters between an Assistant Secretary of State and the Canadian Government. This executive agreement, a glaring example of the abuse of treaty law, was never submitted to the Senate. The Fourth Circuit Court of Appeals held the agrement to be void because the President, by employing the executive agreement device instead of allowing the Tariff Commission to deal with the matter, as Congress has directed, had contravened the law and exceeded his powers.

Early in February 1955, the matter was decided by the Supreme Court; but the highest Court in the land chose not to deal with the constitutional issue involved in the question of executive agreements overriding congressional directives.

As the Wall Street Journal said, commenting on what is now known as the Potato Case; "It is puzzling to us why there is so much opposition to spelling out in exact language just how far such international agreements should go. It is even more puzzling why such a basic question as safeguarding the Constitution should be, politically, such a hot potato."

However, in an earlier case, the Court did protect us, by a 5 to 3 vote, holding against the seizure of the steel mills, which are, of course, privately owned.

Here is what the late Garet Garrett, noted author and publicist, said about this:

"There was a steel strike. On the ground that it put the national defense in jeopardy, President Truman seized the steel properties, which he had no constitutional right to do. The steel people appealed to the Supreme Court and the Supreme Court decided that the President was wrong, but it was a split vote. And it was the Chief Justice himself who argued that under the United Nations Charter, which is an international treaty, the President had the power to do that which under the Constitution he was forbidden to do. His seizure of the steel properties, therefore, was legal—not under the Constitution of the United States but under the Charter of the United Nations. The Chief Justice, happily, was in the minority, supported by only two other members of a court of nine."

If the Chief Justice had won over to his view only 2 of the 5 who stood by the Constitution, a most dangerous precedent would have been established. As Frank Holman, past president of the American Bar Association, stated: "The United States would in effect then and there have ceased to be an independent republic, and we would have been committed and bound by whatever the United Nations does or directs us to do. We would have had a full-fledged world government overnight."

These excesses of "treaty law" are not perils of the future—they are faits accompli today, and there are more ahead. Over 100 U. N. proposals whittling away American constitutional liberties are in various stages of preparation. Perhaps even more worrisome are the countless executive agreements, the existence of many of them unknown to the American public.

What is the basic conflict here? It is one that goes back to the genius of our unique charter of government, the Constitution. Here, for the first time, it was acknowledged that liberty is inherent in man, rather than a gift of the state or sovereign, and that the primary duty of government is to protect citizens from encroachments on their liberty. Implicit in this is the concept that government itself is the principal potential enemy of liberty.

Those to whom this concept is still precious owe a debt of gratitude to a group of lawyers, members of the American Bar Association. As early as 1948, they saw the danger, and the bar association members got into the fight.

These American lawyers, largely at the instigation of the 1949 bar association president, Frank Holman, induced the house of delegates of the association to adopt a resolution recommending an amendment to the Constitution relating to the treatymaking power. Senator BRICKER, having followed the studies made by the bar association, drafted and introduced in the Senate an appropriate corrective proposal, which was supported by the bar association group.

Eventually, a substantially similar proposal was approved by the Senate Judiciary Committee by a vote of 10 to 5, and the suggested amendment was reported to the Senate in June 1953. During the debate in the Senate, however, the Bricker proposal gave way to one introduced by Senator GEORGE, which, while unsatisfactory to the supporters of the Bricker measure, still covered the basic principle; but it lost in the Senate by one vote less than the required two-thirds.

By this time the Bricker amendment had become a live national issue. This widespread interest had been aroused by a number of citizen organizations whose members circulated petitions for the amendment. Many of these groups also adopted resolutions favoring it.

But the fight has only started, and it will be waged most vigorously, now that the amendment has once more been presented to the 84th Congress. It is particularly important to note how significantly the Communists look upon the issue. Political Affairs, a Communist monthly which lays down the line for the leaders of the Red conspiracy, said in its April 1945 issue:

"At the time of the Moscow Conference, October 1943, the Senate voted 85 to 5 in favor of United States participation in a world security organization, even changing the phraseology to accord with the Moscow Declaration. * * * Great popular support and enthusiasm for United Nations policies should be built up, well organized, and fully articulate. But it is also necessary to do more than that. The opposition must be rendered so impotent that it will be unable to gather any significant support in the Senate against the U. N. Charter and the treaties which will follow."

Thus, to overcome the pressure by opponents of the Bricker amendment, the drive must go on to educate Americans to the real purpose of the amendment—to protect them in their rights, and to preserve the power of the Constitution, which is their best safeguard.

Refugee Relief Act of 1953

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. HILLINGS. Mr. Speaker, despite the smoke screen created by the Corsi affair and other attempts to discredit our immigration program, the Eisenhower administration will allow almost

four times as many Italians to enter the United States during the fiscal year ending June 30, than are normally allowed under the immigration quota. This is a little known fact which has been deliberately obscured by certain elements who for political purposes are attempting to sabotage a great humanitarian undertaking.

The refugee relief program is designed to bring 209,000 deserving aliens to America by December 31, 1956. Under the act Italy is far in the lead with some 21,000 visas expected to be issued by June 30. This is in addition to the normal Italian quota of 5,645 visas per year.

The refugee program is now operating so well that there can be issued by December 31, 1956, sufficient visas for all who can qualify under the act and for whom there are required assurances. Those who are sincerely interested in the success of the refugee program can perform a great service by fostering the granting of assurances for the benefit of those who desire to come to America. An assurance, of course, is a guaranty that the alien will not become a public charge.

The refugee relief program is now at the half way point in its 40-month life. Some 108,000 persons have entered the pipeline—those are the applicants who have been notified of documents required to speed their cases toward a visa. Remember that the act calls for 209,000 admissions. Consequently, there is no reason why all qualified applicants cannot be processed in due course. The Department of State, starting from scratch in 1953, has established a worldwide visa issuing organization to administer the law.

What Democracy Means to Me

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "What Democracy Means to Me," written by a 16-year-old Tucson, Ariz., high-school student, which appeared in the National Republic.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT DEMOCRACY MEANS TO ME

(By Joan Carolyn Swanson, 16-year-old Tucson, Ariz., high-school student)

I am thankful that I am a young American citizen, living in the great constitutional Republic of the United States of America. This means to me, first and foremost, liberty—God's greatest gift to mankind. It means I have inalienable rights from God which cannot be taken away from me. These rights are protected by the Bill of Rights, which is part of the Constitution of our Republic.

Our form of constitutional Republic is unique and precious, because throughout history other forms of government claimed that rights such as freedom of religion, of speech, or of the press were given by the state; so, therefore, could be taken away from the individual by the state. In a republic "the sovereignty resides in the people under God, and the administration is lodged in officers elected by and representing the people." We are not just another democracy in the new social order, and should be careful not to identify our form of government with today's distorted version of democracies.

Liberty means we are free to do what is right according to God's law; it does not mean we have the right to do whatever we please. For example: The right to teach means the right to teach truth; the freedom of the press is the right to print what is true only; liberty of conscience is the right to know and obey God's laws. Man is never free from God's authority; but in our great land of liberty, we are free to rule over our own actions. We are obliged to follow right reason in order to achieve our destiny, which is to save our souls. This right is safeguarded in American freedom, under God.

This true Christian liberty is not found in the democracies of our time. They often adhere to a progressive, socialistic philosophy which demands conformity in the name of unity. Moral laws can be discarded since they do not believe in fixed truths, according to Christian principles. This prepares for a mass anti-Christian organization under dictatorship. This type of democracy as propagated by progressive education, is a type of materialistic religion of its own. Our Christian American constitutional Republic protects our right to stand on our own principles independent of the majority rule.

Humanitarianism of today's democracies is based on an effort to cure the evils and ills of the world by supplying man's material needs and desires while ignoring God. Such democracies believe we can coexist with communism, even though communism has declared its intention not to coexist, but to conquer the entire world, so that all must conform to the Communist idea of peace, the brotherhood of man, without Christ, the Prince of Peace.

Loyal Americans want to retain our constitutional Republic, and not be deceived by atheistic, one-world democratic ideologies. Christ came to earth to teach Christianity, not socialism. Some Christians today are dangerously identifying Christianity with a false humanitarianism; they forget that it is the improvement of the individual that improves society, in freedom under God. The type of social reform taught by Christ, and on which our form of Government was founded, is an outgrowth of personal virtue, marked by love of one's neighbor. The democracies of today are bent on making a Utopia of this world with no thought or belief in the next. They believe that the biggest mob and the loudest voice wins, regardless of moral laws. They are of the opinion that liberty, which they use as license, gives them the right to destroy the Constitution, and they use academic freedom to cloak subversion. They do not understand the true meaning of human liberty. They cannot understand human nature because they ignore man's spiritual nature. Liberty is of the spirit more than physical.

Today we are seeing liberty delivered up to tyranny because our intellects have been deceived by substituting the lie for the truth. This is referred to as brainwashing. These lies are given us in the form of fascinating political propaganda; particularly the one-world variety, which is un-Christian and un-American. Slavery begins when man declares himself free from reason in the name of freedom, and thinks he is at liberty to reject the truth in favor of his personal desires. Society becomes the slave of its own unreasoning, and this is especially tragic in the spiritual realm. Our Bill of Right was designed to protect our Christian freedoms; let us not stupidly relinquish them under the pretense of democracy.

Those who today claim that true liberty consists in service to the state are crusading in the cause that the democratic state shall make you free. True liberty rests in faith in God, our eternal king.

If we do not want the American concept of freedom, based on the fundamental traditions and laws established by our Founding Fathers to be abolished, we must not confuse our priceless heritage with any other type of government; we must not cowardly retreat to the state for security; we must acknowledge our duties and responsibilities as free Americans. Our security rests in God—not in man. Love of God is the greatest, and the only sufficient motive to maintain true liberty with its ideals of individual freedom and human dignity. It is imperative that we resort to prayer, and strengthen the religious beliefs upon which this great Republic was founded.

American youth pleads with you, our elders, not to surrender our sacred heritage under Old Glory, which has been deposited in your trust by those who knew the meaning of liberty, and who fought and died for it so that we might have it. Our American freedom is still worth fighting and dying for. But, please do not send your sons, and our brothers, to foreign soil to fight and die for "democracy" under the godless United Nations flag.

Conceivably there could arise a situation where the United States Armed Forces might have a moral obligation to help a small, defenseless nation resist Communist aggression; but that does not mean we should constantly try to police the world. Under the status of forces treaty (treaty law, which now endangers our American sovereignty), our boys lose their rights as American citizens and the protection of the United States Constitution and Bill of Rights while on foreign soil. They can, and, shameful to say, have been, tried and sentenced by foreign courts which do not have the same conception of justice and rights that we enjoy as American citizens.

The very soul of America is liberty, as it is of the spirit. Let us not be such fools as to sell our soul in exchange for nebulous promises of a materialistic utopia.

What a glorious, unequaled privilege it is to be a free American.

Latin America Expert of State Department Lauds Nixon

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an article which appeared in the Los Angeles Times of Wednesday, April 20, 1955, describing the remarks of Mr. Henry F. Holland, Assistant Secretary of State for Inter-American Affairs. Mr. Holland, now in California, has lauded the recent trip of Vice President NIXON to Central America.

The article follows:

LATIN AMERICA EXPERT OF STATE DEPARTMENT LAUDS NIXON

In Vice President NIXON California has a product worth his weight in gold to this

country, the State Department's top expert on Latin America said here yesterday.

Warmest praise for NIXON's great job on his recent tour of the Caribbean and Central America was expressed by Henry F. Holland, Assistant Secretary of State for Inter-American Affairs.

WILL SPEAK HERE

Holland arrived in Los Angeles to prepare for an address on Our Stake in Latin America before a joint luncheon in the Biltmore tomorrow of the Los Angeles World Affairs Council, Foreign Trade Association of Southern California and the World Trade Committee of the Los Angeles Chamber of Commerce.

The Assistant Secretary, who accompanied the Nixons and was their interpreter on the 4-week trip in February and March, said in an interview at the Biltmore that as a Texan he wanted to congratulate California on having produced NIXON and sent him to Washington, D. C.

"He is one of the hardest working humans I have ever seen," Holland recalled. "He nearly killed me with his terrific schedule—morning breakfast conferences, visits to schools and hospitals, lunches, dinners, and then sitting up to 3 a. m. with presidents and prime ministers.

"His accomplishments in the 10 middle American countries were enormous. NIXON has the unusual ability of being able to talk to people and convince them of his absolute sincerity and interest. He did a most effective job of convincing middle Americans of the genuine interest this Government has in them and their problems.

"I particularly want to congratulate Pat Nixon, his wife, who works as hard as he does in making friends."

Mr. Welteroth Concludes Active Water Career

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. BUDGE. Recently one of Idaho's most distinguished citizens and certainly one of the greatest friends of reclamation in the west retired as manager of the North Side Canal Co., which has its head office at Jerome, Idaho. The following is an editorial from the North Side News published at Jerome commenting on the retirement of Mr. Charles Welteroth:

MR. WELTEROTH CONCLUDES ACTIVE WATER CAREER

The News would go amiss for sure if we did not comment on the occasion which made headlines in this area last week when the North Side Canal Co. appointed a new general manager to direct the operations along its 11,000 miles of canals and laterals serving the farmers of the three segregations from Hazelton to King Hill.

To the new manager, Carrol Wilcomb, we extend best wishes for success in administering the vital ingredient of water for the farms in this area. Mr. Wilcomb is extremely well qualified and able to serve in this capacity, representing the board of directors in its policies and plans dealing with local water problems.

But we want to pay special tribute to Charles Welteroth, the retiring manager, whose years of devotion to the company and to the water users is significant. For 38 years, he served the company, the last 12 in executive position where he shaped and directed the policies during the most critical periods of water rights establishment.

Harking back from the old school, Welteroth truly typifies that period of our early water history when men used to shoot each other for water to moisten their parched lands. Too many of us today, especially the younger farmers and ranchers as well as many of the older generation take this precious water for granted. We are matter of fact—it's here, we use it freely, forgetting too often just how it got here.

Long years of struggle were waged by such men as Ralph Shepherd, Ervin Rockwell, Addison Smith, Frank Banks, Frank Weymouth, Maj. Fred Reid, Frank Gooding, Noah Sharp, and most recently Charles Welteroth whom we would most certainly place in the same category of recognition.

In one of his concluding remarks issued upon retirement, "Charlie" as everyone calls him said, "You might have a water right and also have the water, but you must watch it closely" which lead to the reference that "We must camp at the water hole"—a western custom over the early years. No more fitting tribute has been paid to "Charlie" than was made by R. P. (Pat) Parry, Twin Falls attorney and widely known water rights authority at the time the all-important Bureau of Reclamation contract was signed in January of 1953. These were his remarks and we repeat them now:

"No other individual has done so much nor worked so tirelessly on this contract. When conditions were most discouraging in the course of this long battle, he never faltered once in the determination to advance the claims of the water users of this project."

Mississippi Legislature Urges Limiting Court's Appellate Jurisdiction

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Mr. Speaker, I am submitting a resolution adopted by the Legislature of the State of Mississippi for reference to the proper congressional committee. Under unanimous consent, I ask that the resolution be included as a part of my remarks:

House Concurrent Resolution 15

Concurrent resolution memorializing Congress to enact legislation limiting the appellate jurisdiction of the United States Supreme Court and the jurisdiction of other Federal courts

Whereas Federal courts, and more particularly the United States Supreme Court, have through numerous opinions and decisions invaded the fields of the legislative and executive branches of Government; and

Whereas through numerous opinions and decisions Federal courts, and more particularly the United States Supreme Court, have invaded the field of government which should be left to the control of the several States of the Union; and

Whereas Congress is authorized under the Constitution of the United States to control and limit the appellate jurisdiction of the United States Supreme Court and the jurisdiction of other Federal courts: Now, therefore, be it

Resolved by the House of Representatives of the State of Mississippi (the Senate concurring therein), That Congress be memorialized to enact legislation limiting the appellate jurisdiction of the United States Supreme Court and the jurisdiction of other Federal courts, so that the fields of government of the executive and legislative branches and that of the several States shall not be invaded, but shall remain separate and distinct; be it further

Resolved, That copies of this resolution be forwarded to each United States Senator from Mississippi, each Member of the House of Representatives of Congress from Mississippi, the Senate of the United States, and the House of Representatives of the United States.

Adopted by the house of representatives February 15, 1955.

WALTER SILERS,
Speaker of the House of Representatives.

Adopted by the senate March 24, 1955.

CARROLL GARTIN,
President of the Senate.

U. N. Has Empty Record as Peace Builder

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Lawrence Sullivan, Jr., news editor, Statesman Press, which appeared in the Sunday Standard-Times, New Bedford, Mass., on April 17, 1955:

EDITOR SAYS U. N. HAS EMPTY RECORD AS PEACE BUILDER

(By Lawrence Sullivan, Jr., news editor, Statesman Press)

WASHINGTON, April 16.—Only 10 years old, the United Nations is dead on its feet. Will reorganization, under a new charter, revive hopes for world peace? Must Russia be expelled?

Monday, April 25, marks the 10th anniversary of the U. N. founding conference at San Francisco, where Alger Hiss was secretary general of the ill-starred deliberations.

World peace was the core of the U. N. dream, but somebody had made the terrible mistake—at Yalta—of inviting Communist Russia to join the family of nations.

The monumental failures of the Hiss-type U. N. are soon told:

The U. N. has not stopped aggression.

U. N. has not stopped cold-war infiltration, sabotage, and subversion the world around.

U. N. has not limited armaments, or contributed anything to the peacetime application of atomic power.

U. N. has not contributed to world prosperity through broader commercial intercourse; nor has it helped encourage foreign capital investment in undeveloped regions—the one great need of the postwar world.

Congressman LAWRENCE H. SMITH (Republican, Wisconsin), urges immediate expulsion of Russia from the U. N.

"The United Nations, now 10 years old, has not yet learned to walk," SMITH says.

"Far from building world peace, the U. N. has established a permanent international snake pit, where godless communism is given daily forum for hate, recrimination, psychological warfare against freedom, and unrelenting moral aggression against peace."

Since 1945 Russia has frustrated constructive peace proposals with no less than 67 U. N. vetoes.

"The principal world impact of U. N. operations during these first 10 years," says Congressman SMITH, "has been to increase the prestige and vocal range of world-wrecking communism in all its evil works.

"When the U. N. was established in 1945, communism enslaved only about 200 million people in Russia. Today, terroristic communism holds sway over some 900 million souls in Europe and Asia. More than one-third of the world's population is now under Communist influence or control."

Direct support of varied U. N. activities has cost the United States Treasury approximately $2,600,000,000, including relief and resettlement programs—an average of $260,000,000 a year.

In Korea, the world saw its first United Nations war. It lasted 3 years, and ended about where it began. It cost the United States 143,000 battle casualties and some $20 billion in cash. Today, Korean freedom still stands frozen and frightened at the 38th parallel. The American aviators illegally held by the Chinese Communists since the Korean armistice still have not been released.

In his press conference of February 23, President Eisenhower alluded to "the tremendous lack of success" in recent U. N. history.

Since Russia joined the U. N. peace front in 1945, world communism has conducted open warfare in Greece, Iran, Poland, Czechoslovakia, Tibet, Korea, Indochina, and now in the Formosa area.

"Communism thus is branded a complete outlaw and international brigand," says Smith. "Not until communism is disbarred from all civilized intercourse may the world even hope to resume the true paths of peace."

"You can't do business with communism."

Local Service Airlines Should Receive Permanent Certificates

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1955

Mr. WICKERSHAM. Mr. Speaker, I should like to call attention to a statement made on behalf of Central Airlines, Fort Worth, Tex., some time ago:

Central Airlines of Fort Worth, Tex., has been serving Duncan, Okla., for over a year. This air service has been most valuable to the Halliburton Oil Well Cementing Co. as we have many employees who ride Central, making connections with other airlines for trips throughout the United States and many foreign countries. We send much of our mail by air and this helps to expedite our communications with customers and our field personnel. We have many calls daily for materials to be sent on a short notice. These materials consist of manufactured products, tools, etc. They are sent by air-freight in order that we might have as little delay as possible in receiving the materials in our various operating points. The certificate that Central has been operating under is not of a permanent nature and we earnestly solicit your help in giving Central all aid possible in granting them a permanent certificate.

Mr. Speaker, I am heartily in favor of a permanent certification for local service air carriers. This statement is typical of statements of many of my constituents in behalf of permanent certification for local service air carriers. I am for the certification, both Central Airline and other lines seeking such certification.

The Bricker Amendment

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BOSCH. Mr. Speaker, I am sure that this body is aware of my support of the Bricker amendment, Senate Joint Resolution 1.

Under leave to extend my remarks, I include an editorial from the May 1955 issue of American Mercury entitled "In the Mercury's Opinion," by Russell Maguire:

On January 7, 1953, 63 United States Senators joined their colleague, Senator JOHN W. BRICKER, of Ohio, in introducing a proposed constitutional amendment which would prevent treaties similar to the United Nations Charter from overriding the laws of this country and to prevent any President from bypassing the Congress by carrying out Executive agreements with other nations which would have the effect of treaties canceling out United States laws which conflicted with them.

What has happened to the Bricker amendment?

Prior to his becoming Secretary of State, John Foster Dulles supported it wholeheartedly. When the Eisenhower administration took over, both Mr. Dulles and the President were influenced to change their minds and announced they were against it. By so doing, they defeated it in the 83d Congress.

The reasons for this action seem to be principally based on the premise that General Eisenhower is an honest man, and under no circumstances would he do the things the amendment seeks to prevent. So it was agreed that there was no necessity for this vital amendment being passed by Congress.

The Nation assumes that our President is honest, and they also have to assume that he is not the permanent President of these United States.

What about his successors? Senator BRICKER himself has explained the entire situation in these words:

"This resolution would protect the doctrine of inherent rights against erosion by treaties and other international agreements. The preservation of our inalienable rights would not depend merely on the beneficence of the President and the Senate.

"The American people would be the exclusive repository of their inherent rights, and even they would be incapable of surrendering their rights except by further amending the Constitution."

Very likely, nothing will be done on this resolution unless the people of the United States themselves do it. It is their future at stake. It is their decision to make. We strongly urge that they do something about it and advise their congressional Representatives how they feel.

Unless favorable action is taken on the Bricker amendment, the people of the United States continue the danger of losing their priceless independence to the dangerous United Nations or to some other global organization which undoubtedly will be dreamed up by some impractical or sinister group.

We urge you to be a Paul Revere. Push through Congress approval of this honest safeguard. You owe it to yourself and the generation to follow.

Amendment of Civil Aeronautics Act

SPEECH
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2225) to amend section 401 (e) (2) of the Civil Aeronautics Act, as amended.

Mr. HESELTON. Mr. Chairman, I think my colleague from Texas has raised an excellent point which deserves full consideration by the committee and the Congress, and I am sure that his discussion of that point has clarified the record of this debate and will be of great value in terms of the interpretation of this law, which I am sure will be passed with unanimous approval. However, I did note that Mr. John Floberg, chairman of the conference of local airlines, seemed to address himself to this matter in part, at least, in a letter which he sent to the committee and which is incorporated in the record, and which I question whether many of us have seen.

I would like to read into the RECORD two short paragraphs which I think bear upon the statement of the gentleman from Texas [Mr. DIES]:

The argument was advanced at pages 62, 64, 66, and 68 of the printed record of last year's hearings and again in point 2 in Mr. Gurney's statement and frequently throughout the course of his questioning that one of the principal reasons for keeping certificates temporary was the desire of the Board to strengthen the routes of the local service carriers. Aside from the fact that section 401 (h) of the Civil Aeronautics Act adequately answers this point, it may be further pointed out that the history of the Board's actions in this respect inspires little confidence. In the first place you can count on the fingers of one hand—with fingers to spare—the number of route improvements of the local carriers which have been the result of spontaneous inspiration on the part of the Board in the course of a certificate renewal. Nearly all the route improvements have been the result of either a route case as such (e. g. the Fayetteville case as pointed out by Mr. Harris) or have been the result of the proof of public convenience and necessity by the carrier and other interested parties in the course of a renewal proceeding. This proof of public convenience and necessity could have just as well been made in a separate case as in the renewal itself and at considerable economy to all concerned. In any event, the carriers have had to prove to the Board their right to any such route modification.

The Board's argument is also effectively answered both by its recent decision in the North Central Airlines application for a temporary exemption permitting service between Chicago and Duluth-Superior via Milwaukee and Green Bay and also by its decision in the route 106 case in which the Board dis-

membered a route which the Chairman's own statement on page 12 calls a "local service route," divided it between two trunklines, and thereby destroyed the opportunity of either of the two local carriers to strengthen its route with what could have been the strongest segment in its entire system.

I hope that may be helpful in terms of legislative history.

Again I want to make a statement of my own conviction, having some knowledge of one of the local carriers involved that has done an excellent job, the Civil Aeronautics Board having admitted that it should be just about ready to receive permanent certification. I do not believe this legislation would be on this floor today if the Civil Aeronautics Board had done its duty. I think they have been stubborn and unrealistic and have forced us to do something that possibly some of us might have some reservations about in terms of individual carriers. I think the net result is justice and equity in terms of all these local carriers which have done a magnificent job in building up their routes and serving our many communities well.

The CHAIRMAN. The time of the gentleman from Massachusetts [Mr. HESELTON] has expired.

A Plea for River Development

SPEECH
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. TRIMBLE. I yield.

Mr. EDMONDSON. I wish to join the gentleman from Colorado in expressing appreciation to my good friend from Arkansas for the real contribution he has made to an understanding of what is going on in the field of reclamation and flood control when he opens up the discussion on the floor of the policies of the Bureau of the Budget, either actual or intended policies, which have recently come to the attention of the Committee on Interior and Insular Affairs. As the chairman of the Subcommittee on Irrigation was just discussing, that matter has been before the committee and it has been under very careful scrutiny of the very able chairman of the full committee. The gentleman from California [Mr. ENGLE] questioned the Director of the Bureau of the Budget at some length concerning just what the effect of the application of this revised Circular A–47 would be if it were actually placed in operation. I think in fairness to the Director of the Budget it should be stated that he told the committee that this circular was in a preliminary stage or advisory stage at this time. But at the same time it is being widely circulated throughout the Government, and it is receiving the full authority which would accompany a directive of that kind from the Bureau of the Budget in the different Government departments. On questioning by the gentleman from California [Mr. ENGLE] the gentleman from Colorado [Mr. ASPINALL] and other members of the committee, we sought information on the point as to whether the gentleman concerned with this policy could name any flood control or reclamation project in the United States—not just in the Southwest, mind you, but in the entire United States—which would qualify and receive the approval of the Bureau of the Budget under this new procedure set up under revised Circular A–47.

To the best of my recollection, they were able to name only one small project in the United States which they were satisfied would qualify under this new formula that is being set up on benefit-cost ratios. When they were questioned about specific projects which were of great importance in many States of the Union, they were unable to give us any instances, they were unable to give us any clear indication as to whether those projects would receive approval if the formula in Revised Circular A–47 would be adopted. Unless the Congress does assert its authority, unless the Congress steps in vigorously at this point, it is my apprehension that we are going to see the adoption of the formula in Revised Circular A–47, and it is going to throw a roadblock across the progress of the country in the field of reclamation. I think the gentleman will certainly do a service if he does introduce in the Congress a bill which will assure congressional control over this important question of the benefit-cost ratio on these important projects.

Mr. TRIMBLE. I thank the gentleman from Oklahoma.

Let's Do It and Say We Did

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the April issue of Electric Appliance Service News relative to abandoned refrigerators becoming death traps for innocent children. I was saddened to learn that over this past weekend two toddling babies became the victims of refrigerator deaths in Los Angeles. It should be apparent to all of us that the only safe way to eliminate refrigerator deaths is not to build them. The Federal Government should require that all refrigerators moving in interstate commerce should be so constructed that they can be opened with very little pressure from the inside. Senator SPARKMAN and I have introduced legislation which would require this of all refrigerator manufacturers and I hope that Congress will enact this legislation before any more unnecessary deaths occur.

The editorial follows:

LET'S DO IT AND SAY WE DID

Spring is here and summer is on the way. This is the time of year when schools are letting out our children for spring vacations. And housewives, aided now and then by reluctant husbands, are doing their spring cleaning. It is the time of year when those icebox-refrigerator deathtrap accidents start to happen; the time when tots learn early about death, as a friend or cousin is found suffocated in an abandoned icebox or refrigerator. The irony of the whole thing is that too often the trap has been innocently set up by the victim's parents or relatives—in the backyard for the junkman to pick up, or in the basement, cellar, or attic for future use or sale.

This is not the first time we've discussed this subject in our editorial column. Nor will the deathtrap refrigerator stories you have read or will read in the current and future issues be the first ones to appear in EASN. It seems that spring and summer are the times of the year when tears of pathos, remorse, and pity flow the most; when these accidents happen to sadden and tax the human mind and heart.

But, thank God, through all the sorrow come the heartening fact that although Congress is slow in taking steps to avoid these tragedies, at least the States are passing their own legislation toward this end.

In Congress, Senator JOHN J. SPARKMAN, Democrat, of Alabama, and Representative KENNETH A. ROBERTS, Democrat, of Alabama, are still trying to push through legislation that would apply to all 48 States.

In Pennsylvania, both houses of the State legislature have almost unanimously enacted and passed legislation that would impose a 30-day jail sentence or $50 fine, or both, upon the individual found guilty of abandoning icebox or refrigerator of 1½ cubic feet capacity with doors or lids still attached. The measure awaits Gov. George M. Leader's signature.

Last August we discussed here our "idea for an icebox latch" that would allow opening the door or lid of an icebox or refrigerator by a push from the inside. We are pleased to see that six refrigerator manufacturers are presently conducting such tests on their products with a patented lock that has been created by a firm in Virginia.

In the meantime, we urge our readers, when making their service calls, to pass the word around of the need to dismantle the doors or lids of discarded iceboxes and refrigerators, to keep them from becoming deathtraps for our children. We also urge all our readers to indicate their support of proper State and National legislation by writing to their representatives in their State capitols and to their Senators and Representatives in Congress.

We talk about making our streets safe for our children. Let's all help make our backyards safe for them, too.

Red China and the U. N.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. PHILBIN. Mr. Speaker, in early February I was interviewed by Mr. Don Larrabee, the Washington correspondent for the New Bedford Standard-Times. Under unanimous consent I present his article, which appeared in the February

4 issue of the Standard-Times, to be printed in the RECORD.

The material follows:

PHILBIN WARNS AGAINST SEATING RED CHINA IN U. N., URGES ALL TO BE ALERT TO BANDITRY

WASHINGTON, February 4.—To reward Red China with admission into the United Nations would be a "monstrous travesty upon justice," Representative PHILIP J. PHILBIN, Democrat, of Massachusetts, declared today in an interview.

The Clinton, Mass., Congressman, expressing grave concern over Communist tactics both here and abroad, also blasted the notion that the free world can live in so-called peaceful coexistence with international gangsterism.

"I am greatly concerned about growing Communist strength and every American must be so concerned," PHILBIN told the Standard-Times. "World communism will adopt the tactics it deems necessary to secure world conquest and world control. That is its aim. It will go as far as it can. It will do what it thinks it can get away with.

"When the time is ripe," he added, "and the military timetable permits and its chances for victory seem bright, it will not hesitate to strike along a broad front."

One of the real obstacles to halting the Communist world menace, PHILBIN asserted, is the "indifference and unconcern of many Americans about the affairs of representative government at every level." Not only should Americans be shaken out of their lethargy, but also, he said, the United Nations must inaugurate "cooperative measures" to thwart Communist aggression and check dangerous subversive activities in many parts of the world.

"We have a right to expect the United Nations, if its membership still subscribes to the purposes of the Charter of maintaining the peace and defending human freedom, to move decisively and speedily against Communist malefactors.

"Many people see in recent events the beginning of a move designed to bring Red China into the United Nations. Nothing would be better calculated to shatter confidence of the American people in that body. The idea of permitting a bandit nation, which has secured power and dominion over a great * * * ancient, but helpless people through conspiracy, subterfuge and force * * * to be rewarded for its iniquities by admission into the United Nations would be a monstrous travesty upon justice," said PHILBIN, who is starting his seventh term in the House from the third Massachusetts District.

The Congressman, a member of the Armed Services Committee, warned the Communist movement has made steady advances in remote areas of Asia, in Africa and South America and in Europe. He said communism will pursue the tactics of infiltration and penetration, playing everywhere on discontent aroused by antiquated colonial systems or capitalizing on social injustices.

Citing Korea as an example of Communist aggressive action, he mentioned Indochina, Burma and the Malayan states as good examples of subversion.

"But the thing for us to remember is that the Communists have their own answer for every situation. They act boldly and do not hesitate to set up a conspiracy anywhere that suits their purpose. This kind of treachery and deceit requires continuous vigilance and a tough-minded attitude on our part. It cannot be dealt with by bleeding hearts or patience-loving, dilatory Fabians urging delay.

"The Fabian approach of trying to wait the situation out is fraught with real peril because every day the Soviet is building greater military strength," PHILBIN asserted.

Turning to the question of Communist activity in this country, the Clinton Congressman made this unequivocal statement: "There is hardly a scientific secret which has not been filched from us through espionage agents and traitors in the innermost, top-secret archives of this Government."

He compared communism in this country to an iceberg—"four-fifths of it is under water." The number of card-carrying Communists is relatively not great, but the "poison of Communist ideas has been spread widely throughout the land."

CLEVER ATTACK MADE

"Pro-Communist and Socialistic-minded people can be found in most segments of American life. Clever and insidious attacks are constantly made upon basic religious, social, economic and political institutions.

"A constant flow of propaganda is directed against the American people at every level, embracing everything from straight Marxism to eccentric notions about the universe.

"All this," said PHILBIN, "is designed to promote hysteria and uncertainty and to undermine the confidence of the people in representative government, in our economic system, in our religious beliefs, our moral ideals, family loyalties, and business structure. The objective is to break America's faith in itself, its principles, its life and its destiny."

He denounced as outrageous the shooting down of American planes on peaceful missions in the Far East, adding: "These incidents of Communist insult and provocation are absolutely intolerable and as completely unconscionable—as well as illegal and inhumane—as the continued imprisonment of American flyers in Red China on trumped-up spy charges."

STRONG ACTION ESSENTIAL

The unanimity of the House vote on the Formosa defense resolution (there were only 3 dissenting votes) was pointed to by PHILBIN as the "first real declaration of determination to face up courageously" to the Communist menace since the end of the Korean war.

This kind of strong, decisive policy and affirmative action is essential, he said, not only to protect Americans but also to maintain our prestige in the Orient.

The Congressman frequently referred to "apathy, indifference, and unconcern" on the part of many Americans over governmental affairs and called it "one of the most disturbing developments of our time." He insisted the Nation must revive the "spirit of patriotism and loyalty and revitalize the commonsense, industry, and enthusiasm of the individual."

PHILBIN has warned about the Communist menace in the past. Records show he was one of the first Members of Congress to point up the spread of world communism during World War II. In his first major speech in Congress early in 1943, PHILBIN predicted the possible realinement of alliances in the postwar period.

While he sees "unfavorable, disturbing spots everywhere," PHILBIN also points to signs that people are becoming more aroused to the dangers, and more aware of the "sham, falsehood, deceit and iniquity of communism."

"The United States," he said, "must not fail to let it be known that she will use her strength if necessary, to protect her way of life. Once that idea penetrates the Communist mind," he added, "there will be no further aggression and then, perhaps, we can take the lead in world councils to establish universal disarmament and control of nuclear substances. This will be no primrose path," said PHILBIN.

The Yalta Papers

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Julius Epstein brings sharply to our attention the fact that the Yalta papers, as released, give only a part of the whole story.

Mr. Epstein feels, and I am inclined to agree with him, that the forced repatriation of many anti-Communist Russians should be investigated by Congress. It was a tragic affair and brought discredit to us in our hour of victory.

In his letter of April 12, 1955, Mr. Epstein says:

Our State Department sent an official diplomatic note to the Soviet Embassy on February 1, 1945, informing the Soviet Government that we would not forcibly repatriate prisoners of war captured in German uniforms and that we would extend the protection of the Geneva Convention to these prisoners and civilians of Soviet origin who did not want to be repatriated.

Acting Secretary of State Grew radioed to Secretary of State Stettinius in Yalta and warned him against any agreement with Stalin which would violate the Geneva Convention and the American tradition of ready asylum.

Our Yalta delegation simply and arbitrarily—under British-Soviet pressure—overruled the State Department's policy and violated the international law of the Geneva Convention and the American tradition of the right of asylum.

In the light of these new and unknown facts, a congressional investigation of forced repatriation seems to be more urgent than ever.

Mr. Epstein's article follows:

[From the Tablet of April 9, 1955]

SAYS YALTA PAPERS FAIL TO RELATE WHOLE STORY—MR. EPSTEIN CITES AMERICAN CORROBORATION IN CRIME OF FORCED REPATRIATION OF ANTI-RED RUSSIANS

(By Julius Epstein)

The Yalta documents, as released by the State Department, contain incontestable evidence to the effect that members of the American delegation at Yalta, especially the Secretary of State, Stettinius and the Joint Chiefs of Staff, were warned against entering into any agreement with the Soviets which could be construed as in favor of forced repatriation of anti-Communist prisoners of war and civilians in our hands.

This truly sensational revelation can be found under the heading "Statements on war prisoners and other matters as drawn up by the Conference."

There, a top secret radio dispatch of February 7, 1945, from the Acting Secretary of State Joseph C. Grew to the Secretary of State Edward R. Stettinius, Jr., is reproduced. In this remarkable dispatch, Mr. Grew, representing the conservative wing within the State Department, urged Mr. Stettinius to accord the protection of the Geneva Convention to those Soviet citizens in our hands who were captured in German uniforms as, for instance, the followers of General Vlasov.

REDS CLAIMED NONCITIZENS

Mr. Grew also referred to the traditional American policy of granting asylum to liberated persons who did not desire to return to the Soviet Union. Mr. Grew also called Mr. Stettinius' special attention to those persons in western Europe who were not citizens of the Union of Soviet Socialist Republics prior to the outbreak of World War II, but nevertheless were claimed by the Soviet Union as Soviet citizens.

As the Yalta documents show, Mr. Grew's labors were in vain. The top secret radio answer from Mr. Stettinius—dated February 9, 1945—destroyed Mr. Grew's and his friends' last hopes to prevent the American Government from violating the Geneva Convention as well as the American tradition of granting asylum to political exiles.

To illustrate the wanton attitude of our representatives at Yalta and the way in which they sacrificed the lives of millions of anti-Communist prisoners of war and civilians, the following parts of the diplomatic exchange may be quoted:

From Mr. Grew's radio message to Mr. Stettinius:

"Top secret—Washington, February 7, 1945.

"War Department has just made available message dated February 7 from Marshall which indicates that JCS on February 7 approved, with certain changes, British preliminary text on agreement with Soviet Union for exchange of prisoners of war and apparently also for liberated persons."

STATES SPECIFIC POINTS

"The agreement would not appear to cover the following specific points which were incorporated in the United States counterproposals forwarded to JCS staff with you.

"1. Protection of Geneva Convention which we have informed Soviet Government we will accord to Soviet citizens captured in German uniform who demand such protection.

"2. Soviet citizens in the United States not prisoners of war whose cases the Attorney General feels should be dealt with on basis of traditional American policy of asylum.

"3. Persons liberated by United States forces no longer in their custody.

"4. Question of the liberation and repatriation of other United Nations citizens.

"5. Persons claimed as citizens by the Soviet authorities who were not Soviet citizens prior to the outbreak of war and do not now claim Soviet citizenship.

"It is felt that these questions and others referred to in JCS 1266 and 1266/1 should be brought to your attention in order that consideration may be given to them before final agreement is reached."

From Mr. Stettinius' answer to Mr. Grew:

"Top secret—Yalta, February 9, 1945.

"Here the consensus is, including our military, that it would not be wise to include matters regarding the protection of the prisoners-of-war convention and Soviet citizens in the United States in an agreement which covers primarily the exchange of prisoners liberated by Allied Armies as they proceed into German territory. In regard to 'claimants,' despite the fact of the danger of Nazi retaliation, we believe that unless we reach prompt agreement on this question there will be serious delays in the release of our prisoners of war."

ANSWER IS NOT REVEALED

Thus, it evolves from these official dispatches that, in order to prevent "delays" in the release of our prisoners of war in Soviet hands, we were ready to surrender millions of anti-Communists to Stalin and their sure death. No American official at Yalta could have entertained any doubts about the ultimate fate of those forcibly repatriated to the Soviets.

What the Yalta papers do not reveal is—among other things—Mr. Grew's answer to Mr. Stettinius' dispatch of February 9, 1945. Was there no answer, or was it deleted by the editors?

It is in the light of such revelations that a congressional investigation of forced repatriation seems to be more urgent than ever. Only such an investigation will be able to answer the multitude of questions about the responsibilities of certain persons in the White House, in the Pentagon, and in the State Department in connection with the crime of forced repatriation.

There is now Congressman ALBERT H. BOSCH'S H. Res. 137 pending before Congress. This resolution calls for the creation of a select Committee to Investigate Forced Repatriation.

Congress should act upon this resolution as soon as possible. Courageous and independent Democrats should offer their own resolutions for the same purpose.

Only then, there is the chance that the American people will get what they want: An impartial investigation of one of the greatest crimes of recent military history.

Let the chips fall where they may.

A Bill To Amend Section 162 (a) of the Internal Revenue Code of 1954

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. DODD. Mr. Speaker, I have today introduced a bill to amend section 162 (a) of the Internal Revenue Code of 1954 relating to deduction of trade or business expenses.

This bill is a companion measure to a bill introduced in the Senate by Senator WILLIAM PURTELL, of Connecticut.

The purpose of this bill is to permit nonprofit economic development corporations in depressed areas to charge stepped-up rent for a period of the first 5 years adequate to pay off borrowed money and interest, and permit the renting corporation to deduct such stepped-up rent in the determination of taxable income during those 5 years.

This measure will be of great assistance to depressed areas in Connecticut and elsewhere in New England. It will bring new industry into our community and will ultimately provide employment and generally stimulate our economy.

The bill which I have introduced reads as follows:

Be it enacted, etc., That section 162 (a) of the Internal Revenue Code of 1954 (relating to deduction of trade or business expenses) is hereby amended by adding at the end thereof the following: "For purposes of paragraph (3), in the case of a lease of property (A) which is owned by an organization described in section 501 (c) (4) (relating to civic leagues or organizations for promotion of social welfare) which is exempt from taxation under section 501 (a), and (B) which is subject to a mortgage or other lien securing indebtedness incurred in the acquisition or improvement of such property, such rentals or other payments may, during the term of such mortgage or other similar lien (if such term is not less than 5 years and ends on or prior to the date of termination of the lease as fixed therein), be in annual amounts sufficient to discharge such indebtedness at the end of such term, under regulations prescribed by the Secretary or his delegate."

SEC. 2. The amendment made by this act shall be effective wtih respect to taxable years beginning after December 31, 1954.

Isolation of Israel

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. CELLER. Mr. Speaker, our State Department is unfortunately and mistakenly bent at this time upon a policy of isolation of Israel. In doing so, the Department seems to protest to the world "not that we love Israel less but we love our defense pacts more." It does not seem to matter one whit to our policymakers that this infant nation, the standard bearer of democracy in the Middle East has, despite every manner and kind of obstacle placed before it, progressed toward maturity in wondrous contrast to the lack of progress, the illiteracy and the despairing population of the surrounding seven Arab nations. The attitude seems to be that Israel can take care of herself and hence all aid and comfort must be given to the Arab nations.

The question occurs to me whether, if Israel, with all its technological advantages, with its skilled labor force, with its strides in scientific achievement, with proven military skills, were to kick and to fuss against allying itself with the West, were to demand that she, too, be wooed and won, would she thus be dismissed and pressed into disregard? There is a considerable irony in the fact that Israel, being so definitely and conclusively oriented toward the West, should now be permitted to live in jeopardy by the very powers of the West. At Bandung, at the Asian-African Conference, Dr. Fadhill al-Jamali, Minister of State of Iraq and leader of the Iraqi delegation to the conference, named in the same breath colonialism, communism, and zionism as evils which disturb world peace and harmony. He calls zionism "the worst offspring of imperialism." He said he hoped the conference would brand Israel an illegitimate state and an aggressor and see to it that "Arab rights in their own home in Palestine are recognized and restored."

This man speaks for the nation to whom we are sending arms.

His associate, Premier Nuri Said, of Iraq, said only a little while ago that he considered the Zionist danger took precedence over the Communist danger.

Have we not here the evidence of a perspective in international affairs that spells danger to the interest of the United States?

It is tragic that this conceit of Arab policy is now to be spread through the Far East and Africa. The Premier of Iraq has called upon her new ally, Turkey, as well as Pakistan, to support the

Arabs in a battle against Israel. There is none at the conference who will counter the spread of this antagonism into Asia and central Africa.

Sir Anthony Eden has given top priority to the search for a solution for Middle East tensions. It is an historical fact that world conflagrations start in areas that do not occupy great prominence on the map of the world. Hence, it is imperative that our State Department join in this search for solutions to bring peace to the Middle East. Every day of delay increases the danger. Only thus can the best interests of the United States be served, and we, as citizens of this beloved country, cannot silently acquiesce to a policy which cannot possibly enhance the search for peace.

Albert Einstein

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Times of April 19, 1955, is a fitting tribute to a great scientist and a fine human being:

EINSTEIN THE REVOLUTIONIST

Man stands on this diminutive earth, gazes at the myriad stars, and upon billowing oceans and tossing trees—and wonders. What does it all mean? How did it come about? The most thoughtful wonderer who appeared among us in three centuries has passed on in the person of Albert Einstein. If Minerva is the goddess of science, her head must be bowed. This one man changed human thinking about the world as only Newton and Darwin changed it.

Mathematical physicists in Einstein's class are the epic poets of our time. The universe as we conceive it is their intellectual creation. And what a creation Einstein's was. He dealt with it as if it were closed and not infinite; he deduced that matter and energy are different manifestations of the same thing; he substituted his conceptions of time and space for the assumptions on which scientists and philosophers had relied for 2,000 years. The world was shocked when it learned of these revolutionary conclusions. They seemed like the fantasies of a dreamer who ought to look about him, see the world as it was, and wake up.

But Einstein had looked about. Not only this, but he had thrown away the prejudices that had hampered others who had been looking about before him and the traditional conclusions of centuries. When relativity first startled the scientific world, Einstein's cogitations were dismissed by the average man as of no practical use. That view was finally dispelled by the part that relativity played in the development of the atomic bomb. Einstein's simple algebraic equation, which expressed the equivalence of mass and energy, pointed the way both to the "A" and "H" bombs. The dreamy philosopher and mathematician proved to be a hard-headed realist. In fact, he was so much of a realist that he brushed aside his pacifism and persuaded the late President Roosevelt to begin the development of the atomic bomb as a weapon against fascism.

What distinguished Einstein both as a scientist and as a man was his passionate devotion to the truth. He hated arbitrary laws, conventions, coercion of one group by another, any form of pedantry. Thomas Huxley once prayed, "God, give me strength to face a fact though it slay me." Einstein had that strength. It is this that set him apart as a scientist and the mathematician who saw relationships in the outer world to which other men were blind.

Discharge Petition on Bill H. R. 501 to Revise McCarran-Walter Imigration Act

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. ANFUSO. Mr. Speaker, I have today signed a discharge petition to bring out my bill, H. R. 501, to revise and amend the McCarran-Walter Immigration Act. I urge all my colleagues who favor a liberalization of our immigration laws to sign this petition as soon as possible so we can get some action in the matter.

The recent dismissal of Edward J. Corsi as special assistant on immigration problems points up again the fact that the McCarran-Walter Act and the Refugee Relief Act of 1953 are unworkable and should either be replaced or drastically revised.

During his brief incumbency in office at the State Department Mr. Corsi tried to make our immigration laws work in a humane way. The opponents of liberal immigration in the Department of State and outside the Department stopped him by slandering his unquestioned loyalty and smearing his record of patriotic service to this country. In so doing, they affronted large groups of Americans all over the country who are interested in a decent immigration law decently administered.

The Corsi affair goes beyond partisan politics. It effects millions of people who placed high hopes in Mr. Corsi's efforts to help liberalize our immigration policy and make it more humane. Now these hopes have been largely shattered because of the unwarranted and shameless treatment Mr. Corsi received at the hands of the Secretary of State.

On April 9, when it became known that Mr. Corsi was being dismissed from the State Department, I dispatched the following telegram to Secretary Dulles:

Was shocked to read that Mr. Corsi, with many years of distinguished public service in New York, was summarily dismissed from his national post. I am not satisfied that his appointment was for only 90 days, nor that security was at all involved with his dismissal. Mr. Corsi's loyalty was never under question before although he held the highest administrative office in New York State by appointment of former Governor Dewey. If, as it is claimed, Mr. Corsi's dismissal was the result of his liberal interpretation of our immigration laws, then the basic principles of our Constitution and laws have been violated. This thing goes beyond partisan politics, and since another Congressman has been accused of causing the dismissal, I demand a complete explanation in order that I may make known all the facts to the Congress and the American people.

Congressman VICTOR L. ANFUSO.

Mr. Speaker, the people of New York State, whether Democrat or Republican, are incensed and aroused over the State Department's disgraceful action. They see it not only as an act of bad leadership and poor advice, but also that it stems from a lack of ethics in Government and from opinionated men in high positions of power. The whole situation is particularly puzzling when we are assured that the problem of security was not involved in Mr. Corsi's dismissal, and that only a short 3 months ago Mr. Dulles referred to Corsi as his old friend and the man best qualified to handle the job as his special assistant on immigration problems.

What has happened since then? How is it possible that within such a short period of time Mr. Corsi should be dealt with so outrageously and fired from his job in such humiliating manner by the very same people who lauded him to the skies? The people of New York are entitled to an explanation of this whole sordid affair. They are not satisfied with the explanations given thus far by Mr. Dulles, or Mr. Scott McLeod or other State Department officials.

Mr. Speaker, at this point I wish to insert in the RECORD an editorial from the St. Louis Post-Dispatch of April 13, 1955, entitled "Department of Confusion," which clearly explains the state of confusion over this matter in the Department of State. The editorial is as follows:

DEPARTMENT OF CONFUSION

Secretary Dulles and the State Department appear somewhat less than satisfied with any one of the reasons they have offered for the dismissal of Edward J. Corsi. Accordingly they now offer a selection, as follows:

1. Mr. Corsi's post was temporary, and has been abolished.
2. Mr. Corsi had completed his assignment.
3. The 90-day period for security clearance had expired and the Secretary therefore lacked authority to keep Mr. Corsi on any longer.
4. Mr. Corsi was unqualified for the job.
5. Mr. Corsi did not want to take on administrative responsibilities.
6. Mr. Corsi wanted to take on too many administrative responsibilities, trying to become actual administrator of the Refugee Act.

Some of these protestations, like 5 and 6, contradict each other, and the others are contradicted by other statements from the State Department itself.

Mr. Corsi's assignment was, in the Secretary's own words, "to help solve the difficult problems presented by the Refugee Act of 1953." Obviously that is no 90-day task; it is the work of a year, 2 years, or longer. Far from having completed his assignment, Mr. Corsi had not completed the preliminaries to beginning it. His security report, by Mr. Dulles' own later admission, had come in before he was dismissed, but the Secretary said there was not enough time remaining to evaluate it.

In this connection, the Department said Secretary Dulles' offer of another assignment to Mr. Corsi should clearly put to rest any implication that his change of assignment involved any question of security. Secretary Dulles himself, however, pointed out that the post from which Mr. Corsi had been re-

moved was "a sensitive one," a remark which had the effect of putting the implication into active motion again.

Mr. Corsi's qualifications for the job were vouched for by Secretary Dulles when the appointment was made January 10. Referring to the appointee as my dear friend, the Secretary called him "the best qualified man in the United States to help solve the difficult problems presented by the Refugee Act of 1953."

The explanations given for Mr. Corsi's dismissal are almost childish in their implausibility. Edward Corsi was United States Immigration and Naturalization Commissioner under President Hoover, and New York State Industrial Commissioner under Gov. Thomas E. Dewey. His professional life has been spent in public administration. Secretary Dulles' assertion that Mr. Corsi "indicated to me that he was not interested in and not qualified for administrative work" is therefore amazing, to say the very least. It is lamentable that the person to whom this statement was attributed should have felt it necessary to accuse the Secretary of State of falsehoods.

As of now it seems clear that Secretary Dulles dismissed Mr. Corsi because Representative WALTER of Pennsylvania had accused him of having associated with some Communist-front organizations 20-odd years ago. Mr. WALTER is co-author of the McCarran-Walter Immigration Act.

Mr. Corsi says Secretary Dulles "told me he was dismissing me because he had to maintain good relations with Congress" and "it would endanger bills with reference to the refugee program if I stayed."

So once again Secretary Dulles has demonstrated, as in the case of John Paton Davies, that if his appointees are attacked they cannot expect him to stand by them, but can only look forward to being thrown to the wolves. What this will do to morale—which Mr. Corsi says is one of the stiffest problems in administration of refugee relief—should be plain. Its effect on the response of capable men to appeals to serve the Government—at their own risk—should also be plain.

The only possible consequences are deterioration of the quality of the men and women who can be attracted to important posts, and demoralization among those who do accept.

And now, Mr. Speaker, let me add that there are implications in this entire affair which may prove damaging not only to the present administration or to a particular party or some individual. I am worried over the damaging effect this scandal may cause abroad and its repercussions there when it is fully realized that the refugee relief program is nothing more than a hoax and a fraud, and that it is administered in such a way as to keep refugees out of this country instead of facilitating their entry. The honor and prestige of our country is involved here.

To prove my assertion, I want to place in the RECORD a United Press story from Rome, Italians Charge Corsi Case Bias, which was published in the Washington Post and Times Herald last Friday, April 15, 1955. Following is the United Press dispatch:

ITALIANS CHARGE CORSI CASE BIAS

ROME, April 14.—The independent right-wing newspaper, Il Tempo, today said the ouster of Edward Corsi as adviser to Secretary of State John Foster Dulles on refugee problems involved racial and religious discrimination.

"Every hope of increased Italian migration to the United States has vanished," as a result of Dulles' action, it said.

Corsi's removal "has caused great surprise and some bitterness in Italy," the newspaper commented.

It charged that a powerful influence has been brought to bear recently to prevent the nonquota emigration of 200,000 persons, recommended by President Eisenhower.

"This was done by well-known racial circles favoring Nordic and Protestant immigration from southern Europe," Il Tempo said.

"When one practices an open policy of racial and religious discrimination, it is hard to talk of democracy in relations with other countries. And when such a policy so openly hurts Italians, after the visit of our government leaders (Premier Mario Scelba and Foreign Minister Gaetano Martino), to the United States, it is hard to talk about deep friendship.

Mr. Speaker, both the McCarran-Walter Immigration Act and the Refugee Relief Act have come under serious attack lately. The Corsi incident is just a demonstration of public indignation against these two acts. The McCarran-Walter law has been called discriminatory and un-American. The refugee relief measure has been called a fraud and a phony by Congressman WALTER.

For the sake of America's greatness, its international prestige, and its position of moral leadership among the nations of the world, I urge this Congress to revise the McCarran-Walter Act at the earliest possible date, and to make it so workable and fair that no special immigration legislation will be needed in the future.

Mr. Speaker, on January 5, 1955, the first day of the current session of Congress, I introduced an omnibus immigration bill, H. R. 501, to revise and rewrite the McCarran-Walter Act. The bill was referred to the House Judiciary Committee, but no action has as yet been taken by that committee on my bill. In view of the fact that more than 3 months have elapsed since I introduced my bill, I have asked the Clerk of the House for a discharge petition and have placed that petition on the Speaker's desk.

I want to appeal to all my colleagues to sign this petition so that we can bring this bill out on the floor for early action and a complete revision of the McCarran-Walter immigration law.

Liberation of Oppressed Peoples

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following guest editorial from the Polish Daily News of January 10, 1955. This editorial was originally written for the Polish-American Journal by my distinguished and esteemed friend, K. Stefan Pomierski, of Glen Cove, N. Y.

The material follows:

LIBERATION OF OPPRESSED PEOPLES

One of our readers recently submitted a memorandum to President Eisenhower, suggesting positive ways and means to strengthen our historical ties of friendship with the captive peoples of Poland and other countries enslaved by the evil forces of communism.

Pointing out that at present the policy of the United States toward the enslaved nations is certainly not very encouraging to them, the author of the memorandum proposes as the first step the creation of an agency within the State Department or a Presidential commission with a view:

(a) To press a closer relationship not only with representatives of the free Poles, being obliged to live outside of Poland, but also with patriotic individuals and groups within the boundaries of enslaved Poland.

(b) To hold hearings in the United States and abroad for the purpose of determining the best ways and means to obtain information from reliable sources other than our consular and diplomatic officials.

(c) To assemble, scrutinize and evaluate such information, to recheck same and pass it on to the proper officials of our administration.

(d) To encourage captive peoples in the organization of a well-planned program of a passive movement, which in case of war would change into an active armed resistance cooperating with our high command.

(e) To adopt ways and means of mutual cooperation in means of communicating with each other by all modern devices, so that in case of war, we may know where to drop propaganda leaflets, even supplies and arms to the resisting forces.

(f) To study ways and means as to the possibility and practicability of the creation of several divisions composed of free Poles.

A creation of a Polish Army as a part of the Western Powers Defense Organization will offset propaganda initiated by the Communist regime that Western Germany once armed will again ravish the Polish people by fire and sword.

(g) To study and propose such other means and ways that may lighten the darkened road of the future—continuous serfdom, persecutions, and exploitations, which followed the Yalta agreement, and at the same time regain a courageous ally, a more loyal and reliable friend than perhaps some of our so-called allies who are now the recipients of military and financial assistance from us.

The author believes that the creation of such a Commission composed of persons genuinely interested in this matter, would perhaps also pacify a large number of individuals and groups who a little more than 2 years ago listened to campaign promises of both major parties relative to a positive liberation program, short of war, to be adopted, and who are dismayed, disheartened, and resentful of the apparent abandonment by this Government of the efforts it began toward liberation.

However, he argues, the most important point is the fact that if we should have an agency or commission having objectives such as are generally outlined in the memorandum, we may do our country a great service in case of an emergency which may threaten our own existence.

We agree with the author of the memorandum and trust that President Eisenhower, who knows him personally, will give serious consideration to his proposal.

On the other hand, we urge the Congressmen of Polish descent, our Polish-American organizations and their leaders, members of

the clergy, and individuals to support the above practical idea in every way they can.

Our Polish-American solons should introduce appropriate resolutions in the Congress of the United States, and our organizations should adopt resolutions regarding this matter.

In fact, everyone interested in the Polish cause should write to President Eisenhower expressing approval of the plan for the liberation of the oppressed peoples.

Should Public Education Cost $19 Billion in 1965?

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial by the Most Reverend John F. O'Hara, C. S. C., archbishop of Philadelphia, which appeared in the Catholic Standard and Times on March 18, 1955:

SHOULD PUBLIC EDUCATION COST $19 BILLION IN 1965?

The question is asked because such expenditure has been proposed as feasible by the National Citizens Commission for the Public Schools. The speculative proposal, 1 of 3, and the arguments in its support are set forth in a brochure of 62 pages issued in December, 1954, under the title "Financing Public Education in the Decade Ahead."

The commission is not unimportant. A cross section of its list of 39 members is furnished by its Public Education Finance Committee, as follows: Beardsley Ruml, James F. Brownlee, John Cowles, Samuel C. Gale, George Gallup, Lester B. Granger, Robert Heller, Roy E. Larsen, James G. K. McClure, Victor Reuther, O. H. Roberts, Jr., Harry Scherman, Louis B. Seltzer, Richard Joyce Smith and Sidney G. Tickton.

Its financial backing is impressive. Listed as contributors to its work are the Carnegie Corp., the Fund for the Advancement of Education, the Fund for the Republic, the General Education Board, the New York Community Trust, the Rockefeller Brothers Fund and the Alfred P. Sloan Foundation.

Its basic principles are praiseworthy: "To help Americans realize how important our public schools are to our expanding democracy. To arouse in each community the intelligence and will to improve our public schools."

To complete the background, it should be added that this brochure is a model of typographical excellence, its text is replete with tables and footnotes, it has the appearance of a scholarly work and a disarming air of frankness. It might have rendered a great service to the American public, and especially to the Members of Congress who are called upon to consider year after year the question of Federal aid to education.

It has failed to accomplish this high purpose because, (1) it has relied too much on assumptions, sometimes when facts were available; and (2) it has picked up a figure from the right-hand column of a table and applied it to the left-hand column, where it has produced a variance of several billions of dollars.

In the four broad fields covered by the study (population, production and income, educational expenditures, cost of construction) there are assumptions which can be tested at will. This analysis will be confined to a few of these.

One assumption which concerns Catholics is that private education has reached the saturation point. After setting forth certain projections of the poulation offered by the Bureau of the Census, the author selects as his basis of calculation the child population aged 5 to 17 years, "because it represents the gross liability of the American people for education." Then he adds: "A small fraction of the child population is educated privately, some children are not in school, but the increase in these groups is not likely to be important in the decade ahead."

The "small fraction" to which he refers is reported by the Bureau of the Census (Current Population Reports, Series P-20, No. 54) for the current year as 13.9 percent of the white registration in all elementary schools of the United States, and 9.4 percent of the white registration in high schools. Among the nonwhite registrations, the percentages are 4.4 and 3.4 respectively.

Compare the author's assumption with the statement of fact in the Census report just cited:

"Growth in private elementary and high school enrollment has taken place twice as fast, percentagewise, as it has in similar levels of public schools since 1948, the first year for which census data are available on school enrollment by type of control of the school. During these 6 years, the number of public school pupils has increased by 4.8 million, or 20 percent, whereas the number of private school pupils has increased by 1.2 million, or 49 percent." (Should we correct the census comment to read, two and one-half times as fast?)

An unwarranted assumption closely connected with this is that educational expenditures for the private and parochial systems on a nationwide basis are proportional to the percentage of children educated in nonpublic schools. With this assumption, the author estimates the parochial and private school expenditures in 1954 at $1,100,000,000.

Against this assumption stands the fact that more than 80 percent of the teachers in Catholic schools receive no salary, only subsistence; and the further fact that, at least in the smaller parish schools, many of the maintenance items are shared with the parish church in such fashion that costs are at a minimum. Add to this the fact that, as a result of eliminating waste space, many parochial and diocesan schools are constructed at costs far below the local public-school costs, and the discrepancy is greater. Further, interest charges for Catholic schools are generally at a minimum, for school debts are usually paid within 5 years (as against the 30- to 40-year periods involved in bond issues which add 50 percent or more to the cost of public-school buildings).

The material for the sleight-of-hand operation (surely unintentional) to which reference has been made above is found on pages 48, 51, and 53 (tables 6, 9, and 10—pt. B). Table 6 has statistics on the number of school children reported by various Government bureaus, 1950–65. We select the only year (1952) which has entries for all the columns, as follows:

Children, aged 5–17 (Census Bureau)	33,100,000
Enrollment, kindergarten, through grade 12 (Office of Education)	30,200,000
Enrollment, grades 1–12 (Census Bureau)	29,100,000
Average daily attendance (Office of Education)	23,700,000

The reader will note that there is a difference of $9,400,000 between the right- and left-hand columns of the above table.

In table 9 the author projects expenditures for all elementary and secondary schools in the United States, with estimates for 1954 totaling $10 billion. We have rejected the $1.1 billion for private schools, and we may prefer to use as our basis of calculation for public schools not the $8.9 billions, the author's estimate for 1954, but the factual $6.7 billions of 1951, as presented in the Statistical Abstract for the United States, 1954. We might also question the projection of school-age children, from 36 million in 1954 to 48 million in 1965, but that would go beyond the scope of the present analysis.

Table 10, part B, contains the manipulation. It stands thus:

Illustrative projection of school expenditures in 1965, assuming teachers' salaries increase [1]

1954 situation:	
1. Number of school-age children (table 1)	36,000,000
2. Expenditures on education (table 9)	$10,000,000,000
3. Per capita expenditure, including allowance for debt service	$278
1965 situation:	
1. Number of school-age children	48,100,000
2. If $278 per school-age child is spent, total education expenditures will be	$13,360,000,000
3. If $356 [1] per school-age child is spent (equivalent to actual current expenditures plus operations in 1954), total education expenditures will be	$17,100,000,000
4. If $400 [1] per school-age child is spend (equivalent to actual current expenditures plus debt service in communities where education standards are highest) total education expenditures will be	$19,200,000,000

[1] Expenditures of increased amounts per school-age child will involve higher salaries for teachers than now paid. These should be accompanied by greater productivity per teaching unit, through modification of historical teaching practices, consolidation of school districts, utilization of new teaching devices, visual aids, etc. Research in the field of education will improve productivity, as has already been accomplished in industry and agriculture, and will soon begin for clerical activities.

The author has taken the New York figure for column 4 of table 6, and applied it to column 1 for the whole United States. Thus he arrives at $19 billion. In other words, the expenditure per pupil in average daily attendance in the public schools of New York State (the number was 1,771,000 in 1952) was applied to all the children of the United States projected as of age 5 to 17 in 1965. The New York children of those ages numbered 2,739,000 in 1952—almost a million more than the number on whom the educational budget was spent; that is, the public school pupils. A further illustration of the New York picture can be presented by the factual data for 1951: the expenditure per child in daily attendance at public school was $332; per child enrolled, $282; per child 5 to 17 years of age, $220.

It would be interesting as a mental exercise to reverse the process followed in the bro-

chure. The new table would be something like this:

1965	
Total population—5 to 17 (projected)	48,000,000
Less 10 percent not in school (assumed)	4,800,000
Enrolled in school	43,200,000
Less 20 percent in private school (projected)	8,600,000
Enrolled in public school	34,600,000
Less 12 percent absentees (projected 1950 data)	4,152,000
In average daily attendance	30,448,000
Cost, at $220 per pupil in average daily attendance	$6,698,560,000

This unfair projection is, of course, no more worthy of acceptance than is the one proposed by the National Citizens Commission for the Public Schools.

If the author of the brochure will revise his assumptions and stay close to facts, he may yet make a valuable contribution to the debate on a very serious national issue.

Albert Einstein

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial which appeared in the Washington Post and Times Herald of April 19, 1955:

Albert Einstein, one of the intellectual Titans of his time, was a man of exceptional gentleness, sweetness and simplicity. He brought to the America which welcomed him as a refugee from Nazi tyranny great scientific gifts; he was, indeed, one of those rare creatures set apart from ordinary men, an authentic genius, a Promethean figure of the magnitude of Galileo, Euclid, or Newton who radically changed man's concept of the universe he inhabited. His speculations and researches in higher mathematics, translated into the area of nuclear physics, laid the essential groundwork for the development of atomic energy. Thus he made an immeasurable contribution to the strength and security of his adopted land.

But he made what may, in the long run, be reckoned an even richer contribution through his devotion to those ideals of personal integrity and individual liberty which drew him to the United States. Driven from the country of his birth by Nazi intolerence, he had the courage to speak out here when he saw symptoms of the pressures toward conformity which had brought Germany to disaster. Despite his occasional naivete in political matters, he became for Americans a symbol of their own best values, a symbol of the America that has always been a haven for the oppressed, and a symbol of the America that has achieved unity through diversity and security through freedom.

During his latter years, Professor Einstein lived a life of quiet scholarship in Princeton, revered and loved no less by his neighbors than by his eminent scientific colleagues. One of his neighbors was a little girl who stopped in to see him every afternoon on her way home from school. Her mother, fearful that the child might be making herself a nuisance, asked the professor one day what on earth he could find in common with her. "It's perfectly simple," said Dr. Einstein. "She likes me to help her with her arithmetic homework, and I like the jellybeans she brings me." He was, above all else, a man who loved his fellow men.

Quo Vadis America?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting at this point an address by Dr. A. P. Coleman, president, Alliance College, Cambridge Springs, Pa., delivered before the National Slovak Society at Pittsburgh, Pa.

I commend this address to all Members of the House:

QUO VADIS AMERICA?

(By Dr. A. P. Coleman, president, Alliance College, Cambridge Springs, Pa.)

Tonight, ladies and gentlemen, I am going to deliver a warning to my fellow schoolmen and to all Americans. I intend to show, in as striking a manner as I am able, a situation of gravest danger existing in our American schools. Yes, with your permission, learned judges and distinguished attorneys, I even intend to argue a case. I shall endeavor to convince all of you, as rational beings and patriotic citizens, that the changes in the school curricula which I advocate are vital to our well-being as a nation. I shall try to show you that through certain missed opportunities in our classrooms the United States is missing the boat on two fronts: internally, in the crucial problem we have here of integration within our own frame and body; and internationally, in the basic problem of our age, that of creating an effective counterpoise to communism and its fanatical propagators in the Kremlin.

Today you all know the foreign policy of the United States, still under the Russophile influence of opinion makers like George Kennan, is one of containment of the Soviet and quarantining communism. Negative, and thus inevitably failing, this policy can be redeemed only by the injection of one great and vital ingredient.

The ingredient is obvious: Intelligent and enlightened self-interest have but to be applied, and the ingredient stands automatically self-revealed. To any true student of Eastern Europe it is the natural course: The active and purposeful wooing of the souls of the races now enslaved by the Soviets which, alas, we have all but succeeded in discouraging altogether. Originally these relatives of many of my listeners were of our own mind and temper. American policy has almost driven them from our side, from their natural allegiance. We have got, for our own sakes, to woo and win them back.

I feel moreover that this wooing must be done soon. As our own Alliance College student, the heroic Polish flier, Frank Jarecki, often says, we must do it now.

Why so soon, Americans ask?

Because, left alone, apparently abandoned by the West, the people of countries like Slovakia and Poland are suffering beyond endurance. And their children hearing nothing by Communist propaganda may imperceptably be educated into Communism because: as a traveler in the desert drinks from a foul, contaminated spring, rather than die of thirst—so must young people in Eastern Europe today at least pretend to accept communism, or perish. It is as simple as that, friends.

In the meantime what do the young people of Eastern Europe hear? Little about our progress; everything about our failures.

To make matters worse our Government actually receives, yes recognizes, envoys from the U. S. S. R. and the Soviet-dominated regions, thus providing the argument to the folks back home that we here in the United States, so it appears to the East European, approve the various Communist regimes. Else why would we receive the envoys of murderous dictatorships?

Ladies and gentlemen, if I had my way, I'd follow the advice of the president of Polish National Alliance, Charles Rozmarek, and give the Washington ambassadors of all Soviet-satellite embassies, the good old Pittsburgh Slovak farewell "bud-baj." And I say to you, our American policy should be: "No traffic with hangmen."

"Ne ver komunistovi, kym je teply"—is an adage our frontier fathers of Fort Duquesne would expect us Pennsylvanians to translate: "The only good Communist is a dead Communist."

The sooner Washington learns the truth of the following old Slovak saying the better: "Nebude zo psa slanina, ani z vlka baranina."—"You get no bacon from a dog, nor mutton from a wolf."

We Americans, in the light of the long history of our woes since President Roosevelt lamentably recognized the Soviets, ought at last to know there just isn't any mutton to be got from doing business with a Communist wolf.

Intelligence and self-interest aside, where is our former American evangelism? How have we come to the point of being able to desert our spiritual brothers of Central and Eastern Europe, and, not only desert them, but even worse, not even know we are deserting them?

For the hundred and more millions of our fellow Western folk dwelling in the great Middle Zone of Europe, from Finland down through Poland and Slovakia to Romunia, now under Soviet rule, "containment" and "quarantine" are but abandonment. In the end they spell "divorce"—severance utterly from the western orbit to which by every right of choice and tradition these people belong. Let's rather move the Iron Curtain east. To mention only two, America must no longer abandon Slovakia and Poland.

Americans are able to seem to desert their natural friends and ideological allies because they do not, as a Nation, here in the United States, genuinely feel, in the marrow of their bones and in their hearts, that the folk from the Middle Zone are yet part and parcel of America. They do not feel them to be us. Here is the root cause of the tragedy for the Slovaks and other suffering peoples from Eastern Europe, the explanation of how a generous America could perpetrate the infamy of Yalta.

Of course it goes without saying that there are a few Americans of whom this sweeping charge of unfeeling ignorance is not true. There are some who genuinely and with spontaneous intuition feel that deep kinship with the folk of the Middle Zone that means oneness. But the number is too small. Except for those who themselves come from this region, or whose ancestors came from there, the number is insignificant. And many, if not most of this paltry few, are without influence, more's the pity. Some are expatriates, with no roots in our own American soil, and therefore without weight or prestige. Worst of all few who feel this mystic kinship with the Middle Zone are in any degree articulate or influential. This must and will change.

This is where, President Pankuch, Honorary President Platek, members of the su-

preme council, and friends, the National Slovak Society, joining with your distinguished fellow citizens of Pittsburgh, Judge Blair F. Gunther, censor of the Polish National Alliance this year celebrating its diamond jubilee, and with all other patriotic organizations with ties behind the Iron Curtain—this, ladies and gentlemen, is where you by your mighty collective efforts can carry on a vast effort in education to the eternal good of our glorious United States of America.

For our American national good, numbered as the few should be those who fail to recognize the oneness of the midzone races with ourselves; as the many, those who understand, and even more than simply understand, perceive with all their senses that the races we have mentioned are but ourselves, with aspirations and longings identical with our own, and a deep-rooted tradition of full spiritual integration with our own West. Such enlightened Americans know that Poland and Slovakia do not belong behind the Iron Curtain. They belong to our Latin civilization.

How can the balance be reversed? Only by the schools. The schools are the sole agency that reaches enough of our people to do the job. And here I am not referring solely to the schools of higher learning, nor even to them at all. I mean the elementary and secondary schools. Only through these can the desired reversal of orientation be brought about.

But, you argue, the crisis is urgent and immediate. The schools might be able to do the job, but it will take a generation at least for their influence to be felt. The fruit of a school's sowing is seen only after the years have passed. The product is inevitably long deferred, never appearing at once.

This is true, and the argument is valid, or would be if the present struggle were simply of the moment. It is, of course, not this at all. At least twice before our time the races of Europe from which we are sprung have wrestled on the battlefield for a period of a hundred years at a time over issues that divided them. They are doing the same thing again, this time with Asia as an added factor in the duel.

Ours is a third hundred years' war, though still a cold war. It did not begin yesterday, and will not be over tomorrow. Too many people have yet to be purged of the madness of our age for the struggle to end quickly. Too many Americans must still have the lure of escape into totalitarianism banished from their imaginations and exorcised from their souls. Communism must be stripped of its fine clothes and exposed as the bloody, murderous reaction that it is. When fellow travelers and pinkos in the seats of influence in our beloved land pose as experts on Eastern Europe they must be labeled for what they are: Nearsighted dupes of Marxist sophistry or simple opportunists.

Some Americans, even Senators, need to realize that you cannot fight Communists with gloves on. "He who wants the kernel must crack the shell."

Meanwhile the schools do have time. What changes then should be made in our curricula so that the oportunities at present being missed may be turned into opportunities grasped?

The principle governing the changes I propose is easily stated. The rich cultural stream of middle zone thought and aspiration, past and present, must be integrated fully with the stream of culture we are now passing on to our children through the schools as American. As presently offered, the stream is not, in the fullest sense, American. This fact was brought to my attention with a shock some years ago in my own Connecticut hometown. A schoolgirl bearing a Slavic name was reading an essay she had written on the First Thanksgiving Day. In the course of it she spoke eloquently of how her ancestors had taken part in this moving celebration. Her words galvanized my thinking.

"Yes," I thought. "You are right, Laska. Those Pilgrim Fathers were your ancestors, though their names were so different from your own and their race so foreign. They were your spiritual ancestors, because your parents made them so, by deliberately making the country which they so largely fashioned their deliberate choice as your future homeland. When your fathers left Bratislava, Trnava, Nitra, Turciansky Svaty Martin, Brezno, Dobsiana, Margecany, or Kosice, they made as brave a choice as did ever the first members of the Greene family of Rhode Island—my own ancestors—in leaving the British Isles over 300 years ago." This I freely grant.

In the larger sense the Pilgrim Fathers were your ancestors, Laska. Spiritual ancestors, however, not racial. Yet you had racial ancestors living in the year of the first Thanksgiving Day. And they, too, were doing things of importance in that year, things as significant as founding a colony in the wilderness. They were holding back the Turkish horde from the heart of Europe, offering their living bodies as a bastion against the invader, in an earlier chapter of the ever-recurring struggle of West against East. Those ancestors of yours in Slovakia were making it possible in a word, for a colony to be founded in the New World, and you should be very proud of them. Furthermore, if, I found myself addressing Laska:

"If we Greenes let you have our racial ancestors as your own, some way must be found so as to permit me and mine to have your ancestors. It is only fair to us both as makers of the ultimate America."

How can this be accomplished? How can the gate be opened so as to let the Tatra hero, Janosik, enter freely into our garden of heroic memory, as our Elder Brewster has so freely entered into yours through our American schools?

Was it not your great Slovak apostle of Slavic unity, Jan Kollar who wrote, according to the late Peter Yurchak:

"Literary reciprocity is * * * a sharing of all the national groups in the spiritual product of their nation?"

Right here in this great new American city of Pittsburgh let us, Americans all, demand that the school textbooks be revised to show in some small measure the background of the Slavs, and of all Americans. Only in one way: By a thorough refocussing of our school textbooks, and a rewriting of them from start to finish as we go together marching down our Avenue of the Americas, can we build a united America.

Actually, of course, the heroic ancestors I have been speaking of arrived on our shores very early, even before the coming of the Pilgrims. They arrived as part of the spiritual baggage of the Poles who are known to have been present in Virginia's Jamestown settlement, which was founded in 1607, 13 years before Plymouth Colony. Thus Zolkiewski and other heroes of 17th century Poland have been American figures even longer than Governor Bradford and John Winthrop or the romantic John and Priscilla Alden. But for all the long time they have been here, the Poles of Jamestown Colony still have not impenetrated the main stream of our culture, or fused with it to a perceptible degree.

The situation with regard to the Slovaks is even worse. What American boy loving adventure has heard of Moric August Benovsky from his school library?

And yet, with letters of recommendation from Benjamin Franklin, Benovsky, born in Vrbova, Slovakia, came to America in 1775 and later served under the Polish hero, Count Kazimierz Pulaski, in our own Revolution. How many boys and girls of Slovak, or any descent, learn about this in American schools? Who among American school boys know Benovsky's exciting adventures in America and later in Madagascar? None. Somehow we must work for a full two-way cultural exchange to strengthen American unity.

The heroes and symbols dear to our fellow citizens from the middle zone of Europe must not be kept standing on the shore of our on-sweeping cultural stream. To change the metaphor, they must not be kept waiting outside the door of our national Pantheon, like spiritual DP's, hoping, hat in hand, as it were, for some entrance visa that never is granted by our educational leaders.

What great things this full impenetration may accomplish for our general American culture we can scarcely imagine. It is not too much to predict that it may even be the means at last of fertilizing our New World Renaissance.

Today even here in Pittsburgh our young people of middle zone origin go through school receiving an Americanism which takes no cognizance whatsoever of any pre-American past save the English, the German, the French, and possibly the Spanish and Italian. Yet in their homes and churches, lodges, and at celebrations like ours tonight, these young people hear extolled such heroes as Janosik, if they are Slovak. They learn, if they are Polish, about the warrior Bolesiaus the Bold, who sleeps in the mountains, awaiting resurrection and deliverance of his people. They hear of poets like Swetozar Hurban Vajansky, whose words had the power to keep alive an enslaved Slovakia.

I believe that a boy or girl can be a better American if he feels, with Vajansky in Kramoris' translation:

"I am proud that I am Slovak
Sweet my language wells,
Like the music of archangels,
Like the sea-tide's swells.
Hymns of ours purest pearls are,
Diamonds depth along.
In our myth dwells secret rapture,
Wisdom do our proverbs capture,
Beauty fills our song."

Literally with a Slovak or Polish song in their hearts, these your children have gone to our American schools, and then, as I have said, heard not a single word of any Slovak figures, nor what they stood for in history. The result is that American young people too often become conditioned to distrusting the parents to whom these old-country heroes meant so much. They come to believe their elders have been selling them, as they say, "a bill of goods." And so we have growing up in America a race of young people with split souls.

One of our Alliance College students brought this fact to my attention with shocking force one day when he cried in despair, "But why didn't I hear about him in school?"

At Alliance the boy had at last learned of Mickiewicz, the poet par excellence of the Polish heart, whose death in 1855 we are commemorating this whole year, climaxing in a "Mickiewicz Festival" at our college the last week of next July.

At first at Alliance when Mrs. Coleman spoke of Mickiewicz the boy resisted but finally his bitter young mind softened, and yielded to the charm of Mickiewicz's verse.

"Why shouldn't I have thought you were just trying to trap me with some second-rater," he asked, "when in 12 years of public school I have never once heard the name Mickiewicz mentioned? Why wasn't he given to me in his proper place, in his true perspective, along with Byron and the other romantic poets of the world?"

Well, ladies and gentlemen, why not?

Yes, the Middle Zone has got to come into its rightful place in our American stream of culture. Until it does, the stream is, as I have said, not fully American. Too many of the heroes and symbols that should be within its tide are absent. They are as if

illegitimate. They must be legitimatized, and we had better begin in Pennsylvania, American homeland of the Slavs.

Out of the process of legitamization and impenetration, we may, as I have indicated get our own renaissance, too.

Consider for a moment the manner in which Europe received her Renaissance in the 15th and 16th centuries. After ages of being cut off from its past, Europe was reunited with that past through the rediscovery of classical culture. The newly discovered source of inspiration was carried by a handful of geniuses to England and France, Italy, Spain, and Portugal. Here, in the space of two centuries, the classics proceded to impenetrate fully the cultures already in being on the various local soils. "The glory that was Greece and the grandeur that was Rome" became in the fullest sense the possession of the Frenchman, the Italian, the Spaniard, and the Englishman. A tremendous refreshment and rejuvenation of the native culture in each case took place. Shakespeare devoured Plutarch, distilled him through his own imagination, and then, far from keeping him to himself, gave the creator of the Roman Valhalla and all the heroes who were enshrined in his great creation fully and bountifully to the meanest clerk in London, who in turn made him his own. Note, in recalling Europe's Rennaissance, that it was no new culture which served as the fructifying agency, renewing the life of Europe. It was an old culture, ancient and hoary and hallowed by time as compared with the cultures which it stimulated into more abundant life. Seemingly strange to us in the United States who so worship the young, it was a case of an older culture fertilizing those still in the prime, as we say, of their youth.

The same phenomenon can start here in Pittsburgh now. The culture of the midzone is old, old and mellow, tried in the furnace of time and proven valid. Impenetrating our own native culture, it can give it the zest and buoyancy of the people of the Vah, the strength and refreshment of those that dwell along the Vistula.

Whether you agree with my thesis or find my arguments sound, what I am saying will happen, is bound to happen. Whether we wish it or not, the special heritage of each and every race present in America today will in the end be admitted into the stream of American culture. The only question is, how soon—whether soon enough to do us any good in the present ideological duel; and by invitation or through pressure.

However the change comes about, the reorientation will be accomplished through the schools. Already progress has been made along this line in our colleges, where since the Second World War courses in world literature have burgeoned. Most of the courses, however, are afflicted with astigmatism, the reason being, of course, that the textbooks on which they are based are gravely out of focus. One would get the impression from texts used in our schools that between the river Oder and Dniester, which bound the midzone on west and east, lay a gigantic black swamp, inhabited only by animals. Up to the Oder from the west and the Dniester from the east, the various nations are accorded their deserved and proper space. For the nations lying between, there is a great void. I have been told that the wealthy East European Fund of the Ford Foundation publishes no books in Slovak or Polish. Why?

Are not Slovak and Polish important East European languages? I ask you.

Clearly, we need volumes dealing fairly and adequately with the dozen or more national groups dwelling in the midzone. Simple prudence requires that these not be left out, as the Ford Foundation seems to have done. Are we to give the impression in our school texts that the ancestors of our boys and girls of Slovak and Polish origin have no culture? Will this studied discrimination increase American unity? Never.

And if we do forget historic lands like Slovakia and Poland, how are American boys and girls to reconcile what they hear at home with what they hear in school? If, as in many texts, ample space is accorded Russian literature, which, as our young people have been taught by their parents, is relatively new—and it is; while no space whatever is accorded to Slovak and Polish, which they have been taught are relatively old—and they are—will not youth be confused? It most certainly will.

New textbooks, new interpretative volumes, new anthologies must be written. And here I should like to deliver a warning. Great care will have to be taken to make these new texts and anthologies appealing. Those in charge of planning them will have to be careful never to forget they have two masters to serve, not one: the Nation whose culture they are presenting, and the American student. In the tradition of every middle zone country there are heroes and symbols of vital import that will appeal to the young American, and "sel lhim," as it were, on the race in question. There are other heroes who will be totally unintelligible to him, because of his different, that is American, background. It is the heroes and symbols of the first category that the textbook writer of the future must concentrate on. And above all, he must bypass the figures that are dull.

Up to the present, the portion of our American population which has its roots in Slovakia, Poland, and the rest of the midzone has been inarticulate. This, distinguished toastmaster, Mr. President, guests, and ladies and gentlemen, is not going to be the case for long. Soon you in this hall are bound justly to become vocal and to demand the thing I have been talking about. How much better for the cause of harmony within our country if American schoolmen answer the yearning of you folks before it rises to a demand. The schools of Pittsburgh should lead by proving that American educators appreciate Americans of Slovak origin, organized in the great National Slovak Society, because American fair play demands that your heritage be taught in clear focus with those of other races.

For one thing is certain in this uncertain world:

No matter what the future holds for any of us, for America, and for the world, the Slavs will have unmeasurably more influence in the future than in the past.

Ladies and gentlemen, the greatest potential, still unexploited, source of resistance to communism in the world today does not lie in the neutralist Orient dominated by Nehru, but in Eastern Europe, where dwell hundreds of millions of loyal lovers of freedom. The free spirit of Janosik still dwells in Slovakia and everywhere behind the Iron Curtain.

Many millions of hearts in Eastern Europe have just greeted the New Year with anxiety and yet with courage. In the words of Jan Botto's Janosik they have bravely cried:

"Freedom, freedom, dear, dear freedom mine,
For thy sake the lords are preparing the gallows for me."

In conclusion, my friends, we have just been through the joys of Christmas. Shall we then not all the more, as did Janosik, abhor the hangman's gallows going up today throughout Eastern Europe? Can we longer remain indifferent to the fate of the Slavs, fellow Christians of the western tradition?

From the smoking embers of Eastern European Christian culture, even the pagan Slavic god Rodhost cries: "No! No! No!"

Janošik still lives and will go abroad against his land's oppressors as soon as America with an understanding of the historic contribution of the mid-zone obtained in our schools shakes off the bonds of ignorance. Then the voices of the exploited people will echo through the wide reaches of the Tatras:

"Bude volat do všech stran: Janíčko! Kdeze si?"

"Will cry in every direction: Janošik, where art thou?"

I believe before God America must and will answer, provided our schools honestly present Slavic culture in all its beauty and its power. America will turn against the hangmen of Marx who bind the Slavic soul of Eastern Europe, as our hearts here tonight turn once more to the heights of Caktice in Slovakia.

America will approach the gallows of sacrifice in the spirit of Janošik, Robin Hood of the Tatras, for our souls will tell us that there burns the torch of freedom for America and for the world today. As the peoples of Slavdom rise, the Communists will fall.

Coexistence with Communists, my friends, is like making your bed in a snake pit. Bad education in the past would have us even consider the preposterous plan of coexistence with those who in 10 years have enslaved nearly a billion human beings. We need the spirit of Janošik and we must for the inspiration of America, tell again the old tales of Slovak heroism. On the scaffold Janošik found freedom. By releasing eastern Europe America will preserve her freedom.

Albert Einstein

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. MULTER. Mr. Speaker, the following editorial published in the New York Herald Tribune of April 19, 1955, is an indication of the high esteem in which this great scientist was held by the entire Nation:

Just as the shoulders of the mythological Atlas strove to support the heavens, so did the mathematical equations of Albert Einstein seek to balance the universe. This was a scientist who as no other in his century symbolized to mankind a knowledge and comprehension that reached rarefied heights where few minds but his could venture.

It was a striking phenomenon that a physicist and mathematician dealing in abstractions that eluded the grasp of the untrained millions should have attained such widespread renown and affection. Those to whom relativity, the space-time continuum and the unified field theory were indecipherable phrases nevertheless felt the presence of the gray-haired, pipe-smoking, comfortably dressed old man at Princeton, and knew almost instinctively that it was a presence at once benign and beneficial.

To assay the contributions of Dr. Einstein to human knowledge is a formidable task, for mathematics, rather than perception through the senses, was the tool he used for understanding the universe. And yet his hypotheses, written in enigmatic symbols, became palpable and overwhelming facts within his own lifetime. His general theory of relativity predicted the bending of starlight in the gravitational field of the sun; in 1919 an eclipse permitted astronomers to confirm by observation his equations and establish his theory as fact. In 1905 he wrote the formula $e=mc^2$; 40 years later this statement of the relationship between mass and energy was transfigured into the atomic

bomb. His work lay at the base of many developments in electronics and television, as well as of industrial advances that depend upon underlying laws of matter and energy.

Yet the greatness of Dr. Einstein lay less in the everyday achievements he contributed to than in the awesome breadth of the concepts he brought to the post-Newtonian world. He sought one key to unlock all the portals of the universe, and he believed that he had fashioned it at last in the unified field theory, propounded in 1953, in which he united electromagnetic and gravitational phenomena in a cosmic harmony. Here, as in his earlier hypotheses, he did not say whether he was right or wrong—though he undoubtedly suspected the former—leaving it to those who came after to prove the reality of his concept.

Although he shunned fame and publicity, both sought him out. Americans could be proud that he had found, in a house on Mercer Street in Princeton, a refuge from the enmity which had driven him, a Jew, from Nazi Germany. Here, too, he found the free scientific climate that enabled him to pursue his work unhampered, even when, unfortunately, his name and fame were used by Red front groups. Honors poured in on him throughout his life—a Nobel prize, an offer of the Presidency of the State of Israel, awards and citations of all kinds. Other scientists came to him for guidance and support; school children found him ready to help with their geometry problems. A man of genius, he also was a man among men, and he knew that humanity holds a sacred and central place within the expanding universe.

Although he never claimed philosophy among his attainments, his belief that the basic laws of nature were fundamental and not casual, that cosmic order and harmony exist, that God does not "play dice with the world" helped make his thought part of the mainstream of human aspiration, just as his supremely useful and devoted life was an inextricable part of the universe in which he lived.

Bill Jacobsen: A Good Public Servant

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I want to pay further tribute to the memory of William S. Jacobsen, former Congressman from Iowa's second district, by printing the following fine editorial from the Davenport (Iowa) Morning Democrat of April 12, 1955:

BILL JACOBSEN: A GOOD PUBLIC SERVANT

Scott County friends of William S. Jacobsen, former Second District Congressman, will join with Clinton County residents in mourning his sudden death.

Bill Jacobsen represented the district from 1937 to 1943, when Scott County was a part of that district. Like his father Ben Jacobsen, whom he succeeded in Congress, he was always well liked here and ever ready to perform services for Davenporters.

The Jacobsens, father and son, were representatives of the high type of German-American who helped to develop this section of the Mississippi Valley, and who regarded public service and working for community betterment as a part of their debt to the free Republic that offered them a new home.

Kings County Surrogate Maximilian Moss Receives New York University Honor Degree

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following citations and articles in recognition of the achievements of Maximilian Moss:

THE CHANCELLOR AND COUNCIL OF NEW YORK UNIVERSITY

To All Persons To Whom This Writing May Come, Greeting:

Be it known that we, by virtue of authority granted us by charter of the State of New York, and in recognition of distinguished services and attainments, do confer upon Maximilian Moss the honorary degree of doctor of humane letters, with all the rights, privileges, and immunities thereunto appertaining.

In witness whereof we have caused this diploma to be signed by the duly authorized officers of the university and sealed with our corporate seal, in the city of New York, April 3, 1955.

[SEAL]

HENRY T. HEALD,
Chancellor.
HOWARD O. VOORHIS,
Secretary.

NEW YORK UNIVERSITY

PRESENTATION, CITATION, AND INVESTITURE OF MAXIMILIAN MOSS WITH THE HONORARY DEGREE OF DOCTOR OF HUMANE LETTERS

Maximilian Moss: A lifetime member of this community, he has devoted his life to its service as few men have ever done. Born and reared in Brooklyn, he attended the public schools that he was later to govern, received the bachelor of laws degree in 1917 from the university that honors him today, and throughout the intervening years has brought honor to the university by notable service to law, education, and a myriad of civic, philanthropic, and religions causes. Distinguished and successful member in years past of the venerable law firm of Cullen & Dykman, universally acclaimed member of the board of education of the city of New York from 1946 until 1951, and for three terms its president, elected a justice of the supreme court of the State of New York in 1951, named acting surrogate a year ago, he is now, by recent action of the Governor, surrogate of Kings County, a capacity particularly appropriate to one of his professional skill, probity, innate compassion and humanity. The breadth and diversity of his community interests both strain the imagination and exceed the limits imposed upon this citation. Especially active in the religious and philanthropic activities of his own faith, he has served as president of his temple, as president of the Brooklyn Jewish Community Council, as chairman of the New York University Hebrew Chair Endowment Fund, as chairman of the house staff, the Jewish Hospital of Brooklyn, and as trustee of the Brooklyn Hebrew Orphan Asylum. He is presented for the doctorate of humane letters.

RUSSELL D. NILES,
Dean, School of Law.

Judge Moss: In the manifold service of your fellowmen at the bar, on the bench, in public education, and in leading humanitarian enterprises, you have consistently brought honor and glory to your alma mater, wherefore from the depths of our gratitude we tender you this symbol of highest esteem.

HENRY T. HEALD,
Chancellor.

Dated April 3, 1955.

[From the New York Herald Tribune of April 4, 1955]

N. Y. U. DEGREES CONFERRED ON EBAN AND FOUR AMERICANS

New York University, in recognition of the American Jewish Tercentenary Celebration, conferred yesterday the honorary degree of Doctor of Humane Letters on 4 Americans and 1 Israeli at a special convocation in Vanderbilt Hall, 40 Washington Square South.

The five degrees, conferred by Dr. Henry T. Heald, Chancellor of the university, went to Abba S. Eban, Israeli Ambassador to the United States; Rabbi David de Sola Pool, of the Spanish and Portuguese Synagogue; Surrogate Maximilian Moss, of Kings County; Dr. Abraham A. Neuman, president of Dropsie College for Hebrew and Cognate Learning, in Philadelphia, and Rabbi Leo Jung, president of the Jewish Academy of Arts and Sciences.

Ambassador Eban, discussing the relationship between his country and the United States, drew a parallel between the American Revolution and the establishment of Israel. He said the two countries are joined by three basic links: A common body of historic experience, a common devotion to democracy, and a common allegiance to the same system of moral values.

"Israel's task in creating a unified discipline of loyalty and culture from scores of varying tongues and backgrounds has only one parallel in history," he said. "It is the creation of American civilization by the synthesis and harmony of many races, creeds, and tongues which have composed the symphony of American life today."

N. Y. U. had conducted a series of six public lectures in February and March on "Jewish Ideals in American Civilization."

[From the New York Times of April 4, 1955]

FIVE JEWISH LEADERS HONORED AT N. Y. U.—UNIVERSITY CONFERS DEGREES AT CONVOCATION ENDING TERCENTENARY PROGRAM

New York University, in recognition of the American Jewish tercentenary, awarded honorary degrees of doctor of humane letters yesterday to five prominent Jews. They included Abba S. Eban, Israel's Ambassador to the United States.

The academic convocation, held at Vanderbilt Hall, 40 Washington Square South, culminated the university's observance of the 300th anniversary of Jewish settlement in the United States. The degrees were conferred by Henry T. Heald, chancellor of the university.

A tercentenary program of six public lectures entitled "Jewish Ideals in American Civilization," was conducted by the university during February and March. It was planned by the department of culture and education, headed by Prof. Abraham I. Katsh, in cooperation with the American Jewish Tercentenary Committee.

In addition to Ambassador Eban, recipients of the degrees were Rabbi David de Sola Pool, spiritual leader of the Spanish and Portuguese synagogue, Central Park West and 70th Street; Maximilian Moss, surrogate of Kings County; Dr. Abraham A. Neuman, president of Dropsie College for Hebrew and Cognate Learning, Philadelphia; and Rabbi Leo Jung, president of the Jewish Academy of Arts and Sciences and professor of ethics at Yeshiva University.

Ambassador Eban was cited for the "courage, understanding, and diplomacy" that "catapulted him to leadership in Jewish

statehood," for his "devotion to the cause of universal understanding," and for his "inexhaustible effort to further democratic ideals."

Dr. Neuman was commended as a spiritual leader, scholar, "educational statesman," and "distinguished student of Jewish history, who combines the knowledge of the historian with the fervor of a prophet."

Surrogate Moss was cited for his "notable service to law, education, and a myriad of civic, philanthropic, and religious causes."

Rabbi de Sola Pool, who delivered the invocation, was hailed for his leadership of the oldest Jewish congregation in the United States. The citation called attention to his place as "a world leader in Sephardic Jewry" and to his translation and editing of seven sephardic prayer books.

The citation of Rabbi Jung noted that his "academic prowess is a hallmarked by degrees from Cambridge and London Universities and a doctorate of divinity, honoris causa, from Yeshiva University." He was also praised "for contributions to Jewish life and letters and for distinguished leadership in the community."

Rabbi Jung pronounced the benediction.

[From the New York World-Telegram of April 4, 1955]

JUDGE MOSS RECEIVES N. Y. U. HONOR DEGREE

Kings County Surrogate Maximilian Moss received the honorary degree of doctor of humane letters yesterday from New York University. Similar honors were conferred on four other Jewish leaders.

Judge Moss was cited for his "notable service to law, educaiton, and a myriad of civic, philanthropic, and religious causes."

The convocation at which the degrees were given ended the university's recognition of the American Jewish tercentenary celebration, marking the 300th anniversary of Jewish settlement in this country.

Israeli Ambassador Abba S. Eban, one of the five honored, said Israel parallels the United States in "creating a unified discipline of loyalty and culture from scores of varying tongues and backgrounds."

The others who received degrees were: Rabbi David de Sola, spiritual leader of the Spanish and Portuguese Synagagues, Manhattan; Dr. Abraham A. Neuman, president of Dropsie College for Hebrew and Cognate Learning, Philadelphia; and Rabbi Leo Jung, president of the Jewish Academy of Arts and Sciences.

[From the New York Daily Mirror of April 4, 1955]

CALLS IGNORANCE SEEDBED OF BIAS

Ignorance of others' beliefs must be wiped out if the American goal of equality for all is to be achieved, Kings County Surrogate Maximilion Moss declared Sunday at an NYU observance of the 300th anniversary of Jewish settlement in the United States.

"In a democracy thriving in a community with such diverse national origins, almost a 'local one-world,'" he declared, "we must teach an appreciation of each other's culture. America fears no enemy more than ignorance. Dispel ignorance through education and we will go a long way toward assuring a peaceful and harmonious society; for our practical democratic creed, on close analysis, will turn out to be merely an appreciation of all our faiths."

Moss, who received an honorary doctor of humane letters degree, said further:

"There are more persons of Irish heritage in New York than in Belfast, more of Russian origin than in Kiev, Minsk, Odessa, Stalingrad, or Vladivostok. We have here more persons of Italian heritage than reside in Genoa, Naples, or Venice. We have in this city more people of Polish extraction than live in Warsaw."

And he pointed out that children of all groups, playing side by side, pick up the fundamentals of democracy in action.

Among others honored were Israeli Ambassador Abba S. Eban; Rabbi David de Sola Pool, of the Spanish and Portuguese Synagogue; Dr. Abraham A. Neuman, president, Dropsie College for Hebrew and Cognate Learning, Philadelphia, and Rabbi Leo Jung, president, Jewish Academy of Arts and Sciences, and professor of ethics at Yeshiva University.

A Tribute to the Late William S. Jacobsen

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I take this opportunity to pay tribute to the late William S. Jacobsen, of Clinton, Iowa, former Congressman from Iowa's Second District. As a constituent of his for 6 years, I came to know and respect the fine example of leadership my Congressman upheld in the Halls of Congress.

Iowa and the Nation suffered a great loss in the death, on Sunday a week ago, of William S. Jacobsen, of Clinton, Iowa. Davenport and Scott County will always remember with gratitude the faithful services rendered by Representative Jacobsen, for 6 years, from 1937 through 1942. Scott County during that period was included in the old second district of Iowa, and William S. Jacobsen gave wholehearted and capable service to all his constituents, following the splendid example set by his father, Bernhard Martin Jacobsen, who had represented the same district from 1931 to his sudden death in 1936. These were Democrats, both with the large and with the small "d." In national affairs, and in local affairs, they held to the tradition of rising above party interests, in the spirit of the nobel saying of Rutherford Hayes: "He serves his party best who serves the country best."

The Jacobsen family stands for one of the proudest traditions of Americanism—the tradition of the immigrant boy who made good, who served his neighborhood as a storekeeper, his city as a banker and postmaster, and his country as legislator. Bernhard Martin Jacobsen came to this country from Germany as a boy of 14, ignorant of our language, accompanying his immigrant parents. He worked in a sawmill, then in a brickyard, then in a general store, learning English from his fellow workers, then resuming his education as his earnings freed him to devote some time to studies. It is an inspiring story and is good to think that this great tradition established by Bernhard Jacobsen was most worthily carried on by his son William, and that others of this fine Jacobsen family survive to carry on the tradition of patriotism and friendly service. The Jacobsen Building, in Clinton, stands as a monument to the accomplishments of the family, and their motto, "Keep right on smiling," is enshrined in the name of the Jacobsen radio station, KROS–AM and KROS–FM, which, up to now, has been operated by William Jacobsen with his younger brother, Marvin J. Jacobsen.

William Jacobsen has left behind him two sons, Bernhard J. Jacobsen and Maenard W. Jacobsen, who are carrying on the tradition of this outstanding family, a fine example of the contribution of German immigration to the development of Iowa and America.

The Argentine Picture

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of April 15, 1955:

THE ARGENTINE PICTURE

Since Juan D. Perón is now rounding out 10 years of domination in Argentina an inquiry into his role in that nation and the nation's role in the world was apt. The Times has now presented the results of such an inquiry by Herbert Matthews.

Mr. Matthews' principal conclusions are that Peronismo cannot last, and that it is likely to give way to democracy after an interval of military rule; that Perón has made Argentina a land without justice; that its economy is weak; and that the pro-Perón policy of the United States has irked thousands of opponents of Perón, among whom many still have—as one of them remarked—"everything but freedom."

Peronismo cannot last because it is a one-man show. When time eliminates the man the show is over. Few observers will doubt that the army will succeed the Strong Man. As our correspondent noted, the next danger "would come from the right." For not all the foes of Perón, in terms of their social and economic orientation, can be regarded as true disciples of "democracy."

This year American firms interested in building a steel mill for Argentina have been delighted by a new export-import credit of $60 million to the Government-controlled mixed company that is handling the project for Perón. While the position of these firms is understandable, so must also be the sense of disquiet, protest and even outrage among some other Americans—from Washington to Buenos Aires—at what amounts to economic aid to the Perón regime. Washington has never been able to steer a happy course between those who want this country to underwrite their business with Perón and those who want to shun him as an unprincipled dictator.

The existence of this dilemma cannot be emphasized too often. The survey just concluded has brought it up to date.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Reciprocal Trade

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. PHILBIN. Mr. Speaker, the Soft Fibre Manufacturers' Institute of New York City, which has members in my district, recently submitted to the Ways and Means Committee a comprehensive statement on H. R. 1, the reciprocal trade bill.

This material was submitted by my good friend, George F. Quimby, secretary and treasurer of the institute, and, under unanimous consent, I present the statement, to be printed in the RECORD.

The material follows:

SOFT FIBRE MANUFACTURERS' INSTITUTE,
New York, N. Y., February 10, 1955.

The Honorable JERE COOPER,
Chairman, Committee on Ways and Means, United States House of Representatives, House Office Building, Washington, D. C.

DEAR MR. COOPER: The Soft Fibre Manufacturers' Institute, through its tariff committee, submits this statement in opposition to H. R. 1, and respectfully requests that it be included in the printed proceedings of the hearings on this bill.

The Soft Fibre Manufacturers' Institute is an unincorporated trade association of 13 companies that manufacture textile products from bast or leaf fibers on what is known as soft-fiber machinery. There is appended to this statement a list of the members of the institute, with the locations of their factories and principal sales offices. These manufacturing companies, with locations involving 12 States, employ 5,500 people and have an annual payroll of $17 million.

The products manufactured by these soft-fiber manufacturers are included in schedule 10 of the Tariff Act of 1930.

Tariff protection is essential to the continued existence of the soft-fiber manufacturing industry, because it is in direct competition with foreign manufacturers who use the same raw materials and the same machinery, and pay their workers wages that are only a fraction of those received by operators in this country. Furthermore, the survival of this industry in the United States is important because of its essentiality for national defense—a fact abundantly demonstrated in World War II.

The soft-fiber industry has operated in the United States for well over a century, or for the greater part of the industrial life of the country. Although one of the smaller industries, it provides the principal economic base for several communities. It converts natural products, not grown in the United States, over specialized machinery also imported, with the labor of operatives to whom it pays wages at the American standard. Obviously, survival of an industry so placed, even though demonstrably more efficient than its foreign rivals, must depend on tariff protection.

The products of the soft-fiber industry—which are yarns, roves, twines, and threads of jute, hemp, and flax and woven linen towels and toweling—are for the most part primary materials of operating supplies for other industries, and they enjoy a very wide distribution, of which twines furnish the most obvious example.

The essentiality of the industry for national defense is based, however, not so much on its regular products as on the established fact that it can furnish, in an emergency, the only possible substitute for those vital rope and cordage items made from the so-called hard fibers. Hard fibers are, without exception, imported. When the imports suffer curtailment from enemy action and at the same time the demands from the armed services increase substantially, as they did in World War II, the only way of bridging the gap is to draw upon the soft fiber industry for rope and similar products (marlines, for example) made either from jute, as long as that fiber is obtainable, or from American hemp. American hemp is the only fiber in either the hard fiber or the soft fiber group which can be produced in the continental United States in quantities sufficient for a war emergency. The soft fiber industry is the only industry which can make full use of this American hemp to produce the items needed for war purposes.[1]

Although there is some production of fiber flax in this country, it is by no means sufficient for the requirements of the soft-fiber manufacturing industry, and a substantial amount of fiber is imported. The entire supply of jute is imported from Pakistan. The very existence of the domestic soft fiber industry automatically results, therefore, in substantial foreign trade in these two fibers.

Domestic manufacturers have no natural advantage over their foreign competitors in the procurement of raw material. Furthermore, because the working of these fibers requires specialized types of machinery which are not produced in the United States, this machinery must be imported; and the capital investment includes, therefore, a certain item of cost which represents the tariff charge on the machinery.

The most important consideration, however, is the great disparity in the wage rates paid to the American operatives and those who work for foreign competing manufacturers. India, prior to the partition in 1947, produced practically the entire world supply of jute. This advantage, coupled with her abundant supply of cheap labor, fostered the development in that country of a very large jute manufacturing industry, which is the foremost competitor of the United States soft fiber industry. At the present time, the average hourly earnings for spinners in India are reported to be 6.7 cents. In November 1954, average hourly earnings for jute spinners in the United States were reported as $1.40, not including fringe benefits. The ratio of United States to Indian wages for typical occupations in jute manufacture is, therefore, 20 to 1; and even if it is assumed that the American operative is as much as 50 percent more efficient than his Indian counterpart, this disparity in wages means that the labor cost in this country bears to the Indian labor cost a ratio of 14 to 1.

Footnote at end of speech.

When it is remembered that this ratio, speaking generally, applies to the entire range of manufacturing operations, from the raw fiber to the finished product, it is very evident that the United States industry, using the same material and the same machinery as its foreign competitors, can only maintain itself with the aid of some tariff protection. It is equally evident that this tariff protection is directed toward its most legitimate objective, the maintenance of the American standard of living for workers in a long-established and efficient industry, and the perpetuation of enterprises whose plant and technical knowledge are essential to the defense of the country.

In that section of the industry that uses flax as its raw material, the situation is similar. Flax manufactures are produced both in Great Britain and in many of the countries of continental Europe and, in every case, the wages paid in this country are considerably greater than those received by foreign operatives of comparable skill. In the case of Great Britain, for example, which is one of the leading manufacturers of flax products, recent comparisons show that United States wages are four times those paid in the British industry. Tariff protection is vital, therefore, for the domestic spinners and weavers of flax.

Tariff rates affecting the products of the industry are on both specific and ad valorem bases. Many of them have already suffered substantial reductions in agreements negotiated under the Trade Agreements Act. Even where some specific rates have not been reduced, however, it is clear that their effectiveness has been impaired by the substantial rise in prices, wages, and costs during the inflation of the last dozen years. The soft-fiber industry thus finds itself in intensified competition with foreign manufacturers.

The soft-fiber manufacturing industry has already suffered the complete loss of the domestic jute webbing market to Calcutta because of inadequate tariff, and the great disparity between wages paid here and in India. When this institute was organized in 1933, there were six concerns manufacturing jute webbing in the United States. Now there are none.

Concessions which have been granted in agreements negotiated under the so-called Reciprocal Trade Agreements Act have left the domestic flax spinning industry with very inadequate tariff protection. Mr. Theodore Dahlstrom, sales manager of the Linen Theard Co., Inc., a member of this institute, in his able testimony before your committee on February 1, cited the large share of the domestic market on linen threads and yarns already captured by foreign producers—and the peril which this invasion already holds for the continuance of flax enterprises and employment in this country.

It should be remembered that the domestic flax business was considered by our Government to be essential during the last war, and various flax items are at present specified by the United States Armed Forces. The supply of these items can only be assured in times of emergency if the domestic flax manufacturing industry is maintained in a healthy condition.

In summary, therefore:

1. The soft-fiber industry has proved its vital importance to the defense of the United States during the last war.

2. It has existed as an American industry for over 100 years.

3. It is the principal source of income in several small communities.

4. It uses raw materials of which the bulk supply is grown abroad.

5. It pays wage rates 20 times those paid to workers producing jute goods in India.

6. It pays wage rates 4 times those paid to workers in the United Kingdom.

7. Tariff protection for the soft-fiber industry is essential to maintain a vital defense facility and to preserve the wages of its workers at the American standard.

It is hoped that this description of the soft-fiber manufacturing industry; its place in the domestic economy; its contribution to foreign trade and its essentiality in national security will serve to establish in the minds of your committee the justification for our position on tariff protection.

A litle over a year ago, the Honorable Sinclair Weeks, Secretary of Commerce, was reported in the press as saying:

"I am willing for American industry to face the competition of any industry with respect to all save the labor factor. I am not, however, willing to have American industry compete at the expense of the standard of living of American labor. America has learned that a higher wage policy results in a mass market and enables us to rise to ever higher standards of living. We cannot afford to sacrifice this high wage policy. I therefore suggest that the Randall Commission on Foreign Economic Policy consider whether our tariff legislation should not be gradually replaced by a policy which would bring about fair competition in respect to this labor factor as between the United States and other foreign countries."

The Ways and Means Committee could make a lasting contribution to the stability and strength of American industry were it to establish a national policy which would bring about fair competition in respect to this labor factor as between the United States and foreign countries.

The New York Times of February 6, 1955, announces that "top military and industrial leaders in the New York area will join in a national resources conference this coming May. Emphasis this year will be upon a strong national economy as the best preparation for possible war."

And Maj. Gen. Leslie R. Groves, retired, is quoted as saying:

"The industrial capacity of a nation is the most important factor in war today. It is absolutely essential that our industrial leaders understand military requirements and that military leaders understand the capacity of our industrial machine."

In connection with the industrial mobilization program of the Department of Defense, the Corps of Engineers, United States Army, is presently surveying the potential spinning capacity of the soft fiber manufacturing industry "in determining available production in the event of a national emergency."

It would seem that the Ways and Means Committee could, and should, devise criteria and the means of their application which would relieve industries essential to our national economy and defense from the periodic jeopardy and uncertainties implicit in international trade treaty negotiations authorized under trade agreements acts.

Furthermore, Congress itself should determine the amount of protection required for the products of domestic industries to insure a strong national economy and never permit such vital decisions to be made at Geneva or elsewhere abroad in international conferences. A revitalized United States Tariff Commission could serve the Congress in reaching these determinations—and should be instructed to report its findings to Congress rather than to the President.

H. R. 1, in our belief, represents a more complete abdication by Congress of its constitutional responsibilities than it has heretofore yielded to the Executive during the 21 years since the first Trade Agreements Act was enacted.

H. R. 1 means delegation run riot. It would place the power of making decisions vital to our national economy and defense entirely beyond the control of Congress and our elected representatives.

We commend to your earnest attention the legislative recommendations in the January 24, 1955, letter to your committee from Mr. John Chupka, general secretary-treasurer, Textile Workers Union, CIO.

The Soft Fibre Manufacturers' Institute respectfully urges that your committee postpone all action on H. R. 1, or on any measure which would extend Executive authority to negotiate trade agreements, until after the decisions of the current GATT negotiations with Japan and other countries at Geneva are promulgated—and become available for the consideration of your committee and the Congress.[1]

In urging your committee to delay action, we believe that ample opportunity will be afforded to explore the merits of the following bills, which deserve careful consideration:

H. R. 2807, by Representative BAILEY, Democrat, of West Virginia.

H. R. 864, by Representative VAN ZANDT, Republican, of Pennsylvania.

Very truly yours,

GEORGE F. QUIMBY,
Secretary-Treasurer.

[1] Refer to testimony of War Production officials, Department of Agriculture experts and others before the Gillette committee in 1944, Hearings Before Subcommittee of Senate Agriculture and Forestry Committee on S. Res. 80, Utilization of Farm Crops—Fiber, 78th Cong., 2d sess., pt. 9, April and May 1944.

Rules for American Investors in Good Neighbor Lands

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1955

Mr. BUTLER. Mr. President, our country is fortunate indeed in having many ambassadors of good will whose relationships with the citizens of foreign nations have such an important bearing upon the establishment of favorable international ties. No better qualified or more outstanding American in this category than Mr. J. Peter Grace, Jr., president of W. R. Grace & Co., is to be found. Not only is Mr. Grace an intelligent student of this important subject matter, but his fresh viewpoint and farsighted vision combine to make his an authoritative voice in suggesting the most desirable course of our affairs.

In the New York Times of Sunday, March 27, there appeared an editorial entitled "Rules for Good Neighbors." Because of its clear-cut expression of important news, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RULES FOR GOOD NEIGHBORS

A businessman with wide interests in Latin America has set down three rules for American investors in the good neighbor lands. He is J. Peter Grace, Jr., president of W. R. Grace & Co., and his rules are: Stay out of local politics, employ a national of the host country as manager and have the management, particularly the norteamericanos in it, "closely identify themselves with local community life and become part of the countries in which they live."

These are sound rules. But there is another which is in effect the core of all three. The United States businessman abroad should never forget that he is a guest of a foreign nation, and that although it invites and expects him to operate at a profit, his equity in the natural wealth of the country is bound to be less than that of its own people.

This would appear elementary. But many of those who make up the local "American Club" in the great Latin-American capitals still talk and think as if they failed to recognize it. And it is their outmoded attitude that in the past has prepared the climate first for resentment and then for confiscatory and expropriatory acts.

What Mr. Grace had to say was all to the good. Businessmen abroad are envoys of this country no less than diplomats and tourists. Their responsibilities—and their rewards—are great. If they live up to the first, they will deserve the second.

Louisiana Tidelands

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, I have noticed some very fine editorials appearing in the Times-Picayune of New Orleans, La., regarding the tidelands off the coast of Louisiana. Mr. George W. Healy, Jr., a very able newspaperman, is editor of this great newspaper and has given the matter of tideland boundaries his most careful study for a long period of time. The editorials are set forth in a series of four editorials, and I am taking the opportunity of presenting each editorial separately in the RECORD.

I would like to take the time to comment individually on these editorials but I feel they are so carefully thought out, so well worded, and so capably expressed that they in effect present the problem of the State of Louisiana to the Congress most effectively. Mr. Speaker, the first one of the editorials I reproduce below and it is entitled "All Want Minerals Money: Flow Should Be Increased":

ALL WANT MINERALS MONEY; FLOW SHOULD BE INCREASED

Three recent developments in the situation affecting revenues received by the State of Louisiana from offshore minerals, it seems to us, merit extended comment.

First of these was the repeated statement by Secretary of the Interior Douglas McKay that Louisiana's tidelands claim is one based on a 3-league, rather than a 3-mile, limit. Although, after prompting, the Secretary said that he had intended to testify before the House Appropriations Committee that the Federal Government claims title to submerged lands beyond a line 3 miles from the Louisiana coast, his actual testimony to the

contrary appears to us to have been significant.

The second of the developments was the issuance of a statement by Fred S. LeBlanc, attorney general of Louisiana, that the State will go to court "relatively soon" to sustain Louisiana's boundaries. It is and should be the State's contention, in our opinion, that the Louisiana boundary is 3 leagues, slightly more than 10 miles, beyond the coastline.

Third of the developments was a continuing action by State and city agencies to find ways to spend the money which Louisiana is receiving from offshore minerals. Most recent of the spending suggestions was a recommendation by city officials of New Orleans that tidelands oil revenues be used to pay part of the cost of a new incinerator here.

For many months this newspaper has contended that first call on money received through the sale of the State's mineral wealth should be conceded to elimination or reduction of the staggering State debt.

To exhaust the mineral resources of Louisiana without reducing the debt of Louisiana, we submit, would be worse than folly.

The joint committee of the Louisiana Legislature, which is headed by Senator W. M. Rainach, has accepted suggestions that tidelands money be used to retire the public debt, with amendments.

This committee believes that the money should be used three ways: One-third to retire the State debt, one-third to improve the State school system, and one-third to build and maintain highways.

A firm dedication of the minerals revenue to the purposes recommended by this committee, it seems to us, would be wise. Certainly, it would prevent dissipation of the windfall which won't last forever to pay inflated current expenses.

In the first quarter of 1955 royalties, bonuses, and rentals received by the State from its mineral lands aggregated $33,908,707. These figures were obtained from the office of Mrs. Ellen Bryan Moore, register of the State land office.

Of this income, slightly more than $14,800,000 was from offshore minerals and more than $19 million was from inshore royalties, bonuses, and rentals.

If the rate of the first quarter is continued throughout 1955, the State's income from its minerals—exclusive of severance taxes—will exceed $130 million.

This income, of course, is tremendous; but in the opinion of students of the situation, Louisiana still is not receiving its just returns from minerals being severed from submerged lands off its shores.

One of these students, Leander H. Perez, is convinced that a positive stand by the State to protect its claim to all lands within its historic boundaries should substantially increase the revenue realized by the State from its minerals.

An elaboration of this thesis will be presented in succeeding editorials in this series.

Excerpts From Address by Hon. Edward Martin, of Pennsylvania, to the Colonial Daughters of the 17th Century

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1955

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address I delivered on yesterday afternoon to the Colonial Daughters of the 17th Century.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

I am deeply grateful for the high honor and the privilege of addressing this most distinguished group.

You represent all that is best in loyalty and patriotism. You believe in 100 percent Americanism.

You keep alive the traditions and the spirit of those whose courage, sacrifice, and love of liberty built the greatness of our country.

You serve America by your example of devotion to the principles upon which our Republic was established.

You defend America by your watchful, steadfast, and vigorous support of our sacred heritage of liberty and independence.

The early settlers of the American Colonies differed in their form of worship and their ideals of government. But they had one firm belief on which they could all agree—that freedom of the individual is God's greatest gift to mankind—more precious than life itself.

The development of the United States, from an uncharted, savage wilderness, to the greatest Nation in all history, was founded upon that priceless element of our national strength—freedom of the individual.

Yes, my fellow Americans, freedom of the individual, sustained by faith in God, made possible our marvelous industrial development, our great transportation systems, and our rich agricultural production.

It expanded the employment of our workers and encouraged the establishment of many thousands of large and small businesses.

It built our great cities and beautiful towns. It gave us our great colleges and universities, our centers of art and music, our splendid churches of every denomination.

It gave America the highest living standards and the highest cultural and spiritual level ever attained by any nation in the world.

We can point with pride to all that has been achieved in the comparatively short span of years since the first settlers reached our shores. But we must never forget that we did not gain the proud position we occupy today without struggle, hardship, toil, and sacrifice.

All that we have is ours to enjoy because heroes and patriots in every generation were willing to shed their blood and give their lives in defense of their God-given freedom.

The troubled times in which we live call upon every one of us to take up the cause they so nobly served. The dangers we face today call for renewed dedication to our country and our flag. They call for deeper devotion to the ideals of liberty and independence, for new strength and courage in defense of freedom.

America faces a desperate challenge.

It is a challenge hurled by the forces of evil that would destroy our system of free government and would wipe out the principles of individual freedom.

Let us consider briefly the situation confronting the United States today.

The course of history has placed upon the American people the responsibility for peace and progress in the world.

The United States stands as the one strong barrier against the Communist conspiracy to dominate and enslave the entire world.

The jet-propelled plane, the atomic weapons, and the hydrogen bomb have changed the whole picture of offensive and defensive war. They have revolutionized the whole concept of military science. They give tragic emphasis to the fundamental truth that the world must live in peace or bring about its own destruction.

We know, however, that enduring peace cannot be achieved by force alone. It can be realized through truth, honor, justice, and devotion to high moral and spiritual standards.

But until these ideals are accepted by the whole world, including the Communists, we must face facts that connot be ignored.

To save the world from the total disaster of war, America must be strong—not in arms alone—but strong in the spirit of our forefathers, strong in patriotism, ready and willing to do our full duty in peace and in war.

Unfortunately there are too many misguided Americans who do not understand and do not appreciate the real meaning of America.

They do not seem to realize that our system of free government places upon each citizen an equal share of responsibility for our security and our progress.

Good citizenship is the basis of patriotism. That is why I am constantly urging every individual to take a more active, intelligent, patriotic part in government.

We will not attain our full strength as a Nation until every American has a clear understanding of his individual responsibility for the future of the United States.

I think it is the duty of every American to make his voice heard on the question of loyalty.

There is no room under the American flag for those who would tear down our free institutions or undermine our system of government.

We must teach young and old that America means freedom under God, while communism means slavery under the iron rule of godless tyrants.

We must tell over and over again the glorious story of our country's rise to greatness among the nations of the earth.

We must tell and retell the story of our sturdy, courageous pioneers and the heroic exploits of those who extended our frontiers over the mountains and across the western plains.

We must point with pride to the patriots and statesmen who pledged their lives, their fortunes, and their sacred honor that "these united colonies are and of right ought to be free and independent states."

I make this appeal to you because you are qualified by patriotic service for leadership in civic responsibility.

Let us go forward once more, armed and equipped, to fight for our country.

Let us take our places in the front line of the battle to keep America free, strong, prosperous, and at peace.

Asian Aid

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1955

Mr. SMITH of New Jersey. Mr. President, I have had brought to my attention an editorial entitled "Asian Aid Shaping Up," published in the Christian Science Monitor of April 18, 1955. This is a very important contribution to an understanding of the Asian situation, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASIAN AID SHAPING UP

Indian Prime Minister Nehru's calling of an 11-nation Asian conference at New Delhi to work out plans for using western economic

aid highlights recent hopeful developments in this field. The Nehru move comes in time to help keep Asian perspectives realistic. It will remind Asians that they can get help from the West on terms consistent with their own self-respect and freedom.

This should help to offset impressions which Communists may wish to create at another Asian conference now getting underway at Bandung—that Asian peoples can best achieve their hopes by keeping clear of western ties even at the risk of being dominated by the Asian branch of international communism.

The near coincidence of the two conferences has meanings, however, not only for Asians but for westerners. One of these has been spelled out by Canada's Minister for External Affairs, Mr. Lester B. Pearson. In a speech at Princeton University, Mr. Pearson has warned that we must offer more than plumbing in exchange for philosophy and not try to substitute Coco-Cola for Confucius in dealing with our Asian friends.

Western leadership may well note that the Bandung conference is being organized around political and philosophical concepts Asians share. If economic aid to Asia is to give maximum help to free-world understanding it must avoid emphasizing material aims to the exclusion of other values.

This is one reason why some of America's allies with long experience in the Far East have hoped that new Asian aid can be launched without too much fanfare; that it will not seek the spectacular and swift results of the Marshall plan in Europe, which in any case are probably unattainable by underdeveloped nations.

Main dangers of divergence on the approach to Asian aid appear to have been surmounted already. The New Delhi conference is in line with Washington's desires that Asians should determine how the aid should be spread among their nations.

This conference, like the announcement of plans for a 56-nation International Finance Corporation to aid private investment in underdeveloped areas, reflects much careful cooperation within the western community as well as between it and the Asian community. In asking Congress for funds for this work the President will be asking only adequate support of a moderate, down-to-earth approach to Asian aid.

Oil Slicks Killing Raritan Bay Ducks

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Paterson Evening News, of Paterson, N. J., on February 25, 1955. In the article, the writer pointed out that hundreds of ducks were being killed by oil slicks resulting from the reckless dumping of waste oil by ships in the eastern area.

I hope the appropriate authorities will take note of this violation of the law, and will take proper steps to stop the practice. Incidents of this type are far too frequent along our eastern coast.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL SLICK KILLING RARITAN BAY DUCKS

TRENTON—Dr. A. Heaton Underhill, director of New Jersey's Fish and Game Division, said today oil slicks were causing some deaths among thousands of ducks that winter in Raritan Bay.

Underhill said an oil tanker sprang a leak last week off Raritan Bay and New York's harbormaster was investigating to determine if the accident resulted from a normal hazard of the sea.

The fish and game director said as many as 100,000 ducks from the upper reaches of Canada and from Alaska use Raritan Bay and its shoal areas as winter quarters from October through April. He said the ducks fed on mussels in the shoals.

Underhill said he had a report that about 1,000 ducks died since the oil slicks appeared in the bay, but that he didn't believe that many had been affected.

The Fish and Game Division has experimented with detergents in breaking up oil slicks which appear in the bay periodically, Underhill said.

He said the New York harbormaster and the American Petroleum Institute have cooperated with his division in efforts to prosecute officers of oil tankers who pump out their bilges in the vicinity of New York Harbor.

Underhill said the slicks should drift to shore and that the division hopes a wind will spring up to blow off the slicks quickly. He said the slicks had lessened in the past few days and should be gone by the weekend.

Construction of Atomic Energy Plants by Private Enterprise

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1955

Mr. SCHOEPPEL. Mr. President, on April 12, there appeared in the Topeka Daily Capital a most important editorial dealing with private enterprise, as opposed to public power, in connection with the new development which is occurring by authorizing private companies to participate in the atomic energy field. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOW TO SOCIALISTS

The eagerness of private enterprise to build at its own expense the four plants needed to develop atomic-energy plants must have shocked the advocates of public power. The private companies propose to spend 80 to 90 percent of the $150 million the plants will cost. They ask only the encouragement and support of the Government in fringe areas, such as adequate insurance if private insurers back away from this new type of industrial plants.

The furore raised last year by the public power advocates when the Atomic Energy Commission contracted with Dixon-Yates for a generating plant at Memphis had little effect upon the Eisenhower administration. The program of getting the Government out of the power business so far as possible is going ahead, even though the critics of private enterprise still are protesting.

The Tennessee Valley Authority, which has cost the Nation's taxpayers billions of dollars, does not stand very high in the estimation of Congress. Appropriations are being reduced to the point where TVA is resorting to issuance of revenue bonds to take up the slack between costs and receipts. The free spenders are finding that President Eisenhower meant what he said: "Government should not engage in business that can best be carried out by private enterprise."

The New Look in the Government's attitude toward private business is a red flag to the advocates of public power at no matter what the cost to the taxpayers. The Eisenhower administration's effort to balance the budget by reducing expenditures is cutting under the Socialists who hate private enterprise. Private companies are willing to spend billions for development of new sources of hydroelectric power, and pay normal taxes for the privilege. The TVA and its sister public power enterprises pay little or no taxes, but drain billions from the taxpayers.

Dedication to an Immigrant

EXTENSION OF REMARKS
OF
HON. ROBERT H. MOLLOHAN
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MOLLOHAN. Mr. Speaker, the Nation today mourns the loss of one of its outstanding citizens, Dr. Albert Einstein, whose tremendous contributions to the world and to this Nation have literally changed the course of this century in which we live.

Many honors have been showered upon Dr. Einstein during the course of his life and many more will be dedicated to his memory. But I can think of no greater tribute which this Congress could pay to him, and certainly none that would be more fitting, than that the House reexamine the immigration laws of our country in order that future Dr. Einsteins, whether potential or recognized, shall not be barred from our shores because of our preoccupation with unworthy fears, mistrust, and discrimination against the stranger who knocks at our gates.

Surely no finer monument could be erected to the great heart and great mind of Dr. Einstein than for this House to put life and meaning into the Refugee Relief Act. Need I remind any Member of the House that this act was passed by the 83d Congress for the humanitarian purpose of admitting to this country 214,000 of those who seek escape from tyranny and oppression, from hardship and suffering in their mother lands to reach America, where liberty was cradled and independence nurtured. Yet today this legislation stands a bar instead of a door to freedom.

In memory of Dr. Einstein then let us engrave upon our hearts as well as upon stone those famous words of the poet, Emma Lazarus:

Give me your tired, your poor,
Your huddled masses yearning to breathe free.
The wretched refuse of your teeming shore.
Send these, the homeless, tempest tost, to me.
I lift my lamp beside the golden door.

The Fight Against Polio

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. DODD. Mr. Speaker, the Nation has had reason to rejoice in recent days at the announcement that a vaccine has proven effective in checking the ravages of poliomyelitis. The discovery marked a victory for scientific teamwork, supported by the will and the money of the American people. It is an accomplishment that has been welcomed generously by the people of all nations who have learned of it. Polio has never let frontiers or boundaries stand in its way.

The fight against polio was a long and an expensive one. It could never have been carried on without the cooperation of the people and the organizations who sought the funds, the administrators who encouraged the research projects, and the scientists and their assistants who worked long and patient hours in the laboratories. To Dr. Jonas E. Salk, who rightfully deserves the credit for the final achievement, must go the thanks of every parent. Let the thanks go also to his team of associates in the University of Pittsburgh, drawn from as far away as Australia and Germany, for the research that made this discovery possible.

They would, I am sure, be the first to concede that their final discoveries would not have been possible without the research and guideposts that were left for them by hundreds who worked on other phases of this problem. The discovery of three distinct types of polio virus, in an experiment that cost $1,370,000, and was carried on in four major universities for 3 solid years, and the discovery that the virus circulates in the blood stream before the onset of the disease are examples of the knowledge that had to be learned.

It is a source of particular pride to me and to the people of my district that the first major scientific breakthrough in the battle against polio was made by a distinguished Harvard scientist whose parents still live in West Hartford, and whose ancestral roots are deep in Connecticut soil. I refer, of course, to Dr. John F. Enders.

It was Dr. Enders and two associates, Drs. Thomas H. Weller and Frederick C. Robbins, who proved in 1949 that the polio virus could be grown in human and ape tissues in sufficient numbers to produce a vaccine. Their discovery made it possible to produce a safe vaccine that does not carry the risk of brain damage.

For their work, they received the Nobel Prize in Medicine and Physiology in 1954. Two other awards also came the way of Dr. Enders—the Albert Lasker Award of the American Public Health Association in October 1954 and the Passano Foundation Award in June 1953 for distinguished medical research, the latter an award of the American Medical Association.

Dr. Enders is the son of Mr. and Mrs. John O. Enders, of 17 Highland Street, West Hartford. He is the brother of Ostrom Enders, of Avon, president of the Hartford National Bank & Trust Co., the fifth oldest national bank in the United States.

Dr. Enders was born in west Hartford on February 10, 1897. He was graduated from Yale in 1920, after service as a Marine flier in World War I. He received a master of arts from Harvard in 1922 and a doctor of philosophy in bacteriology and immunology in 1930. A former president of the American Association of Immunologists, and editor of the Journal of Immunology, he is associate professor of bacteriology and immunology at Harvard and director of the research division of infectious diseases at Children's Medical Center, Boston.

I feel it proper that the Congress should take note of these contributions to the drive against polio, and I therefore introduce the following resolution:

Whereas the Congress has learned of the success of American medical science in developing a safe vaccine to use against polio; and

Whereas it is recognized that into the final discovery went years of work, countless observations, and the painstaking efforts of thousands of people; and

Whereas the first successful breakthrough in the fight to conquer polio came as a result of the discoveries of Drs. John F. Enders, Thomas H. Weller, and Frederick C. Robbins at Harvard Medical School in 1949 of a way to grow the virus in human and ape tissues in sufficient numbers to produce a vaccine: Therefore be it

Resolved, That the Congress and the American people hereby express their gratitude and appreciation for the achievements of Dr. John F. Enders, Dr. Thomas H. Weller, and Dr. Frederick C. Robbins in making the final discovery of a way to halt poliomyelitis possible.

Postmaster at Maysville, Ky.

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an affidavit dated March 23, 1955, by Hon. D. Bernard Coughlin, attorney at law, Maysville, Ky., to supplement his affidavit of December 29, 1954, which appears in the March 1, 1955, CONGRESSIONAL RECORD, concerning the charges against the postmaster at Maysville, Ky.:

AFFIDAVIT IN BEHALF OF NEWELL M. HARGETT, POSTMASTER AT MAYSVILLE, KY., ON HIS APPEAL UNDER SECTION 14 OF THE VETERANS' PREFERENCE ACT OF 1944, AS AMENDED—NEWELL M. HARGETT, POSTMASTER AT MAYSVILLE, KY., APPELLANT, *v.* ADDITIONAL BRIEF FOR APPELLANT, UNITED STATES POST OFFICE DEPARTMENT

UNITED STATES CIVIL SERVICE COMMISSION,
Washington 25, D. C.:

To further supplement my affidavit of December 29, 1954, concerning the alleged political conspiracy of William B. Mathews and the Republican Committee to remove Newell M. Hargett as postmaster at Maysville, Ky., and replace him by said William B. Mathews, I wish to state that said William B. Mathews has been contacting the members of the Republican committee in Mason County, Ky., for their endorsement and support to assist him to get the postmastership at the Maysville post office although the present incumbent's appeal is pending before you and same is a part of the political conspiracy involved and proved in this case.

_____.

Subscribed and sworn to before me this March 23, 1955.

_____,
Notary Public, Mason County, Ky.
My commission expires April 4, 1958.

H. R. 5659

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. KNOX. Mr. Speaker, I have introduced H. R. 5659 to provide a refund on gasoline used or resold for the operation of motorized equipment for agricultural purposes.

I am cognizant of the fact that Congress originally enacted the Federal gasoline tax in 1932 for general revenue purposes. However, I am convinced beyond all reasonable doubt that the Federal gasoline tax should be levied and earmarked for highway purposes, thereby imposing a tax upon all motor vehicles propelled upon public highways to pay the tax levied by the respective State and the Federal Government.

My home State of Michigan has a constitutional provision which provides that all monies collected from the tax on motor fuel consumed by motor vehicles using public highways shall be dedicated and used exclusively for highway purposes and the tax on gasoline consumed for all other purposes shall be refunded to the user. I believe this method to be basically sound and in the best interest of the general public.

Now, Mr. Speaker, I believe you are aware of the debate on the floor of the House a year ago when the Congress passed the Federal-Aid Highway Act of 1954. It was brought out numerous times that the full amount of money derived from the gasoline tax should be appropriated for highway construction, beside the fact that the tax levied on gasoline used for other purposes than highway construction is highly discriminatory. I am convinced that the American farmer is willing to pay his fair share of the cost of building highways, and this should be developed only by the use of the highways and not through a medium of a flat tax on gasoline for purposes other than highway use. For these reasons, Mr. Speaker, I introduce H. R. 5659 to provide for the exemption of gasoline used for nonhighway purposes from the Federal gasoline tax. I request that the Committee on Ways and Means, who is handling this legislation, give fair and impartial consideration to the bill I have introduced.

Snagged Refugee Relief Program Needs "Shot in the Arm"

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BARRETT. Mr. Speaker, as a result of the Corsi controversy, I have received hundreds of protests from constituents of Italian origin urging my intercession with the President to speed up the refugee relief program in order that their relatives and loved ones may be permitted to join them in America.

This "entire mess," as it has been called, merely serves again to expose the ineptitude and inability of the Republican administration in matters of human welfare.

Approximately 340,000 persons entered the United States under the terms of the Displaced Persons Act administered humanely and expeditiously under the Democratic administration of President Truman. This in itself proves that our party, as always, has the interests of the little people at heart and again shows that the Republican Party still stands behind big business.

Under leave to extend my remarks in the RECORD, I wish to insert herewith my letter to President Eisenhower wherein I urged him to appoint an independent agency to handle this program in order to bring it to a successful conclusion by December 31, 1956:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 20, 1955.

The Honorable DWIGHT D. EISENHOWER,
President of the United States, The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: I have received hundreds of telegrams and letters from the many Americans of Italian origin residing in my congressional district protesting the dismissal of Mr. Edward J. Corsi as Special Assistant to the Secretary of State for Refugee and Migration Problems.

I think we would find ourselves in agreement that we should not lose sight of the main point, which is, the efficient and effective operation of this program.

The records of your office will show that on three occasions since its inauguration I warned against delays and procedural snarls in the administration of this program designed by Congress to aid the refugees and to bring the relatives of Italian citizens to the United States for permanent residence.

As you yourself said when signing the law on August 7, 1953, this legislation was conceived as "a significant humanitarian act and an important contribution toward greater understanding and cooperation among the free nations of the world."

The latest official semiannual report made by the Administrator to you and the Congress, under date of February 8, said only 17,000 visas had been issued to the first of this year—toward the program goal of 209,000.

The report is significantly silent as to the number of persons who had actually been admitted to the United States under this program 16 months after you signed the bill. That figure is about 800.

Thus, the rate of admission was approximately 50 a month. If the same rate continues it would take 4,180 months, or 340 years, to complete the program. Under the law no visas are to be issued under the act after December 31, 1956.

The Administrator's report itself admits the average time for processing a single case up to the issuance of a visa is 126 working days—61 of which are used for investigative purposes. Explanations for this are wordy and illustrated by elaborate charts and statistical tables.

In the matter we are not dealing with statistics, but with human beings to whom we are presumably extending a helping hand; human beings who have been uprooted from their homes, whose lives were wrecked on the tides of war or conquest by subversion.

What can be done about it?

The Congress can and should revise the law to make its terms more liberal from the standpoint of technical procedural requirements. Although I am not a member of the Committee on the Judiciary which handles immigration legislation, I am exerting every effort upon my colleagues to make a thorough investigation of this program and to enact appropriate legislation to remedy the situation as it exists today.

Secondly, a responsibility rests upon you as President to immediately remove from the Department of State to another independent agency under you the authority to make the investigations and reports of the applicants for admission.

This you have the power to do under the act which provides no visas shall be issued except after a thorough investigation and by such investigative agency as the President may designate.

By Executive order dated September 16, 1953, you designated the authority to the Department of State, which authority in turn was delegated to the Bureau of Security and Consular Affairs.

Mr. President, in all fairness to the citizens of the United States who are in the process of gaining admission to our country for their relatives and friends under the Refugee Relief Act, may I respectfully request that the authority to administer this program be taken out of the hands of the Department of State and delegated to another agency?

To prove that we are sincere in our wish to have the peoples of the world come to America to live, I appeal to you to use your authority to speed up this program and permit the admission of the remaining 209,000 immigrants before the act expires on December 31, 1956.

Respectfully yours,
WILLIAM A. BARRETT, M. C.

Time for Stocktaking

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, many of my constitutents have expressed to me their deep concern regarding the drift of our far-eastern policy. The recent speech of Mr. Adlai Stevenson gave expression to the fears that many people feel regarding this situation and proposed a path that might lead us out of the dilemma in which we find ourselves. Under unanimous consent, I insert an editorial from the St. Louis Post-Dispatch of April 17, which admirably summarizes both the problems we face and a possible new way of facing them:

TIME FOR STOCKTAKING

This is a good day on which to do some needed stocktaking of world affairs. There have been several notable developments in this country and in Europe in the fortnight immediately behind us. The wholly unprecedently Asian-African conference, representing approximately three-fifths of the world's population, opens tomorrow in Bandung, Indonesia.

Unquestionably there is a better informed public opinion in the United States as to Quemoy and Matsu now than there was 2 weeks ago. American doubts that were beginning to arise over these coastal Chinese islands were clearly and cogently put into form by Adlai E. Stevenson's exceptionally able radio address on foreign affairs.

Not only did the former Illinois Governor counsel against risking the difficulty of trying to make "a rational, calculated decision under fire" as to what to do about these islands, which are historically, legally, and geographically a part of mainland China. He proposed a positive course by which the United States and its indispensable allies would work for, among other things: first, an end of hostilities in the Strait of Formosa, after which Quemoy and Matsu would be of little if any value to Chiang Kai-shek and his Nationalist troops; second, peaceful settlement of the status of Formosa through international action.

In seeking these ends, Mr. Stevenson supported hopes that have been expressed by President Eisenhower.

The Stevenson address was an air-clearing message that set forth the folly of "go-it-aloneism" and called for correcting the distorted picture of the United States that has resulted from our Defense Department's seeming reliance on atomic weapons. It also urged Washington to be done with bluster and bluff since these tactics only "dismay our friends" and add to "the misgivings about America" over the world.

Some of the most thoughtful of commentators wrote along the same line last week. Walter Lippmann said the Eisenhower administration's lack of clear policy on Quemoy and Matsu is an invitation to Communist China to create as much confusion as possible "in this country, in Formosa, among our allies and in the uncommitted Asian countries."

Urging evacuation from the coastal islands, he wrote that whenever this country must fight a war, it is paramount that it be in "the legitimate and clearly defined interests of the United States—and not because we have become entangled and cannot muster the moral courage to disentangle ourselves."

A similar view was expressed by Joseph C. Harsch of the Christian Science Monitor who said that the net effect of Mr. Stevenson's "intervention" was to give Mr. Eisenhower "a powerful reason" for resisting the pressure of the element in Washington "that wants to fight over Quemoy and Matsu."

But will the United States not lose face in the Orient if there is no fight to hold Quemoy and Matsu, as Chiang demands? Will this country not then become a paper tiger?

The answer of Prime Minister Nehru is on the preceding page, in an interview with Donald Grant, of the Post-Dispatch staff, now in Bandung. Says the Asian statesman who is the leader of millions of uncommitted peoples:

"The United States would not lose prestige. Everyone knows that the United States is a great and powerful nation and such an act would not make anyone believe the United States was weak."

Admitting that Chiang might lose prestige if he were required to evacuate Quemoy and Matsu as he did the Tachen Islands, Nehru said: "Anything the United States would do to help reduce tensions would be

appreciated in Asia as a contribution to peace—and a peaceful solution is most desirable, no matter how long it takes."

The Knowlands and the Bridgeses and their cohorts in the GOP's anti-Eisenhower wing are only too ready to risk war over these postage-stamp coastal islands. But the vast rank and file of the American people, to say nothing of their friends overseas, would oppose entering Chiang's civil war over territory so unimportant.

Informed opinion, so we believe, holds to the view that it would be wicked, if not criminal, to bring on an atomic war that might engulf the whole world for no better reason than to prop up Chiang's fading prestige.

It is easy to throw the word appeasement around, as some of Mr. Stevenson's critics did after his distinguished address. But epithets or no, the United States cannot afford to let itself appear less pacific in intent than, for example, Communist Russia, which only this past week agreed to restore the unity and integrity of Austria—a course this country has favored almost since the end of World War II.

The precise route for the United States may not be clear, but there can be little doubt about its general direction. It is the way of conference and negotiation, of conciliation and adjustment, of international action and agreement. We cannot yet let our guard down, but while we keep it up we can do many things through economic aid, scientific and technical assistance, and the lowering of trade barriers that will be far more effective than armaments in the winning of friends to the side of freedom.

In a little more than a month Britain will hold its general election, following the departure of Sir Winston Churchill and the installation of Prime Minister Eden. Our cue is plain: work with might and main for a meeting of the big powers this summer, as Premier Faure in France, and Chairman GEORGE, of the Senate Foreign Relations Committee, in this country have proposed.

Meantime, get out of Quemoy and Matsu. The risk is too great at a time when the prospects for peace are brighter elsewhere in the world.

Start at Home

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Punxsutawney (Pa.) Spirit, of March 29, 1955:

START AT HOME

Some time ago Dean Clarence E. Manion made a radio address which stirred and has held national attention. In it he blasted the idea that socialized electric power is honestly low-cost power. He said, "By the same theory and practice involved in government made and merchandized power, the Government could go into the milk business, the coal business, the lumber business, or what have you, and undersell every private businessman in the country. The milk, coal, and lumber user would like it at first, because he understands his milk, coal, and lumber bill, while he knows next to nothing about the taxes that he is paying to subsidize the price of every commodity that the Government makes and sells, including electricity. In the same way that such Government-operated business drove its private competitors out of the Tennessee Valley, so also will extended and continued Government operation drive every private business out of the entire United States."

In Dean Manion's view, any attempt at coexistence with what he terms "galloping" rather than "creeping" socialism is futile. But he offers an alternative. It is to sell the TVA and all kindred Government-operated enterprises to private investors. If all were sold, he adds, we would reduce the public debt by more than $30 billion and save some $900 million in annual interest which we, the taxpayers, are now paying on money advanced for these socialistic ventures. And, in addition, huge new tax revenues to Government would result when private enterprise took over.

Still more important, this would show that we mean it when we talk about freedom. As Dean Manion said, "If we are really determined about our worldwide fight against socialistic slavery, the first place to underscore that determination is at home."

Has Our Foreign Service Gone Completely To Pot?

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. ZABLOCKI. Mr. Speaker, during the past 2 years we have received many disquieting reports about the conditions prevailing within our Foreign Service. I spoke about those reports on other occasions. They indicated that the morale of our Foreign Service was at a very low ebb—that officials occupying responsible positions were apparently afraid to properly discharge their responsibilities.

Currently, attention has been called to a report of Mr. Hans J. Morgenthau, director of the Institute for the Study of American Foreign Policy at the University of Chicago, and a former State Department consultant. Mr. Morgenthau reports that the conditions in our Foreign Service have been deteriorating drastically, that the personnel has declined in quantity and quality, and that the reports of our Foreign Service officers are tending to become worthless because these men appear to be more concerned about not becoming controversial than in reporting facts as they see them.

If our Foreign Service, as Mr. Morgenthau alleges, "has ceased to be the eyes, ears, and brains of the foreign policy of the United States," then what usefl purpose does it serve at this critical juncture of history?

I should like to commend the following editorial from the Milwaukee Journal of April 19, which deals with this matter, to the earnest consideration of the Members of this body:

HAS OUR FOREIGN SERVICE GONE COMPLETELY TO POT?

A year ago last January five distinguished former diplomats issued a public letter charging a lamentable breakdown in the morale and the competence of the State Department and the Foreign Service.

The names of these five men gave weight and substance to their comments. They were Norman Armour, Joseph C. Grew, Robert Woods Bliss, William Phillips, and G. Howland Shaw. Three had been Assistant Secretaries of State and two had been Under Secretaries. Four had been Ambassadors. Their careers reached back to the early part of the century.

They charged, among other things, that "a Foreign Service officer who reports on persons and events to the very best of his ability and who makes recommendations which at the time he conscientiously believes to be in the interest of the United States may subsequently find his loyalty and integrity challenged and may even be forced out of the service and discredited forever as a private citizen after many years of distinguished service."

They charged that weakening of morale and capability of the State Department was a threat to national security. And they added that "it is relevant to inquire whether we are not laying the foundations of a foreign service competent to serve a totalitarian government rather than the Government of the United States as we have heretofore known it."

The letter of the five career diplomats caused a stir—and raised the hope that in the face of such damaging criticism the administration would act to restore to the State Department its traditional standards of competence, morale, and integrity.

Hans J. Morgenthau, Director of the Institute for the Study of American Foreign Policy at the University of Chicago and a former State Department consultant, has taken a close look at the Department 16 months after the letter cited above. In a recent issue of the New Republic, Morgenthau writes: "As presently constituted, it is hardly competent to serve any government, totalitarian or otherwise. Not only the morale but also the professional competence and capacity for teamwork of its members have drastically declined.

"The Department of State which the present administration inherited was, to say the least, a useful instrument of foreign policy. Its obvious administrative weaknesses were compensated for by the intellectual ability, technical competence, and devotion of most of its top and middle layer officials. Many of those officials have either been dismissed or have voluntarily resigned. Of the officials of this type with whom our High Commission in Germany was staffed 2 years ago, not a single one is said to be left today."

The present Department, says Morgenthau, "gives a golden opportunity for advancement to the incompetent, the time server, and the informer, who has never uttered a wrong thought and who has never been associated with the wrong person. A system which not only does not require professional competence but actually suspects it cannot help but use standards of selection congenial to it."

The personnel of the Department of State "has drastically declined in quantity and quality," says Morgenthau. Reports of our diplomats abroad have, for the most part, become worthless, for they too often pay less attention to the facts than to what they think superiors in Washington want to hear. State Department personnel fears to become controversial by reporting facts or giving opinions that are not popular.

Summing up his analysis of the Department, Morgenthau says: "The Department of State has ceased to be the eyes, ears, and brains of the foreign policy of the United States."

Here is a most disquieting indictment by an expert. It buttresses what the five distinguished diplomats said a year ago—and, unfortunately, indicates that things have grown worse in spite of their warning.

The Late John E. Nelson

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Daily Kennebec Journal, Augusta, Maine, of April 13, 1955]

Former Congressman John E. Nelson was one of those liberal Republicans who anticipated the need for drastic social changes in our American way of life long before the Democratic Party implemented them.

Two years before Franklin D. Roosevelt took office he won national attention by pointing out that "economic justice," not strict controls, was needed to reduce the threat of radicalism and communism in this country. Succeeding events proved his point.

Maine and his home city of Augusta are indebted to him for many things. Groundwork for modernization of the Togus Veterans' Administration Center, and the Cadillac Mountain Road in Arcadia National Park are two examples.

His neighbors knew him as the head of a fine American family of old-fashioned proportions. One son followed in his footsteps, and is carrying on his father's liberal tradition in Congress today.

His resourcefulness in adjusting his ideas to the times marked John E. Nelson as an outstanding American.

[From the Portland (Maine) Press Herald of April 14, 1955]

Men in public life are frequently remembered—or forgotten—in accordance with the durability of their words.

Former Representative John E. Nelson, who died in Augusta Monday, will be remembered for different things by different people, but his most durable claim to fame rests in words he wrote as a dissenting member of a special committee to study communism.

The committee was headed by a Republican of extreme ideas, Representative Hamilton Fish of New York. Its recommendations included abolition of the Communist Party and the deportation of Communists. In an opinion that took courage to express in 1931, Maine's Congressman John Nelson summarized his ideas on combating communism as follows:

"The solution of this problem lies in the wisdom of our legislators and in the unselfishness of our industrialists. In proportion as we work out economic justice here in America and so order our social system that labor shall share in the economic life of the Nation as fully and fairly as it now shares in its social and political life, in just that proportion will radicalism fail of its own inanition and the threat of communism cease to disturb us."

The astute Congressman spoke prophetic words. Even before most of the country knew much about communism John Nelson was advising his countrymen that superficial remedies weren't enough, that an effort should be made to seek out the cause. It is not given to every Congressman to have his words stand the test of time so well.

[From the Waterville (Maine) Morning Sentinel of April 14, 1955]

Elder Waterville residents who were in Waterville High School when he was its principal remember John E. Nelson with affection. They regard him highly both as a teacher and a friend and paid him homage whenever they got together at a class reunion.

Nelson's field of activity broadened considerably after he left Waterville and he went on to become a Member of Congress where he served for many years until the great Democratic upsurge of the depression days unseated him.

He lived to see his son occupy the seat he once held, and though he was ill for many years his courage and strength enabled him to keep that illness in check until he died this week at the age of 80.

John Nelson was a figure of national importance in Congress and when he left the chairman of the House Interstate and Foreign Commerce Committee declared: "There was no abler man in Congress or on my committee."

Those Waterville High School students of many years ago who are still living have reason to be proud of the years of service given his State and his Nation by their teacher.

[From the Courier-Gazette, Rockland, Maine, of April 14, 1955]

In the death of John E. Nelson of Augusta, Maine lost the last of its colorful political leaders of the old school. One thought of John Nelson in the same breath as Senators Frye and Hale, and our own dynamic Congressman, Charles E. Littlefield.

Mr. Nelson, Representative to Congress from the old Third Maine District, was in Washington from 1922 to 1932, and it took a Rockland man, former Congressman E. Carl Moran, to unseat him in the Roosevelt Democratic landslide of 1932.

Congressman Nelson, a lawyer, was a big man in every sense of the word, a Republican through and through, and he wielded a great influence during his decade in Washington.

He was the father of the present representative from this district, CHARLES P. NELSON of Augusta.

[From the Daily Kennebec Journal, Augusta, Maine, of April 15, 1955]

To the EDITOR:

Just before commencing my duties in 1933 as a Member of Congress, I was invited by my predecessor, whom I had defeated for reelection, to share his office and "learn the ropes." His cordiality and kindness to me were unlimited; his introduction of me to his friends in Congress resulted in some lifetime friendships. He left for my use his thousands of files, which aided me immeasurable in completing such cases as veteran's claims in process at the time he left office.

The man who did all that for his political opponent was John E. Nelson.

At this time of his passing, I want the people of Maine to know how he placed their interest far above partisan consideration; he was a real public servant.

He was one of the first men in public life who, while recognizing the danger of communism, recognized the greater danger to our American way of life if we sank to police-state methods to root out communism. His famous minority report to Congress entitled "The Individual Views of John E. Nelson" is just as true gospel today as it was when he wrote it, and could be read to advantage by every American, particularly these superpatriots who would tear down the Bill of Rights in their effort (for their own political advantage) to stamp out communism in America.

John E. Nelson was a statesman, and far ahead of his time in his thinking. I join with his relatives and many friends in mourning his passing.

EDWARD C. MORAN, Jr.,
Ex-Congressman, 73d and 74th Congresses.

DEAR CHARLIE: Dorothy joins in deepest sympathy to you in the passing of your father—a great man and a great father—one whose virtues were his handicap in a world not ready for the truth he spoke but recognized in the tributes of those who knew him best.

He was the most able and the most fearless of the public men of Maine of his generation and one worthy to rank with the galaxy of Maine greats of all time.

You have much to remember with pride and gratitude.

Sincerely,

OWEN BREWSTER.

APRIL 19, 1955.

The Case of H. R. 12

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Chicago Daily Drovers Journal]

THE CASE OF H. R. 12

Farmers have every right to resent the way farm matters are being kicked around in Washington like a political football. It seems quite obvious that nobody really expects any change to be made in the farm law this year. Yet Chairman COOLEY'S House Agriculture Committee has brought out a bill, H. R. 12, which would reverse the trend of thinking on farm programs again and return rigid supports of 90 percent of parity on basic crops. He is using this bill as an excuse for heckling and harassing the administration on farm matters at every turn.

It is a little difficult to see why, if not for political advantage, the House committee would bring out this bill. Everyone conceded it would pass the House only with great difficulty, and the Senate not at all. Furthermore, it was conceded that even if it should by some miracle clear the Congress, a presidential veto awaited it.

While it is disconcerting to see such an important matter as farm supports bouncing around in the political arena, perhaps it is just as well the bill is out, to be considered by the House after the Easter recess. Now Congress can weigh it coolly, without the heat and pressure which might be generated in any consideration of it in 1956, a general election year. In rejecting the rigid supports idea, as Congress will surely do, perhaps it will be demonstrated to the whole Nation that the political appeal of rigid supports has completely faded.

That this is true seems obvious. Congress showed that it realized the truth about rigid supports when it voted last year to turn to the flexible support plan favored by the administration. Then farmers backed up this action by their votes in last November's elections. They showed they were aware of what rigid supports had done and were continuing to do to their markets and that they favored a change to a more realistic peacetime plan. Now they must be looking on in amazement at the actions of Chairman COOLEY in heading right back in the same old track.

H. R. 12 appears to be a doomed bill. Already its backers have delayed bringing it to the House floor while they seek more support for it. They have even engaged in a

deal of logrolling with Walter Reuther for CIO support of it in an attempt to gain the necessary help. But even with this, predictions are that it will not make the grade. Perhaps it is just as well that this effort is being expended, though. Maybe the issue will, when finally settled, rest in peace.

[From the Salt Lake Tribune of March 26, 1955]

GIVE FLEXIBLE FARM SUPPORTS A FAIR TRIAL

A showdown is due next month in the House of Representatives on a bill to supplant the administration's sliding-scale farm price-support program with rigid supports at 90 percent of parity. The farm bloc claims strong labor support for the first time in the House, but the administration is counting on the Senate to kill the bill even if it clears the House.

Speaking in Salt Lake City recently, Agriculture Secretary Benson effectively answered backers of high, fixed supports who claim the administration program is wrecking farm prices. Actually, the flexible supports do not take effect until this year's harvests. Not a bale of cotton or bushel of grain or peanuts yet has come under the new price-support plan.

Even so, the farm program is considered good political fuel and we will hear much about it. The main differences on policy are illustrated by the viewpoints of the National Farmers Union as expressed recently by presidents of the opposing organizations.

James G. Patton, Farmers Union president, declared recently in Salt Lake City that high price supports must be restored in order to maintain high-level farm income. He denied that high supports had led to burdensome surpluses and in fact defended stockpiling of food as essential to American security, as much so as the stockpiling of metals.

Charles B. Shuman, president of the federation, speaking before the House Agriculture Committee, argued that high price supports fixed by Government without adequate regard to supply and demand result in lower, not, as Mr. Patton contended, higher farm incomes.

Mr. Shuman cited the record of more than 25 years of experience with various types of farm price-support and production-adjustment programs. During 12 of those years, he agreed, farm prices averaged well above parity. But this, he contended, was due to "extraordinary demand associated with war and the conditions that grow out of war," and not to mandatory high price supports.

The Tribune has long held a similar view. High supports are only effective when postwar artificial demand has distorted the picture. Once conditions return to normal or near normal, the high price supports lead to surpluses and a host of attendant evils.

One of those evils is the encouragement of overproduction. We have today in the Nation a wheat carryover of 975 million bushels, representing a United States investment of $2½ billion. This is more than enough wheat to supply our needs, plus export demand, for a whole year.

Moreover, high United States farm price supports make export sales difficult, and then, while we reduce our wheat lands by 17 million acres, the rest of the world increases its output by 73 million acres.

Mr. Patton spoke of the monthly income of the average farmer declining to $150 in 1954. But averages can be very deceptive. Mr. Shuman, in his testimony, noted that farm statistics include residential and part-time farmers whose gross income from sale of farm products may vary from a few dollars up to $2,000 a year. These people, who make up 31 percent of all farms reported by the census, are not primarily dependent upon their farms for their livelihood. Inclusion of this group in farm statistics, he said, confuses the uninformed and makes it appear that commercial farmers are worse off than they are. In the year 1949, when total farm income was well below the postwar peak, the some-three-million commercial farms producing 95.2 percent of all farm products sold had averaged gross incomes of about $7,000 a year.

Americans have heeded the advocates of high price supports for a good many years with no solution to that problem. Surely it is time to give flexible supports a fair trial.

Indonesia in Peril

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Leader of March 28, 1955:

INDONESIA IN PERIL

(By Sal Tas)

Indonesia today is in the position of Czechoslovakia 6 months before Jan Masaryk's suicide. Preparations for a Communist coup are gathering momentum. And both the anti-Communist leaders and Western diplomats in Djakarta are standing by virtually paralyzed.

For 3 centuries, Indonesia was a Dutch colony. Occupied by the Japanese during World War II, it refused to submit to Dutch rule again after V-J Day. A guerrilla war ended in victory for the nationalists; Indonesia won her sovereignty.

The Indonesian people in 1945 were 90 percent illiterate. There was a pathetically small intelligentsia, for education had been quite neglected under Dutch rule. The young State needed administrative, commercial, and technical help. The Netherlands was the logical source of such help, but the war had left bitter anti-Dutch sentiment. Young, ambitious, often half-educated Indonesians, anxious to corner the key jobs for themselves, exploited the situation and fostered xenophobia.

The civil war had undermined Indonesian society. It had left a terrible legacy of banditry which the young State was too weak to destroy. Holland did everything it could to restore its reputation in Indonesia. A Dutch military mission, invited by the government, went to Djakarta and did an excellent job building up the Indonesian Army. But meanwhile living standards sank to 60 percent of prewar, poverty spread, parts of the country rebelled.

After the explusion of the Dutch the Nationalist leaders had named a temporary parliament; it was not the time for real elections. But, as the state sank further and further into trouble, many members of parliament began to concentrate on one goal: enriching themselves. As corruption increased, the parliament increasingly lost contact with the masses. That the state has survived has been due to the efforts of a handful of genuine idealists who have worked themselves to death.

Amid this chaos, all that remains is the prestige of a few outstanding names. One of them is Soekarno, Indonesia's president, a Nationalist leader and agitator since his youth, a "martyr" who had been repeatedly jailed by the Dutch. Soekarno is a sort of oriental Aneurin Bevan, a gifted orator, very vain, rather unscrupulous, with a strong will to power. One capable observer calls Soekarno a "gambler," but the fact is that his theatrical personality has overshadowed that of a far more realistic and able leader, Vice President Hatta. Soekarno has also overshadowed the Socialist leader Sjahrir, who refused to collaborate with the Japanese after they freed him from the Dutch and who led the Indonesian revolutionaries to their first political victories. Sjahrir became discouraged early, and stood aside when Soekarno took the spotlight.

Indonesian Communists played an important role right from the start. But they revolted prematurely and suffered a considerable defeat. Unfortunately, the Indonesian Nationalist chiefs did not follow up this victory with energetic measures. Both the Communist Party and the Communist parliamentary group continued undisturbed. Soon Communist power began to revive. The party waged a successful campaign against the Socialists in the labor movement and succeeded in capturing the trade unions. Since then, they have been concentrating their energies on parliament.

Elections have been promised to the Indonesian people for several years, but the present parliament has constantly delayed such elections. The Communists took the fore in postponing elections, because they knew that the Moslem Party, the Masjumi, would undoubtedly emerge as the strongest single bloc. In fact, it is probable that the Masjumi and the Socialists would be able to form a stable majority if free elections were held. In opposing elections now, the Communists have an ally in President Soekarno, who fears losing power after an election.

The present Indonesian Government, headed by Ali Sastroamidjojo, is based on a parliamentary majority in which the Communists form the most dynamic component. As a result, their influence has been felt in many ways. The Dutch military mission was dismissed after much intrigue. Undercover maneuvering forced the dismissal of the Sultan of Djokga, the energetic Minister of War who had made a serious effort to destroy the Communist guerrillas; he was succeeded as Minister of War by a fellow-traveler. Communists and fellow-travelers have infiltrated the army and police. Finally, a new special secret police has been organized, modeled on the gestapo and GPU. This "state police" is not responsible to the Department of Justice; it is responsible only to a Communist state official who, in turn, is responsible to no other minister. With this apparatus in hand, the Communists can prepare "safe" elections.

Meanwhile, the Communists are using the few remaining Dutchmen in Indonesia in a vast, complicated propaganda offensive. Most of these Dutchmen work in enterprises which remain Dutch property, and are regulated under the Dutch-Indonesian Treaty. These enterprises have suffered Indonesian persecution for some time. They are attacked and plundered by bandits, forced to pay exorbitant sums which no Indonesian firms face, harried by extravagant wage demands.

In the last few weeks, several Dutchmen have been arrested by the new state police. Some of these prisoners have signed confessions which say that they are plotting with the parliamentary opposition to overthrow the government. The Dutch High Commissioner in Djakarta has established that these confessions were extracted under torture by the Indonesian GPU. Many confessions were retracted as soon as the torture ceased; some of the prisoners refused to sign confessions even after the worst torture. When the case came to public trial, the defense lawyer was able to prove that the confessions were pure nonsense and were dictated by agents provocateurs. The poor

victims were forced to give the names of their accomplices (at state-police dictation), and a few of these turned out to be unbelievably ludicrous. A certain Colonel Thompson was not even in Indonesia at the time of his alleged subversion; there were other such false details, reminiscent of the Moscow trials.

A group of Indonesians and Chinese were also forced to confess that they had collaborated with the Dutch subversives. They confessed that they were members of the Netherlands Indies Guerrilla Organization—nonexistent. One man named Smit was tortured in the place of another suspect of the same name—who, it later developed, had been in Europe at the time of his alleged crimes.

One Dutchman had to be sent to a mental institution after his interrogation; others have become invalids. The defense lawyer was practically powerless. When he sought documents on his client from the department of justice, he was told that the secret police refused to deliver them. (The justice department thus acknowledged the supremacy of the secret police.) Witnesses for the defense have disappeared; the tortured prisoners have been deprived of their passports and otherwise intimidated. The police even tried to eliminate the defense lawyer, Mr. Bouman, by accusing him of bribing witnesses, but they had to retract this charge. The police terror in Djakarta is so powerful that not a single member of Parliament has dared interpolate the government about the secret police. The press is silent because editors fear destruction of their property and arrest of their staffs.

What is behind this campaign? First, the Government wants to discredit Dutch business firms, so that it can expropriate their properties without compensation in violation of the treaties. At the same time, leaders of the opposition are being involved in the alleged "conspiracy." The Government's next step will be to turn the Dutch "confessions" against Hatta, Sjahrir and their friends. If their parties are broken up and deprived of leadership, the Government can then start to organize "free elections." The current proceeding against Dutch businessmen is therefore something like the Reichstag fire trial, which Goering used to paralyze the anti-Nazi forces, and the Shakhty trial in Moscow, when British engineers were used to produce "confessions" of sabotage which laid the groundwork for the Soviet purges of 1936–38.

Both the American and British embassies have been implicated in the trials of the Dutchmen. The prisoners had to confess that arms for the alleged Dutch guerrilla warfare had been supplied by Britain and America. Despite this, both embassies continue to produce favorable reports on the Indonesian situation.

Next month, Indonesia will play host to the Afro-Asian conference in Bandung. The present Indonesian regime aims to lead the Asian peoples, through neutralism, in stages into the Communist camp. But, because this conference represents an intermediary stage, the Indonesian fellow-travelers must keep the Communist conspiracy secret during the Bandung sessions. Obviously, the Indonesian Communists are highly vulnerable in the next few weeks; an aroused world public opinion can lend valuable support to freedom-loving Indonesians and encourage resistance to the police terror. Some time ago, the secret police arrested two Chinese journalists, both Indonesian citizens, who had criticized the Peking regime; it planned to deport them to China—a barely disguised form of murder—but pressure from public opinion abroad stopped them. Now the stakes are much higher; the very freedom of Indonesia's millions hangs in the balance.

Man's Miracle

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. RODINO. Mr. Speaker, from time to time we can come across a piece of literature—no matter in what form—which seems to strike the right chord in the inner man. It is when a piece of writing seems to reach out of the pale of the ordinary and commonplace that this happens. I felt this way when I read the editorial which apeared in the U. S. News & World Report on April 22, 1955, by David Lawrence entitled "Man's Miracle?".

In this age of materialism, it is well to reflect, even if momentarily, on something beyond all of this. When we do I am sure that like David Lawrence, we will find that "God may be merciful if men will only act toward one another in a manner which will deserve His blessings."

The article follows:

MAN'S MIRACLE?

(By David Lawrence)

Again science has come forward to save man from a dread disease.

Generations have suffered from it amid hopes that some day a miracle would be achieved.

The miracle has come. All honor to the scientists, Dr. Jonas Salk and the others, who have brought to mankind the relief so long and desperately sought as countless children have succumbed yearly to the ravages of poliomyelitis.

It is an historic coincidence that announcement of the discovery came on the 10th anniversary of the death of the late President Franklin D. Roosevelt. His valiant fight against polio, which struck him at the age of 39, helped to dramatize in later years the public drives that won so much financial support from the people of America for the National Foundation for Infantile Paralysis.

What great hope one man's struggle instilled in the minds of other victims. To what heights could they aspire—since, indeed, one whose physical movements were restricted by the paralysis of his legs could nevertheless campaign actively and become President of the United States. It was an example that conveyed a message of encouragement to millions of persons with a frustrated outlook on what the future held for them.

Today the parents of children who might otherwise be potential victims of polio can rejoice that a vaccine has been found which in nearly all cases will prove effective. While research is yet to be completed, especially as to certain strains of the disease found abroad, the door has at least been opened. Science has conquered another enemy of man—adding to victories attained heretofore over typhiod and yellow fever and tuberculosis.

It is naturally hoped that the intense study concentrated in recent years by medical experts everywhere on another disease—cancer—may in the not-far-distant future also bring a preventive. In the laboratories day and night technicians are striving for that momentous result. The prayers of mankind are directed toward what may be the next great discovery of our times in the field of medicine.

We are inclined to credit man with all such achievements. Do we forget perhaps that behind man is the guidance of the Master?

The mysteries of man's successes and defeats are not unfolded to our finite minds. For even as man makes great discoveries in science and by his inventions changes the life of the world, nature often exhibits a power greater than any that man himself can generate.

The force of a tornado or of a hurricane can be stronger than that of a hydrogen bomb.

No invention as yet has conquered the most violent storms to assure the safety of all vessels at sea.

The sun is still a puzzling antagonist, as well as a great benefactor.

When we seek mastery over the elements, however, it is not in defiance but in self-protection against the dangers they may suddenly bring.

But, even as we manage to conquer a terrible disease, we are concerned because there are in the world today governments which threaten to use germs as an instrument of war. Our own experimentation in this field is carried on solely to teach us how to deal with such a scourge if an unmoral government some day decides to use germ warfare. The mere existence of such lethal weapons, however, is in itself a sad commentary on the deterioration of the human spirit in Moscow and Peiping, where such plots are hatched.

Of what avail it it to conquer the germs of disease that spread themselves naturally if we are to encounter the germs of man-made plagues, too?

We are reminded, moreover, that the worst epidemic of all—war itself—knows as yet no vaccine.

We have not yet found the way by which governments can be inoculated against the making of arbitrary decisions to kill innocent men, women, and children. We have in our lifetime seen it happen twice. This seemed impossible, but it happened.

Can it be said that the satanic instinct in many is still battling for supremacy against the divine spirit?

When we learn of the amazing discovery of a vaccine to ward off polio, we are encouraged to believe that it is not the hand of man but of a divine providence which guides us toward new accomplishments in the field of human welfare.

Perhaps our generations have been remiss as we have glorified the achievements of man in a world of materialism. Perhaps our shortcoming has been an inability to perceive through the years of suffering that another way is open to us. Perhaps this new respite—prolongation of life through such medical discoveries—points a moral in human history. Perhaps it tells us that God may be merciful if men will only act toward one another in a manner which will deserve His blessings.

Let's Quit Flirting With Socialism

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. GAVIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial

from The Derrick of Oil City-Franklin-Clarion, Pa., of March 30, 1955:

LET'S QUIT FLIRTING WITH SOCIALISM

Do you favor governmental action which poses a direct threat to the American system of free competitive enterprise under which this Nation has grown great and attained the highest living standard in the history of the world?

That, in effect, is the question posed today by a situation prevailing in the natural gas industry.

It results from a Supreme Court ruling of last June which held that under existing law the Federal Power Commission has authority to fix rates at the well head on natural gas destined for interstate distribution.

As a result of this ruling some 5,000 gas producers—big, medium, and independent small operators—were brought under Federal control. The Government is calling the turn. Price fixing is the order.

This carries a sinister portent not only for the gas industry, but for all industry. If gas production is to be subject to Government control and price fixing, might the next move not be regulation of oil, coal, and all other natural resources?

This is socialism. It is the very antithesis of the American way. Once affirmed as a national policy it could mean the end of the type of economy which has enabled this Nation to prosper and grow strong.

Every citizen has a stake in the fight against this sinister power of gas field regulation and control. Aside from the all-important long-range effect of regulation upon the tried and proven competitive enterprise system, there is the near prospect of higher prices to the consumer.

If the growing gas market is to be supplied, additional gas reserves must be found. This involves great risk of loss of capital. It is obvious, therefore, that there must be real incentive to encourage exploration by individuals and corporations. But producers will not risk the huge sums necessary for finding new gas reserves if the price they are to receive is to be determined by a bureau in Washington. Incentive will be destroyed, a lessening of supply undoubtedly will result, and this can only mean higher prices to the consumer.

Yes, the stakes are high in this fight to remove the field price of gas from Government regulation and restore it to the same category with other commodities.

The need for action is urgent. You can help. Let your representatives in Congress know you want the Harris-Hinshaw bill passed to free natural gas producers from control of the price of their product at the well head.

Let's quit flirting with socialism and stand firmly by the American system of free competitive enterprise.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the recommendations of the Hoover Commission for curtailment of the veterans' benefit program would, if carried out, cause serious hardships to many veterans and their dependents or heirs. I ask unanimous consent to insert a resolution introduced by Councilman Harry Hook in the Municipal Council of the City of Rahway, N. J., and adopted by the council, which states the need for continuance of the veterans' benefit program:

RESOLUTION BY COUNCILMAN HOOK

Whereas the veterans' central committee of the city of Rahway has requested the Municipal Council of the City of Rahway to lend its assistance in the prevention of the enactment of national legislation which would have the effect of penalizing disabled veterans and their dependents and heirs; and

Whereas it appears that the veterans' benefit program is to be made the subject of an executive investigation, and that precedent and prior experience reveal that such investigations result to the detriment of disabled veterans and their dependents with little or no corresponding financial savings in the cost of government; and

Whereas the cost to the taxpayers of veterans benefits has been grossly misrepresented as appears by the following statistics as represented to this municipal council:

(a) That in the past 15 years United States taxpayers have paid over $80 billion in foreign-aid program while the total cost of pensions and compensations to veterans and their dependents during the entire history of the United States is less than $35 billion.

(b) United States taxpayers are spending less today in proportion to national income, for pensions and compensation, than they were spending some 60 years ago when the veteran population represented less than 3 percent of the total compared to over 13 percent today.

(c) That it is the popular impression, in mentioning the 3 million World War I veterans who are reaching the age of 65 years and qualifying for pensions, that World War I veterans are automatically eligible for a pension at the age of 65, whereas the truth is that in order to qualify for a pension a World War I veteran must be rated permanently and totally disabled, unemployed, with income of not more than $1,400 per annum with no dependents, and $2,700 per annum with dependents.

(d) That if such World War I veterans can meet all the foregoing requirements, they may, when they reach the age 65, apply for a pension which is presently $78.75 per month. If under 65 years of age they may apply for a pension which is now $66.17 per month: Be it, and it is, hereby

Resolved, That the Municipal Council of the City of Rahway, while approving of legitimate savings in the cost of National Government, do hereby memorialize the President's Commission on Veterans' Pensions to perform the duties involved in a manner which will not cause hardship or heartache to those who fought our country's wars or the dependents or heirs of our veterans; be it further

Resolved, That the city clerk be directed to foward certified copies of this resolution to Hon. CLIFFORD P. CASE, Senator from the State of New Jersey, and Hon. HARRISON A. WILLIAMS, Congressman from the Sixth Congressional District.

I, Robert W. Schrof, city clerk of the city of Rahway, N. J., do hereby certify that the above and foregoing resolution was duly adopted at a regular meeting of the Municipal Council of the City of Rahway, N. J., duly called and held at council chambers, 1470 Campbell Street, Rahway, N. J., on Wednesday evening, March 23, 1955.

In testimony whereof, I have hereunto subscribed my name and affixed the seal of the said city of Rahway, N. J., this 24th day of March 1955.

ROBERT W. SCHROF,
City Clerk.

Fired Postal Workers Unaware of Charges

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the Minneapolis Morning Tribune of Monday, April 18, 1955, by Charles E. Benson, a staff writer, entitled "Fired Postal Workers Unaware of Charges."

The article is as follows:

Manipulation of civil service hearing under the Veterans' Preference Act is making a mockery of civil service protection for Federal employees, Joseph Robbie, Jr., Minneapolis attorney, charged Sunday.

Robbie, former director of the office of price stabilization (OPS) in Minneapolis, represents a group of Minneapolis postal supervisors accused of political activity, and Henry A. C. Saggau, postmaster of Ceylon, Minn., whose replacement order is being contested.

Robbie said one of the key Minneapolis employees under fire, Ambrose Johnston, has been found innocent because the Civil Service Commission learned that one of the informers against him had lied.

The other Minneapolis employees involved are Odin Rude, Lee Saunders, Allen P. Roberts, Walter Hogan, John J. Brennan, Earl Woolery, and Clifford A. Carlson, whose Federal service averages 30 years.

Robbie said that he has asked that no suspensions be carried out until the matter has been heard in court (probably in the United States district court in Washington).

In the meantime he has asked that the Civil Service Commission explain the alleged violation. He said that he finds it difficult to answer the charges when they are not stated.

(Reportedly the Minneapolis employees are accused of selling tickets to a dinner sponsored by the Democratic Party.)

Robbie said the Minneapolis investigation was instigated by "disgruntled post-office employees who were seeking political preferment to be promoted to the jobs which they hoped would be vacated if they could cause supervisory employees to be dislodged from their positions."

The employees, he said, originally were accused of violating civil-service rules, under which the Government is required to detail its charges because of the veterans' status of the employees.

The charges later were shifted to the Hatch Act (which provides criminal prosecution of Federal employees who engage in political activity) because veterans' status is not recognized under this law, Robbie said. He added that he believes the Veterans' Act applies, regardless of procedure.

Robbie said that in asking for a review of the cases, and in planning court action if necessary, he has raised these points:

That the Government produced no evidence, but merely examined defense witnesses.

That postal inspectors who did the investigating refused to appear for questioning.

That the hearing examiner refused to permit testimony by persons making the charges.

That the hearing examiner refused to let the employees know who their accusers are,

or to know the nature of material in "secret files."

"It is impossible for a man to defend himself when he does not even know the identity of those whose affidavits are being used to convict him, or the contents of those affidavits.

"We offered to show that certain of the informers had used political contacts to seek to gain promotion to the positions they hoped would be vacated. This offer was refused," Robbie said.

In the case of Saggau, Robbie said that he had been postmaster of Ceylon for 18 years and that his ratings had been continuously satisfactory until November 1953.

"He was visited by a postal inspector on November 7 and 8 and received notice that he would be dismissed for inefficiency on November 12—only 4 days after the visit was completed," Robbie said.

"The inspector went up and down the streets of Ceylon visiting local businessmen in considering whether or not Saggau should be replaced, which is a new and unique method of handling a merit system in protecting the tenure of classified civil-service employees."

Robbie quoted a witness at the hearing on Saggau's appeal under the Veterans' Preference Act as saying that "someone heard the inspector ask if Saggau should not be replaced because he was a Democrat."

Robbie said the inspector was present at the hearing and did not deny the statement.

"The commission was at least sufficiently impressed by this testimony so that it conducted a new investigation at Ceylon without giving the defendent any chance to cross-examine any of the witnesses that it subsequently interviewed," Robbie said.

The regional civil service commission at St. Louis, Mo., upheld the removal decision of the Post Office Department. Robbie said an appeal has been filed with the Civil Service Commission in Washington.

Robbie charged that the postal inspectors "have become the political arm of the Postmaster General to destroy any semblance of civil service protection within the Post Office Department," and that "if these men can be found guilty on this kind of evidence, at this kind of hearing, then there is no merit system and no Federal employee is safe."

Postal Pay Bill

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. CLARK. Mr. Speaker, I hope President Eisenhower will not attempt to thwart the overwhelming will of Congress by vetoing a fair pay increase for postal employees.

The 8.2-percent increase voted by the House is less than adequate, but under the circumstances, was the best could be had. I have favored and still favor a 10-percent raise and am hopeful that the final conference agreement will be closer to 10 percent as voted by the Senate, than the 8.2 percent voted by the House. Either figure is small enough when measured by increased costs of living which have sharply reduced the purchasing power of postal workers.

We would be inconsistent, indeed, if we did not insist on making the increase retroactive to March 1. After all, the 50-percent salary boost Congress has voted for itself was made effective as of March 1. An additional safeguard provided in the House bill will prevent abuse of the reclassification program by requiring the Postmaster General to report his actions to Congress. If these reports indicate that the reclassification procedure is being abused, or being used for partisan political purposes, Congress will have an opportunity to change the program.

Confused Foreign Policy

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. QUIGLEY. Mr. Speaker, the confusion and contradictions of administration foreign policy statements, to which former President Harry S. Truman and Adlai E. Stevenson have alluded in recent major addresses, has never been so well illustrated as by remarks made by Secretary of State John Foster Dulles during the last few days.

The radio commentator, Edward P. Morgan, discusses the confusion which has been compounded by the contradictory remarks of Mr. Dulles in an article published in Labor's Daily for April 21. I include that article as a part of my remarks:

As reported earlier, the promising Austrian situation makes things look better. In Europe maybe they don't look real cool yet, but they're encouraging.

In Asia, though, the situation is as sticky as tropical heat. If you are getting the picture clearly through the sweat of confusion it's more than a lot of reporters have been able to do in Washington.

I'm afraid Secretary Dulles hasn't been of much help to us, although I'm sure he tried. Either the Chinese Communists have stepped up their buildup of airpower in Formosa Strait, or they have not. Sunday the Secretary said they had. Today he was uncertain.

Either the buildup, if it's stepped up, has freshly grave implications, as the Secretary gravely said Sunday, was the case, or it has implications of the same gravity the Formosa situation has had for weeks.

Now Secretary Dulles is too busy a man to be expected to trot out of his office every time he gets a piece of news and tell the rest of us about it, so when he does put his privy to a bit of intelligence you'd like to think it was the latest, freshest thing available, clear as a bell pealing the facts or tolling them, depending on whether the news was good or bad.

Indeed when the Secretary read his communique after seeking the President in Augusta Sunday afternoon, he indicated it was thanks to better, swifter intelligence methods that he was able to reveal the ominous story that he did, which so conveniently caught the headlines in the usually lean Monday papers.

Now it's the informed and virtually undisputed opinion in Washington that the buildup Dulles spoke of on Sunday is nothing new. It has been going on steadily for weeks and was, in fact, one of the circumstances on which Admiral Carney supported his now no longer off-the-record judgment that the Communists could be ready to attack one of the offshore island groups by mid-April, if they wanted to.

After the speedup in the intelligence reports, it turns out now that they were too slow to begin with. Much of what there is to be found out about what the Communists are up to, what airfields they're building, and what planes they're stacking on these fields.

Much of this data comes from air reconnaissance by Chiang Kai-shek's Nationalist pilots. These photographs and reports simply weren't being evaluated and turned over with dispatch, according to reliable information in Washington.

Now, this process has been quickened a little, so what the Secretary revealed Sunday with such a splash was seemingly little more than an accumulation of reports. He tried to put the matter in a perspective slightly less blurred when he was questioned about it by the Senate Foreign Relations Committee.

The Secretary said he didn't have full information, reported Senator GEORGE, the chairman, after the Secretary had appeared. He said, Senator GEORGE went on, that perhaps we were only getting more and better information about the Chinese Communists' activities than we had been getting in the past.

Somebody might say a mild amen to that. It is suggested charitably that the Sunday announcement, in any event, had the purpose of impressing the conferees at Bandung that while Chou En-lai was talking of peace, he was making belligerent preparations in Formosa Strait.

Now, if the limit of our ingenuity in trying to impress the Bandung Conference is represented by what some people would have to believe would be classified as a stale news story, framed with grave implications, in the Secretary's words, grave implications that confuse the American public in the bargain, maybe it's even more urgent to reexamine our policies than Adlai Stevenson said it was.

Measure of a True Patriot

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. RHODES of Arizona. Mr. Speaker, with a deep sense of humility I rise to bring to the attention of the Members of this House, a true patriot. The measure of a person's devotion to ideals can be put to no greater test than when that person will submit his wife and family to the possible scorn of his neighbors and friends. Mr. Ray C. Moorhead, of Cashion, Ariz., was asked by the FBI in 1947 to join the Communist Party. For 8 years he underwent the many trials and tribulations that go with being a known Communist. Last week Mr. Moorhead testified in the Government's behalf in its case against 5 men and 2 women accused of advocating the violent overthrow of the Federal Government. Mr. Moorhead is a dairy farmer and the father of 4 children. Since testifying, he may be in more danger than when he actually was working with the Reds, but his comment to this has been, "When the FBI asked me to work for them, they gave me 3 days to talk it over with my wife. She told me communism was

against God and I decided that I owed it to my country and to Him. After all, somebody has to do the job." I would like to include in the RECORD an editorial written in the Phoenix Gazette on Saturday, April 16, 1955, entitled "Measure of a True Patriot." I am sure that every American is grateful to Roy C. Moorhead for his sacrifice for his country.

MEASURE OF A TRUE PATRIOT

The 8-year ordeal of Ray Moorhead, a Cashion farmer who served the FBI as an unpaid anti-Communist undercover agent, is not new. Many Americans have endured the loss of friends, community distrust, and mental anguish that such assignments bring. One of them, Herbert Philbrick, described the impact of these hazards on a typical American family in his book, I Led Three Lives.

Thus Ray Moorhead is not the first loyal American to endure the ordeal in the service of his country, and he will not be the last. But he is the first known Arizonan to engage in the risky job of catching Communist subversives by pretending to join with them in activities aimed at the overthrow of our democratic form of government. Unlike Philbrick and others whose undercover activities were carried on in large cities, Moorhead performed his valuable work in small farming communities west and south of Phoenix.

Where everybody knows his neighbors by their first names, it takes rare courage to pose as an active Communist for 8 long years. It means cold glances from former friends that say more than words. It means hardship for self and family. It means a man's children must be permitted to believe that their father is disloyal. It means embarrassment, worry, and tensions for a wife who knows the secret but cannot tell.

All these things and more are the price Ray Moorhead has paid to serve his country while protecting it from its enemies. That, we submit, is the measure of a true patriot.

Jay A. Robinson, President of the National Society of Public Accountants, Honored by Texas State Legislature

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. LIPSCOMB. Mr. Speaker, the Texas State Legislature bestowed an unusual honor on the Honorable Jay A. Robinson, C. P. A., president of the National Society of Public Accountants, of which I am a member, by inviting him to address their distinguished body in joint session on Tuesday, April 19, 1955. Under leave to extend my remarks in the RECORD, I include the text of the address which Mr. Robinson presented:

ADDRESS OF JAY A. ROBINSON, CPA., PRESIDENT, NATIONAL SOCIETY OF PUBLIC ACCOUNTANTS, BEFORE JOINT SESSION, TEXAS LEGISLATURE

Mr. Speaker, Mr. President, members of the house and senate, ladies and gentlemen, I do not believe there is any man to whom this great privilege and honor was extended that would not stand before this august body in deep humility. There were many things going through my mind as I prepared to come to your great State, and there were many thoughts whirling around as I sat at my typewriter preparing the details for these remarks.

I considered that all of the public accountants in the United States were being honored and that I, their president and representative, was merely the symbol of this great honor. I pay tribute to the State of Texas having this privilege so near April 21, which is the commemoration of the Battle of San Jacinto on April 21, 1836, when independence came to your great State. I salute you on this occasion.

I am deeply grateful to my colleague and dear friend, Representative Louis H. Anderson, whose resolution made this memorable appearance possible. He and I, over the years, have worked together in the interests of the public accountants, and he has served in many responsible elective and appointive positions in the National Society of Public Accountants. He is a great servant of the profession and he has brought the profession great honor by his election to this house of representatives, and I am certain he will be a loyal and devoted servant to the people of his great State of Texas as well.

No man in the accounting profession could come to the State of Texas without paying his personal respects to one of the most renowned and revered members of our profession, Mr. J. A. Phillips, of Houston, a certified public accountant and a past president of the American Institute of Accountants, the national professional society of certified public accountants. He has been and is an understanding man in our profession who is dedicated, as I am, to the unification of the accounting profession not only in your State but throughout the width and breadth of this land. The accounting profession is deeply indebted to Mr. Phillips for the great service he has rendered the profession, his community, and this great State.

I have had occasion in the past 2 years to have met and known Mr. L. E. Tennison and Mr. Hagans who are members of your State board of accountancy, but during the year of my administration the national society has been extremely fortunate to have as one of its elective officials from your State, Mr. John A. Thomason, who is a newly appointed member of your State board of accountancy. He is also an official of the Texas Association of Public Accountants and is presently serving in the elective office of State director for the State of Texas for the National Society of Public Accountants. He is for our society and the accounting profession generally rendering yeoman service in the building of the standards and the ethics of the profession and making known to all the public accountants of your State their great responsibility.

Let me briefly tell you something about our society. The society was founded in 1945 and its founders were a small group of courageous public accountants—it was founded as a protest against discrimination, exclusion, and prejudice—its objectives were recognition of the public accountant by legislation and the preservation of his rights to practice in the future and to secure enrollment for admission to practice before the Treasury Department—its philosophy was militancy, hate and conflict—10 years later with the advent of professional maturity—the protest still prevails where discrimination, exclusion, and prejudice still exist—its objectives are the same—its philosophy with maturity has changed to conciliation, cooperation and understanding—intelligent planning, constructive programing, higher standards of practice adherence to a code of ethics and rules of professional conduct—educational programs to prepare and qualify to take examinations to practice public accounting and be enrolled for admission to practice before the Treasury Department and public relations to inform the public of its program of service through its members, to the American community—and now for a few of the important details of our society.

The National Society of Public Accountants is composed of practicing public accountants and those interested in accounting from all of the 48 States, the District of Columbia, and the Territories of Puerto Rico and Hawaii. There are State societies of public accountants in all States except approximately 4 or 5. Regulatory legislation prevails in 28 of these States and the remainder are on a permissive basis. The administration of the National Society of Public Accountants is vested in a board of governors, and the officers consist of a president, a vice president selected from the States east of the Mississippi, a vice president selected from the States west of the Mississippi, and a secretary-treasurer. The national society has its executive offices in Washington, D. C., at 1012 14th Street NW., and maintains an executive director and a full executive and administrative staff.

The National Society of Public Accountants has two publications—the National Public Accountant, which is our technical publication, and its subscribers consist of our members and other persons who are interested in its publications, and it is published monthly. The other publication is a house organ intended solely for our membership. It is entitled the PA and it is also published monthly. The operating and programmatic organization of the society is divided into 10 districts, each headed by a district governor, and each State within each district has an elective director representing the National Society of Public Accountants in his State. In the State of Texas, as I mentioned earlier, Mr. John A Thomason is our director, and the State of Texas is part of district 8 of the national society, which this year is headed by district governor C. W. McAllister, of Tulsa, Okla. The State of Texas and the entire district 8 have performed most admirably in the program of the society during this year in all of its programmatic phases, and your State is leading in the forefront in society activity. The national society has a code of ethics and rules of professional conduct of the same standard and intensity as those under which all other accountants practice, and our committee on ethics and practice maintains vigilance over every possible violator and shows no mercy for the member who fails to adhere to the code of ethics and rules of professional conduct. The society has established and maintains a department of education which has now promulgated a correspondence course for our members which will ultimately qualify them for an examination for admission to practice before the Treasury Department of the United States, and when enrolled will represent taxpayers in their differences or disagreements with the Treasury Department at the administrative level or conference level.

The members of this society do not expect to be granted anything for which they do not prepare, nor for which they do not qualify, but they believe that if they do prepare and take this course which will prepare them adequately for an examination for admission to practice, the examination that they have to take should be prepared, given, graded and under the complete jurisdiction of the Treasury Department, and that no material should be used from any private source whatsoever, including the National Society of Public Accountants. The society believes that only through the medium of continued education will it be performing its organizational obligations to the citizens of all the communities which our members serve. The society maintains a public relations department and through that department is presenting to the public its story of the public accountant and his fine record

of service to the public these many years. The society in this presentation attempts to inform the public of the qualification of the practicing public accountant in the United States. It also believes in this presentation that the right and prerogative of the citizen of this country should be maintained and preserved in the selection of the person or persons whom he desires to serve him. The American community should be made fully aware by the respective professions of the abilities and the qualifications of the members of the same but should advocate that the citizen should have the right to select the person he desires to serve him, and that the decision should not be in the form of restrictive legislation which could be classified as discriminatory or exclusionary. The National Society of Public Accountants pledges its support to every State board of accountancy in this country to uproot any unethical practitioner and will give any and all assistance to see that the profession is maintained at the highest possible level of conduct for the protection of the public, but it cannot help but feel that if the public is made aware, then we should permit the public to make its decision.

The society is dedicated to the proposition that the standards of the accounting profession shall be maintained at the highest possible levels and that the future of the profession shall be determined only through the process of educational preparation and meeting the standards by passage of an examination. It is well to consider in this regard the incidence of service and the level of service in the American economic community. Should the man who serves John Smith, the blacksmith, be required to be the same type of technician as the man who serves the Texas Oil Co.? We place this question before the legislative bodies of the American community.

I agree that there may be different levels of academic knowledge and different levels in professional techniques. However, I do not believe that there can be two levels of honesty and integrity, and is it not an established fact that a professional practitioner is selected by his client not merely for his academic knowledge or technical skill in his particular field, but more particularly because the client knows him to be an honest practitioner and has confidence in him as well as his ability?

The society is against no class either within or without the accounting profession. It is for the preservation of the rights of the public accountant to practice his profession and to continue to render service to his community.

The society would like very much to see standardization of legislative enactments relating to public accounting practice so that reciprocity will be provided for licensed public accountants from State to State as it is now provided for a certified public accountant.

We urge a general study of the entire legislative enactments relating to the regulations of public accounting so that inequities which may now exist may be corrected and refinements made of existing law where required.

Leadership must continually observe the trend of events and the desires of their constituency, and perhaps it would be well for leadership to look to the grassroots for a sign of the times.

In my home State of California, of which I am very proud, during my year as president of the Society of California Accountants we sponsored and had enacted by the legislature, in cooperation with the California Society of Certified Public Accountants, legislation which forbid discrimination against the public accountant by any agency of the State government, or any of its political subdivisions, for example, counties, cities, school districts, etc. The national society equally is energetically engaged in the program of eliminating discrimination against the qualified practicing public accountant by any government or State agency as soon as the discrimination comes to its attention.

It has been the idea for some years that when a man passed the examination and became a certified public accountant, or when a man was privileged by legislation to secure a permit to practice as a public accountant that he had reached the end of the line. I think that we can do a major job or perform a major undertaking if we were to send out the clarion call that this is by no means the end of the line—but quite the reverse, it is only the beginning of what is a great responsibility because here begins service to the public, the application of all of the academic knowledge, professional skill, ethics, and standards which had been taught, and this together with a display of honesty and integrity will spell success in the future. The only way, in my considered opinion, that the public accountant can be faithful to his trust is to continue with the process of education so that he may be familiar with the new techniques and skills in this ever-changing political, social, and economic world in which we live.

Let me for a moment discuss with you the present situation as it relates to the licensing of certified public accountants and public accountants and the renewal privileges. I should like to make particular reference to the use of the funds from such licensing and renewal privileges. It is my opinion and the opinion of many that the funds which State boards of accountancy receive from the licensing privileges and renewals should remain under the exclusive jurisdiction of the various State boards of accountancy and earmarked or allocated for the specific use of such boards of accountancy. And it is my opinion that although the State boards of accountancy are the policing and enforcement agencies for the protection of the public to see that high standards are maintained and that their rules of professional conduct are abided by, there is an equally important function for State boards of accountancy, and I suggest to you most respectfully that you consider that the funds from the licensing privileges and renewals should be used for the dissemination of educational material to the public accountant and certified public accountant to continue to keep them alert to the techniques, changes, rules, and responsibilities which may be thrust upon them in the future. No more beneficial use of this money, in my opinion, could be made in the public interest.

The public accountant of your State or any State assumes a tremendous responsibility, and it is not a surface one, by any means. It is a responsibility of great depth. It reaches much further than most people imagine. Most people think of the public accountant as one who comes into his place of business and makes little red marks in his books and then prepares a statement or a report which ultimately reflects a profit or loss of that business.

It is a responsibility which reaches much deeper than that. It is a responsibility to the people behind the books. The lives of many people, the futures of many families may hinge upon the ability of the public accountant to perform satisfactorily and adequately in his chosen field. His responsibility reaches far beyond his client. It reaches the third-party interest—the bank, the credit grantor, the taxing authorities, at all political levels from the municipality to the Federal Government, who rely upon the statements and the tax returns which the public accountant prepares and files in behalf of his client.

The public accountant owes a responsibility and an allegiance to the State in which he is privileged to practice and he owes his loyalty and devotion to his country, protected by the Constitution and its memorable Bill of Rights.

The public accountant is not only a fine, qualified, ethical, upstanding practitioner, he is a loyal citizen ready to render service to his community in welfare and in charity, for which there is no reward, only the satisfaction that he had served. The public accountant is dedicated to the program of continued education, the broadening of the accounting profession, living in peace with all the other professions, and discharging his responsibility at all levels of service as men of great honor, dignity, and integrity.

All of the great academic accomplishments of the profession and all of the great service rendered over the years notwithstanding, no one in this profession or any other profession could fully discharge his responsibility unless he had first discharged his responsibility to God, and I pledge to you men of this august legislative body of this great State of Texas and you kind ladies and gentlemen who have assembled for this occasion that the public accountant who is a member of the National Society of Public Accountants and its affiliated State societies, such as the Texas Association of Public Accountants, will discharge his responsibility as a highly qualified and ethical practitioner faithful to the rules and ethics of our profession and as a true and loyal citizen of a great State and country, and seek the divine guidance and the spiritual assistance in order that he may fully discharge this responsibility to both God and man.

As to Rural Power

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Parsons (Kans.) Sun of March 22 entitled "As to Rural Power":

AS TO RURAL POWER

Rural electric cooperatives are stirred up, and properly so, over a Hoover Commission recommendation that the REA rely on private financing instead of loans from Government sources in the future.

By making such a recomendation, the Commission shows a failure to understand the nature of the rural electrification program or prefers to ignore it. The position it assumes is unrealistic, completely so.

If extension of electric powerlines could have been accomplished by private financing, it would have been done long ago. But not until the Government entered the picture with the Rural Electrification Administration was electricity taken to the farms in quantities that counted. Private companies refused to take the risk.

By following the Hoover Commission's recommendation to its logical conclusion, one gets the idea it would have preferred no rural electrification to having it done with Government assistance. Most citizens would disagree with that premise.

One of the really big domestic developments of the past two decades has been the spread of rural electrification. It has revolutionized life on the farm, and brought conveniences to rural residents which their city cousins long had enjoyed. It has created a vast new market for American industry at the same time.

Rural electrification proponents have overstepped bounds in their zeal to promote the cause. Their job primarily is one of distribution of power to farms. But to suggest that the Government step out of the picture at this time and leave rural electrification at the mercy of those who were not in sympathy with it before is to commit just as big an offense in the opposite extreme.

Private enterprise had its opportunity to deliver electric power to the farms of the country. It chose not to do so and while the wisdom of its decision may be open to question, certainly the right to make it goes unchallenged. But because it did choose to go the way it did is no reason why the job should not have been done in the first place or finished now that it has been started.

The Late Albert Einstein

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I ask unanimous consent to insert editorials from the Elizabeth Daily Journal and the Christian Science Monitor, on the death of Albert Einstein. If any one man can be said to have shaped the destiny of our times, he was that man. I believe all Members of the Congress will join with me in feeling that the finest eulogy that could be given him would be to make the most creative and constructive use of the intellectual legacy left us by this great man of science and of peace.

The editorials are as follows:

[From the Elizabeth Daily Journal of April 19, 1955]

GIFTED MAN OF SCIENCE DIES

Dr. Albert Einstein, world-famous scientist, died yesterday at Princeton Hospital at the age of 76. His was a genius that must stand forth whenever in the ages to come historians seek to group the greatest scientists. Dr. Einstein's theory of relativity drew attention to him from all over the globe, long before racial conditions in his native Germany drove him to the New World—and the world spotlight followed him to the famous Mercer campus where the noted thinker found the quiet and the privacy he cherished.

No one ever abhored publicity more. Glory came to him without seeking. He was truly an unpretentious wizard at mathematics and physics and was numbered among the world's most outstanding scholars—one whose fame will endure through the ages.

Dr. Einstein's thinking was too intricate for many to comprehend. As Dr. Harold W. Dodds, president of Princeton, said: "His contributions to man's understanding of nature are beyond assessment in our day. Only future generations will be competent to grasp their full significance."

It is equally significant to note Governor Meyner's estimate of him. "It is one of the cosmic ironies that out of Dr. Einstein's intellect," he said, "were produced the postulates which led to the creation of the atomic bomb. It is a cosmic irony because Albert Einstein was a man of peace, a man who abhorred violence. In the years to come, his work and his memory will be suitably honored if the atomic power which produces bombs is diverted to the myriad uses by which it can benefit humanity."

The death of Dr. Einstein is a tremendous loss to his field of science. There is in truth no one to take his place.

[From the Christian Science Monitor of April 19, 1955]

BREAKER OF BARRIERS

"I never believed an axiom." That was Albert Einstein's own answer when asked to explain how he came to formulate the theory of relativity. He refused to accept the supposed fact that light moves in a straight line; he saw reasons to believe it could be bent, and proved it.

He constantly rejected limitations; he insisted on looking beyond the apparent. His "holy curiosity of inquiry" could not be satisfied with claims that the behavior of electrons was inexplicable; by reason or intuition he arrived at provable explanations in the quantum theory.

"I cannot believe God plays dice with the cosmos." Unwilling to believe the universe was not ruled by law, he persisted in seeking to reconcile the relativity and quantum theories. Finally he came up with the unified field theory. The whole effect of this is not yet evident, but once more he had opened new worlds of thought—worlds as far beyond limited material concepts as are the millions of milky ways in the astronomers' "expanding universe."

Aside from his great work in showing that motion, mass, energy, and time could not always be dealt with as fixed quantities. Einstein contributed in another way to progress. He helped give respectability to the method of deduction—the "inspired hypothesis" often producing results which might not be reached by centuries of goalless induction.

It has been said that when physicists accepted a mathematical description of nature (with Einstein as chief describer) they were forced to abandon the world of sense perception. In many respects this is true, but it does not always mean they are ready to accept the view that all real causation is spiritual.

Einstein described his own humble religious sense in moving words:

"That deeply emotional conviction of the presence, of a superior reasoning power, which is revealed in the incomprehensible universe, forms my idea of God."

Like other physicists, he continued to seek explanations of reality in physical phenomena. But his greatest contributions in making the universe comprehensible were achieved when he broke the barriers of conventional thought patterns and rode the wings of insight.

No. 1 Lung Cancer Cause Is Smog, Study Indicates

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I include an article from the Washington Star of April 20:

NO. 1 LUNG CANCER CAUSE IS SMOG, STUDY INDICATES

PASADENA, April 20.—Smog is the greatest single cause of lung cancer, says a top research scientist in the field of air pollution and its relation to public health.

"Atmospheric pollution holds the answer to lung cancer more than any other single agent," Dr. Paul Kotin, University of Southern California pathologist, told the third national air pollution symposium yesterday.

His connecting smog with lung cancer climaxes more than 4 years of experiments with thousands of animals under a United States Public Health Service grant. Dr. Kotin, 38, and his research team conducted the experiments at the U. S. C. Medical School and the Los Angeles County General Hospital.

CITES ACCUMULATIVE EFFECT

The scientist said the study showed that smog "has a prolonged accumulative effect" as a tumor inducer.

"We have no concept of the dosage of smog required," he added. "But I feel that the amount encountered during an ordinary siege in many cities may be too much."

His experiments have all been with animals subjected to artificially created smog.

The pollutant which is the irritant causing the cancer, he explained, is at least one type of hydrocarbon in the oxidized state. Hydrocarbons are found in auto exhausts, industrial emissions and in gasoline vapors.

NEW TESTS PLANNED

His conclusions will be the basis for new experiments aimed at detecting which hydrocarbon is guilty, and what chemical state it is in when it does the damage, he said.

"We did find the tumor yield—both benign and malignant—to be significant" among animals breathing smoggy atmosphere created from gasoline and diesel engines and gasoline vapors, he said. In some of the tests the yield was very high.

With the exception of cancer, Dr. Kotin said he and his research team found smog had no permanent ill effects on the health of test animals. This contradicts the opinions of some scientists that smog damages the respiratory system.

"There were no consistent biological changes in animals subjected to up to 10 times the maximum known concentration of smog," he declared. Even the animals with impaired respiratory systems showed no ill effects from such heavy doses, he added.

Law Urged To Bar Job Bias for Age—Aid Asked for Those Over 40

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of April 17, 1955, entitled "Law Urged To Bar Job Bias For Age":

LAW URGED TO BAR JOB BIAS FOR AGE—AID ASKED FOR THOSE OVER 40

Demands are arising for Federal legislation to bar discrimination because of age, now that laws bar discrimination for race, creed, or color. These demands are based on the increasing difficulty persons over 40 have in finding employment. Meanwhile, the population of the United States is getting older.

The argument is that age is relative. What should be taken into account is biological age, not calendar age. A person of 30 may be old mentally and in his reactions, whereas many older persons make brilliant executives, mellowed by experience.

Rejection of those in the 40 age bracket seeking employment often is based on pension plans. Overloading of older persons requires higher payments by employers, but both banking and insurance quarters assert that most pensions, either insurance-underwritten or bank-trusteed, are flexible enough to absorb older persons and let in the young, too. It averages out.

COUNCIL FINDINGS

The social change which is taking place in United States age brackets is indicated by a bulletin of the New York Adult Education Council. It reports that among users of the council's consultation service in September and October 1954, about 18 percent were between 45 and 54 and 12 percent were 55 or older.

Five years previously, in these months of 1949, those who told their ages to the service were tabulated as 11 percent between 45 and 54 and four-tenths percent over 55. The unemployment factor is in there somewhere, but it cannot be proved.

Employment managers say that, except for a relatively few enlightened managements, there is considerable difficulty to get a front-office approval for hiring both handicapped persons and those above 40 because of unproved fears that both groups are bad health and insurance risks. The statement that pension plans make it financially impossible to hire older persons, is merely an excuse, not reality, they say.

PLUS 40 CLUB AIDS

The drive to maintain middle and older age groups of both sexes as useful units of the American production team is spearheaded by the Plus Forty Club. It is run almost exclusively by volunteers who have been unable to get work. Several of these clubs have sprung up throughout the country since the first one was established here 16 years ago.

As the Catholic Digest pointed out, "40 plussers have proved so dependable that some employers, regrettably few it is true, rely almost exclusively upon the club to fill their vacancies. At times concerns have tried all other sources without success and turn to the club for help."

That calendar health is a myth and biological health a reality also has been discovered by the airlines. There are many pilots over 40 and many in their fifties who are assigned to the most important runs. The pilot who flies the Queen of England is pushing 60.

Another aspect is that those who cannot find employment because of "advanced" age at 40 or more are not eligible for social security—merely for temporary State unemployment insurance.

Secretary of Labor James P. Mitchell pointed out that, if business and industry is not going to do anything about freer employment of older persons by 1975, the United States may well have a pressure group of more than 60 million persons over 45.

President's Committee on Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, the annual meeting of the President's Committee on Employment of the Physically Handicapped is to be held May 23 and 24. Because I am one of the sponsors of legislation which created this committee, it gives me an especial pleasure to extend a personal invitation to my colleagues to join me in attending this meeting.

With permission to extend my remarks in the RECORD I wish to include an informative article about this committee. The article appears in the current issue of Performance, the Story of the Handicapped, and should be of much interest to all:

PRESIDENT'S COMMITTEE TO HOLD ANNUAL MEETING MAY 23–24

How governors' and community committees on employment of the physically handicapped can meet the increased need for job placement of the physically impaired will be the principal subject of discussion at the annual meeting of the President's committee on May 23 and 24. The meeting will be held in Washington, D. C., at the Departmental Auditorium and the Washington Hotel.

The need for a stepup in providing work opportunities for the handicapped is expected to grow out of the passage of Public Law 565, the vocational rehabilitation amendments of 1954. Under this law, the number of handicapped rehabilitated and made ready for jobs is expected to triple by the end of 1959. A panel on "How To Make Public Law 565 Work" will be a feature of the second-day morning session. Elmer Walker, general vice president of the International Association of Machinists, will act as moderator, with Arthur W. Motley, Assistant Director, Bureau of Employment Security, and Miss Mary E. Switzer, Director, Office of Vocational Rehabilitation, participating in the discussion, along with a chairman of one of the governors' committees.

The annual meeting will convene Monday, May 23, at 9:30 a. m., with Maj. Gen. Melvin J. Maas, chairman of the President's committee, presiding. Dr. Frederick Brown Harris, pastor, Foundry Methodist Church, Washington, D. C., will deliver the invocation. Secretary of Labor James P. Mitchell will greet the delegates.

President Eisenhower will make the presentation of the President's trophy to the "Handicapped Man of the Year"—Judge Sam M. Cathey, of Asheville, N. C., a municipal court judge there and one of the founders of the North Carolina State Association for the Blind.

The President will also present the prizes to the winners of the national essay contest conducted annually by the committee.

A panel on how employers can help increase job opportunities for the handicapped will be chaired by Arde M. Bulova, chairman of the Bulova Watch Co. and chairman of the employer committee of the President's committee. Panel members include Edward L. Cushman, director of industrial relations, American Motors Corp., Detroit, Mich.; Henry Viscardi, Jr., president of Abilities, Inc., West Hempstead, N. Y.; and G. R. Fugal, manager, employment practices, General Electric Co., New York City.

The Monday afternoon session will be devoted to a general discussion of State and community problems, with representatives of governors' and community committees participating in a discussion conducted jointly by General Maas and Mr. Bunting.

The first day's session will conclude with a showing of The Eternal Sea, new Republic Pictures feature film. Immediately following the film, a reception for delegates and friends will be held at the Washington Hotel.

Earl Bunting, vice chairman of the President's committee, will preside at the Tuesday sessions. A speech by Gov. William G. Stratton, of Illinois, will open the morning meeting. Following the Governor's talk will be a speech by John B. Hynes, mayor of Boston and vice president of the United States Conference of Mayors. The panel on Public Law 565 will follow.

Gen. Nathan Twining, Chief of Staff of the United States Air Force, will be the principal speaker at the noon luncheon on Tuesday. Msgr. Maurice S. Sheehy, rear admiral (Ch. C.), U. S. N. R., will deliver the invocation. A medical panel on "Cardiacs: Employment and Placement" will follow General Twining's address. Cochairmen for the panel are E. A. Irvin, M. D., medical director, Ford Motor Co., Dearborn Mich., and Carl M. Peterson, M. D., executive secretary, Council on Industrial Health, American Medical Association, Chicago, Ill. Panel members are Frederick J. Whitehouse, Ed. D., rehabilitation consultant, American Heart Association, New York City, and S. Charles Franco, M. D., Consolidated Edison Company of New York, New York City. A prominent employer will also be on this panel. A demonstration will then be given by the Washington, D. C., Cardiac Work Classification Unit under the direction of A. G. Prandoni, M. D., rehabilitation committee chairman, Washington Heart Association.

Postal Field Service Compensation Act of 1955

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4644) to increase the rates of basic salary of postmasters, officers, supervisors, and employees in the postal field service, to eliminate certain salary inequities, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana [Mr. HALLECK] to close debate in opposition to the amendment.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from California.

Mr. GUBSER. Before the chart was carried out, I noticed on it that the regular clerks and carriers were credited with a 6.9 percent raise. I think it has been conveniently forgotten that 20 percent of the postal field service, 120,000 substitutes and temporaries, were not included on that chart. If they were, the average raise would have been 7.2 percent.

Mr. HALLECK. At that point, and with particular reference to that chart, I think this point should be made, and everybody ought to be fair enough to understand it. In recent years we have had what we call across-the-board raises of $400 and $450. Obviously everyone recognized that this profits in greater proportion the men in the lower grades as against the higher grades. That is what is meant by the reclassification, to bring some sort of equalization in pay to the more responsible positions. So, certainly, this proposal of the committee should not be attacked on that ground.

I am for this bill and against this amendment for two reasons: First, be-

cause the committee has brought in a good bill, that is fair and equitable; and second, there is no question about it in my mind that it is the only bill that can become law.

Reference was made to the fact that even if we go this far, the 8.2 is risky. It is more than risky, because if you stop to consider, this is the fact: Already this bill recognizes a tremendous amount of compromise from the original administration proposal. I know something about it because I worked very diligently trying to bring about an arrangement by which we could get fair treatment for the postal employees and have a bill which would be passed. So the original 5 percent was raised to 6 percent. Other adjustments also were made. A total of $30 million has been added to the cost of the bill by the action of the committee as against the original administration proposal. Now let us take another look at it. I realize it is always easy to want to be openhanded. I have had people working for me and I would like to pay them more, but the question is how much can I afford. That is one of the things involved here. The total cost of the committee bill was $160 million a year. You may say, "Well, to add $12 million more—how does that make it bad?" I just want to say to you the committee bill has gone about as far as we can go. It has gone as far as we can go. Not only will we add on more expense every year, but in addition it will wreck the whole reclassification proposal, which is most important.

Bear in mind another thing. We ought to be responsible in respect to affairs of government. The Post Office Department is operating at a deficit right now of $400 million a year. You are going to add another $160 million a year in expenditures. How many of you who want to raise that amount are ready to stand up here and vote for a rate increase to balance it out? What you are doing is saddling the taxpayers of the country with additional burdens.

I say this bill is fair. Since 1945, the increases for the postal employees have totaled 96 percent and in that time the cost of living has increased only 48 percent. The gentleman from California referred to the increases in our own salaries. I have received some rather critical letters and communications. They said, "Well, you voted yourself 50 percent and now you will not give us 10 percent." But they overlook the fact that since our salary was set at $15,000 a year, we increased it 50 percent while in that time the postal employees have received a 60-percent increase in their pay and here is an additional 7.6 percent. This bill is fair treatment for them. If the average pay for the postal employee is $2 an hour, and that is about what it is, then this 7.6-percent rate is equivalent to 15 cents an hour increase in their pay. Is that not comparable to what you have heard has been done generally in industry in that time? If you go back to 1951, when the last pay adjustment was had for the postal employees, the cost of living has increased 3.8 percent and here is proposed a 7.6-percent increase in their pay.

Finally, as I say, we have a responsibility and I think we ought to meet it. I do not think we ought to touch off another inflationary wage spiral and price inflation. Reference has been made to the increased cost of living. We all know how that has affected us. Fortunately, in recent years the cost of living has balanced out. I do not want to be responsible for starting that inflationary action all over again.

Michigan State University Mission to Vietnam

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. HAYWORTH. Mr. Speaker, I am glad to inform the Congress that Michigan State University, my former employer and a great educational institution, is undertaking an important and dramatic step in the fight against world communism. The political science department of Michigan State has just concluded a contract with the Foreign Operations Administration of the United States Government to conduct a technical-assistance mission to the troubled State of Vietnam. This practical approach to problems of government is in keeping with the great down-to-earth tradition of our land-grant colleges. It is unique, however, in that it undertakes to apply our educational and technical skills on an international scale.

The main objective of the Michigan State mission to Vietnam is to help stabilize the Government and the economy of that country by training native Vietnamese in the skills of modern public administration. Experts are being sent to help train the workers in this new democracy in the fields of public administration, police work, government finance, and field administration. Later, Vietnamese will be brought to the United States for further training in each of these fields.

Michigan State is undertaking this project with clear motives. Believing that democracy can only flourish when the machinery of government is effective, honest, and technically proficient, the members of the mission are dedicated to their task of helping build a sound governmental structure.

With the withdrawal of the French and the refusal of the United States to engage in colonial control of this brave but threatened country, the hopes of keeping the country from falling to the Communists would seem slim indeed. But if we act quickly to help the Vietnamese people in their efforts to make democracy work, Vietnam can still be saved. Small islands off the coast of China are of little importance, indeed, relative to this country which stands between the Chinese Communists and the rich lands of Burma, Thailand, and Malaya.

Prof. Wesley Fishel deserves great credit for developing this technical-assistance program for Vietnam. Mr. Fishel has spent the last several months working with the Premier of Vietnam—Ngo Din Diem. His knowlelge of Vietnam, his sympathy for its people, and his determination that free government shall flourish in Vietnam have made the project a reality. Prof. Edward Weidner has also worked tirelessly to bring the know-how of American public administration to this troubled spot in the Far East. We wish them and their colleagues Godspeed in their endeavors.

What Freedom in America Means to Me

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include, for thoughtful reading, the following statement made by Miss Jeannette Mudgett, a second-year high-school student in my district, on the all-important subject, What Freedom in America Means to Me:

What does freedom in America mean to me? Right now I'm sitting in a desk in a public school. In front of me sits the daughter of the president of the bank. Across the aisle to my right, a boy, whose father owns and manages his own store, is sitting. My dad is a machinist in a factory. Yet all of us go to the same school. We sit side by side in class; we play together; we worship together. That is freedom.

I came into this classroom a few minutes ago, and my teacher assigned this theme to be written. She did not tell me what to say. Nor has anyone above her told her what to say. I am writing only my ideas. That is freedom.

I am the officer of a club. We have a sponsor, but we, as officers, direct the activities of the club; she serves to give us advice as we need and ask it. This club is a religious organization, but no one has told us we must attend its meeting or accept its beliefs. In fact, this is a nondenominational club and there are no restrictions as to color or creed of those who attend. That is freedom.

My father and mother own our home. The car is paid for. We have conveniences and even luxuries. Certainly my parents pay taxes, but they have the privilege of voting and thereby choosing the legislators who tax them. They themselves may hold public office. That is freedom.

I think now of a little Russian girl. I do not know her name, but maybe she today is in school just as I am. She is fortunate that she can attend school. She is one who passed a test that made her eligible for high school. Even then, only those of her own social class are around her. This is communism.

Perhaps she too is writing a theme. However, her teacher has been told what to tell her class. Her class must write on What Freedom in Russia Means to Me, not as the students or teacher sees it but as Moscow directs. That is communism.

Tonight our little Russian girl must attend a political rally. She is required to be in attendance. She has to accept the propaganda fed to her there. She has nothing

to say about the way in which activities of this sort are directed. That is communism.

In a little while, she will be going home. Her parents have saved and scraped to afford this little cottage. Her family walk every place they go, as they have no car. She wonders about this wonderful television she has heard of, but never seen. Taxes are high but what can her parents do about it? They cannot vote as they wish. That is communism.

I, as an American, living in a country where I enjoy so much freedom, find it hard to comprehend a life such as our little Russion girl must live. She is a slave compared to me. I am free. I am an American.

Look What Is Happening in Pennsylvania Under the New Democratic Administration

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. VAN ZANDT. Mr. Speaker, the truth of the following statement by Miles Horst, chairman of the Pennsylvania State Republican Committee, Harrisburg, Pa., is confirmed by the editorial that follows, which appeared in the April 20, 1955, issue of the Altoona Tribune, Altoona, Pa.:

CHAIRMAN'S MESSAGE

The Democratic Party won the last election by promising, first, to abolish the general sales tax, and second, to so manage the State's affairs as to make a substitute tax unnecessary.

Before election, the Democratic State Chairman said:

"The Democratic Party is convinced that the State budget, with proper economic reforms, can be balanced without reenacting the controversial sales tax next year and we intend to show that it can be done. We're not going to be stampeded by Republican demands to name a substitute tax when we do not believe a substitute is necessary."

At the very same time, the Democratic candidate for governor declared:

"Republican leaders, in an attempt to put me on the spot, have asked what I would substitute for the sales tax. I do not plan to substitute anything. I am not convinced at this time, * * * that a substitute is necessary."

The people believed these words of the Democrats and elected the Democratic candidate to the highest office in the gift of the voters. Certainly they have every right to expect the Democrats to live up to their promises.

However, from his first day in office, the Governor has been slowly but surely preparing the public for repudiation of his repeated promises to operate the State government without the sales tax or a substitute.

Although he has received, at his request, the broadest power ever given a Chief Executive to reorganize, he has made no discernible effort to reduce the cost of operating our State government as he is pledged to do.

On the contrary, the Democratic State Chairman has said in effect that all promises made before January 18 no longer count, while every sign indicates the next budget will surpass any this Commonwealth has had previously.

The governor and the Democratic Party received a mandate to cut government costs which they cannot escape except by practicing the rankest kind of political fraud and chicanery.

The people will not accept astronomical demands for new taxes until the Democratic administration makes a real and sincere attempt to put into effect some of the savings they so glibly promised last year to get votes.

Unless this is done, the Democrats will be branded for all time as complete political fakers whose promises are not worth a plugged nickel.

MILES HORST, *Chairman.*

[From the Altoona (Pa.) Tribune of April 20, 1955]

LETTING THE PEOPLE DOWN

Governor Leader's record-breaking State budget and tax program are an amazing denouement to the months of controversy and speculation concerning the new administration's plans for handling Pennsylvania's financial troubles.

Well authenticated reports in the last week, of course, have indicated the governor would ask for some form of an income tax, but the full extent of his breath-taking budget and tax demands were not revealed until Tuesday afternoon.

Governor Leader's program is a disappointing one. It is more than that. Although we have been favorably impressed by Governor Leader, and have commented with some satisfaction upon his government reorganization plans and other ideas, we must say that Tuesday, he let the people of this State down!

There is not other way we could put it!

In this column, we opposed the Republican sales tax. We remarked at that time that the people of this Commonwealth were looking for economies in State government. We predicted the sales tax would be unpopular, and it is.

But, in all frankness, we must say, too, that it is as nothing compared to the broad program of heavy taxation suggested by Governor Leader Tuesday.

Last fall, Governor Leader denounced the sales tax. He refused then to say what he would do about replacing it. But, he spoke strongly about effecting State economies, cutting costs, adopting a little Hoover commission type of government bureau reorganization in order to eliminate duplication and needless work and costs.

Governor Leader, it is our conviction, was elected because the people of this Commonwealth expected him to cut the budget, and cut taxes—not raise both!

So far, almost every department of State government is showing an increase in costs.

Tuesday, the governor asked for $620 million in new taxes; the Republicans went to their political doom asking for some $425 million.

Even the highway department, normally one of the strongest financially in the State, apparently is slated for a slice of the new revenue program, for the governor calls for a 1-cent increase in gasoline taxes, and a $5 hike in passenger auto licenses.

Never before in Pennsylvania history has such a tax program been laid before a General Assembly.

The Governor asks for 1 percent on incomes, exempting the first $1,000. He asks 2 percent on professions or unincorporated business. He asks 4 percent on rents, interests, royalties; 5 percent on income from dividends; 6 percent from long-term capital gains. He raises the corporate net income tax, already the highest in the Union, from 5 to 6 percent. He increases the 14-mill tax on utilities to 24 mills. He includes natural gas under the new utility taxes. He would require banks to pay the corporate net income while repealing the tax on bank shares, and would extend the corporate tax to include savings and loan and building and loan associations and cooperative banks.

Under this program, Altoonans would pay four separate taxes on their wages or income: City, school, State, and Federal.

The Governor proposed an industrial development fund some time ago. Although it was called self-liquidating, and $20 million was asked for it, this program received favorable reaction.

But, of what effect could such a program be to bring new industry to Pennsylvania in the face of such an all-inclusive new tax program as proposed Tuesday?

In this day of record Federal taxation, business and industry are looking for States with a tax program which will permit their survival not facilitate their demise.

We had expected, and we believe the people of this State also had expected, that economy would be the dominant area of activity in the new State administration.

So far in this administration, there has been little if any evidence of a real desire to effect economies in the State government.

It may be admitted that the Leader administration has a heavy deficit to face. It may be admitted also that it is not responsible for incurring this deficit.

It is, however, responsible for telling the people this problem could be met without the annoying sales tax and for not telling them a far more annoying tax program would be substituted for it.

It is most unusual for a governor to draft a tax program and present it to a legislature. That duty customarily falls upon the lawmaking body.

It is unfortunate Governor Leader did not relinquish this tax to the legislature.

But, it is entirely probably, the legislature will not pass the program presented Tuesday.

Duck-Stamp Funds for Acquisition of Waterfowl Areas

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I wish to call the attention of the House to a letter I have received from Mr. Charles H. Callison, conservation director of the National Wildlife Federation, and to one of the resolutions adopted by the delegates to the 19th annual convention of the National Wildlife Federation at Montreal, Canada, on March 11 to 13.

Last year, Congressman LEE METCALF and I spoke out very vehemently against the cut in the appropriation for the Fish and Wildlife Service of the Department of the Interior. I voted for the amendment introduced by Congressman METCALF to restore the funds for the waterfowl program. The amendment did not pass and the reduction in funds meant that the Fish and Wildlife Service could not expand the program of acquiring new wildlife refuges, but would have to spend the monies received from the sale of duck stamps for maintaining the refuge, research, enforcement of waterfowl regulations, printing of the duck stamps, and other administrative costs.

Since Congress intended that the extra dollar assessed for the purchase of duck stamps by conservationists be used for the acquisition of wildlife refuges, I and other conservation-minded Congressmen felt that the Department of the Interior should use the additional money for this purpose.

Therefore, on January 13 of this year, I introduced H. R. 2142, one of the bills to which Mr. Callison refers in his letter of April 14. Mr. Callison's letter reads as follows:

APRIL 14, 1955.

The Honorable LESTER R. JOHNSON,
House Office Building,
Washington, D. C.

DEAR LESTER: We appreciate your continued interest in the proposed legislation to guarantee that a fair share of the duck stamp money will be used for acquisition of waterfowl areas as originally intended.

Bills similar to your H. R. 2142, earmarking 40 percent of the receipts for acquisition, have been introduced in the House by the following: H. R. 37, Congressman CLAIR ENGLE (California); H. R. 597, CLIFTON YOUNG (Nevada); H. R. 4448, JOHN E. MOSS (California); and H. R. 5140, HENRY S. REUSS (Wisconsin).

Anything you can do to secure action on this important legislation will be much appreciated.

Sincerely yours,
NATIONAL WILDLIFE FEDERATION,
CHARLES H. CALLISON,
Conservation Director.

Resolution No. 2 adopted at the 19th annual convention of the National Wildlife Federation is as follows:

DUCK STAMP FUNDS FOR ACQUISITION OF WATERFOWL AREAS

Whereas the United States Fish and Wildlife Service of the Department of Interior has estimated some 4 million additional acres of lands suitable for waterfowl management and refuge purposes is urgently needed to complete the Federal refuge system and to assure the perpetuation of continental waterfowl resources; and

Whereas the acquisition of desirable wetlands for this purpose is lagging and the resource is gravely endangered by drainage and by other destructive factors; and

Whereas the receipts under the Migratory Bird Hunting Stamp Act have been used largely for maintenance and operation expenses rather than for land acquisition as originally intended: Therefore be it

Resolved by the National Wildlife Federation in convention at Montreal, March 11–13, 1955, That the Members of Congress be urged to enact H. R. 37 or similar legislation to earmark at least 40 percent of the duck stamp receipts for acquisition of waterfowl areas; be it further

Resolved, That the Federation study the advisability of increasing the migratory bird hunting license (duck stamp) fee as the only practical means of securing adequate funds to complete the minimum and essential acquisition of suitable waterfowl areas.

Ship Subsidies

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. RAY. Mr. Speaker, in recent years, the costs of ship construction subsidies and ship operating subsidies payable with respect to American-flag ships in our merchant marine have been mounting so rapidly as to cause widespread concern. That concern relates both to the basis for determining the payments and the amounts of the payments.

It is generally conceded, and I firmly believe, that we must have a strong, privately owned and operated merchant marine under the American flag. Apparently, that result cannot be secured without the payment of subsidies. It is high time that we reviewed all phases of that problem and I am, therefore, glad that Hon. HERBERT C. BONNER, chairman of the Merchant Marine and Fisheries Committee of the House, has introduced a bill which will require that committee to make such a study.

Record Still Bad

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Coffeyville (Kans.) Journal of April 18 entitled "Record Still Bad":

RECORD STILL BAD

While 1954 saw a slight decrease in the Nation's automobile accident toll, nearly 2 million casualties were reported.

Even with the slight improvement over the more than 2 million reported in 1953, the results are staggering.

A report shows 35,500 perosns killed and 1,960,000 injured in 1954. Excessive speed was the most dangerous driving mistake in 1954. Speed killed 12,380 people and injured more than 659,000.

Weekend crashes accounted for 13,980 killed and 678,000 hurt during 1954. Thirty-nine percent of the deaths and 35 percent of the injuries occurred on Saturdays and Sundays last year.

Three out of four auto accidents happened to passenger cars driving in clear weather on dry roads, and 78 percent of vehicles involved in fatal accidents were traveling straight ahead.

These are grim statistics. The above figures point out that accidents are heavy, even though State and community authorities have spent millions of dollars in an effort to provide safer and better roads and saner driving.

Insurance companies and other private firms are spending millions for safety education. State, county, local, and parkway police are constantly patrolling streets and highways. More and better engineered throughways are coming off the drawing boards. It appears to us that almost everyone is concerned with this needless slaughter and its accompanying waste of human and property values.

Almost everyone, that is, but the drivers.

Traffic regulations were set up as a proper guide for the handling of traffic, and need the cooperation of all drivers. The problem starts and could ideally end with the drivers. Who are the drivers?

Each one of us knows the answer to that question. It is sincerely hoped that by continually reminding drivers of safe driving through newspaper messages, television, radio, and literature that traffic accidents will be reduced in the coming years. It can be done. We are the drivers and it is up to us to see that it will be done.

Let's Keep Liberty Solvent—An Address by George E. Stringfellow, President of New Jersey Taxpayers Association, Before the Annual Conference, State DAR, at Trenton, N. J., on March 18, 1955

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. WOLVERTON. Mr. Speaker, the Daughters of the American Revolution is an organization that has always been alert to guarding our Nation from any type of weakness. Time and again it has called for adequate military strength to protect us from the assaults of the enemy from without and vigilance against those influences from within that weaken the foundations upon which we have built.

One of these weakening influences that too often our people overlook is that which relates to our fiscal policies. Waste, extravagance, and prodigal use of our financial resources can undermine our strength and bring disaster. It was therefore appropriate that one of the character and standing of George E. Stringfellow, president of the New Jersey Taxpayers Association and senior vice president of Thomas A. Edison, Inc., should bring to the annual State conference, State Society, the Daughters of the American Revolution, at the State House Assembly Chamber, Trenton, N. J., on March 18, 1955, a message under the title "Let's Keep Liberty Solvent," which emphasizes the importance of maintaining the financial stability of our Nation.

This timely address, delivered by Mr. Stringfellow on the above occasion, is entitled to the consideration and attention of all of our citizens. It reads as follows:

LET'S KEEP LIBERTY SOLVENT

(Address by George E. Springfellow, president, New Jersey Taxpayers Association and senior vice president of Thomas A. Edison, Inc., before the annual State conference, State society, the Daughters of the American Revolution, at the State house assembly chamber, Trenton, N. J., March 18, 1955)

Recognizing the important part which the Daughters of the American Revolution has played in defending the principles upon which our Government is founded, I consider it an honor to address you this morning.

Your organization has been in the forefront in defending the best interests of our Nation.

You have demonstrated your belief that eternal vigilance is the price of liberty.

With the passage of time, the requirements of vigilance have changed. In the earliest days of our Nation's history, vigilance meant that—in the manner of minute-men—we should be ready to assemble on the village green when the call to battle was sounded. Later it took us to sea to defend our Nation's commercial interests. Subsequently, we fought to preserve our Nation against inter-

nal division, and then, in two world wars, we fought for a way of life—that men might not be trammeled under the heel if dictatorship.

And now, today, we find ourselves in a great conflict of ideas. In addition to guns, the opposing forces now use the printing press, radio, and television to capture men's minds. Two philosophies are in a life and death struggle. One would make government the servant of man. The other would make man the servant of government.

If we are to emerge victorious in this titanic struggle, we must do more than claim that our system is best. We must continue to prove it. May I paraphrase the scriptural text, to say that, in the final test, it is by our works that we shall be known.

One hundred and eighty years ago, when our people were in peril, Paul Revere mounted his horse, in the dead of night and galloped, from house to house, sounding the alarm to which the minute men responded. Today we face more subtle dangers. Against these, one Paul Revere will not suffice; we must have many. They must reach us in our homes, alerting us to the dangers which our Nation faces.

In this great contest, the Kremlin is well aware of the importance to us of a strong national economy.

If our Nation spends its way to destruction,
If it saddles itself hopelessly with debt,
If it destroys incentive with taxes,
the main citadel of free government will fall easy prey to the authoritarian forces which already hold in their grip a large portion of the land surface of the globe.

This morning, I want to talk with you about the cost of government. You feel the impact of this cost in the form of taxes, for taxes are the price tag of government.

This, I believe, is a particularly appropriate subject to discuss before this audience because women control a substantial portion of the Nation's wealth. They are large stockholders in industry. At the same time, they direct the expenditure of more than 60 percent of the domestic dollar. Of necessity they have developed a strong sense of economy. The taxpayer is coming to realize that government is beset by the same forces that control costs in his own household or business. Increasingly, too, the taxpayer is coming to realize that in government, as in private affairs, ways must be found to make a dollar buy more in goods and services. A wise Frenchman has said:

"There are some sciences so lofty and serene that they leave in peace those who are not concerned with them, but finance is not one of these; it has a way of taking a terrible revenge upon nations and upon individuals who neglect or despise it."

Let us look at local government, since this is closest to us. Unless we happen to live in a large city, it is quite likely that we are personally acquainted with many of the officials. Because of this close acquaintance, we are able to subject the local official to a high degree of direct accountability. At the same time, we can assume a high degree of individual participation in government affairs. This close relationship is one of the most effective safeguards against waste and inefficiency if we will but exercise it.

Like the home, the municipality is confronted with rising costs. While this results in part from our increasing population and its dispersion outward from urban centers, it is also profoundly affected by modern invention.

Reflecting New Jersey's dynamic growth and the increasing complexities of government, operating expenditures between the close of World War II and 1954—a span of 8 years—rose approximately 124 percent for our State, 115 percent for our schools, 92 percent for our counties, and 87 percent for our municipalities.

Under this stress, there has too often developed a tendency to look to the State for financial aid. While at times this may seem justified—it is a disturbing fact that it is invariably accompanied by a deterioration of the sense of local responsibility. Why question a certain expenditure, the State is paying a large part of the load. So the argument runs. And it is a potent argument with the unthinking. But apathy and imprudent expenditure are its consequences.

It is necessary that we recognize that the State, too, has great fiscal difficulties. I call to your mind that as recently as 1946, New Jersey's State appropriations totaled $78 million. In contrast, the Governor's proposed budget for the fiscal year beginning next July indicates expenditures totaling $287 million—an increase of $209 million or 268 percent. The new budget level is more than 3½ times the 1946 appropriations.

Efforts to obtain aid from a higher level of government rarely stop at the State level. They eventuate in demands for Federal aid. Let's look at the Federal Government. Last year this greatest of all enterprises again operated at a loss. It spent $67.8 billion, which is 10 times the assessed value of all taxable property in New Jersey. While consuming approximately 22 percent of the national income in its operations, the Federal Government still turned in an astronomical $3 billion deficit. This year it will again operate at a loss. Today we hear of an increasing number of proposals for so-called Federal aid to our States and local governments—to deal with housing, highways, health and welfare, schools, libraries, air pollution, water supply—almost everything in varying amounts—totaling billions of dollars.

Let us examine the Federal Government's capacity to supply this aid. To begin with, the only place the Federal Government can get money, with which to extend Federal aid, is from you, me, and the other taxpayers. The disturbing fact is that Uncle Sam is already spending more than he is taking in—billions more—and borrowing to make up the difference. It is quite clear, that the only way he can obtain the necessary funds with which to extend more aid is to borrow. And where shall he borrow? From the people. And how shall he repay the borrowing? With money which he collects from the people—in more taxes paid by you and me and the other taxpayers throughout the Nation.

I emphasize this debt particularly because New Jersey's share is nearly 50 percent greater than the assessed value of all taxable property in the State—all of our factories, our farms, our commercial establishments, and all of our other taxable real estate. This debt is a part of the heritage of every new born babe in New Jersey.

Meantime, Uncle Sam must pay interest on his huge debt amounting to $6.5 billions annually. This year New Jersey's share of this interest is $242 million—or $164 million more than the budget of our State government in 1946 and only $45 million less than the governor's proposed budget for the fiscal year beginning next July 1.

For every dollar our State and local governments receive in Federal aid, we pay the Federal Government $2.19 in taxes.[1] These figures do not include the cost of Federal administration and debt service. It would also be observed that monies easily procured from the Federal Government usually result in more extravagance at the local and State levels, than would be true of monies raised and spent locally.

Once a Federal-aid program is established, it is more difficult to terminate than to expand. It grows by easy stages. As Federal grants are made, Federal controls are extended far beyond the limits intended by the framers of our Constitution.

May I suggest that we will never have better State or Federal Government than that at local levels. If we tolerate extravagance and corrupt local government, it will breed and multiply many times at higher levels.

The New Jersey Taxpayers Association, of which I have the honor to be president, supports efficiency in the collection and expenditure of public funds. It urges the "delegation of governmental functions to the lowest levels capable of fulfilling them efficiently and economically, thus insuring maximum responsiveness to the will of the people."

In the last quarter century the Federal Government has spent $258 billions more than it has taken in and, during that time, taxes have been increased in many instances to a confiscatory rate. Yet Government has either been unwilling or incompetent to bring disbursements within income. In only 3 of the last 26 years, said the senior United States Senator from Virginia, the Honorable HARRY FLOOD BYRD, has the Government lived within its income.

May I quote an Americanized version of Charles Dickens' philosophy expressed more than a hundred years ago. In effect, he said that if one's annual income is $5,000 and his annual expenditures are $4,500, the result is happiness; if one's annual income is $5,000 and his annual expenditures are $5,500, the result is misery.

That continued deficit spending will produce misery for every American should be self-evident, even to the unthinking.

History bears mute testimony to the fact that liberty cannot exist in a bankrupt State. I submit that continued deficit spending will produce a bankrupt State and a bankrupt State will produce a dictator in America, as it has elsewhere. We must keep our country solvent if we are to keep liberty alive in America. Fellow citizens, lift your voices against confiscatory taxes and deficit spending, and thus strike another blow for the preservation of liberty in America.

[1] Based upon computation by the Tax Foundation, national research organization.

Constitution Day

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I include the following resolution regarding Constitution Day officially adopted by the 64th continental congress of the Daughters of the American Revolution assembled in Washington:

Whereas the changing of the name Constitution Day to Citizenship Day in the matter of observance of September 17 as the date of the signing of our Constitution minimizes the importance of this all-important document in the minds of the American people and emphasizes the citizenship idea which tends to fall into the world citizen plan of propaganda, and in order to preserve, support, and appreciate our Federal Constitution, it is essential to understand its provisions and principles: Be it

Resolved, That the national society, Daughters of the American Revolution, urge the United States Congress to restore the designation Constitution Day to the date of September 17 in order that all Americans on this anniversary may rededicate them-

selves to the basic principles of this great document; and

Resolved, That the national society, Daughters of the American Revolution, in every locality study and publicize the Constitution during its 168th anniversary week of September 17–23, 1955; request their mayors and governors to proclaim Constitution Week; and sponsor chapter, school, and public programs on the Constitution, especially emphasizing the primary purposes of good government as set forth in the preamble to the Constitution and the duty of citizens in our Republic to protect the Constitution and the freedoms as set forth in its Bill of Rights, so that it may continue to protect us and our posterity in "this Nation under God."

The General Agreement on Tariffs and Trade and the Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. DAVIDSON. Mr. Speaker, an informed, inteligent, and alert public has been the foundation of America's greatness. Secret governmental plans and secret international agreements have always created suspicion and, in most instances, eventual sorrow.

Wider knowledge today of the functions of the General Agreement on Tariffs and Trade and the purposes of the new Organization for Trade Cooperation is most important.

The League of Women Voters has recently published two outstanding bulletins containing concise descriptions of these two international trade media. By so doing, these ladies have again rendered a valuable public service.

The international relations of the United States and our conduct in foreign trade and economic assistance matters are of paramount importance in the struggle with international communism. Extension of the Trade Agreements Act, expanded international trade, and United States participation in the Organization for Trade Cooperation are vital parts of this effort.

I include here the following two statements by the League of Women Voters:

THE GATT AND THE OTC

Congressional interest in trade policy turned abruptly last week from H. R. 1, the renewal of the Trade Agreements Act, to the proposed international Organization for Trade Cooperation. The proposal is an outgrowth of a conference recently concluded in Geneva, Switzerland, in which the United States and 33 [1] other countries participated to renegotiate the General Agreement on Tariffs and Trade. Senator BYRD (Democrat, Virginia), chairman of the Senate Finance Committee, said he believed the committee should not act on H. R. 1 until it had a better understanding of the proposed OTC.

The functions of the OTC will be (1) to sponsor international trade negotiations and (2) to act as an intergovernmental forum for the discussion and solution of trade disputes and other problems related to international trade.

Since 1947 these functions have been carried on through a limited and temporary agreement by most of the main trading countries. This agreement is called the General Agreement on Tariffs and Trade (GATT).

As a result of the renegotiation in Geneva, organizational features of the General Agreement have been modified and incorporated in the OTC. Remaining in the General Agreement are mainly (a) a listing of all tariff rates negotiated by the member countries and (b) a set of fair trade rules. The OTC, if approved by the United States Congress and the legislative bodies of other nations, will administer the General Agreement.

WORK OF THE GENERAL AGREEMENT

The need for a General Agreement on Tariffs and Trade, and therefore an OTC, is based on the premise that the foreign commerce of each nation has international implications and that through international cooperation trade can be conducted on a more orderly basis than if each nation were left to make its own rules.

United States participation in the tariff negotiations under the general agreement has been based on the authority Congress delegated to the President in the Trade Agreements Act. These tariff negotiations, conducted in 1947, 1949 and 1950–51, have resulted in the stabilization of over 58,000 separate tariff rates of the participating countries. This figure represents well over 50 percent of all foreign trade in the world. The 34 countries represent 80 percent of world trade. The results of a round of negotiations are formally binding for only 3 years at most. At the end of a 3-year period, nations are free to renegotiate any tariff concessions given. The last review was in early 1955 and the negotiated tariff rates were extended until December 31, 1957. Indeed, since the first negotiation in 1947 the tariff reductions have been extended by the member countries without substantial modification.

The general agreement also specifies a set of fair-trade practices to which each member should adhere. One prohibits trade discrimination among nations. When one nation agrees to reduce a tariff or not to raise an existing tariff, this "concession" applies to all nations. This is called the "most-favored nation" principle. The general agreement has succeeded in obtaining general acceptance of this principle because when many countries negotiate at one time, each can see the value to itself of obtaining the results of concessions granted by other nations. More reductions in trade barriers also result.

An example of this was the desire of the United States to obtain from Canada a reduction in the latter's tariff on plate glass. Canada would not give the United States such a concession in an agreement between the two nations because Belgium supplied Canada with even more glass than did the United States, and if Canada gave the United States a concession, her bargaining power with respect to Belgium would be weakened. But when Canada, Belgium, and the United States negotiated at the same time, both the United States and Belgium obtained from Canada a tariff reduction on plate glass.

Another fair-trade practice recommends that nations prohibit the use of quotas because quotas constitute an absolute barrier to trade. Once the quota for the year has been filled, no additional imports are allowed. The use of quotas can undermine the reduction of tariffs gained through negotiation.

A third fair-trade practice advises against the use of government subsidies on exports in order to gain a competitive advantage in world markets. If one country uses subsidies then all other countries are placed at a disadvantage and may, in turn, also resort to subsidies, thus beginning a vicious circle.

EXCEPTIONS TO THE RULES

The general agreement makes provision for exceptions to the fair-trade rules and also allows member nations a means of settling disputes when one country has a complaint against another.

One exception permits a nation to increase tariffs when a domestic industry is seriously injured by competitive imports. The United States has made the greatest use of this exception.

A second exception permits nations to place quotas on imports when its means of payment for those imports is threatened. Of the 34 countries in the general agreement, 21 are taking advantage of this exception though the number of products affected by quotas has been drastically decreased in the last 2 years.

A third exception is that a nation in the early stage of economic development may place quotas on imports in order to establish needed industries.

Although each nation in the general agreement is pledged to nondiscrimination in trade policy, some nations have close political ties with others which involve giving them preferential treatment in trade matters. Great Britain and other members of the British Commonwealth have such a preference system. The United States and Cuba, the French Union, the Benelux Customs Union, Uruguay and Paraguay are other examples of preference systems. The general agreement has succeeded in preventing an increase in the preferential treatment received by countries in these preference systems.

Occasionally the deterioration of political relations between countries results in one's wishing to discriminate against the other in trade. In 1951, Congress called for the withdrawal of all United States trade concessions to the Soviet bloc, including Czechoslovakia, which is the only Soviet bloc country belonging to the general agreement. Since this action would have been contrary to the agreement, the United States requested and obtained a waiver of its obligations. Such a waiver requires a two-thirds vote of the member countries assembled.

Another waiver obtained by the United States just recently is one permitting the United States to place quotas or special fees on imports of agricultural commodities which the Secretary of Agriculture deems to be interfering with our price support system.

RESOLVING DISPUTES

Opinions different as to whether the General Agreement should allow so many exceptions to the rules. The general agreement, however, contains procedures for resolving complaints of one country against another. The first step is for a country to enter a complaint on the agenda of the annual meeting. An example was a United States complaint registered in October 1954 against Belgium import restrictions of United States coal. The United States and Belgium con-

[1] Members of the GATT and the OTC: Australia, Austria, Belgium, Luxembourg, Brazil, Burma, Canada, Ceylon, Chile, Cuba, Czechoslovakia, Denmark, Dominican Republic, Finland, France, Federal Republic of Germany, Greece, Haiti, India, Indonesia, Italy, The Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Peru, Rhodesia and Nyasaland, Sweden, Turkey, Union of South Africa, United Kingdom, United States of America, Uruguay; also Japan on a provisional basis pending the outcome of tariff negotiations now going on in Geneva between Japan and member countries.

sulted at Geneva and the result was favorable to the United States—most of the restrictions were removed.

If the consultations do not resolve the dispute, the complaining country asks that the member countries, by a majority vote, approve retaliatory action. Such a case occurred when the United States placed quotas on imports of dairy products and The Netherlands complained that the action denied benefits to it resulting from United States concessions given under GATT negotiations. Since the quotas were placed by Congress, there was nothing the United States negotiators could do about removing the restrictions. Therefore, the member countries approved the proposed retaliatory import restrictions by the Dutch against United States wheat flour.

The working of the general agreement described above was not altered substantially at the Geneva Conference. The most important changes tightened up the exceptions on the use of quotas for balance of payments, reasons, and for economic development. Under the new agreement, any country using quotas for the above reasons must periodically justify their use and indicate that their use will be temporary.

Another significant change is that member countries must not increase the use of export subsidies on manufactured goods between now and December 31, 1957. At that time consultations will take place on the extent to which existing subsidies can be removed. On primary products (agricultural and other raw materials) the subsidy provision should not permit a country using subsidies to gain more than its fair share of the market.

The general agreement and the proposed Organization for Trade Cooperation are designed to expand world trade on an orderly basis. In a few weeks a measure will be introduced into Congress authorizing United States membership in the OTC.

PROPOSAL FOR WORLD TRADE COOPERATION

The Organization for Trade Cooperation is a new proposal to enable nations to work together on problems of world trade. The OTC's main function will be to administer the General Agreement on Tariffs and Trade, a basic and comprehensive trade agreement among the United States and 33 other countries.

The OTC was formulated in Geneva, Switzerland, at a conference ending in March 1955, in which the United States and the 33 other nations participated. The OTC would come into being upon approval by those (of the 34) nations which account for 85 percent of the foreign trade of the GATT nations.

The OTC is made up of an assembly, an executive committee, and a secretariat.

The assembly would meet once a year and each of the 34 nations would have 1 vote.

The executive committee would be made up of representatives from 17 nations. The 5 nations of chief economic importance would be included automatically among the 17; the United States would obviously be 1 of the 5. In addition, the composition of the executive committee would include nations from different geographic areas and in different degrees of economic development. The executive committee would operate according to powers and duties assigned to it by the assembly, and decisions would be made by a majority of two-thirds of the votes cast.

The secretariat would be headed by a director general appointed by the assembly. He would have the power to appoint the staff and determine their duties and conditions of service in accordance with regulations approved by the assembly.

MODEST COST

The OTC would operate on a moderate budget. It would not be substantially greater than the budget which has enabled members of the GATT to meet annually and conduct their business. Each nation's share of the budget would be determined, basically, in proportion to that nation's share of the foreign trade of the nations in the GATT. At the present time the United States contributes 17 percent of the budget of GATT or about $60,000. This is a slightly lower percentage than the United States share in the world trade of the GATT nations.

The purpose of the OTC would be to provide a forum for the business of the member nations in the GATT. Functions would include discussion of trade disputes among nations, sponsoring trade negotiations, and reviewing various proposals by which the trade barriers of individual nations might be reduced.

The proposed international organization would have no authority to veto the acts of individual governments or to impose new obligations on them without their consent. It would have authority only to consider problems, to recommend courses of action, and to determine whether individual countries had been hurt by the action of others in trade matters. Functions and authority of the OTC would be substantially unchanged from the manner in which the GATT has been carried out since its beginning in 1947. The main difference would be a greater degree of coordination and continuity in the work of the general agreement.

Any nation which is a member of GATT would become a member of the OTC. A nation may be admitted to the GATT by an affirmative vote of two-thirds of the member nations. The new nation would also be required to enter into trade negotiations with other GATT nations.

The OTC, once established, may "by an agreement approved by the Assembly, be brought into relationship with the United Nations, as one of the specialized agencies * * *." Such an agreement would require the approval of the U. N. General Assembly.

President Eisenhower is expected to ask Congress to approve United States membership in the OTC. A bill to this effect will soon be introduced in the Congress. Rather than either accepting or rejecting the OTC as proposed, the Congress may place certain conditions on United States membership. If these conditions basically alter the character of the OTC, the proposal would then have to be renegotiated. If other countries were unwilling to accept the United States conditions, then the new organization would not come into being.

As stated above, approval by nations accounting for 85 percent of the foreign trade of the GATT nations is necessary if the OTC is to be accepted. The United States accounts for 20 percent of this foreign trade. United States participation, therefore, is vital.

The Public Interest Is Not Served by Secrecy in Government

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include an editorial from the Santa Rosa (Calif.) Press Democrat of March 29, 1955, on the subject of secrecy in Government.

The editorial points out the repercussions following publication of the Yalta papers. The proceedings at Yalta were kept secret. Historic decisions were made, many of them responsible for the tension existing in parts of the world today.

It was President Wilson who advocated open covenants openly arrived at. We should adhere to that philosophy. The records of meetings should be opened to public view within a reasonable length of time. If mistakes were made the people should know what they were and who was responsible in order to be able to reconsider before it is too late.

At a time when this issue is generating considerable controversy I respectfully call your attention to the following expression of interest by a newspaper serving an important area of the First Congressional District of California:

AT YALTA OR SANTA ROSA, SECRECY HURTS PUBLIC

This may be reaching pretty high to prove a point, but your Press Democrat would like to call your attention to the worldwide uproar resulting from publication of the American version of what went on at the Yalta Conference between Joseph Stalin, Winston Churchill, and Franklin D. Roosevelt.

This secret meeting probably was one of the most fateful things that has happened to date in the troubled history of this world. Three individuals, speaking for three great world powers, met for the purpose of deciding how to carve up and redistribute vast portions of the civilized world. The United States, Great Britain, and Russia at the time were allies in a major war involving the Big Three and some minor allies on one side, and Germany and Italy on the other side.

Two of the Big Three, Britain and the United States, were allied with Australia, New Zealand and some minor powers in another major war with Japan. In both wars, some of the allies were minor only because the enemy had already conquered them. France, a major power, was occupied by the German forces. The Philippines were occupied by Japan.

Meeting in secrecy, with only their handpicked advisers present, Mr. Stalin, Mr. Roosevelt, and Mr. Churchill proceeded to reshuffle the world.

The official American version, just released, is that Mr. Roosevelt promised to give Russia lands held by Japan and China in return for Russia eventually declaring war on Japan. At the time, Mr. Roosevelt knew that the atomic bomb was nearly perfected and Russian help was not essential to the defeat of Japan.

There was tentative agreement to split Germany into 5 or 6 unimportant small countries. There was discussion of freezing France out of any important postwar settlement.

At least, that's what the American notes, now made public, claim.

Mr. Churchill, the only surviving member of the Big Three, has not given details but he says that the American version is not correct.

Now, what we would like you to consider is this:

Using hindsight, the decisions reached are now known to have been very good for Russia and very poor for the United States. Some of them were modified later at another secret meeting which still remains a secret. But the things Russia obtained in the Orient now threaten the safety of the United States.

Was it better that the Yalta meeting was held in secret, or would America have been in less danger today if it had been public, so that the public could learn of, and object to, the historic mistakes that were made?

And how about Churchill's claim that the American version is incorrect?

Is what we are now being told the shocking truth, or is the true picture something different?

Our point is that secrecy in Government, whether it be in a local school board or at the highest international level, is not in the public interest.

The World Challenges American Educators

EXTENSION OF REMARKS
OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mrs. HARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address delivered by Mrs. Dorothy Houghton, Deputy Director of the Foreign Operations Administration, before the spring conference of the Education Association of the District of Columbia on Saturday, March 10, 1955.

Mrs. Houghton's address was eloquent, inspiring, and informative. I take this opportunity to call it to the attention of the Members of Congress:

THE WORLD CHALLENGES AMERICAN EDUCATORS

(Address by Mrs. Dorothy Houghton before the spring conferenee of the Education Association of the District of Columbia, Saturday, March 10, 1955)

Technical cooperation with the less well-developed nations of the world is a major phase of United States foreign policy, as an expression of the humanitarian interest and good will of the American people, and because the ultimate benefits to this country justify United States assistanee on the basis of its contribution to our national interest and security. Our programs of technical assistance are designed to help build and stabilize within the world the kind of nations and peoples with whom we can live in peace and who in time of need will place their human and natural resources on our side. Through these programs we are waging a relentless war against ignorance, poverty, hunger, and disease.

Technical cooperation has many facets, such as the improvement of health, agriculture, industry, or education, but all of them to be fully effective involve educational processes. Only by helping the less-developed nations to increase their own ability to do the job for themselves and by themselves can any lasting improvements be made. In this, education has a key role to play.

American education and technical skill have become a major export item amounting to more than a hundred million dollars a year. This is fast becoming an influential factor in American foreign policy. The Foreign Operations Administration alone has more than 1,700 United States educators and technicians at work in nearly 60 countries to help foreign peoples better their economic conditions and way of life. Forty-three American universities have contracted with foreign universities and governments, with the help of FOA, to bring American skills, methods, and techniques into the educational systems of 29 countries, and already have members of their staffs overseas conducting advisory and extension services under 61 contracts.

Never before has such an opportunity and challenge come to any nation. Never have so many nations come to any nation and pleaded "come over and help us. Send us your greatest scholars and your most skilled scientists and share your knowledge and skills with us. Train our teachers and our doctors, our agriculturists and our administrators in your methods and techniques. We will open to you our schools and all our other facilities. We will pay our share of the costs in our own currencies whether it is double or treble your dollar costs. Don't delay. Time is running against us."

That is the challenge that FOA has accepted on behalf of our people. The challenge is a fitting tribute to you as educators and to your predecessors who in years past have labored at scant pay and often with slight public recognition to develop a system of education to meet the everyday needs of our people. Today in countries where once the professor taught only the sons of the elite your American colleagues are striving to establish a functional concept of education geared to meet the needs of people who have burst the shackles of economic serfdom to gain their rightful place as free citizens of the modern world.

The problems of the developing nations of the world today are so immense that the efforts of the United Nations and FOA can contribute only a fraction of what is required in their solution. Needed also is the understanding and selfless work of private groups, such as yours.

You perhaps know of the increasing use being made of American universities in providing technical assistance to foreign institutions and governments. Individual faculty members have been borrowed from universities, and have served as staff members of FOA missions overseas. During the past year, FOA has been emphasizing an entirely new approach whereby United States educational institutions undertake major projects overseas, sending their faculty members abroad, while faculty and administration on the home campus provide technical and administrative supporting functions.

The provision of United States assistance in raising the teaching, research, and extension standards of a foreign university can usually be done best by an education institution in this country, which has take generations to reach its present level of efficiency in just those fields. The American school can attack the problem as a well-integrated team, with faculty on the home campus rendering much-needed professional advice, as well as undertaking the training of selected members of the staff of the foreign partner. Outstanding members of university faculties are often willing to serve their own university overseas, when they might not be interested in taking leave from their universities to serve as direct Government employees.

Technical-assistance programs are not giveaway programs. They are not imposed upon any country or people, nor are they designed to create an unhealthy dependence upon us. These are cooperative programs requested by the other governments and their people. In support of these programs the 39 independent countries and 20 dependent territories with which we carry out cooperative programs of technical assistance are spending the equivalent of at least $2 to every $1 we spend.

In the past, improvements were imposed by conquerors and built with slave labor or were given as a largesse from a ruler to his subject people. The people themselves had no real part or cooperative interest in the improvements. The American technician in the field is well aware of this, and knows that what he imposes upon his neighbor won't last. He knows, too, that giving these people something beyond their ability to maintain and operate is equally foolish. The guiding principle of all the technical-cooperation programs is aided-self-help. Nothing will remain unless the country participates of its own free will and accord; unless its people invest their time, their own effort, and their money in the projects, too.

The basic philosophy in which we are engaged and which we pray may be extended even beyond the present free areas, even beyond the Iron Curtain, was expressed by the President in his address to the American Association of Newspaper Publishers. The philosophy that was expressed in that address is the basic philosophy which we are carrying on. He said, in part: "We are prepared to reaffirm, with the most concrete evidence, our readiness to help build a world in which all peoples can be productive and prosperous. This Government," he continued, "is ready to ask its people to join with all nations in devoting a substantial percentage of the savings achieved by disarmament to a fund for world aid and reconstruction. The purposes of this great work would be to help other peoples to develop the underdeveloped areas of the world, to stimulate profitable and fair world trade, to assist all peoples to know the blessings of productive freedom. The monuments to this new kind of war would be these: roads and schools, hospitals and homes, food and health. We are ready, in short, to dedicate our strength to serving the needs, rather than the fears, of the world."

In the free world—those nations specifically alined by treaty or agreement between ourselves or our immediate allies—there are approximately 550 million people. In the Communist orbit there are 850 million people, comprising one-third of the world's population in one-fourth of the world's land surface. In between there are approximately 1 billion neutrals.

The fellah of the Middle East, the peon of Latin America, the coolie of the Far East are gradually awakening to the fact that things can be different. There are nearly 1 billion people in these areas of the world, a great proportion of them poor and continually hungry. Eight out of ten never learn to read or write. Two out of three are chronically sick with preventable diseases that sap their strength and productive power. The fellah, the peon, and the coolie now know that this does not have to remain true.

We cannot ignore the fact that these billion people in underdeveloped regions are important to us for a variety of reasons. For example, they produce all of the natural rubber we need. They produce 85 percent of our manganese, 77 percent of our tin, and 80 percent of our antimony. Out of the total volume of strategic materials we need, 73 percent comes from the product of their labor.

It may be too easy for us in the United States to blame the turmoil in the Middle East and South Asia solely upon the menacing expansion of Communist totalitarianism. It would be unrealistic to ignore the Communist part in magnifying the trouble in Iran, Indochina, Indonesia, and elsewhere. We must recognize, however, that the problem is not just a creation of Communist totalitarianism but is exploited by it. Communism directs a major portion of its effort toward the underdeveloped countries. Today these countries realize that they must modernize. The question is how—by taking the Communist path, or by modernizing with western aid and friendship. The choice these peoples make will probably determine whether Communist totalitarianism or the democratic way of life eventually acquires throughout the world a preponderance of economic, political, and defensive power.

Should communism succeed in bringing most of the underdeveloped countries under its yoke, the effect upon the free world will be disastrous. Political freedom, individual dignity, and liberty will suffer a staggering blow. Our concern, therefore, for economic and social progress in the underdeveloped areas of the world is also a concern that the distinctive human values of the United States and western civilization shall remain alive in the world.

The primary purpose of such a program is to teach those who, in turn, will teach others new and better methods of instruction, to develop curriculum and materials for classroom use, and to advise ministries of education in the broad principles of educational administration. Special emphasis has been given to literacy campaigns and community development so as to lift the economic, health, educational, and social structure at the village of grassroots level.

For example, the social and economic ferment in Iran has required a coordinated attack on ignorance, ill health, disease, and poverty. The FOA mission in Iran has mobilized its technical and economic aid resources to assist the Government to provide types of services and institutions needed in this crisis, training personnel to carry them on, and stimulating local communities and private enterprise to use their own resources in meeting the problems of the country. The FOA education program has resulted in adoption of a revised and more practical curriculum for the entire educational system of Iran and an extraordinary expansion and improvement of the schooling available in the rural villages where 80 percent of the people live. The training of teachers for agriculture, trade and vocations, homemaking, recreation, and health is carried out with FOA help. Approximately 8,000 rural and urban teachers from every part of the country have already been trained, including 3,748 from villages and remote tribes who came by donkey, camel, boat, and bus to regional training centers set up by FOA for inservice summer sessions taught by selected village teachers trained at Teheran the previous summer. Major emphasis is placed on gearing the educational program to the needs of the pupils in each particular village, and stimulating the teachers to create their own teaching materials out of what might be found in the village.

One of the most dramatic and unique phases of the FOA education program in Iran is its pioneering development of schooling for the approximately 200,000 people still living in nomadic tribes. There are now over 100 schools operating among these tribes, with an enrollment of more than 1,000 boys and girls. One hundred and five teachers, selected (and paid) by the tribal leaders, were given intensive training under FOA auspices at Shiraz in the summer of 1953, and the program was inaugurated last winter. By March, 73 schools had been supplied with a school tent, portable lap desks, a few books, and simple equipment such as easel blackboards; 44 more were to receive their tents and supplies and begin operation by last June.

In Khorassan, one of the most isolated provinces of Iran, an adaptation of the American Chautauqua idea has been utilized to bring fundamental education to thousands of people during the past 6 months. Moving from one remote village to another, a team of FOA-trained Iranians equipped with motion pictures, slide projectors, and simple demonstration equipment, presented a 6-day course for adults including some rudiments of education in health, sanitation, and agriculture, drawing an attendance of up to 1,000 persons a day. Men and women walked many miles to attend the sessions. In some of these classes, turbaned Turkomen from the high steppes patiently learned infant care, so that they could take the information back to their wives and daughters.

One thousand five hundred and sixty Iranian students, teachers, principals, and supervisors have participated directly in arts and crafts lessons given by the FOA specialist and her Iranian counterpart during recent months. A film strip on arts and crafts is being produced by the Syracuse Film Group, using photographs and drawings made by Iranian students and the FOA arts and crafts specialists. She also prepared Iran's first textbook in the field, a "Creative Art Teaching Manual," designed to assist teachers and students to think creatively.

In Lebanon, one of the educational activities of FOA has stimulated production of a series of health-education pamphlets of great value to the entire Arab world. During the summer vacation in 1953, Lebanese public and private schoolteachers from all over the country attended a special seminar and workshop on school health, whose objective was to instruct the Lebanese teachers in this field and to develop teaching materials in the Arabic language. Up to this time, the subject of health had never been introduced into the Lebanese curriculum, nor in the entire Near East were there any teaching materials available on this subject.

The conference was eminently successful. The materials produced by the teachers during the summer were utilized by the Lebanese staff who conducted the workshop in turning out a series of school health pamphlets for the use of children and teachers. These 50 teachers have, in turn, provided training in the same field for the other teachers in Lebanon. As a result of this workshop, the subject of school health was recognized in Lebanon for the first time, and a professor was employed at the National Teacher Training College to teach this subject.

Last fall at the opening of school the Lebanese workshop staff and some of the teachers trained in the workshop conducted a series of 2-day institutes and workshops on the subject of school health for the teachers in each small area. To provide intensive and more individual instruction, each workshop was kept small, and an average of almost one conference a week on the subject of school health was held during the winter months. The reaction to these conferences was heartening. For most of the Lebanese teachers, it was the first opportunity to get together on a professional basis to discuss their common problems and to cooperate in developing their teaching methods and techniques is a particular field.

Lebanon has no natural resources in terms of agriculture or minerals; her greatest resource is her people. If Lebanon is to make full use of this resource, the education staff of the Lebanon mission and the mission's public health staff, together with the Ministry of Education and the Ministry of Health, must cooperate as they have done in creating a recognition of the importance of health and in developing proper health habits and attitudes through adult education and the school system. This project illustrates a fundamental approach to a basic problem in which the United States and the Lebanon Government have worked together to provide the basic training required to develop a healthy and productive country.

In Ethiopia, there is a critical shortage of trained teachers. There are only about 1,200 teachers in the entire country—less than 1 for every 12,000 persons. Of these, 800 had less than 4 years of formal education and only 17 had completed high school. The problem is further complicated by the large number of spoken languages and a scarcity of reading material in these different tongues.

Under joint programs with the United States, substantial progress has been made in Ethiopia's educational system. All Ethiopian teachers attend intensive teacher-training courses designed to accomplish in one summer the equivalent of a year's regular study, thus raising the educational level of the teaching staff and the quality of teaching throughout the country. New curricula and techniques have been installed to solve the language problem. Instruction in English has been improved and expanded and new materials are being developed in Amharic. Teacher salaries have been standardized, teacher training expanded, and a system of orderly promotions established.

Today there are 5 high schools in Ethiopia, operated under the guidance of Oklahoma A. & M. College on an FOA contract. United States specialists in education have been working with Ethiopian representatives on plans to establish 8 additional secondary schools within the next year. The number graduating from high school each year has been tripled as a direct result of the FOA program.

Probably the most distinctive contribution of the FOA program to Ethiopian education is the preparation of the first school textbook ever devoted to the geography of Ethiopia. Written for use at third grade level by a FOA geography adviser, it was accepted by the ministry of education and distributed to 100 schools during the last week of May 1954. This preliminary edition is in 4 parts, a text in Amharic for use by the students, the same text in English, and guides to the text in Amharic and in English for the teachers. After an initial period of trial in the 150 schools, and possible revision based on that experience, the book is to be printed by the Ministry of Education.

In the war-devastated areas of Korea our own GI's have not waited for their Government to act but, with their own hands and money, have begun to rebuild the village schools. These sons of ours have made contributions of several million dollars. Senator THYE reported to Congress that he saw them on a blustery December day laying up the stone masonry of new school buildings. It was their own peaceful contribution to a free world—of greater importance over the course of the years than the winning of a battle in war.

To finance these programs costs each citizen of the United States less than 8 cents a year. The expenditures of the other countries amount, in many instances, to much more than twice the United States contribution. In the fiscal year 1954 only 2 percent of FOA's appropriation was spent on programs of technical assistance. This year 5 percent or approximately $116,500,000 is going into those programs.

As you are well aware, technical assistance is only one of the ways in which we are meeting our international problems. The mutual defense assistance program is another phase of the FOA program. While we are not in the business of arming the whole world, we do supply friendly nations those weapons, equipment, and other items which they need to meet an agreed level of effective defense, but which they are unable to make, buy, or otherwise obtain for themselves. In most cases the other countries do most of the work; we supply the missing links.

Another way of protecting our interests and of attaining our foreign policy objectives is by means of our programs of economic aid for defense, for development, and to meet emergency situations. Such aid was used, for instance, a year ago to keep Iran from going bankrupt and possibly into Communist hands. Considering the strategic location and oil reserves of Iran, such an investment of United States funds can well be considered a good bargain. More recently such aid has been used in Bolivia, in Guatemala, and now in Indochina, especially in connection with the resettlement of half a

million refugees from communism in North Vietnam.

The concept of the mutual-security program changes somewhat from year to year, reflecting changed conditions in world affairs. For instance, massive economic aid to Europe now appears to be a thing of the past. In our program this year no such aid was requested or will be allocated to Europe except for a few special cases, such as Spain, Yugoslavia, and Greece, and in these instances only to enable those countries to support a defense level which would be beyond their normal capacities. Total appropriations of new funds for the mutual-security program are down from $6 billion in fiscal year 1953 to $2.8 billion for fiscal year 1955. This reduction is the result of (a) an enormously improved economic position worldwide; (b) the substantial completion of the initial period of vast and rapid military buildup; and (c) the establishment of a pace in international military affairs which can, if necessary, be sustained for years.

We cannot, nor do we seek to buy the minds of men, but we are firmly convinced that through the Foreign Operations Administration's programs we can develop the understanding and promote the economic development which will permit the underdeveloped nations of the world to move forward and take their place as true partners and friends in the world community.

It is not enough to share our knowledge and our skills; it is not enough to teach others how to use new machines and industrial methods. As educators, you will understand that we must share ourselves—our ideals, our beliefs—recognizing others as our equals and cherishing them as our friends. Whenever an American goes overseas under an FOA-sponsored program, he will be working with a local national counterpart. The American will stay for a very brief 2 years, but he must leave within the person of his counterpart and all whom he may reach that spirit which is the dynamic for all he attempts. It is an exacting test to apply, but unless he has left a trusted and trusting friend he has failed in his mission. Not all can meet such a challenge. Perhaps the world is asking too much of us, but the opportunity is ours to build new frontiers of understanding and peace.

Willow Run Not Proper Base for Jet Plane Operations

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ann Arbor (Mich.) News of April 18, 1955:

WILLOW RUN NOT PROPER BASE FOR JET PLANE OPERATIONS

If the Air Force stands by its tentative decision to move jet planes to Willow Run, the action will indicate a great disregard for a few economic fundamentals and for the pocketbooks of taxpayers in general. How Air Force officials ever arrived at the decision to send the jets is rather mysterious in view of the very strong arguments that can be marshaled against it.

No doubt they have had to provide themselves with mental blinders in most discussions of jet operations. Nobody anywhere seems to want a jet base nearby. And seldom was a greater squawk raised than that over setting up a jet base in northern Michigan last fall. But there are certain salient facts about the Willow Run operations that they seem unwilling to face.

Their intended action first became known when they turned down a University of Michigan request for use of a hangar which they owned at Willow Run. The university is carrying on an extensive secret research program for the Government and needs room for expansion. The Air Force didn't reply for some months, and only recently refused the request on the grounds of the jets' coming in July.

Since then, in face of growing protests from Washtenaw County officials and citizens, the Air Force has stood its ground. While no definite decision has been reached on the matter, say Air Force officials, the planes will be based at Willow Run as announced earlier, unless more factors are brought into the picture.

In selecting Willow Run as a jet base, they passed over nearby Wayne Major Airport which is already equipped to handle military aircraft—to the tune of $3 million in installations, in fact. The Michigan Air National Guard and two commercial airlines are the lonely users of the Wayne field now, while Willow Run's 9 commercial airlines handle a busy schedule of 320 regular flights per day.

But Wayne Major doesn't want the jets either. Leroy C. Smith, Wayne County road commissioner, wants Willow Run's nine commercial airlines, instead. He has made overtures to the separate airlines, and has called a May meeting to discuss the switch. Navy and Marine aircraft, pressed for space at Grosse Ile, were recently denied the use of Wayne Major facilities by Smith on the grounds that there would be no room for them when the airlines moved from Willow Run.

Wayne's blandishments have found a cold reception among the nine airlines. The negligible differential in driving time to the Wayne terminal from Detroit is not sufficient to offset the huge costs the move would incur. Representative GEORGE MEADER, of Ann Arbor, Second District Republican Congressman, on the floor of the House of Representatives this week estimated that the cost of preparing the Wayne Major Airport would be $20 million to $30 million, a sum that would have to be provided by Wayne County taxpayers and the Federal Government.

Willow Run, on the other hand, handles the sixth largest passenger volume among the Nation's airports at a negligible cost to the taxpayer.

While the airlines would not ordinarily be receptive to Wayne County's invitation, they are apprehensive about the jets. Jet operations constitute a hazard for ordinary air traffic, and they would hesitate to jeopardize their passengers' safety.

The disastrous effects of basing jets at Willow Run would probably not end with a mass migration of the airlines, if they decided to move. Observers also feel that the operations could hamper development of the proposed 1,100-home West Willow subdivision immediately west of the airport, as well as the multi-million-dollar redevelopment project planned for Willow Run proper. The two Government financing agencies, the Federal Housing Administration and the Veterans' Administration, have definite restrictions covering housing loans on land near jet and military aircraft installations.

All of these reverberating results can be forestalled if the Air Force follows the logical procedure of basing its plans at an airport that can easily accommodate them—Wayne Major.

For the Air Force to sabotage an extremely satisfactory arrangement between the university and the airlines at Willow Run, at great cost to the citizens of Michigan, would be economic folly. Surely they will be too sensible to let such a thing happen.

UNESCO and American Workers

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the fight against illiteracy, ignorance, and intolerance, which has been one of the driving forces of American history, is today being carried forward throughout the world by UNESCO, the United Nations Educational, Scientific, and Cultural Organization. What UNESCO's activities mean to Americans is outlined in an article by Mr. John D. Connors, director of education for the AFL, which I include under unanimous consent:

UNESCO AND AMERICAN WORKERS

(By John D. Connors, director of education, A. F. of L.)

Of vital importance to American citizens—and particularly to American workers—is UNESCO, the United Nations Educational, Scientific, and Cultural Organization. UNESCO, one of the specialized agencies of the United Nations, works to carry out the primary purposes of the parent body, the establishment and the protection of world peace.

UNESCO works toward this goal by promoting cooperation among the nations through education, science, and culture. Its purpose, thus, is of importance to all peace-loving people. Because it works to promote peace—and does this through fighting illiteracy, ignorance, and intolerance—UNESCO is particularly important to American workers who have fought these enemies for decades through the American Federation of Labor.

By encouraging education in reading and writing, in scientific and in vocational skills, the United Nations Educational, Scientific, and Cultural Organization is helping to raise the living standards of all people. This necessarily will tend to raise the standards of living of American workers as well as of all other segments of our national community.

One of the greatest contributions of UNESCO, through education, is the blows that it deals the international Communist conspiracy. In some parts of Asia and Africa, Soviet agents and local Communists carry on, with some success, campaigns of propaganda based on lies, half-truths and distortions. Facts, through education, stop this Red technique in its tracks. Facts about the free way of life, its culture, its ideals, and its material progress provide the Asian and the African with a valid basis of judgment. Perhaps this explains why Communist Russia boycotted UNESCO for so long and forbade its satellites to become or to remain members.

Only at the recent general conference of UNESCO held at Montevideo, Uruguay, where this writer had the honor to serve as labor adviser to the United States delegation upon recommendation of President Meany, did Communist Russia exercise its right to UNESCO membership as a member of the United Nations. This late coming was, of course, merely a part of the friendly face which the Communists use from time to time when they hope to serve their own

purposes thereby. This action fits in with their current peace crusade, which is fraudulent and designed to lull the free world into inaction.

At Montevideo the Soviets led their usual drive to force the seating of Chinese Communists as the representatives of China. This move was defeated, 41 to 6. Similar attempts to admit the Soviet puppet governments of Rumania and Bulgaria were likewise defeated.

Underlining the democratic nature of UNESCO, the Montevideo conference amended the UNESCO constitution, 49 to 9, to prohibit the executive board from initiating activities beyond policy directives passed by the general conference itself. Policy authority was thus kept firmly in the hands of the general representatives.

One of the most important activities of UNESCO is its battle against illiteracy. The American concepts of liberty, due process, freedom of speech, protection against involuntary servitude, democracy and the like have little meaning for a man who cannot read. Self-government, so important to us, has little reality for a person who has neither experienced nor studied about it. Therefore, in its basic aim, mass education, UNESCO is contributing to the cause of freedom.

UNESCO by its constitution is an international agency. It does not operate as a supra-national organization. Rather it acts by, through and for sovereign independent nations. Its facilities and aid are extended only on request of a national state, and then only as that state requests. UNESCO's constitution provides as follows:

"With a view to promoting the independence, integrity, and fruitful diversity of the cultures and educational systems of the member nations, the organization is prohibited from interfering in matters which are essentially within a nation's jurisdiction."

That this proscription is honored by the director-general and the 200-person secretariat of UNESCO gives the lie to the isolationists' charge that UNESCO is attempting to dominate the American or any other school system.

Since its establishment in November 1945 at a meeting of allied ministers of education in London, UNESCO has grown in membership and activities. As one of the founding nations, the United States has given UNESCO close support. There are now 73 member states. These determine policy questions and approve the program and budget at general conferences every 2 years.

Between conferences this world educational organization is governed by an executive board meeting several times each year. Day-to-day operations are carried on, from UNESCO's Paris headquarters and in the field, by the permanent staff (the secretariat) under the direction of a director-general. The present director-general is an American, Luther Evans, the former head of the Library of Congress.

The United States National Commission for UNESCO was established by Congress in 1946. Sixty of the 100 members, all appointed by the Secretary of State, are nominated by national voluntary organizations. As one of these organizations, the American Federation of Labor has been represented on the national commission from its inception. The writer is the present representative and is a member of the executive committee.

The United States national commission was set up, as were similar national commissions in other member countries, to advise the Government on the kinds of projects it believes that UNESCO should undertake, to cooperate with UNESCO's activities and to provide information to our citizens about this important agency of the United Nations.

This support of UNESCO by our Government and the A. F. of L. is based not only on the high aims of UNESCO but also on its solid achievements and its proposed future program.

Primary among the UNESCO activities in which the American labor movement is interested is the holding of international seminars for specialists in labor education, such as those held in recent years at the Chateau de la Breviere, not far from Paris. Here during one summer session, for example, some dozen American trade unionists met with their counterparts from other countries to exchange ideas, techniques, and information.

In the UNESCO exchange-of-persons program last summer, a group of American trade unionists toured Europe studying labor organizations, working conditions, etc., in several countries. Plans are now underway for the American Federation of State, County, and Municipal Employees to charter a plane to take a group of its members on a similar 4-week study tour of 6 countries this year.

These activities serve a double purpose: first, to enable workers in other countries to learn firsthand from Americans about our economic life; and, second, to enable our own workers in turn to learn from trade unionists of other countries more about their ways of life and work. This mutual give-and-take is of vast benefit in pointing up the economic problems faced by all workers and how they are solved through free, democratic trade unions.

America's labor movement also supports the UNESCO clearinghouse for educational, scientific, and cultural information; the seminars of experts on the problems of education for women, evaluation of textbooks and television, and the special problems of arid zones; the missions of specialists assisting member states, who request it, in the improvement of their educational systems; the efforts to establish free public libraries more widely; and the many other widespread activities of UNESCO. Among the more important projects is the positive encouragement of the free exchange of information among the nations of the world.

Its accomplishments, too numerous to detail here, have won for UNESCO the praise of American labor and our Government. Warm endorsement has come, also, from the leaders of all major religious groups in the United States.

If the past achievements of UNESCO are noteworthy, its current program is also impressive. The 1955–56 program, adopted in Montevideo, includes an expanded program of technical assistance in the form of exchange among nations of those skills, techniques, and factual information which will assist mutual economic development.

Scientific and technical document centers will be completed in Mexico, Egypt, India, and Yugoslavia. Primary and secondary education programs will be carried on in 19 countries. With the direct aim of teaching skills required for a higher living standard, fundamental education programs will be conducted in 9 countries, while 8 will receive help in technical education projects.

As in the past, the training of adults and children, the education of teachers, the attack on illiteracy, the training of scientists, the support of research, the reproduction and the translation of the great literature of all countries, of the great works of art—all of these and other projects will continue.

What does all this cost us, as taxpayers? About 3 cents per person per year. Even from the standpoint of self-interest alone, the benefits to Americans in terms of increased world productivity, accelerated international trade, and increased understanding make this a very good investment in peace and security.

It is to be hoped that, as literacy increases, the workers in the economically underdeveloped nations will learn how far superior the lot of the workers in the democratic countries is to their own.

This could well lead to the organization of strong and free trade unions which would advance labor's economic well-being and thus expand the economies of their countries.

As President George Meany stated in his New Year's message in summarizing the program of 1955 for American labor:

"Our first concern must be for the preservation of peace. That goal can be accomplished by strengthening our national defense, by reinforcing our alliance with the free nations of the world, by participating with them in effective programs for broadening international trade and economic growth and by joint resistance against any further appeasement of the Soviet conspiracy."

There can be no doubt that the programs of UNESCO will serve to assist the free world in accomplishing its goal of preserving the peace.

Since much of the bad feeling, suspicion and distrust between peoples is based on ignorance, which evil leaders can turn to their selfish advantage, the work of international education can make a concrete contribution to peace. As the people of the earth learn more generally, they will learn more about the Soviet slave empire and be able to see through its disguise as a reform movement. They will learn—particularly those in Asia and Africa who have had little if any experience in democracy—that the oppressed have the most to gain through freedom; that they would lose even the little they now have through Communist tyranny.

The United Nations and its educational, scientific, and cultural organization, UNESCO, are in the forefront of the international struggle for freedom and peace. UNESCO is helping the workers in many countries in their struggle for bread and peace.

In the preamble to the constitution of UNESCO is a phrase which is almost an axiom:

"Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed."

Editorial Comment on the Tariff Issue

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include an editorial from the April 5 issue of the Eureka (Calif.) Humboldt Standard.

I, personally, am very appreciative of the comments in this editorial on the problem of tariffs and trade. Such a constructive analysis is heartening, especially in view of the constant published criticism which would infer that Congress is opposed to world trade.

I know it is not the intent of Congress to restrict trade. We are fully aware that trade between nations of the world is good for all concerned. But certain checks are necessary or else the high standard of living attained by the American people—through their own efforts and enterprise—would surely be

jeopardized if America were made a dumping ground for surplus foreign production.

The wide variance between American workers' standards and those of other countries should never be lost sight of in formulating trade agreements. Too often this has been ignored, or minimized, by those who would substitute international politics for sound economic reasoning in negotiating tariff concessions.

Congress should have the right of veto over proposed tariff negotiations, in a like manner accorded Presidential reorganization plans.

I am pleased to include the views on this subject expressed, as follows, by one of the leading newspapers in the First Congressional District of California:

SCUDDER ON TARIFF RATES

In the news from Congress these days there is a good deal of comment relative to GATT, a term which is somewhat reminiscent of the alphabetical maze associated with the advent and course of the New Deal, which coined so many such references to identify the myriad agencies that sprang up during that period.

GATT, by way of information, means General Agreement on Tariffs and Trade. The agency itself was set up about 7 years ago, representing an agreement among some 33 nations (including the United States) as a sort of temporary tariff truce, devised as a method of promoting exchange among these nations during the period of postwar readjustment. Recently, the State and foreign departments of the participating nations agreed at Geneva, Switzerland, to put the arrangement on a more permanent basis.

This new agreement, however, has had the result of stirring up a controversy between the administration and Congress over its provisions, its proposed duration and various other factors. Basically, what it boils down to is a battle over the question of whether Congress or the administration in power shall control tariff levies. The significance of the current controversy and the importance of the issue are indicated by the fact that, according to veteran observers, the debate now raging in Congress is the hottest since 1929, when the Smoot-Hawley Tariff Act was adopted to set up a protective wall around depression-struck American industry.

Further reducing the dispute to its basic elements, the issue is that which has been debated for a great many years—protective tariff versus relatively free trade. And, for that matter, this is an issue which doubtless never will be finally settled, in view of the opposing political philosophies involved representing, largely, partisan views.

At any rate, however, Congressman HUBERT B. SCUDDER, representing our own First California Congressional District, voiced some significant and timely comment on the entire tariff situation, including GATT, in remarks made recently in the House of Representatives. Mr. SCUDDER prefaced his remarks by the declaration that tariff rate negotiations should not be made a pawn or bargaining point in international politics but, rather, should be based solely upon economic conditions existing in the countries involved and should be equitable from the standpoint of the importing country and our American economy. And this, certainly, is a point of view that makes extremely good sense.

Mr. SCUDDER pointed out, among other things, that the United States has been a consistent leader in reducing tariff rates to a point where, at the present time, our tariff rates are among the lowest in the world, 5.1 percent on the average. By contrast, 37 other countries maintain higher tariff rates. For example, the United Kingdom imposes a tariff schedule amounting to 25.6 percent on the average, including revenue duties and, in addition, imposes strict quotas, license requirements, dollar control and favors empire countries with low rates. France has an average tariff rate of 10.6 percent, Mexico 20.6 percent and Japan as high as 50 percent on some items.

Again, Mr. SCUDDER points out that the answer to the trade problem does not lie in the relatively simple approach of cutting American tariff rates. He insists, and rightly, that schedules must be considered from the standpoint of American industry, labor, and agriculture and that this Nation cannot afford to go along with the idea that we can absorb the surplus of our overseas friends with whom we do business.

On this latter score, he points out that as Americans we are justifiably proud of our high standard of living. For instance, American industrial workers receive an average of $1.83 per hour, compared to 19 cents in Japan, 46 cents in France, 47 cents in Britain, 44 cents in West Germany, and correspondingly low wages in other countries. Domestic producers, he points out, cannot compete with products from cheap-labor areas because, largely due to United States aid and assistance programs, other industrial nations now have machines as modern and efficient as our own, with equally skilled laborers. Without protective tariff regulations, he declares, the end result will be the tearing down of our hard-earned wage standards. Which, again, is a viewpoint that makes good sense.

Bringing the situation down to cases, Mr. SCUDDER notes that in our own district the price of crabmeat has been driven to such a low point by imports that it is almost financially imposible for local fishermen to operate, with several plants already closed down. Japan, in this instance, represents the threat to American industry, in view of the fact that 60 percent of the crabmeat consumed in this country is imported from that country. A similar situation is threatening the plywood industry, due largely to the fact that hardboard has been erroneously classified as a paper product under the existing tariff rules.

In summing up his stand, Mr. SCUDDER declares:

"Tariff rates should be based wholly on the findings of a bipartisan Tariff Commission, after receiving testimony from representatives of industry, labor, and agriculture * * * based on economic conditions as they exist. Those findings should be final, and if they are to be varied in any manner, it should not be done without congressional approval. In this way the constitutional responsibility of Congress in determining trade policies would be maintained, and adequate protection should thereby be accorded our economy."

And again it is apparent that anyone concerned with American industry and our American standard of living (a concern which, unfortunately, seems to have been lost sight of by some of our high-pressure foreign aid "do-gooders") must concur with Mr. SCUDDER's comments.

New Horizons

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MEADER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Detroit (Mich.) News of April 18, 1955:

NEW HORIZONS

Apparently Governor Williams has accepted the Democratic showing in this month's election as a mandate to see the world. He left New York's Idlewild yesterday with bow ties to last him through England, Israel, Jordan, Lebanon, Turkey, Greece, and France.

His tour will consume 3 weeks and end in New York and Washington, where he will be exposed to reporters and TV interviewers, drawing him out on the world's troubles.

Others before him—Adlai Stevenson and the late Wendell Willkie and Tom Dewey—had made their grand tours when their box appeal had already wilted. It may be then that Governor Williams sees some point in staging his hegira at this point, against the background of 1956, when his aspirations to the Presidency come to full flower.

This is the seventh time this year the governor has left the formalities of office to Lieutenant Governor Hart. He has been absent on chores as far afield as telling Californians they should have honest elections.

For 6 years the governor has won considerable sympathy with his complaint that he couldn't get the cooperation of the legislature. In most of that time the legislature was in no mood to cooperate with itself. In the present year, with the legislature moving into the climactic weeks of debate on his program, he is beguiled by the prospect of being heard over an international radio hookup from Tel Aviv.

Only the unreflective will wonder why the governor can afford to be absent at so critical a juncture in our public affairs. Actually, his absence changes little. As long as government remains under the watchful eye of Michigan's No. 1 Democrat, Walter Reuther, the governor in good conscience feels he can leave Lansing to campaign, even in Istanbul.

Food: Not Less, but More

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. HOPE. Mr. Speaker, the current issue of Newsweek, under the heading of "Food: Not Less, but More," carries a most interesting article on the subject of agricultural research.

The article makes reference to the work of the Council for Agricultural and Chemurgic Research, formerly known as the National Farm Chemurgic Council. This organization which for many years has sponsored and encouraged the development of industrial uses for agricultural products is now broadening its activities. Under the able leadership of its president, Henry T. McKnight, it has enlisted the support and assistance of all of the general nationwide farm organizations. Its board of directors includes representatives of farm groups as well as officials of many business organizations dealing with agriculture. I am told that five major foundations are now contributing members of the organization.

The council, of course, works with land-grant colleges, the Department of Agriculture and other Government agencies as well as private research organizations.

The Newsweek article, which I am submitting herewith as a part of my remarks, is a challenging discussion, not only of recent research achievements in agriculture, but of the many problems which lie ahead in that field:

FOOD: NOT LESS, BUT MORE

Behind each mouthful we eat, behind the farmer, the food processor, and the supermarket, stands a little-publicized but critically important line of endeavor—agricultural research. Within a generation, the men of this quietly phenomenal science have put a meaty abundance on the American dinner table envied by all the world.

But with miracles come huge problems. From a glance at the current United States farm surplus, one might conclude that science and mechanization have lured the farmer into overproduction. The truth is far from this. The embarrassing pileup of wheat, corn, butter, etc., is destined to vanish soon.

One good drought could do it. In any case, it will soon be eaten away as the population boom adds 2.5 million mouths a year to the national stomach. If these mouths are to be fed, farmers must become much more scientific than even the best of them are today.

In the following special report, based on talks with top authorities in the field, Newsweek Science Editor Richard K. Winslow tells of the marvels already achieved by agricultural research and of the knotty problems still to be solved:

"Last week a canny Iowa farm manager, an old hand at 'selling' research, put his finger on the changed mood that has revolutionized American farming.

"Before the war, the county agent needed several seasons to put across a proven point on soil care or insect control. Most farmers would wait for the fellow down the road to try it first. Today, it's the other way around. A farmer snoops around an experiment station, then rushes back to try some discovery that the scientists haven't half tested."

For the 1955 season, this science-minded farmer has a bumper crop of fresh wonders to keep his eye on.

A Midwest experiment station is about to release a strain of corn with husks so tough a bird can't peck through. It will also fend off its old enemy, the borer.

Since January, American cattlemen have been slipping a female sex hormone, stilbestrol, to 2 million steers to make them bigger quicker on less feed (an operation, scientists say, that will not affect a steak-lover's manhood).

Breeders also are talking seriously of impregnating 200,000 cows with the frozen semen of a single prize bull.

In New York City, a chemist is taking the last kinks out of an edible sugar-based detergent made from cane and beet sugar. Soap and soap powders containing it do not leave rings around the bathtub, do not sting the eyes—and wash spinach thoroughly.

More, more: To some experts—the ones who can see beyond the misleading mountains of today's surpluses—such advances are deceptive. They are not nearly enough to assure that United States agriculture will continue to get its job done.

One of these men, Dr. Byron T. Shaw, farm research chief of the United States Department of Agriculture, estimates that, if the average American is to continue to have as much meat to eat as he did last year, all acreage that is currently idle will have to be back at work by 1960. By 1975, even if all marginal lands are used, there might be a deficit of more than 100 million acres. To meet this, livestock production alone will have to be nearly doubled on the land at hand.

But the output of the hard-pressed hen, for example, has already been pushed from an average 100 eggs a year to 180. Broilers have 70 percent more meat on them. For further big increases, the hen and her rations—already nutritional dynamite—will have to undergo some serious redesigning.

Big push: To improve and broaden agricultural research, the National Farm Chemurgic Council—a group of influential farm, industrry, scientific, and Government leaders—is launching a concerted campaign on many fronts this month. This is the group which has long pioneered in promoting industrial uses for such items as corncobs, soybeans, peanuts, and other farm products. They have made such a dramatic success of this that these products now account for 8 percent of the $30 billion total farm sales. However the chances for further expansion along these lines look dim in view of the mounting competition from petroleum derivatives. So the council is currently broadening its scope to embrace all aspects of agricultural study, from the test tube to the consumer's palate. (To emphasize this, it is changing its name to the Council for Agricultural and Chemurgic Research.)

The council's president, Henry T. McKnight, a Virginia cattle raiser, is alarmed by the not too surprising fact that industry's investment in research is five times that of agriculture. "It seems pretty shortsighted," McKnight says, "when you consider that the $15 million spent to develop hybrid corn now brings in more than $1 billion a year."

To keep the United States diet as rich as now in protein, McKnight figures that the $300 million spent last year for farm research must be doubled within 5 years. (Half of the annual bill is paid by the government, Federal and State, and half by food processors and farm suppliers.)

Antibiotics: Whether or not the council achieves its goal in that short time, farm research will continue to unfold excitingly. The big news story at the moment is what is being done with antibiotics, the wonderfully versatile wonder drugs which alone may prove a considerable antidote for the land shortage. They are performing startling feats in making an animal transform more of what it eats into good lean meat.

Antibiotics were initially used on animals to knock out bacterial infections. Soon, scientists found that in smaller doses, they also made the animals grow faster. First fed to chickens and pigs, they have been supercharging cattle and sheep to a profit-doubling extent in the last 2 years. Even mink and beagles are thriving on them. In Terre Haute, Ind., the Pfizer Research and Development Farm, which feeds and weighs experimental cattle like rats, now serves a special antibiotic-and-hormone cocktail that is setting fantastic new records for induced growth.

Antibiotics may have even greater potential for plants. Fresh on the market are streptomycin sprays that knock out costly bacterial blights on fruit trees, tobacco, peppers, tomatoes, and potatoes. After treatment, the plants show big crop gains, leading to speculation that antibiotics not only control plant diseases but may, as was found with animals, somehow stimulate plant growth.

Experimentally, these potent substances are also controlling fungus attacks, responsible for a major part of the Nation's $5 billion-a-year crop loss from pests. They are being screened as insecticides. Dramatically, they are being studied as a means of altering and improving the very chemical characteristics of plants, including tobacco and cabbage, as they grow to maturity.

A present obstacle to their widespread use for all this is an economic one. Antibiotics are pretty expensive for repeated sprayings of low-price crops.

Closer at hand, probably, is the antibiotic preserving of meat, dairy products, and vegetables. This may soon compete with radiation sterilization of foods, which, apart from some use in preventing potato spoilage, is still some years away. Dr. F. E. Deatheridge, head of the Ohio State Biochemistry Department, embalms fresh-killed steers simply by pumping an antibiotic through their arteries. The meat then will keep through 3 hot summer days and acquires, in the process, a delicate aged flavor. Similarly, by pumping brine and smoke flavor into a slaughtered hog, Dr. Deatheridge thinks he can put ham and bacon on the table in 3 days instead of 3 weeks.

Future gaps: Supplementing the antibiotics, hormones, and other surprises on the brink of development, the enterprising farmer of the future will have an old standby to rely on: A choice of some 40,000 agricultural chemicals developed over years of research.

All these will help, but the farmer will still have other problems—pressing problems that demand immediate and thorough investigation if those 2.5 million new mouths a year are to be adequately fed. Some of them:

Mechanized as farming is, the farmer still spends an estimated 65 percent of his day shoveling, lifting, and toting. Needed: A variety of radical labor-saving devices—everything from fertilizer spread by the same vehicle that delivers it to the farm, to pipelines for milk from the udder to the vat.

Marketing is often a Stone Age process, capable of depressing many a farm item even when production has been modernized. Needed: Studies showing the dairyman how to sell his beverage, for instance, as fast as brewers do, and research to ease the way for more vertical organization in marketing.

Though botanists have cataloged 300,000 plants from all over the world, chemists have intensively analyzed no more than a dozen, notably corn and soybeans, for use by industry. Needed: A greatly stepped-up search of all plant life for new foods, pharmaceuticals, and chemical products.

By 1970 American industry will have doubled its already gargantuan thirst for water. With water already in tight supply over most of the Nation, crop irrigation is spreading fast over the eastern half of the country, for it enlarges the yields and helps insure against drought. Needed: Commonsense, stricter conservation, and above all, more research—on the development of crops and grasses thriving on less water, and on rounding out theories of the water cycle that can be applied to each locality.

This is perhaps the biggest and most ominous scientific lag of all. Without water, all agricultural research could quickly become so much theory.

REVOLUTION AT THE DINNER TABLE

In just 30 years there have been big changes in what Americans eat and the way it is produced on the farm. Some of the most startling shifts:

	1925	1955
Appetites increased:		
Beef per citizen per year ..pounds..	59	72
Oranges.....do....	20	58
Chicken.....do....	14	23
So did farm efficiency:		
A farm worker produced food for.....people..	8	19
Crop yields per acre ..units..	100	130
Farm tractors.....	246,000	4,600,000
Food production of farm animals.....units..	100	150
But—		
Production expenses ..units..	100	300
Average farm size..acres..	141.9	215.6
Farm population.....	31,200,000	21,000,000

Ijebu-Igbo Is Listening

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. BOW. Mr. Speaker, recently there appeared in the Christian Science Monitor a letter to the editor from a resident of Ijebu-Igbo, Nigeria, Mr. Donald J. Eberly. Mr. Eberly wrote the editors of the Christian Science Monitor about the program of the United States Information Agency for Africa and also touched on some of the other types of news, information, and music which are available to the Nigerian listener. It is a very interesting summation of the situation in Nigeria and, under leave to extend my remarks, I would like to call it to the attention of my colleagues:

IJEBU-IGBO IS LISTENING

To the Christian Science Monitor:

In your edition of December 18, which has only recently arrived by slow boat to Nigeria, there was an article about the discussion of policies and activities of the United States Information Agency at a Massachusetts Institute of Technology conference. This report reminded me of much less formal discussion about the same topic which occurred at MIT not many years ago.

While we had stimulating talks about this subject, we realized we could never do complete justice to the topic since we had not witnessed an information program in operation. Now that I have spent 18 months at a secondary school in a small Nigerian town, I should like to record a few impressions concerning the information program as it affects Ijebu-Igbo.

News of the United States reaches us through many and varied media. Our shortwave radio brings us such stations as Radio Pakistan, Radio Moscow, the BBC, the Voice of America, and WRUL, the privately sponsored American station. Local newspapers carry American news received from Reuters or the United States Information Service in Lagos. Occasionally, USIS may send a speaker or its portable cinema van. Here at Molusi College, we have received several hundred books from several American sources.

That is the extent of sources of American information available to the citizen of Ijebu-Igbo. The shortwave radio is not such a great luxury as one might guess; a good one run on a dry battery may be obtained for about $30. What do these various sources tell us about the United States?

Radio Pakistan often brings us encouraging reports on the progress of United States technical assistance projects in that young nation. Radio Moscow carries the customary vituperative attacks on America of which we read so much in our newspapers. What not all of us may realize, however, is that these diatribes are attractively arranged, somewhat like American commercials. Many listeners are content to put up with 5 minutes of rubbish if they can have 25 minutes of stirring Russian music.

BBC does not seem to be concerned with propaganda; it caters to a worldwide audience of British subjects who desire the same type of program they would receive in the British Isles.

The Voice of America is, in my opinion, not well designed for African listeners. It seems bent on showing the evils of communism and nothing else. It is the "nothing else" which worries me. I am convinced that this gap can be filled by a specific concern for Africa. On my way to class several weeks ago, I was stopped by one of my fellow teachers, a Nigerian.

"I heard your President give a speech on the radio last night," he related with a beaming face.

"That's nice," I said. "What did you think of him?"

"I like him very much. He mentioned the importance of Africa in his talk."

I am sure the mere mention of that three-syllable word, Africa, on the lips of President Eisenhower, did more to win the approval of my friend than the rest of the speech. What greater prestige could be won by America by a more concentrated and specific concern for Africa.

While casually turning my radio dial, I often find myself stopping at WRUL. Why? Because WRUL always fills 1 of my 2 criteria for radio listening—an intelligible voice or pleasant music. If Africans have the same criteria, would it not be advisable to woo their attention by a selection of African music?

United States Information officers in Nigeria do a consistently fine job in reporting news of special interest to the leading newspapers in Nigeria. For example, there was excellent coverage of the Supreme Court decision of last May on the school-segregation issue.

The one speaker from USIS who came to our school on invitation was well received. There are, of course, severe limitations on time and manpower in such a program of information. The two film shows that were brought here by USIS were received with rapt attention. One film was devoted to the need for and the consequent development of Boys' Clubs in Egypt. Just the familiar sight of palm trees helped to bring the lesson home to the viewers.

Film showing is a project which gives evidence of being worthy of great expansion. If the cost of one battleship were converted into cinema vans and the cost of operating them, every person in Nigeria could see a film show a month for several years. In more impressive terms, President Eisenhower surveyed the positive things that could be done for the cost of one modern heavy bomber in his memorable speech of April 16, 1953.

Many books have come to us through voluntary groups and friends in the United States. These have been the much-needed textbooks and biographies. Among the governmental agencies, the United States Book Exchange Service, in conjunction with the Library of Congress, has similar books plus magazines such as the National Geographic and Popular Science. The Department of State, under a program initiated by Chester Bowles while Ambassador to India, has sent a fine selection of pocket books. Included in this selection are works by Dwight Eisenhower, Albert Schweitzer, George Gamow, Alexis de Tocqueville, Robert Frost, and the Christian Science Monitor's own Edmund Stevens.

That is what I will tell my friends from MIT at our next bull-session. I hope our State Department will be listening.

DONALD J. EBERLY.

America's Perpetual Disease

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address on the subject America's Perpetual Disease, delivered by Rev. Feltham S. James, department commander of the American Legion, Department of South Carolina.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S PERPETUAL DISEASE

(A speech on national security by Rev. Feltham S. James, department commander, the American Legion, Department of South Carolina)

The men of many wars lie silent. Victims of a terrible disease. Their names are etched on time-discolored tombstones, and are unforgettably engraved on the hearts of all posterity. The battles they fought made history, yet to many of them the glory of the victory was their's on history's pages only, for we have not stamped out the disease. In spite of the achievements of science, in spite of the development of the wonder drugs of our time, in spite of the discoveries that have rid mankind of deathly plagues, America is still infected with a disease that has claimed uncounted thousands. It is America's perpetual disease. The tragic results of that disease are visible in every cemetery where lie the remains of our soldier dead; in every hospital where the maimed and the sick are suffering from battle-caused inflictions; and even on our streets where the crippled and handicapped depict the casualties of war.

"America's perpetual disease" is the result of the failure of the supreme legislative bodies of our country to fulfill their obligation laid down in the Constitution. In the preamble of that cherished document we read: "We the people of the United States, in order * * * to provide for the common defense, * * * do ordain and establish this Constitution for the United States of America." To provide for this common defense Congress is given power "to raise and support armies" and "to provide and maintain a Navy." Except in time of extreme emergencies Congress has not made provision for the protection of the Nation. Therein lies "America's perpetual disease"—failure to provide for the "common defense."

"America's perpetual disease" began in the time of George Washington when we fought the Revolutionary War without trained men. We did that after 10 years of warning that such a conflict was bound to come. Oh, we gained our independence, but the tragedies of our loss are buried up and down the countryside in marked and unmarked graves.

After the "shot heard around the world"—after Lexington and Concord—English General Howe shoved the colonists before him with the ease of a vessel ploughing the lanes of the sea. The untrained, undisciplined, poorly equipped Colonials ran pell-mell at the sight of the British Red Coats. In saying that, I am not trying to detract from the heroism of the soldiers of the Revolution. But it wasn't an army that George Washington had. It was a collection of fellows who hadn't been taught the first principles of armed conflict, did not understand discipline, who had a few togs, were poorly conditioned and scarcely knew how to line up. Nothing, you see, had been done in preparation. It was the first on-set of "America's perpetual disease." We can't blame them for running. We can't blame them for deserting by the thousands. They just didn't have a chance against well-drilled and well-trained opponents. George Washington's fighting of the whole war might be likened to a football coach who is given a new squad of men every Monday morning and is expected to win all the games on Saturday against well-coached teams.

We actually never won the Revolution by either our power or our skill. Because of our

failure to make preparation, we dragged through 8 years of death by exposure, disease, and the bullet. And yet we had material available in the colonies as fine in ruggedness, character, and marksmanship as anywhere in the world. Of course the men became discouraged by the wholesale when they realized that they had little chance against the well-trained British and when they saw themselves officered by persons as unskilled and unlettered as themselves.

But more surprising is what was done after the war. Here is the first evidence that America had become completely infected with the disease of unpreparedness. After the war we dismissed our entire staff of leaders and all the soldiers—except 80. These 80 simply worked around the quarters and received no practice or instruction. We had the idea that there would never be another war. Any attempt to set up an army was met by charges of professionalism—despotism and tyranny. Armies had been the plaything of kings and the people would have nothing that even suggested the tyrannical and despotic ways of royalty. George Washington did his dead-level best to show them how false was such a view. He begged and pleaded and advised, but to no avail. He wrote of the Revolution: "Had we formed a permanent army in the beginning, we should not have been the greatest part of the war inferior to the enemy." He also wrote: "To be prepared for war is one of the most effectual means of preserving peace." Governor Harry Lee, of Virginia, about the same time, went even further and said, "Convinced as I am that a government is the murderer of its citizens which sends them to the field uniformed and untaught, where they are to meet men of the same age and strength, mechanized by education and discipline for battle, I cannot withhold my denunciation of its wickedness and folly."

Yes, we were warned against the tragic disease with which we had become infected—but we paid no heed. The people refused to look at the picture. They refused to take out preventatives or insurance against the disease. Even when the United States became a Nation and our Constitution was adopted, we had an army of the magnificent size of 595 men.

The Indian raids began to take their toll. We had no army to fight them. A thousand perished by tomahawk and arrow in Kentucky alone, with no army to protect them. A hastily recruited force of men was ambushed and annihilated in Ohio. And so goes the record of history with the Indians. Our weakness furnished the savage with new courage, and we cannot even estimate the thousands who died.

There was only one bright spot in this decade of terror. Washington had selected Anthony Wayne to lead troops against the Indians. Wayne trained his men for over a year before he took them into action. At the Battle of Fallen Timber, 11 years after the Revolution, he completely spanked the Indians, and they let the settlers rest in peace for a long time. Trained troops would have spared the lives of many, but we were infected with a disease.

War scares came one upon another. One with France 15 years after the Revolution. One with Spain 20 years after the Revolution. One with Great Britain 25 years after the Revolution. The only thing we did about any of them was to vote huge sums of money and call out thousands of men on paper. At no time did our Armed Forces, even poorly trained, number 4,000 men. The Army never rose in time, and it never stayed long enough afterward to have any effect. So we arrived at our second war with Great Britain, 29 years after the Revolution, weaker proportionately than when we faced that conflict.

The War of 1812 would be funny were it not so tragic. Our history books, in order to make us the perfect people of the world, omit much of it. Here again we find thousands of untrained men fleeing from the fields of combat, fleeing because they were unprepared to meet a well-trained enemy. We had no management or leadership and the fine manhood of our country, for want of previous training, was held up to ridicule, suffering, casualties, and disgrace. We called out over a half-million men and could not drive a maximum of 16,000 British soldiers from our shores. We spent nearly $200 million, not counting pensions, when a small percentage of that would have maintained an army of trained soldiers that could have met the situation. We sacrified 6,000 lives in camp and on the battlefield, when it should not have been much more than 100. We should thank God for Napoleon and European weariness, which called off the British.

After this narrow escape of 1812, we did not do as we had done after the revolution. We didn't do away with our preventative medicine. No, sir, we kept our Army in training—for 3 whole months. Then we reduced it to 10,000 men on paper. Five years later, in the face of protests by such men as John C. Calhoun, we cut it to 6,000 men. Then came the Seminoles, Creeks, Black Hawks, and others with their gentle art of taking scalps. Again we had no army to fight them. What army we had was scattered up and down the country in lonely forts. Oh, Congress got afraid once and hastily voted for our Army to be raised back to 10,000. But they could not be trained in time and the slaughter went on. General after general on the frontier, seeing the uselessness of his struggles, asked to be relieved of his command. One hundred and seventeen of our best officers, in 1 year, resigned from the Army rather than to be a party to American's perpetual disease.

By 1842 the Army was reduced to 8,613 men. A Congressman on the floor of the House stated that year: "We have no prospects of war. We have more reason to suppose that the world will grow wiser and that the humane and oft-repeated wish of the wise and good, that the sword and bayonet may be converted into scythe and ploughshare, will be realized." No prospects for war—but 4 years after that statement came the war with Mexico. It came like a bolt out of the sky. War has a way of sneaking upon us like a thug in the night.

The war with Mexico found our 17 million people with an Army of 5,300 men all told. Think of that. General Taylor had to fight with less than that. He had just 3,000 troops against a possible 50,000 Mexicans. And his command was the largest regular force we had assembled since the Revolution. His position was perilous as he went forth with his little band of trained soldiers. He won over superior numbers but it was a hard struggle and it cost dearly in lives. In the years just before this war, Congress twice tried to abolish West Point and once made no appropriation for it. The superintendent borrowed at his own risk $60,000 from a private individual to keep it going. That is a symptom of our perpetual disease.

But we didn't learn after three wars. After the Mexican conflict, we reduced our Army to 7,000 men. That is the same size it was after the War of 1812, 36 years before. We reduced it in spite of the fact that we had a population of 17 million and a territory of nearly a million square miles. In this vast territory our paltry 7,000 struggled against hundreds of thousands of Indians. By 1861, the entire Army numbered a little over 15,000 men.

Then came the Civil War. For 30 years the North had been trying to black the South's industrial eye, and the South had vigorously defied the threats. Oh, there were speeches—speeches that there would be no war; that brother would not fight against brother. Even when South Carolina seceded 4 months before the conflict, and six other States followed, we did nothing about it. Even when we saw the South call up 100,000 men for a year's service, we sat like spectators on the bleachers. We continued the practice of not being ready. In 1860 we even passed a bill to abolish the Navy. The North threw away 365,000 lives, not counting the thousands who died in the Southern forces. Here was the bloodiest conflict we ever fought and it could have been prevented by wisdom and foresight. "America's perpetual disease" took its toll. We fed our manhood like babies into the burning cauldron of Moloch, all because we were infected with the disease of unpreparedness.

After the Civil War—what happened? First, we trimmed the Army down to 38,000. The day before General Grant took office as President, we reduced it, against his urgent recommendations, by 28 regiments. By 1876 we had a scant 25,000 soldiers. And there it remained, for almost a quarter of a century, until the Spanish-American War. There it remained in spite of increased population and increased territory. There was a war party who wanted to keep peace and a peace party who wanted us to fall into war. A paltry 17,000 soldiers were scattered up and down the country in little groups to protect the advancing settlers against hundreds of thousands of Indians.

The American people, after 25 years of sleep, awoke one morning to find the battleship *Maine* at the bottom of Habana Harbor. And we were in war again. Amazed and confused we rushed this way and that. And yet, we knew it was coming. Just 2 years before the *Maine* a Congressman rose and said, "I do not take much stock in an early war with Spain or England." That same day Joe Cannon said, "I want to say that I do not believe we will have a war the coming year, nor the year after. I doubt if there will be any during this century or perhaps the early years of the next century."

When the Spanish-American War blew up in our face the Army was the same size it had been 22 years before. It was scattered in little groups all over the West and on the borders. The War Department was clogged with 30 years of cobwebs. We had not learned a single lesson from a hundred years of tragic disasters of our own making. Here was unpreparedness at its worst. Oh, we called up our volunteers but they did not have time to train. "On to Havana," the people cried. What matter to them the extravagance of human life. Congressmen who had taken delight in blocking legislation for preparedness were the loudest in crying for guns and vessels to protect their districts. But we lost 7,000 lives in 2 years.

After the Spanish-American War for the first time in history we strengthened the Army. We raised our Army to 100,000 for 75 million people. We set up other service schools and made it possible for our officers to have a good military education. We formed a general staff. For several years it looked as if our Army would be a going concern. Then we lagged. Then came the old wolf in sheep's clothing. Congressman DIES in the House of Representatives, stated in 1913: "God has placed us on this great, rich continent, separate and secure from the broils of Europe." Others propounded their propaganda of no more war. The people ate it up. They always have. It is something we like to hear. All Europe was arming but not us. By now our trained mobile force was smaller than our trained force before the Spanish-American War.

We were magnificently unready when we jumped into war on April 6, 1917. Someone had fired another "shot heard around the world" at Sarajevo. Europe was on fire and we had done nothing to prevent the flames from reaching us. We needed 200,000 officers, but did not have 10,000 trained to in-

struct them and at the same time to lead our forces. We had a few out-of-date airplanes, only enough artillery ammunition for a 2-day battle, no automatic rifles, and comparatively few machine guns and ordinary rifles. What equipment we had was out of date. We did not have time to adequately train the men called up in the draft. We sent men into battle who couldn't even load a gun. The people were excited. Flags waved and bands played. But that did not save a single life of a soldier sent into battle untrained and poorly equipped. Out of 2 million sent to Europe, 50,000 were killed and 65,000 more died. And I am sure many thousands of these because they were untrained for battle.

Well, after World War I we raised our Army to 280,000. Finally we were going to do something about this business of preparedness—we were going to provide for the common defense. We were at last going to obey the Constitution. But the efforts were short-lived. Congress reduced the Army to 175,000 for 120 million people. We began to destroy our equipment. What we kept went from bad to worse with little effort on improvement. Until World War II the Army was never more than 119,000.

You know about World War II. It is the same old story over again. We had not yet learned our lesson. The same old disease had us down again. The only bright spot was Roosevelt's National Defense Act, but that was too little, too late. Again thousands died because of insufficient training. Again men were sent into battle who couldn't even hold a gun. I was at the port of embarkation when replacements were sent in for my antiaircraft regiment, replacements who had never even seen an antiaircraft gun and who had not fired the rifle.

After World War II it is the same old story. We reduced our Army. We destroyed our equipment. The boys just had to get back home. But then came Korea and it is just about the same thing over again. In spite of our warning we didn't even have a good map of Korea when the fighting started.

Call me a militarist, if you will, but I believe that economy which cripples our national defense is nothing short of extravagance. I believe with Benjamin Franklin that "the expenses required to prevent a war are much lighter than those that will, if not prevented, be absolutely necessary to maintain it."

Did you ever stop and ask how many wars we have had? "Oh, about 10," you say. That is indicative of our knowledge. Well, we have just finished fighting our 112th war. One hundred and twelve wars—great and small—an average of about one war every year and a half since we have been a nation. We have fought all told more than 900 battles. The truth is—through the years we have had no military and no peace.

Once more we are coming up with a plan to provide for the common defense. Once more we are going to attempt to cure America of its perpetual disease. The national security training program must come to pass. Our Nation's ability to protect itself is our best insurance. With George Washington we say, "If we desire to avoid insult we must be ready to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

As members of the American Legion we are interested in curing America of its perpetual disease. The American Legion from its birth has been the foremost champion of national security. Being veterans with battlefield experience we are conscious of America's need for a strong defense. Adequate training and adequate equipment have grim meanings for the men who have borne arms in the Nation's defense. They know from experience how important it is to go into combat with good and sufficient equipment and to know how to use modern arms and how to defend against them.

Since World War I the American Legion has kept the torch burning for peace through strength. It has been called militaristic by the pacifists and subversive elements of our country, but it has not faltered in its effort to provide for the common defense. We are proud that in all of our 36 years of championing an adequate protection for our country, we have never been wrong in any of our major recommendations. The march of events has always justified the rightness of our course. We have worked; we have pleaded; we have demanded that the common defense be provided for. We are now waiting for the Nation and for Congress to catch up with the American Legion's policy on national security. We are out in front and mean to stay there. We mean to cure America—to rid America of its perpetual disease. We mean to fight until Congress fulfills its constitutional obligation to provide for the common defense.

Ethics and Politics

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. DODD. Mr. Speaker, recently former United States Senator William Benton, of Connecticut, delivered a speech before the Harvard Law School forum as part of a symposium on ethics and politics.

Because I believe that this speech will be of great interest to many people, I am today inserting it in the Appendix of the RECORD:

ETHICS AND POLITICS

As a part-time politician I thank Harvard for the chance to share this platform with two professionals. I also feel honored because politics is a noble calling, one of the noblest, and I am proud to be part of it, even part time.

Just 20 years ago I sold out my interest in my first creative business enterprise, the New York advertising agency of Benton & Bowles which I founded. I dedicated 6½ years of my life to Benton & Bowles, big full-time years when I thought only of business and of financial risks, uncertainties and profits; but of the 20 years since, I've devoted myself, in about equal parts, to three fields of action: first, to higher education, as an administrative officer of a university and as a college and university trustee; secondly, to the three businesses which I control and own, in publishing, motion pictures, and music; and thirdly, to politics, including service as Assistant Secretary of State, and later as a United States Senator.

Thus I've had an opportunity to compare the ethics of practitioners in three major fields. If we here tonight were to ask Dr. Gallup or Mr. Roper to get us a rating-scale of public opinion on the relative virtue, or perhaps the word is respectability, of the three groups, I'm sure the professors would come in first, almost with halos; the businessmen would rate second because, as President Coolidge said, "the business of America is business"; and the politicians would come last, and many would label them as mendacious and corrupt.

My own rating scale, based on my observations of the 20 years, and taking into account the pressures to which each group is subjected, would reverse that order. I would put the politicians first—and remember, please, I am speaking of ethics—and the professors last.

I hasten to assure you that my veneration for scholarship and the life of learning is not diminished by my discovery of its ethical deficiencies as ethics are understood by practitioners of business and politics. The professor does not apply his high code of scholarship to one significant facet in any code of ethics, the realm of private and personal relationships.

Early in 1949, after I had served in the State Department as a high administrative officer working closely with the Congress, but before I had any notion I'd ever serve in the United States Senate, I gave a talk to the Sales Executives Club of New York. I may have startled some of the members with this paragraph:

"The truth is that the Members of Congress—the five-hundred-odd Members of Congress—are the finest group of men that I have ever met anywhere; and on integrity, intelligence, hard work, they rank above any group of men with whom I've ever worked and, believe me, I know the business community well. I know the Board of Trustees of the Committee for Economic Development, and I am not without friends in the Chamber of Commerce and the National Association of Manufacturers. I would trust our United States destiny overwhelmingly to the Members of Congress, judged by intelligence, integrity, competence, and hard work, far ahead of trusting our country's future to the top business leaders as represented in these business associations. That is as great a tribute as I know how to pay to a group of men who are so frequently kicked around and abused, misunderstood and unappreciated."

Today I still hold with that view—and with far greater emphasis after my 3 years in the United States Senate—I hold with it even after 3 years exposure in the Senate to the condemned man from Wisconsin. The ethical practices of politicians are greatly underrated in contrast to other groups in our American community; and it is by such contrast that they must in part be judged.

The notion that all politics is dirty is one cause of the cynicism and apathy that keeps nearly half of all our eligible voters away from the polls, even in presidential years—a disgraceful record compared with the democracies of Europe. I pause here to pay high praise to my State of Connecticut where 93½ percent of the eligible voters went to the polls in 1952, the highest percentage ever achieved in any State in any election. I praise this percentage even though it was the Eisenhower vote which accounted for my own defeat.

This idea that politics is dirty is also one reason why otherwise estimable citizens avoid any personal involvement in politics. The truth is that only some politics is dirty. Mr. DeSapio and Mr. Javits can, if they will, tell you where the dirt is.

We are not here to minimize the ethical problems of politics. Many of these problems are very old indeed. From the Old Testament on, a high proportion of the great books of our Western World have debated the virtues that are required of political leaders, and the vices associated with political power and with the struggle for power. Plato and Aristotle had much to say about this: Plutarch very much. So did Machiavelli and later the 18th-century philosophers.

As my approach to the problem before us tonight, I shall seek to identify some major ethical problems of politics as they exhibit themselves in our day; and secondly, I shall discuss some steps we might consider in our effort to resolve them, at least in part, for our generation—more precisely, how we might pursue those steps which may reduce the powerful pressures toward mendacity and

corruption which our society inflicts on our politicians.

What are some of those pressures? And what are some of the easier things we can do to relieve them? In these two questions I pose a long series of discussions and debates before this forum. We cannot undertake tonight to develop a catalog. I shall only try to identify for you four major areas of acute ethical discomfort in politics, and briefly suggest approaches to relieving them.

I shall not invoke for you that great tried and true remedy of the orators and reformers, the only true, permanent, and sovereign cure, that of an ardent and informed citizenry. I shall not invoke it if only because from my efforts to sell encyclopedias and other books I know some of the difficulties in achieving this goal. This is a true goal, a great one, but it is very long range indeed.

Two of my four areas concern election campaigns. The other two concern the conduct of an officeholder, specifically a Member of Congress, once he has achieved election.

There are really three kinds of politicians. There's the candidate who's running and any good candidate must run hard. Then there's the same man after he's been elected, the officeholder. Finally, there's the man in the back room, the professional, the manipulator and compromiser whose power is often absolute and whose word must be better than other men's bond.

My comments tonight deal with the first two species of homo political and ignore the third who is often the most important of all.

As the first of my four areas, let's look at the financing of campaigns. This is the single most ticklish ethical question in the whole field of elective politics. Every candidate is now a panhandler, first among his friends, and then among people he hopes to make his friends. (Of course, I'm talking about Democratic candidates—we Democrats realize that a bottomless cornucopia flows automatically into the Republican coffers.)

The school of thought which holds that all politics is dirty of course believes that candidates and their campaigns are bought and paid for by the so-called vested interests. The truth is at least cousinly to this belief: it is that nearly every candidate, at least for Federal office, must violate the spirit if not the letter of corrupt practices legislation. The limitations set forth in the corrupt practices legislation are unrealistic for our day. Since these acts were passed, campaign costs have increased 400 percent to 500 percent and they will increase further with the greater use of television. The Congressional Quarterly records that candidates for Congress are now reporting a national total of $10 million in expenses per election, and the Congressional Quarterly adds: "The reported spending is actually far below what it cost to elect many candidates for contested seats." Ten millions is by no means an excessive total. The truth far exceeds this. Ten million is far too small to underwrite and pay for the campaigns which must be waged. All the professionals know this. Ask Mr. DeSapio. If you don't believe him, ask Mr. Javits.

Further, in defense of these higher and even higher expenditures, may I suggest that our political campaigns are our principal instrument for education in public issues, as our elections are our principal instrument for determining the public will. On that alleged $10 million rides the decisions we shall make about many tens of billions and, potentially, hundreds of thousands of lives. The 10 million, by current standards, is a pittance. It's the old nickel subway ride.

Unhappily for the morals of our generation, the present pattern of our corupt practices laws, Federal and State, is such a sieve that any Harvard undergraduate can drive a bulldozer through the holes. What is now needed is a realistic revision of existing corrupt practices laws, and then rigid enforcement of the new legislation.

Among reforms required is new legislation to provide high penalties on corporation officials who reimburse themselves, in one way or another, from their companies, for their campaign gifts. Another urgently needed reform is a greatly improved system of reporting campaign contributions. A contribution made in the open loses much of the sinister character of a hidden gift. I would insist also that this reporting take place not only immediately after the election but shortly before it, and again at stated intervals following the election, to disclose how a campaign deficit, if there is one—and there frequently is—is met. I think all of us should know about the NIXON funds, even before the recipient becomes a candidate for Vice President.

Fifty years ago Theodore Roosevelt felt so strongly about the ethical hazards in campaign financing that he recommended that Congress provide "an appropriation for the proper and legitimate expenses of each of the great national parties." I'm not sure I'd go quite as far, but I'm not sure I wouldn't. Here's a good study for some willing Ph. D. candidate. But before I embrace President Theodore Roosevelt, I'd like to examine possible ways to broaden the base of political giving. As a people we haven't yet learned to give for politics. Our political fund-raisers—and many of my best friends do it—are almost all of them part-time amateurs. Philanthropic money raising is developing as a science and an art. The political parties and partisans have yet to learn the techniques of the Red Cross, the Community Chest, the March of Dimes, the Harvard Alumni Association to which you are about to become abject subjects.

I'm merely opening the door into this first dark and murky area, that of the financing of political campaigns. I'm giving you a peek, but with little light. I haven't even touched the high spots.

I move hastily into my second area of danger—the character of the campaign itself.

I hasten to assure you I have no hope of overcoming the current excessive flamboyance of campaigns. I refer to the kind of exaggeration for which we Americans have developed a high tolerance.

But can we not concern ourselves with a moral peril point which is reached when a campaign becomes vilification and defamation, an attempt at political assassination? As a high example, I place in this category Governor Dewey's speech in Hartford, the capital of my State, when he told his audience that "Whenever anybody mentions the words 'Truman' and 'Democrat' to you, for the rest of your lives remember that these words are synonymous with Americans dying thousands of miles from home because they did not have the ammunition to defend themselves. Remember that the words 'Truman' and 'Democrat' mean bungling our country into war and the lack of courage or the capacity to win the war or to win a truce."

I take this as my example because this comes from no irresponsible political campaigner but from the 8-year titular head of one of our two great parties, a far more responsible role than that of any governor or United States Senator.

I take this as an example because I am here at the Harvard Law School talking to young men who could not be blamed if they wished to emulate Governor Dewey's present role, as a senior partner, in nomenclature at least, in a firm not unknown even in my community of Fairfield, Conn.

In this, my second area, I ask 2 questions, though I am not applying these 2 questions to my reference to Tom Dewey, who is perhaps an understandable idol for any young Harvard Law School student, even though a dubious one by the ethical standards which is our subject tonight. I ask these questions of those who seek to teach you. First, I ask whether our laws of libel and slander, applied to political campaigns, should be strengthened. In practice we have made it almost impossible for a complainant to recover damages for statements made about him in a political campaign. We have taken the position that "all's fair in love and politics." Perhaps a change is in the offing; a few weeks ago, a New York court assessed $25,000 damages against a candidate for Congress who described two of his opponent's workers as Communist fellow travelers. In my own second campaign, advertisements were run all over Connecticut attacking me in eight points as a Communist.

Is there not a question here of legitimate interest to your forum and to the Harvard Law School?

Even more valuable than strengthened libel and slander laws could be the creation of a permanent Citizens Elections Practices Commission, a national body which could serve as a model for similar State commissions. I urged the creation of such a commission when I served in the Senate. Such a nonpartisan commission of distinguished private citizens could be called upon, among other responsibilities, to issue reports each 2 years after elections, a kind of referee to report on low blows delivered during the heat of campaigns and to admonish against them, and then to recommend criteria of responsibility. Such a commission could sponsor an era of public enlightenment which our politics desperately needs.

My last two areas of moral hazard, for officeholders, are characteristically pitfalls of office as they are traps for campaigners. The first of these involves the familiar old dilemma of compromise. George Bernard Shaw once described a political situation as "smirched with compromise, rotted with opportunism, mildewed by expedience, stretched out of shape with wirepulling, and putrified with permeation." But politics has also been defined as the art of the possible. It has been defined even more precisely for the politician by T. V. Smith as "the art of compromising an issue without compromising yourself."

Compromise is necessary and inevitable in politics. But exactly where, in the necessary and inevitable compromising, exactly where lies the question of ethics? A good compromise is the best practicable solution of a problem, possible at a given time, in the interest of one's constituency, and of one's nation.

A bad compromise is a politician's decision to support the proposals of a special interest group, even though they may conflict with the general interest. A classical example is pork-barrel legislation. Personal financial gain is rarely the consideration of the politician in such compromises. What is at stake is votes the politician seeks to own or control. Rarely is outright cynicism involved, but rather what might be called gymnastic rationalization. That is why I prefer to speak of relieving pressure on the politicians, rather than of redeeming sinners.

The root of the pork-barrel problem, and by any other name it smells the same, is that the special pleaders control a bloc of votes—or successfully create the illusion that they do—and the politician is not convinced that he opposes the bloc, no matter how small it may be, he will gain an offsetting support in the general citizenry, by virtue of his opposition.

Here is the great potential role for the Voters' League, the Citizens' Council, the women who prefer politics to poetry. Here is the answer to the familiar question, "Does it do any good to write to your Congressman?"

Now let me move to my fourth area of acute ethical discomfort in the field of politics. This springs from the politician's need for publicity. Of all the crafts and professions, politics and the theater are the two for which publicity seems indispensable. This is no mere matter of ego satisfaction for the performers. A good press translates into tickets at the box office and into votes at the polls.

Applied to the politician, this urgent need for publicity is consistent with democratic theory. The ethical dilemma feeds upon the fact that what is interesting, what is newsworthy, has no necessary relation to what is important.

Congressman who knocks himself out trying to master tax measures, appropriations bills, tariff problems, water-resource issues, or any key problem may find his lazy colleague, or his opponent, grabbing the headlines with a quick denunciation of the latest shakeup in the Politbureau.

When I was a very junior Senator—in fact, No. 96 in seniority—a batch of Hoover Commission proposals, for the improvement and reorganization of the Federal Government, came before the Committee on Expenditures, of which I was the junior member. To my surprise, many of these worthy proposals had no Senate champion. Perhaps because of my business background, these proposals to save money and achieve efficiency appealed to me powerfully. I leaped into the breach, not, I like to believe, without some success. One columnist said of me he couldn't decide whether I was a Sir Galahad or just naive. I never was a Galahad; I happen to think my heart is reasonably pure, but it never gave me the strength of 10, or even 1½, in the Senate. But I was puzzled. The Senate has many able and dedicated men. Why had they not stepped forward?

Senator Wherry helped me gain understanding. After my speech in support of the Hoover Commission proposal to reorganize certain aspects of the Treasury Department's relationship to the banks, and I was the only Senator to speak for this proposal which was opposed by the banks and finally mustered only seven votes, Senator Wherry left his front row seat as Republican leader and walked back to my back row No. 96. We were friends from my State Department days. He said, "Bill, your speech reminds me of my first as a Senator; I prepared it carefully; as I spoke I saw the old and distinguished heads nodding in approval; I thought I was doing fine; but when the vote came, I wasn't there; I didn't have them; and I remember that as I walked off the floor Senator Reynolds came up to me and put a consoling arm around my shoulder."

At this point, Senator Wherry put his arm around me.

"'Kenny,' Senator Reynolds said to me, 'Kenny, we was with you as long as you was talkin'.'"

I learned that, older and wiser than I, the old hands of the Senate knew there was no political sex appeal in reorganization. There was little publicity, almost no incentive in terms of popular support, meaning votes in the next election, and there were some real and terrible penalties in terms of organized opposition of those who think they stand to lose, whether they be bankers or post-office workers.

In this my fourth year there is a great opportunity for creative ideas and I have one suggestion I'll give you tonight. Can we develop a system of recognition which is independent of newsworthiness? A month or so ago, when Harold Lasswell of the Yale Law School was visiting me, I suggested an idea to him. He is to be president of the American Political Science Association next year. I suggested that the association each year designate the 10 Members of Congress who had done the most valuable unpublicized work of the year. If no Member could be named twice in 5 years, that would mean that every 5 years 50 members would receive such recognition. I do not believe it would be difficult to make the selections. Such matters are common knowledge to the staffs on Capitol Hill. And I would not underestimate the value of such recognition even in a campaign. I believe Senator DOUGLAS would acknowledge other value to him in last fall's election in Illinois of the fact that he had been named "No. 1" Senator in a poll of Capital news correspondents.

My suggestion here is trivial, however, in contrast to the problem in this area. I give it to you because it's quick and easy. This problem well warrants a full evening by your forum.

Many of you young men here tonight in this historic hall will find yourselves within a few years deep in politics. I say, strength to your arms. The risks and hazards and pressures of politics are great. But the rewards outweigh them all. All your capabilities, all your experience will be called into play. And when other desires and ambitions have been satisfied, or blunted by the years, your desire to serve the public interest will sustain you.

I have outlined some of the pressure that operates against morality in politics. I have suggested a few possible ways of helping to relieve such pressures. But I have not mentioned the best solution of all. That solution is everywhere in this hall tonight. It is in yourselves, and in what you can and will and must do, for yourselves and for your country and for all of us, as you of the Harvard Law School move into politics. As your generation moves in and takes over American politics, in line with the great history of this hall and university, to which your presence here tonight shows you chose to conform, you will bring to politics all the truth and earnestness and honor that is in you. This is the best solution, the great solution, and to it I hope that some of you may dedicate yourselves here—in this hall—tonight.

Aid for the Koreans

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. DAWSON of Utah. Mr. Speaker, among many private agencies supplementing the United States Government in its worldwide fight against misery and want is the American-Korean Foundation. The Salt Lake Tribune in a recent editorial found its program worthy of special mention. The editorial follows:

AID FOR THE KOREANS

Attention has been focused lately on Formosa but meanwhile the enormous job of rehabilitating the war-ravaged Republic of Korea goes on.

The United States Government is contributing about $700 million this fiscal year, representing about half the value of South Korea's gross national product, but the program is geared to military necessity and expediency. A South Korean Army of 20 regular and 10 reserve divisions helps reinforce our security.

The damage caused by more than 3 years of fighting in the little country has affected every family, business, and institution in South Korea. Some industries were completely wiped out. The rural irrigation system was badly damaged. Cities, transport systems, and powerlines were wrecked.

The American-Korean Foundation, headed by Maj. Gen. Charles W. Christenberry, former deputy chief of staff of the famed Eighth Army, is taking the lead in helping the South Korean people rebuild their war-torn country. Stressing technical assistance rather than relief, the foundation is helping the Koreans to help themselves. It has spent more than $2 million in the fields of health, education, and social welfare. Schools, hospitals, and orphanages have been rebuilt; training has been given doctors, dentists, and nurses, and rehabilitation work carried out in other ways.

Patrons of the theaters in Salt Lake City, Utah, and neighboring States are being given an opportunity this week to contribute to the funds of the American-Korean Foundation. Money voluntarily donated by American people and business firms goes directly into the reconstruction program. Our investment in blood, money, and promises in South Korea is tremendous. And the job is only partly done.

The Late Walter White

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mrs. KELLY of New York. Mr. Speaker, it is with deep regret that we learned of the death of a true American, Walter White. As executive secretary of the National Association for the Advancement of Colored People, he played a leading role in the endeavor to have the principles of the Constitution of the United States adhered to on all levels of American life. To have full recognition of the dignity of all men was his chief objective.

Born with fair skin, blue eyes, and Caucasian features in 1893 in Atlanta's Darktown, he chose to remain proudly a member of the Negro race. At the age of 13, when he witnessed his first mobbing of a Negro in the streets of Atlanta, he started to fight racial segregation and discrimination. Walter White was indeed one of the great national leaders of American Negroes, and his name now lives with those other great Americans of his race, with Booker T. Washington, and George Washington Carver.

As secretary of the National Association for the Advancement of Colored People from 1929 until his death, Mr. White fought against lynchings and led the fight for a Federal antilynching bill. A lecturer, author of books and magazine articles, stalwart investigator of lynchings, mediator and consultant on various National and United Nations committees, he was ever vigilant, stoutly militant, and showed no hesitancy in bucking public opinion when he thought he was right.

During his lifetime, 3,017 men and women were lynched in the United States, but for the 4 years prior to his death, there had been not a single lynching in this country. Racial bias and discrimination in labor, industry, and in the arts, was on the wane, and desegregation in education was being effected. Thus it was that in the final days of his

life he saw the definite trend toward the fruition of his objective, the full recognition of the dignity of all men. In closing, I want to add the tribute of Marjory Jackson, a member of my staff:

Hard the battle
Day had just begun
Fierce the fight
In heat of noontime sun
Peace with twilight
Brought the victory won.
Rest from labors now
Most valiant and illustrious son.

Let's Count Our Blessings

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the following from the East Side News. Both of these articles deal with one of the most enlightened spirits that it has been my privilege to know, the Rev. Richard E. Evans, minister of the Presbyterian Labor Temple in my district. Eloquent as these tributes are to this distinguished religious leader, they cannot and do not do full justice to his extraordinary devotion to his fellow men and to his work as minister and pastor. It would take volumes to report fully on all that he has done for, and meant to, not only the East Side, in which he carries on his ministry, but for all America whom he seeks to serve.

The articles that follow are token tributes among the many that are his due:

LET'S COUNT OUR BLESSINGS

Living as we do in the shadow of the A-bomb and confronted each day with stories in the press of an alarming increase in crime and juvenile delinquency; of strife and impending war and disaster, we are prone to believe that all is evil and that virtue has abdicated.

It is therefore with pride, in this holy week of Easter and Passover, that we pause to pay homage to a man of God, our good neighbor, the Reverend Richard E. Evans, minister of the Presbyterian Labor Temple.

Under the dynamic administration of Dick Evans, who came to Labor Temple some 5 years ago, this oasis has become a true temple of all the people—a living, pulsating symbol of the brotherhood of man under the fatherhood of God.

At Labor Temple kids do battle on the basketball court, on the premise that if boys play together they can live and work together. Here, too, at Labor Temple is home for Hebrew School and Quaker Seminary; Russian Christian Choir and Seventh Day Adventists; Christian fraternity and B'nai B'rith; the Brownies, Boy Scouts, Family Circle, and veteran groups; for civilian defense, mothers' clubs, Jewish Writers Union, and Greek societies.

At Labor Temple the friends of Spinoza lecture and Mizrachi chapter meet. Here the fellowship of all men is revered and the welcome mat is out for those of every race, creed, color, and national origin.

For this is America, this is democracy, a shining face to show to all the world. We feel that the world-famous author, Will Durant, summed it up when he recently said:

"It gladdens my heart to see that my alma mater, Labor Temple, is in the hands of so noble a lover of humanity as Dick Evans, and is bringing together, without any proselytizing, men and women of diverse Christian and Jewish denominations, and helping them to live together in friendship and concord. I owe much of my education to Labor Temple. It taught me that civilization is a cooperative product, the work of many people; and there I learned that clarity is a moral obligation of a teacher. I hope that this unique institution which does not merely preach interfaith fellowship but practices it every hour of the day, will be adequately supported to go on with its undiscourageable conviction that all men are brothers."

And when we pay tribute to Dick Evans and to Labor Temple, we hasten to include the gracious little lady, who not only has been the inspiration of his life but whose radiant spirit permeates every activity of this historic institution. In her own right she has lived a magnificent life of devotion to God and service to humanity. His foster-mother, Miss Sarah E. Dickson, the first woman elder in the history of the Presbyterian Church, is known affectionately far and wide as "The Chief."

We can think of no finer words to describe her than those used by Dr. Alexander Sharp of the National Board of the Presbyterian Church at a dinner given in her honor recently, when he said:

"'The Chief,' as she is known affectionately, belongs in the roster of unforgettable characters, once you have seen or met her. Her hair is gray but her heart is eternally young. Her body is slight, but her spirit is as vital and vibrant as a youth's. Her eyes take in the world—as it is, and as it can become. She loves people—sharing with them their fun; bearing with them their sorrow. Her mind grasps instantly the complex issues of this day; her heart resolves them in magnanimity. She is a personal radiation center of spiritual power who leaves us all stronger for having come within the radius of her spirit.

"Thank you for being yourself."

We say thank God for "The Chief," for Dick Evans, and for Labor Temple. Let's count our blessings.

ONE CLERIC'S FIGHT FOR DEMOCRACY

(By Ernst Jacobi)

During the course of a recent trip through Europe and the Near East, the Reverend Richard E. Evans, of New York's Labor Temple, had dinner with Pastor Moss, rector of Heidelberg's Heiligengeist Kerche, and one of Germany's foremost Protestant clergymen. Dr. Evans told him about his work at the Labor Temple, explaining how members of nine different congregations and widely divergent racial and ethnic minorities were all worshiping harmoniously under one roof and in one chapel.

"This is madness," the German pastor exclaimed. "But it's divine madness," he added, after a moment's reflection.

Almost everything Dick Evans has done in his life had this tinge of divine madness. He has preached in Negro churches in the South, openly defying the Klan; challenged and broke the Bund during the height of his popularity in the heart land of its strength, in Milwaukee, Wis. An ordained Presbyterian minister, he has raised funds for Israel; made himself into one of the stanchest defenders and protectors of the predominantly Roman Catholic Puerto Rican minority group in New York; and advocated the return to the fundamental principles of the Judeo-Christian tradition within his own church. He has sided with the underdog and fought tyranny in whichever form it showed itself—communism, fascism, or bigotry.

Dick Evans was a lad of 18, working in the Chicago stockyards after the First World War, when he had his first brush with social injustice and intolerance during the terrible race riots of 1919. Ever since then he has devoted his life to fighting these evils.

It's a battle for which he's well equipped. He has the Welshman's gusto for a good fight and gift for fiery oratory, along with unflinching personal and moral courage. Attempting to silence Dick Evans when he's aroused is like trying to smother a volcano.

To take one day the helm of New York's Labor Temple, where many of his ideals were being translated into action had been one of Dick Evans' lifelong ambitions. But when the call finally came to him, in 1950, the famous 40-year-old institution had lost much of its former vitality and missionary spirit. There was talk of closing it unless Dick Evans could somehow revive it. In less than 5 years he has since raised its monthly attendance figure to over 20,000, making it into a shining example of what he calls symphonic democracy. Its doors are open to all denominations, creeds, and races; its forum at the disposal of all viewpoints, even the most intolerant ones, as long as its advocates are willing to stay and listen to discussion and rebuttal.

During his busy life, Dick Evans has acquired not wealth, but a great many friends and a great many enemies. He's equally proud of both.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

A Soldier for America

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. MUNDT. Mr. President, the American Legion has been doing some special work in the effort to stimulate patriotic sentiments in our high-school boys and girls. One of the projects, which is working especially well, is the annual patriotic speech contest.

This year the contest was won in South Dakota by Gary Schulz, of Mitchell, S. Dak., whose oration was entitled "A Soldier for America." I feel that his speech contained many ideas and professed many ideals on which all of us could reflect. For that reason, I ask unanimous consent to have this thrilling and inspiring patriotic address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SOLDIER FOR AMERICA

(By Gary Schulz)

In Arlington National Cemetery stands the Tomb of the Unknown Soldier. Upon the flawless white marble is the inscription: "Here rests in honored glory an American soldier known but to God." In the hallowed silence of the dead, a glowing sun casts radiant spendor over the tomb of a lone man, a man chosen to represent all those who have offered their lives for our country. The tribute paid in humble gratitude to this man is paid to every individual whose life and work have come to be part of the United States of America.

The body was placed there in 1921, immediately following the First World War, but many years after the death of the first American soldier, many years after men had begun to sacrifice their lives for our Nation.

Many years ago, upon the turbulent ocean, a frail ship sailed slowly forward toward a distant shore. A small group of weary people stood on the deck of that ship, their eyes gazing hopefully into the misty haze of an early morning. These people had deserted their homes, their families, had risked a lifetime of work and achievement for an ideal; within the hearts of these people was the realization that in the vast world there could be a place where man could love his God, where man could live with pride and dignity, where man could be free. It was upon the shore, seen only vaguely in the distance, that their eyes saw promise of a great nation, a nation tall and proud, a nation they would build. And from across the towering mountains and rolling prairies the new day's sun foretold their words that would live forever: "We, the people."

There followed behind many more ships and soon 13 tiny colonies sprang to life; 13 colonies worked and built and created until one day, when these people were no longer able to endure the injustice and mistreatment which came from across the ocean, they banded together, all in one accord, and sent back to that world living under the imprisoning bondage of only a few, separate individuals, the truth which so long had been repressed by autocracies, monarchies, and dictatorships. They said: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." And the yoke of time and fear was lifted from their lives.

The first step had then been taken and there could be no turning back. Filled with the inflaming desire to confirm and substantiate their words, they raised high the sword of justice and beneath it fell the greatest empire of the world. A newly created country took form, a country that needed law, law which would give these people their freedom, law which would also protect them from ever again being subversed in the hands which bring human subjection.

In 1787 the delegates of those colonies moved slowly, but deliberately into this lucubration, the creation of government that would protect the life, liberty, and property of its citizens and thus secure the happiness of individuals and the prosperity of the Nation. Their doctrine was to be the culmination of all men's aspirations from the beginning of life; it was to finally abolish the injustices, the iniquities, and the grievances to which man had been subjected; it was to confer and accord to mankind those sanctioned rights and privileges which had unlawfully been taken from him. Their manifestation was to be an affirmation of justice.

It was when the last delegate had signed his name that the impossible, the unthinkable had been accomplished. From that assemblage came the immortal Constitution of the United States.

Yet the most decisive step was still to come, for the law alone could not complete true government, especially since this government was rooted in its citizens. Their final judgment was to determine the fate of an ideal. Whether or not this novel and unprecedented form of representative democracy could succeed was to be decided by the reaction of the people; this law required their fullhearted cooperation and participation or it would fall into the annals of impossibilities. Could such a young country with its untried government survive; could it stand in a world long established and founded; could it unite and become strong? The crucial test was to come.

At last citizens of a nation were granted freedom of religion, and God was worshipped in the hearts of all; freedom of speech, and voices resounded in the void that was once silence; freedom of public assemblage, and common, everyday citizens became the power.

At last citizens of a nation were granted the right of trial by jury, and fear left the minds of men; the right of petition, and the people became the government; the right to vote, and the ballot became assurance; the right of equality, and men and women of all races and all creeds stood equal in the sight of justice.

Within 5 years, order and strength replaced the chaos and confusion of the Original Thirteen Separate Colonies. Round the globe every country came to respect and admire this miraculous achievement. In every corner of the world people heard and dreamed of living in this land of opportunity, this cradle of freedom. Every year brought more immigrants, every month brought more prosperity, every day brought strength to the Constitution.

And when, in 1861, there seemed suddenly chance of destruction, of disintegration, brother turned against brother in a war of sacrifice for that document. A great man spoke out in time of crisis, a man of wisdom, * * * "With malice toward none, with charity for all * * * " The wounds were healed and peace prevailed until 1917, when in distant lands an aggressor sought to trespass upon human beings, the first call for world leadership came from across the seas. The time had come for the American soldier to move beyond his native shore, to move into the world bearing testament of the ideal. That call was answered and the Stars and Stripes of freedom were unfurled to every man, woman, and child who before knew only the chains and shackles of slavery.

So it is that the Constitution, leader of the world, leader of all mankind, is still waging its crusade in the cause of justice and liberty. Today it stands steadfast and indestructible against every power that would destroy it.

In Arlington National Cemetery lies one man who offered the supreme sacrifice for this document, one of the multitude. He is the men and women who dared to leave their homes to seek out this land with only an ideal; he is those men who took arms against their mother country to make the ideal possible; he is a signer of the final written document which made the ideal a reality; he is a brother who walked to battle against brother to save that ideal; he is the men and women who have crossed the oceans and seas to universalize this ideal. And that soldier is the farmer who tills the prairies, he is the mother who keeps the home, he is the minister who teaches goodness and truth, he is the businessman, the lawyer, the carpenter, the laborer, the schoolboy. He is in every home, every church, every school. He is an American.

Ladies and gentlemen, each of you is an American citizen. Each of you is a soldier or an enemy of our Constitution. In order that this supreme law may continue, you must give it strength. What reason can there be for freedom of religion in a land where men and women have forgotten God, what purpose is the privilege of free speech when no one cares to speak of anything more than a bridge game or the latest movie, of what worth is the right to vote when a citizen casts his vote for a candidate he doesn't know, of what justice is equality when boys and girls are denied proper education because of the color of their skin?

In your hands have been placed the privileges and obligations of all ages. You have been given the task of making valid those sacrifices of American soldiers who have gone before you, and of continuing where they laid down to rest. A soldier is an American, but not an American filled with apathy, ignorance, and indifference; he is not an American whose acknowledgment of responsibility is indolence, nor a citizen whose response to his country ends with the thoughtless recitation of an allegiance to our flag. An American soldier is not the individual who refuses to accept the heritage of a great ideal, an ideal that took centuries of suffering and dying to fulfill, a heritage made sacred by the blood of young men at Concord and Bunker Hill, at Gettysburg, at Argonne, at Iwo Jima, at Heartbreak Ridge. The survival of our Nation, of our Constitution, and all that they died fighting for, is in your hands. You alone can take up their battle, you alone, as a soldier of America.

In the dusk of evening the image of a tall, thin man walks among the endless rows of white crosses. His voice echoes sadly from out of time passed, calling to the people whose Constitution is the crowning achievement of all time. He pauses silently to read the inscription of a marble tomb in Arlington National Cemetery and Abraham Lincoln speaks once more, to you, the living, "that we here highly resolve that these dead shall not have died in vain, that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Recovery Picture

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. SPRINGER. Mr. Speaker, herewith attached are two articles. One is an editorial from the New York Times of today. The other is by the distinguished columnist, Roscoe Drummond, writing in the New York Herald Tribune on April 11, 1955. Both bear on the remarkable economic recovery of this country during the past few months, as well as on the prospects for the future:

[From the New York Times of April 25, 1955]

RECOVERY PICTURE

If there had been any lingering doubt that the recession of 1953–54 was now definitely behind us that doubt should be effectively resolved with the publication by the McGraw-Hill Economic Department of the capital investment plans of American business for 1955.

Six months ago a preliminary survey by this same organization indicated that capital spending by manufacturing industries would be some 7 percent lower in 1955 than in 1954. Now all but 3 of the industries covered in this category have revised their estimates upward. The revised outlook is for a 3-percent increase in the capital investment in manufacturing and 5 percent for business as a whole. Some of the specific revisions are little short of spectacular considering the length of the interval between the 2 reports. Last fall, for example, the iron and steel companies were planning to cut their spending on plant and equipment in 1955 by 3 percent; now they are planning to increase it by 29 percent. Machinery companies have shifted their sights from a 1-percent reduction to a 14-percent expansion, and paper companies, which only recently foresaw a drop of 6 percent, now are making plans for a 10-percent expansion.

This study, organized 8 years ago by Dexter Keezer, combines the advantage of sensitivity with the fact that it deals with the most vital driving force in the economy. In addition it now looks 3 years into the future. Plans become increasingly approximations, needless to say, the farther away the year covered. However, the preliminary estimates for future years have customarily been kept deliberately on the conservative side and have had to be adjusted upward later. With this fact in mind, it is particularly important to note that, although the figure now indicated for 1955, namely, $29.4 billions, would set a new record for capital spending, preliminary estimates for 1956 point to a decline in that year of only 3 percent. Should history repeat itself with respect to the pattern of revisions, this gap could not only be closed before another year has come around but transformed into a substantial increase.

[From the New York Herald Tribune of April 11, 1955]

WASHINGTON

(By Roscoe Drummond)

THE OVERLOOKED BIG STORY

WASHINGTON.—Nobody is yet leaking the biggest story in the United States today.

It isn't classified and it's staring us right in the face. The pessimists may hesitate to admit it and the optimists may fear they will not be believed. But there is full evidence to support it and there is no use delaying the news:

The 1954 recession is over.

Every significant business indicator is on the rise and has been on the rise for months.

At several points the economy is beginning to set new records. The upturn has now been so sustained and so steady that it is accurate to say that the recession which began in July 1953, reached its depth in March 1954, and began to saucer out in October 1954, is well in the past.

A new period of growth and stability is at hand.

Here are the most meaningful business indices which justify this report:

Industrial production has risen from a low of 123 on the Federal Reserve index in the March-August period last year to an estimated 135 in March this year.

The gross national product has grown from a low annual rate of $355 billion to about $369 billion during the last quarter—better than anybody anticipated.

Personal income, made up largely of wages and salaries, has risen from a 1954 low rate of $283.4 billion to an alltime high of $292 billion.

The average workweek has moved up from 39.3 hours to 40.7.

New plant and equipment spending has begun to increase, reversing a 2-year downtrend.

Industrial employment has risen steadily for 7 consecutive months and industrial unemployment has gone down consistently for 6 months and is now leveling off.

Total unemployment was down 548,000 this March from a year ago and total employment was up 400,000.

Some precisionists among the economists will want to throw in a layer of "ifs" and "buts." Throw them in and you still come up with the conclusion that, while there may be another recession some time, this one is over. It has been a remarkable experience—remarkable for these reasons:

Because it was one of the most short-lived and least severe slumps in American economic history.

Because it showed that, although there will continue to be wrinkles in the Nation's economy, man-made measures—both private and governmental—are capable of controlling the extremes of the business cycle.

Because it proves anew, and increases confidence in, the resiliency of the American enterprise economy.

It is impossible to measure which factor or which set of factors did most to shorten, to cushion and to reverse the 1953–54 recession. But there are discernible measures which each contributed to that end. They are:

1. The brilliantly timed and perceptive shift of the Federal Reserve System, in advance of the recession from a hard-money policy to an easy-money policy which relieved many pressures toward forced liquidation.

2. The deliberate and, from its standpoint, substantially unorthodox decision of the Eisenhower administration to carry through the scheduled lowering of income and excess profits taxes despite an unbalanced budget.

3. The fact that business stuck by its long-range investment and did not run to shelter at the first sign of trouble.

4. The visible impact of the built-in shock absorbers which Government has added in the past 20 years to the functioning of the economy—unemployment insurance, social security (both expanded in the past 2 years) plus the general leveling up of incomes.

The Federal Government resisted the pressures and the political temptation to launch a crash spending and reflation program at the onset of the recession. It was called blind and heedless by some. In retrospect its diagnosis proved accurate and its actions equal to the need.

Robinson-Patman Act

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. WILLIS. Mr. Speaker, as I indicated in my remarks in the RECORD recently, the recommendations of the Attorney General's committee to study the antitrust laws are receiving wide attention.

Some of the recommendations strike at the very heart of the Robinson-Patman law. My service on the House Committee on the Judiciary, which has jurisdiction over all monopoly and antitrust legislation, has afforded me an opportunity to keep in close touch with the operations of the Robinson-Patman law, the court decisions interpreting it, and the efforts constantly made to weaken it. This law was passed by Congress in the interest of the small independent businessman. It is intended to give the small man an opportunity to stay in business and it has demonstrated its usefulness over the years.

We frequently hear loose statements to the effect or at least implying that the Clayton Act, as amended by the Robinson-Patman Act, requires the selling of commodities of like grade and quality at the same price, under all circumstances. This is simply not true. The act specifically permits the manufacturer on supplier to sell commodities of like grade and quality to different customers at different prices, where the difference is due to normal discount for cash, quantity buying, freight savings, and other varieties of customary and acceptable business practices. Cash discounts, savings in freight based on quantity buying, differentials which make due allowance for differences in the cost of manufacture, sale or delivery resulting from differing methods or quantities in which commodities are sold to the purchaser—all such advantages have always been available to operators. Such fair business practices were customary prior to the adoption of the Robinson-Patman Act and they have not been changed by that law.

What the act prohibits is purely arbitrary price discrimination, not remotely connected with economic reasons, so

that the discrimination may substantially lessen competition or tend to create a monopoly or to endanger, destroy or prevent competition. Such price discriminations mean that a manufacturer or supplier has two prices, a secret and very low price for a few favored customers such as chain stores, and a so-called public high price for the independent little-business man in the community, such as the corner-grocery store, hardware store, drug store, and filling station. It prohibits under-the-counter concessions to the favored few under such guises as excessive free goods, brokerage commissions, rebates, and so on.

One of the favored devices to crush the small-business man was the maintenance of so-called brokerage departments by large buyers. A majority of the Attorney General's committee proposes to amend the act so as to permit payment of brokerage to buyers to the extent of services rendered the seller by the buyer. Beware of this proposal. In that connection, I want to make a part of the RECORD the letter I received from California & Hawaiian Sugar Refining Corp., dated April 21, 1955. It tells the story so very clearly that I cannot possibly improve on it, and I commend it to all the friends of the small-business man in Congress. The letter follows:

CALIFORNIA & HAWAIIAN
SUGAR REFINING CORP.,
San Francisco, Calif., April 21, 1955.

The Honorable EDWIN E. WILLIS,
The House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN WILLIS: I am writing to state this company's strong opposition to the position of the Attorney General's Committee to Study the Antitrust Laws regarding the brokerage section of the Robinson-Patman Act.

As the law now stands, section 2 (c) of the Robinson-Patman Act forbids payment of brokerage to any person who is acting for or is under the control of a buyer. This provision was aimed at an abuse widely practiced before adoption of the act—the maintenance of so-called brokerage departments by large buyers. Such buyers were in the practice of demanding brokerage for these departments in amounts completely unrelated to the value of any services received by the seller. The brokerage was of course nothing but a price concession given color of validity by the brokerage department device.

A majority of the Attorney General's Committee proposes to amend section 2 (c) of the act so as to permit payment of brokerage to buyers to the extent of services rendered the seller by the buyer. In our opinion this seemingly innocent exception would make the section entirely unenforceable. It would make every complaint under the section depend on difficult questions of cost accounting. In practical effect, the section would be a dead letter.

The consequences would be extremely serious, both to sellers and all but the largest buyers. It is only relatively large buyers that are in a position to establish brokerage departments and take advantage of the loophole proposed by the Attorney General's Committee. In our judgment the committee's proposal is inconsistent with the basic purpose of the act, to preserve equality of economic opportunity.

The payment of brokerage to a buyer is a merchandising absurdity. A bona fide broker is the seller's sales representative; his functions is to give sales service. In the nature of things a "broker" employed by a buyer cannot and will not do this job. A more honest and descriptive name for a broker acting for a buyer is purchasing agent. His interests are essentially adverse to those of the seller, and no seller would ever voluntarily agree to pay him. This practical inability of such a broker to give any service of value to a seller justifies the present outright prohibition of brokerage in such a case. Any payment to such a broker is in practical effect a payment to a buyer's purchasing department and results in unfair discrimination as between competing buyers.

Please forgive the length of this letter. This company well remembers the brokerage practices that existed before the adoption of section 2 (c) of the Robinson-Patman Act. They were costly and unfair, and should never be permitted again.

Sincerely yours,

DONALD MACLEAN.

Forced Repatriation in Treaty Protested

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. BOSCH. Mr. Speaker, on several occasions I have called the attention of my colleagues to House Resolution 137, which I introduced on February 8, 1955, and which was referred to the Committee on Rules. This resolution, if passed, would set up a select committee to investigate the forced repatriation program carried out by our military and civilian authorities in the years 1945–47 and fix the responsibility for same.

At this time we are giving a good deal of attention to the Austrian State Treaty, and we should examine it thoroughly and make sure that we do not make the same mistake with regard to forced repatriation that we made following World War II. I take this opportunity to draw to the attention of my colleagues article 16 of the Austrian State Treaty.

Under leave to extend my remarks, I include a letter written by Mr. Julius Epstein to the New York Herald Tribune giving an excellent analysis of article 16, which appeared in the April 23, 1955, edition of said newspaper.

FORCED REPATRIATION IN TREATY PROTESTED

To the New York Herald Tribune:

The Austrian State Treaty which the Soviets and the Austrian Government just agreed to sign—pending the consent of the American, British, and French Governments—may well bring about one of the greatest tragedies in modern history.

The origin of this tragedy must be seen in the Soviet version of article 16 which deals with former Soviet citizens who are now living as displaced persons in Austria. There are now about 30,000.

Article 16 of the Austrian State Treaty, against which the American Government had fought for about 8 years, and which it suddenly accepted on February 13, 1954, at the Berlin conference, creates a similar situation as had existed in 1945, when Soviet missions visited our POW camps and when we forcibly repatriated millions of anti-Communist prisoners of war and civilians.

Article 16 provides:

"Austria undertakes * * * to take all necessary measures to complete the voluntary repatriation of displaced persons within its territory." Today, 10 years after the end of hostilities, there is, of course, not a single displaced person in Austria who, voluntarily, would want to be repatriated to the Soviets.

"Austria undertakes to render full assistance to the allied and associated powers [read to the Soviet Government] concerned in regard to the voluntary repatriation of their nationals and will enter into direct bilateral negotiations for this purpose." That means that a powerless Austrian Government would have to face the Soviet Government. Under these circumstances it is, of course, more than doubtful that the human rights of the anti-Communist displaced persons could ever be protected.

"Austria further undertakes:

"To permit the accredited representatives of any allied or associated power [read Soviet representative] * * * to visit freely such camps or centers for the purpose of conferring with its nationals." This provision can only mean the repetition of the horrible scenes of attempted coercion which the world had witnessed in the neutral zone in Korea.

"To prohibit in such camps or centers any propaganda hostile to the interest of the allied and associated powers [read of the Soviet Government] and any activities designed to induce such displaced persons not to return to the countries of which they are nationals." This stipulation gives the Soviets a complete monopoly of propaganda, coercion, and blackmail with no possibility to counteract the brainwashing to be expected in Austrian camps.

"To dissolve immediately any committee, center, and other similar organizations existing in those camps and assembly centers that may be found to be engaged in activities opposed to the interests of the allied and associated powers." Read the Bolshevist tyranny. This paragraph can only be interpreted as a deprivation of all organized aid and protection and an invitation to the Soviet agents in Austria to destroy the lives of the 30,000 vigorously anti-Communist displaced persons.

Paragraph 5 of article 16 provides:

"No relief shall be given by Austria to persons who refuse to return to their native countries. If these persons fought on the side of the enemies of the allied and associated powers, or voluntarily collaborated with the enemies of these powers, or are engaged in hostile activities against their countries of origin, as well as against any of the United Nations, or are members of organizations and groups which encourage displaced persons not to return to their countries of origin."

This paragraph is the most insidious clause of the Austrian State Treaty. It is the first time in history that a government will be forbidden by international law to give aid to the poor and destitute. It means a complete renouncing of the principles of western civilization.

If these provisions of the Austrian State Treaty should ever become valid, it would only mean a tremendous Soviet victory in the cold war of ideas and morals.

There can be no doubt that validation of the provisions mentioned above would put an end to the ideological war, would render utterly useless our anti-Soviet media as the Voice of America, Radio Free Europe, and Radio Liberation, and would certainly deprive us of the last vestiges of our reputation as defenders of liberty and human rights, especially in Asia and Europe.

JULIUS EPSTEIN.

NEW YORK, *April 21, 1955.*

S. 923

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. STAGGERS. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a petition and list of signers from Huntington, W. Va., in support of S. 923. These citizens protest the advertising of alcoholic beverages in magazines and newspapers and over the radio and television, and request that they so be recorded:

PETITION

To our Senators and Representatives in Congress:

We the undersigned citizens of Huntington, W. Va., urge you to use your influence in support of Langer bill S. 923. This bill if passed will prohibit alcoholic-beverage advertising in interstate commerce and over the air:

Marion Fisher, Mrs. V. B. Gothard, Mrs. Vernon Johnson, D. L. Brumfield, E. M. Pridemore, Mrs. Edgar Pridemore, Mrs. Marion Fisher, Mrs. L. O. Adkins, Mrs. C. L. Cremeans, C. L. Cremeans, L. O. Adkins, Lorraine Pennywitt, Floyd H. Adams, Lloyd Y. Bayless, Maxine Bayless, Mr. and Mrs. P. J. Hutchinson, Jewell Brumfield, Mrs. N. E. Berry, Ruth Zimmerman, Patricia Zirkle, James Zirkle, Robert Zimmerman, James Allen Reed, Mrs. J. A. Reed, Mrs. Charles Bias, Wetzel G. Owens, J. D. Wilkes, Clive Ferguson, Mrs. Clive Ferguson, Joseph J. Patton, John J. Hedrick, Doris Hedrick, Mayme White, Mrs. Robert L. Hunt, Garland R. White, Howard A. Meadows, Mrs. H. A. Meadows, Mr. and Mrs. Herman Day, Mrs. George Coos, Mr. and Mrs. Carl I. Eves, Garland R. White, Claude L. Nelson.

Orland Hunt, Claude Shy, Rev. Ran H. Ball, Harry Patterson, Herbert Wysong, Taylor Allen, Juan Leap, E. G. Snyder, Henry M. Barbour, Thomas Eves, Even Eves, C. B. Childert, A. F. Hooker, Sheely Shurlock, Everett L. Zimmerman, Robert F. Hunt, Russell Bower, S. C. Newman, J. L. Cooke, E. W. Charlton, Earl Wheeler, W. M. Gill, E. F. Waedl, Archie Adkins, W. A. Roberts, C. A. Dillon, H. T. Pribble, M. H. Campbell, M. R. Shepard, H. B. Wheeler, A. W. Holley, Russell Jenkins, Kerzie Donahoe, Gene Berry, H. W. Edwards, Roscoe Childers, Dempsey W. Vickers.

J. E. Cregger, Mrs. Euna M. Cregger, Mike Chafin, Helen Weekley, Otto Dinger, Bernice Smith, Mabel Rumbaugh, Mrs. Otis Rusil, Sr., Mrs. Ollie Weeghan, J. W. Neumun, O. L. Bawyer, Mrs. Hosea R. Hodges, Ralph E. Fawlkes, Harry Davis, J. N. Bell, Mrs. Opal Barr, Byron I. Judy, Reva Mae Judy, Lura Hetchings, Dorothy Watts, Euna M. Cregger, C. V. Humphrey, Reba Davis, Dorothy Smith, John A. Busch, Delphia Johnson, Beatrice Hall, Nelle M. Campbell, Mrs. John Calvert, Evelyn Miller, Robert H. Miller, Vernard W. Griffin, Katherine Vasvary, Lorena Richardson, Agnes C. Sliger, H. E. Hill, Faye Shields, Walter A. Stvore, Louie Sanford, J. Richard Malcolm, Eloise F. Malcolm, Ludia Gibson, Kathleen Browning, S. Y. Dobbin, Mrs. R. E. Fawlkes, Lloyd J. Mullins.

Florence Ball, R. Cecil Ball, C. C. Hobost, Mabel Chinn, George Chinn, Virginia Worland, R. C. Worland, H. O. Morris, Helen Griffis, Ruth Johnson, Bessie Andrews, Wm. Paul McNee, Flora Hill, D. B. Shumaker, Grace V. Shumaker, Josephine Hoback, Kathryn A. Jones, Harold E. Ward, Kermit Shields, Mrs. I. L. Green, Mrs. A. H. Adamson, Mrs. Margaret Y. Matthews, Clara E. Richardson, Mrs. J. H. McComas, Mrs. I. F. Gillen, Mrs. J. H. Lenny, Mrs. D. B. Shumaker, Alice D. Crawford, Mrs. Edna E. Ferguson, Mrs. Mary B. Williamson, Mrs. W. F. Taylor, Verne Taylor, Mrs. J. H. Dawson, Mrs. Ethel Morrow, Mrs. E. G. Yost, Mrs. Ellis Watts, Mrs. Bertha Grogg, J. R. Morrow, Ruth Newman, Frank Hitchings.

Mrs. Luella Holley, Mrs. Lee Huff, Mrs. Namie Sullivan, Mrs. T. H. Lambert, Mrs. N. Johnson, Mrs. Mamie Ray, Mrs. Lizzie Earls, Mrs. Kerzie Donaho, Mrs. Anna Curtis, Mrs. R. H. Ball, Mabel Whitehead, Mrs. Edna Smith, Ada Eves, Mrs. C. A. Dillon, Pearl Fapping, Mrs. Opal Moreland, Mrs. Vesta Edwards, Mrs. R. A. Petit, Doris C. Miller, J. A. Arauslicent.

We, the undersigned residents of Huntington, W. Va., do petition the legislature to reject House Joint Resolution No. 5, which would in effect permit the sale of liquor by the drink, and we ask you to support House Bill No. 37, which provides for local option on beer, and also for your support of House Bill No. 207, to close beer establishments all day Sunday.

Tom Shepherd, Mrs. Evelyn Brilhart, Mrs. Millie Valentine, Mrs. Gordon Gore, Mrs. L. L. Sutton, Mrs. R. J. Haselip, June Baker, Mrs. Carl Sutton, Mrs. Ernest Rood, Katie Mae Sutton, Mrs. Willis Gilbert, Mrs. Georgia MacCalla, Mrs. Martha Greig, Mrs. M. J. Heller, W. H. Norton, Willis Gilbert, P. C. Vernatte, William L. Hartz, David Byers, Thelma McIlvain, W. E. McIlvain, M. D.; J. A. Meador, J. S. Hanshaw, James W. Stean, Robert Wamsley.

Richard Bosten, Mr. and Mrs. J. L. Carson, Mrs. Paul R. Robertson, Mrs. Milo F. Melrose, Jr., Milo F. Melrose, Jr., Mrs. P. E. Dundas, Mrs. Wm. Rice, Mrs. J. A. Meador, Mrs. Wm. Joseph, Mrs. Harper E. Williams, Mrs. Lillian Childers, Mrs. Marvin Lowe, Marilyn Wamsley, Phyllis Stanley, Kathryn Jenkins, Peggy Robertson, Georgia Wheeler, Doris Hylbert, Mattie Charlton, Mrs. H. C. Russell, Mrs. H. B. Wheeler, Mrs. Everett L. Zimmerman, Mrs. Ola Hooker, Mrs. John R. Moore, Mrs. W. L. Ringer, Mrs. Dana C. Ashley, Opal Floyd, Mrs. Archie Adkins, Mrs. W. R. Marks, Mrs. E. G. Snyder, Mrs. A. R. Roswall, Mrs. J. L. Cooke, Mrs. V. C. Becket, Mrs. Evan Eves, Mrs. M. H. Campbell, Mrs. Eril Leap, Mrs. O. C. Hunt, Mrs. B. W. Marcum, Miss Jessie L. Shy, Mrs. O. L. Zimmerman, Mrs. Austin Day, Mrs. John Ray, Mrs. Ruth Duke, Mrs. Josephine Atkins, Mrs. T. E. Dunkle, Mrs. S. C. Neuman, Mrs. Shelby Spurlock, Mrs. E. H. Parsons, Mrs. H. M. Barbour, Mrs. J. H. Barbour, Mrs. M. R. Shepard, T. E. Dunkle, H. H. Harless.

The Hells Canyon Hearings

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Capital Journal, of Portland, Oreg., on April 7, 1955:

THE HELLS CANYON HEARINGS

As a Boston paper once said of a better speech week, the congressional committee that held hearings in the Northwest on the bill for a high dam in Hells Canyon "has came and went," after hearings in Boise, Lewiston, Pasco, and Portland.

The visit was planned by pro-Hells Canyon solons, presumably as a political Roman holiday to grace Easter Week, for it was hardly conceivable that any important new facts would be developed after the Federal Power Commission had spent so many months hearing the experts air all the pros and cons:

They sought to bypass southern Idaho, locale of the bitterest opposition, but agreed to gave Boise half a day. There they really got a ground swell from the grassroots. Two hundred organizations, chambers of commerce, granges, irrigation districts, etc., a cross section of the region with the exception of the labor unions and the Democratic Party organization showed up to oppose the bill. Headed by Governor Smylie, who defeated a pro-Hells Canyon opponent last fall. Eight hundred persons crowded the auditorium, cheered the anti-Hells Canyoners, booed the pros till they were shut up by Senator MURRAY, a pro.

The committee was glad to leave that hotbed behind at noon Monday and fly to Lewiston which was supposedly in the other camp. There and at Pasco about the same number of witnesses were heard on each side, repeating the familiar arguments.

At Portland Wednesday both sides were heard in about equal volume. There the opposition was led by the Governors of Washington and Oregon and two former presidents of the National Reclamation Association. If the crowd showed any preference, it was for the opposition, though it appeared courteous to both sides.

What did the hearing show? That there is a lot of opposition to this project in three principal States of the Columbia Basin. Usually a proposal to dump half a billion of Federal money in a region evokes nothing but applause there. The objections come from taxpayers elsewhere. Here is a big Federal spending project strongly opposed in the Northwest States. The committee, which came out here expecting a very different reception must wish it had never come. The result is bound to weaken leftwing enthusiasm and strengthen the opposition that almost certainly includes a substantial majority in Congress.

Surplus Farm Commodities

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. WILLIS. Mr. Speaker, the laws passed by Congress, including the most recent Public Law 480, in substance and essence constitute directives to the Department of Agriculture to find outlets for surplus farm commodities in ways which promote an expansion of markets and do not depress prices.

I am willing to concede that these directives of necessity present administrative difficulties. On the other hand, many of us in Congress honestly feel that the program outlined by Congress has been pursued by the Secretary of Agriculture with something less than vigor and enthusiasm. This could be due to the fact that because of alleged international considerations the State Department has put a damper on or at least has been cool to the program. But whatever the reason for it the cold fact is that our surplus farm commodities have not moved in the channels of foreign trade, as contemplated and directed by Congress.

Rice is a typical case in point as brought out recently by our distinguished colleague from Arkansas, Representative E. C. GATHINGS, one of the farmer's best friends in Congress. Following a discussion with Mr. GATHINGS, I addressed the following telegram, dated April 12, 1955, to the Secretary of Agriculture and the Secretary of State:

APRIL 12, 1955.

The Honorable EZRA T. BENSON,
The Secretary of Agriculture,
The Honorable JOHN FOSTER DULLES,
The Secretary of State,
Washington, D. C.:

I understand that as conditions to the proposed transfer of 2,250,000 hundredweight of rice by our Government to Japan, the State Department is seeking to have Agriculture Department to agree first that in the future no rice will be offered on the world markets at less than current domestic prices and, second, that no rice will be exported into the southeast Asian markets. The first condition would, in my opinion, be in direct violation of the will of Congress as expressed in Public Law 480 and the second would constitute a trade barrier which neither State nor Agriculture can impose. Further, such restrictions would no doubt result in further reduction of domestic rice acreage which has already been cut too deeply. I strongly protest any action of this nature and would appreciate your advising that these or any other similar restrictive conditions have been or will be removed and that program of disposal of rice will be pursued vigorously as contemplated by Congress.

EDWIN E. WILLIS,
Member of Congress.

Mr. Speaker, I now insert in the RECORD the reply of the Department of State, dated April 18, 1955:

DEPARTMENT OF STATE,
Washington, April 18, 1955.

The Honorable EDWIN E. WILLIS,
House of Representatives.

DEAR MR. WILLIS: Reference is made to your telegram of April 12 concerning the question of rice sales in Asian markets.

We recognize the desirability of finding outlets for United States surplus rice in ways which promote an expansion of markets and do not depress prices, as the Congress has stipulated. We support such an objective. We have not taken a position to embargo sales of rice in southeast Asia.

Your attention is called to the fact that title I, section 101 of Public Law 480 provides that in negotiating agreements "the President shall (a) take reasonable precautions to safeguard usual marketings of the United States and to assure that sales under this act will not unduly disrupt world prices of agricultural commodities."

On September 9, 1954 the President issued an Executive order and a general policy statement for the implementation of Public Law 480, which outlined the basic problems as well as certain of the responsibilities in connection with the administration of this act. Two paragraphs of the policy statement are hereinafter quoted in full.

"Today, the magnitude of the United States' holdings of many commodities is such as to be capable of demoralizing world commodity markets should a policy of reckless selling abroad be pursued. This potential greatly alarms other countries despite the fact that past behavior of the United States has shown no intention of pursuing a harmful policy."

* * * * *

"The United States cannot be satisfied with the position of holding its own supplies off the market and accumulating surpluses while other countries dispose of their entire production. Accordingly, the United States will offer its products at competitive prices. At the same time, the United States will not use its agricultural surpluses to impair the traditional competitive position of friendly countries by disrupting world prices of agricultural commodites."

The State Department, from the very outset of the problem of surplus agricultural commodities, has been intent upon opening up possible permanent foreign markets for American commodities, and particularly in the areas where consumption may be increased. Our primary concern has been to widen the markets and to create a situation which will permit a continuation of sales abroad on an expanding basis. The Department has been concerned that we do not enter into potential price wars which can only harm the American farmers and defeat the basic foreign policy concept clearly set forth in the introduction of Public Law 480.

A decision to dispose of United States surplus rice stocks in Asian markets under Public Law 480 or at subsidized prices under existing uneasy political conditions in that area is one which should involve consideration of the important questions of foreign policy which are concernd. In particular, disposal in a manner which would have the effect either of depriving Burma and Thailand of their traditional markets or of depressing export prices, or of threatening to do so, may seriously jeopardize the enthusiasm of those countries to resist Communist overtures. Few actions on our part could be more suitable to Communist propaganda which is already pounding into Asian ears the charge that the United States surplus disposal program disregards the economic interests of Asian countries.

The specific question of rice disposals in Asia is now being considered at the highest levels of the administration to determine the manner in which our surplus disposal program and our critically important foreign policy intersts in Asia can be reconciled.

Sincerly yours,

THRUSTON B. MORTON,
Assistant Secretary
(For the Secretary of State).

Mr. Speaker, I was, of course, very pleased with the second paragraph of the letter, which I repeat:

We recognize the desirability of finding outlets for United States surplus rice in ways which promote an expansion of markets and do not depress prices, as the Congress has stipulated. We support such an objective. We have not taken a position to embargo sales of rice in southeast Asia.

And while the succeeding paragraphs in the letter were perhaps necessarily general, I was nevertheless pleased with the assurance of the last statement to the effect that "the specific question of rice disposals in Asia is now being considered at the highest levels of the administration," and so forth.

Finally, Mr. Speaker, 3 days later, on April 21, 1955, I received the following letter from the Department of Agriculture:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, April 21, 1955.

Hon. EDWIN E. WILLIS,
House of Representatives.

DEAR CONGRESSMAN WILLIS: We have your telegram of April 12 to Secretary Benson regarding the proposed transfer of 2,250,000 hundredweight of rice by our Government to Japan.

The Department of Agriculture has been discussing this transfer thoroughly with the Department of State and other interested parties. We are now in the process of going ahead on negotiations for the transfer.

As you may know, the Department of State is properly interested in making sure that relations with friendly nations are not jeopardized by any transfer of foodstuffs involving substantial subsidy that might interfere with normal marketings by other friendly nations.

However, I am glad to inform you that in this case satisfactory arrangements were worked out to proceed with negotiations.

Assuring you of our desire to pursue every possible avenue to move rice into the export markets, I am

Sincerely yours,

EARL L. BUTZ,
Assistant Secretary.

Mr. Speaker, evidently the considerations at highest level of the administration referred to by the State Department bore fruit because in the letter of the Department of Agriculture I find this significant sentence:

I am glad to inform you that in this case satisfactory arrangements were worked out to proceed with negotiations.

I sincerely hope the negotiations, when completed, will continue to be satisfactory not only in this case but in connection with the general administration of the directives of Congress.

Opinion-Poll Report

EXTENSION OF REMARKS
OF
HON. S. J. CRUMPACKER, JR.
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. CRUMPACKER. Mr. Speaker, for the past several weeks I have been conducting an opinion poll among citizens of the Third Congressional District of Indiana on eight questions dealing with President Eisenhower's 1955 legislative program and other issues of vital concern to the Nation.

I have been conducting these polls among my constituents annually for the past 4 years with several objectives in view. My primary purpose has been to determine, in broad terms, for my own benefit, the attitudes and opinions of the people of northern Indiana on major legislative issues. These surveys, however, also serve to stimulate public discussion and interest in these issues, which is a healthy thing, and they enable me to present to Congress, as I am now doing, the views of an important segment of the voting population.

Questionnaires were mailed early in March to a substantial cross section of voters in the four urban and rural counties I represent: St. Joseph, South Bend; Elkhart, Elkhart and Goshen; La Porte, La Porte and Michigan City; and Marshall, Plymouth.

Ballots also were printed in several district newspapers and readers were asked to fill them out and send them to me with their answers.

The response this year, as in past years, was well above the average for similar mail polls. Approximately 18,000 questionnaires have been returned to date, and they are still coming in. This com-

pares with a response of approximately 12,000 in 1952, 15,000 in 1953, and 21,000 in 1954.

The results of my 1955 poll, as tabulated by the IBM service bureau, an impartial private concern, are listed below. Within the limitations of any survey of this nature, they reflect the current opinions of a substantial cross section of Indiana voters.

	Yes	No	No opinion
Do you believe that Congress should:			
1. Continue to support the President in his determination to defend Formosa against attack by the Chinese Reds?	Percent 82	Percent 9	Percent 9
2. Reduce the minimum voting age below 21 years?	34	61	5
3. Approve a $25 billion increase in the national debt to finance an expanded highway program?	44	46	10
4. Grant statehood to Hawaii and Alaska?	76	11	13
5. Approve construction of 35,000 public housing units per year for 2 more years?	39	46	15
6. Raise the Federal minimum wage from 75 to 90 cents per hour?	70	23	7
7. Approve the cuts in the Army Ground Forces proposed by President Eisenhower?	55	33	12
8. Make the Post Office Department self-supporting by increasing postal rates?	67	26	7

POLL OF HIGH-SCHOOL STUDENTS

In order to stimulate interest in public affairs among future citizens of my District I again conducted a separate poll among high-school students. More than 3,000 students took part this year, voting on the issues in class under the supervision of instructors after a thorough discussion of the pros-and-cons. Here are the results of the 1955 high-school poll, based on returns from 25 high schools in northern Indiana:

	Yes	No	No opinion
Do you believe that Congress should:			
1. Continue to support the President in his determination to defend Formosa against attack by the Chinese Reds?	Percent 84	Percent 7	Percent 9
2. Reduce the minimum voting age below 21 years?	50	43	7
3. Approve a $25 billion increase in the national debt to finance an expanded highway program?	41	39	20
4. Grant statehood to Hawaii and Alaska?	73	15	12
5. Approve construction of 35,000 public housing units per year for 2 more years?	50	22	28
6. Raise the Federal minimum wage from 75 to 90 cents per hour?	65	22	13
7. Approve the cuts in the Army Ground Forces proposed by President Eisenhower?	34	44	22
8. Make the Post Office Department self-supporting by increasing postal rates?	54	28	18

National Federation of Federal Employees

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following radio broadcast by Chet Huntley, ABC, March 18, 1955, where he commented on Federal employees and the National Federation of Federal Employees:

This reporter had a cup of coffee yesterday morning with a highly responsible and almost dedicated employee of the United States Government, a man from the Civil Service Commission.

The fact of the matter is that Uncle Sam has a problem, a real aggravating and accumulating problem.

The Government of the United States is woefully short of scientists and engineers and technicians and specialists of all sorts, everything from operators of complex accounting machines to bacteriologists and anthropologists and nuclear physicists.

True, the Government can't pay as much as private industry is paying. The loyalty program has driven off many a quality employee who just simply resents the prying into his private affairs and who has seen the most innocent act or association misconstrued and misinterpreted. But the fact remains that the Government of the United States needs people, trained people, and needs them badly. Our Government may not get these people until you and I stop the foolish and damaging business of regarding every Federal employee as a suspect or an enemy.

In this respect there is now under way a big recruiting program for the National Federation of Federal Employees, the oldest independent union of United States Government workers. In Los Angeles alone the National Federation of Federal Employees hopes to recruit some 50,000 workers and some 220,000 in the State of California.

The wages of Federal employees are lagging far behind those in private industry. That has to be corrected.

But probably most important the National Federation of Federal Employees understands that something has to be done about the security of the Government worker. The occasional individual who wraps himself in the protection of Civil Service and coasts along as though he owned the job and Government, has to be corrected or weeded out. On the other hand, something has to be done to secure the stability and economic security of the good public servant. This reporter would say, offhand, that 99⅘ percent of the Federal employees are dedicated, sincere, and deserving people who do not take their responsibilities lightly. Once in awhile you run into a bad apple who can destroy or damage the whole reputation of the more than 2 million Federal employees.

One thing the National Federation of Federal Employees realizes is that more care must be exercised in recruiting people into Government service. As badly as the Government needs people, particularly qualified technicians and scientists, it dares not lower its standards and take on all comers. Do we realize, for example, that it costs you and me about $600 to fire a worker and replace him? Just the process of turning over 1 Federal job costs the taxpayers of the Nation about $600. So we have an investment in these workers. It pays to hire good ones in the first place and after they're hired it pays us to see that they stay hired.

There are a number of things you and I can do in all of this. One, take a more kindly and understanding attitude toward your underpaid, patient and reliable public servant. Meet him halfway with your understanding and he'll meet you 75 percent of the way everytime.

Second, be aware of the National Federation of Federal Employees, and if, by chance, you are a Federal worker, find out about it and consider whether you might want to join in. You can find out about it at your nearest Federal building or Federal offices, or contact the nearest United States Civil Service Commission office.

And if you are a student or about to enter college, or if you are the parent of a student or a prospective student, give a thought to the possibilities of Government service. Government careers are not all bliss, to be sure, but it has a lot of compensations and there are many of us who insist that it's really a rather noble undertaking.

Sports Ambassadors

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. MUNDT. Mr. President, the Congress is well aware of my interest in our State Department's international, educational, and cultural exchange program. As a cosponsor of Public Law 402, 80th Congress, the Smith-Mundt Act, I have been gratified to note from time to time the effectiveness this program has had in winning friends abroad and gaining respect for our country.

While it is generally well known that this program includes an exchange of students, professors, teachers, and research scholars it is not so well known that the program has also been garnering much good will for our country through nonacademic exchange of persons. The interchange of leaders of national prominence between our country and some seventy countries around the world has been a very fruitful interchange in obtaining a better understanding of our life, our attitudes, and our peaceful intentions in today's world. Top level Government officials, mayors, civic leaders, and so forth from other lands have returned home to tell the American story with convincing credibility. The selected American leaders who have gone abroad on this program from as diverse fields as law, labor, management, the arts, and athletics have been equally effective in providing living refutation to Communist lies about our life and our people.

Surprisingly, to some observers, has been the tremendous success of the goodwill tours of our top athletes who have gone abroad on this program. On February 7, 1955, my good friend and colleague, the Honorable CARL HINSHAW, of California, inserted into the CONGRESSIONAL RECORD a reprint of a newspaper article which appeared in the Pasadena Star-News which described the tremendous exploits and friend-winning activi-

ties abroad of our great two-time Olympic diving champion, Major Sammy Lee. I have been told of the voluminous reports which have come in from our Foreign Service posts describing the abundant goodwill won for our country by our four great Olympic champions, Sammy Lee, Mal Whitfield, Rob Richards, and Harrison Dillard. Bob Considine, outstanding American sports writer, recently quoted an on-the-spot observer from India as saying that Bob Richards, the Vaulting Vicar, reached and favorably impressed at least 3 million Indians while he was in India on this educational exchange program.

The Cleveland Press on February 16, 1955, carried an article on Harrison Dillard which displays so much admiration for their home-town product and which expresses so well the value of this kind of exchange that I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DILLARD WINS PRAISE AS UNITED STATES "AMBASSADOR"

(By Jack Clowser)

For a long time, I've felt it was impossible to be more proud of Harrison Dillard than the day I saw him ascend the victory stand at London and accept his first Olympic victory wreath.

For a close second, perhaps, it was the time his old coach, Eddie Finnigan, and I watched him enter Buckingham Palace—the only member of his race invited to a reception by the British King and Queen. I remember Eddie, his chest swelling with pride, muttering "What a long way to come—a kid from a poor East Side neighborhood, all the way to the Palace."

Now I'm not sure that either was Dillard's finest achievement. After reading letters that have been coming to Mayor Celebrezze and to Hank Greenberg, Harrison's boss, it seems the famous Cleveland track star has just turned in his most praiseworthy performance.

The letters are from the United States State Department, under whose auspices Dillard recently made a 3-month good-will tour of South and Central America. His selection was, in the first place, a high honor indicative of his type of citizenship.

In this global struggle for the minds of men, with democracy arrayed against communism, the State Department sought to impress our pan-American neighbors by sending them a young man who was representative of the highest type of sportsman. A gifted extemporaneous speaker and world-famous athlete, Dillard filled the bill so well that United States Embassies in the countries he visited have been deluging the State Department with praise for his work.

Here are some examples, as cited by the department in letters to Greenberg and the mayor:

From Haiti: "The Department is to be congratulated for its selection of Dillard. His effectiveness is not limited to demonstrations of sports techniques; in addition he represents his country, on all occasions, with poise, intelligence, cordiality, and a genuine interest in his hosts."

From Bolivia: "The story of Dillard's visit can be described by saying that in almost every instance when he was scheduled to make a speech, show a film, or attend a reception indoors, the demand to see him was such that we had to move outside. He was one of the most successful of American leaders who have visited here in years."

From Argentina: "His visit to Buenos Aires was a great success * * * his engaging personality, his modesty and sincerity made a highly favorable impression on all who met him. President Peron himself expressed his satisfaction at Dillard's visit, and his wish that the visit might have been longer."

From Cuba: "Just imagine what it means, in the affirmation of the principles of the good neighbor and democracy, to see this young Negro, of humble background but lifted to the pinnacle of success and admiration by his own efforts, widely honored, as he well deserves. Dillard has rendered Cuba a work worthy of gratitude."

From Panama: "Dillard's visit is considered by this Embassy to have been the most effective short-time exchange of persons project ever experienced in Panama."

In his reply to the State Department, Greenberg wrote, "We are proud of his association with the Cleveland Baseball Club, and delighted to learn that his appearances in Latin America provoked such complimentary responses."

It must give all good Americans a warm glow to know that the skinny little guy at East Tech High has grown up to represent his country, not only as a wonder athlete, but much more important, as an instrument for international good will.

After all, isn't that the logical sequence for the sterling sportsmanship he has unswervingly practiced?

The Effects of Atomic Radiation

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent that excerpts from editorials and articles which have appeared over recent months in the New York Times and the Washington Post and Times Herald and which relate to Senate Concurrent Resolution 22, introduced by me on April 13 and cosponsored by 24 other Senators, be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[From the New York Times of September 2, 1954]

DOOM OF MANKIND SEEN IN ATOM WAR

Dr. Edgar Douglas Adrian, Nobel prize winner and president of the Royal Society of Great Britain, in his presidential address to the British Association for the Advancement of Science, said: "We must face the possibility that repeated atomic explosions will lead to a degree of general radioactivity which no one can tolerate or escape." Dr. Adrian is quoted as having said that the human race could not survive if more than a few thousand large atomic bombs were exploded, regardless of where they fell.

[From the New York Times of September 12, 1954]

GENETICIST WARNS ON RADIATION RISE

Reports on an article by Dr. A. H. Sturtevant, of the California Institute of Technology, in Science, in which Dr. Sturtevant is quoted as having said: "I regret that an official [Admiral Strauss] in a position of such responsibility should have stated that there is no biological hazard from low doses of high-energy radiation. * * * Every geneticist familiar with the facts knows that any level whatsoever is certain to be at least genetically harmful to human beings when it is applied to most or all the inhabitants of the earth."

[From the New York Times of November 3, 1954]

CHURCHILL SAYS RADIATION MAY LINGER 5,000 YEARS

Prime Minister Churchill is quoted as having told the House of Commons that an undue number of hydrogen bomb explosions might have serious effects on the earth's atmosphere for about 5,000 years.

[From the New York Times of December 9, 1954]

RADIATION CALLED HEALTH PROBLEM

The New York commissioner of health, Dr. Herman E. Hilleboe, is quoted as having said at the annual conference of State and Territorial health officers: "Because the use of radiation in industry and in the community is gaining so rapidly a special problem faces the health officer who wishes to prepare now to meet what may well become one of our most significant environmental health problems of the future."

[From the New York Times of March 7, 1955]

UN URGED TO SIFT POISONING OF AIR BY ATOM BLASTS

The Federation of American Scientists, urging that the United Nations undertake a special study of the extent to which atomic and hydrogen bomb tests may be poisoning the world's atmosphere, is quoted as having said: "However, it should be clear that future accelerated H-bomb test programs by several atomic powers will ultimately reach a level which can be shown to be a serious threat to the genetic safety of all people of the world."

[From the New York Times of March 13, 1955]

UTAH IS WORRIED BY ATOMIC TESTS

Utah residents expressed uneasiness regarding the amount of fall-out registered in their State from Nevada tests by the Atomic Energy Commission. Reassurance was given by AEC monitoring teams and by the radiobiological laboratory of the University of Utah.

[From the New York Times of April 4, 1955]

STATE CODE CITES ATOMIC HAZARDS

Public hearings on projected regulations for the State of New York, designed to lessen the risk of working with radioactive materials, were announced for the near future. The rules were made public by Rear Adm. William S. Maxwell, retired, newly appointed chairman of the State Board of Standards and Appeals, and are designed to cover everything from shoe store fluoroscopes to the industrial use of isotopes. Even uranium mines will be covered, if any are discovered in the State.

[From the New York Times of April 8, 1955.]

EXPERTS TO STUDY RADIATION EFFECT ON ALL LIFE

The effects of radiations have been a subject of increasing controversy among scientists. Dr. Detlev Bronk, president of the National Academy of Science, said there is an urgent need for further intensive research since very little exact knowledge is now available. Prof. Linus Pauling, Nobel Prize chemist of the California Institute of Technology, is qouted as warning that radiation from atomic tests could be potentially fatal to persons whose resistance to cancer was low. Prof. Frederick Soddy, Nobel Laureate physi-

cist, is quoted as saying that hydrogen bomb explosions are "fouling the air with radioactivity" and that "it is nonsense to say it is harmless." Prof. Joseph Rotblat, an associate to the head of Britain's atomic bomb project, is quoted as saying that "future generations of all nations" might forever pay "through disease, malformation and mental disability for our folly unless effective curbs are placed on hydrogen weapons."

[From the Washington Post and Times Herald of April 18, 1955]

COLONIALISM INTRIGUES HIT AT BANDUNG

President Soekarno, of Indonesia, said of nuclear and thermonuclear explosions, "There is a force loose in the world whose potential for evil no man truly knows. The effects may be building up into something of an unknown horror."

[From the Washington Post and Times Herald of April 12, 1955]

HOW BAD IS RADIATION?

The Post called our knowledge about the effects of radioactivity appallingly small. It praised the study initiated by the National Academy of Science and said only a a study by a United Nations Commission could speak with more standing and authority. It said that the public ought to know whether its mounting apprehension is justified. If it is not justified, the best way to dispel the fear is by getting all the facts.

Quemoy-Poland

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. HILLINGS. Mr. Speaker, under unanimous consent, I place in the RECORD an article by Mr. Joseph Alsop which appeared in the New York Herald Tribune on Monday, April 11, 1955. Mr. Alsop in his article compares the present situation in Asia with conditions in Europe in 1939 immediately prior to Hitler's invasion of Poland.

The article follows:

MATTER OF FACT

(By Joseph Alsop)

QUEMOY—POLAND

HONG KONG.

The visit to Saigon, from which this reporter has just returned, has inspired two pretty unhappy questions.

First, have we not reached almost the same state in Asia that was reached in Europe when Britain so desperately guaranteed Poland? And, second, does not this connect rather directly with the vital decision on Quemoy and the Matsu Islands?

Trying first to answer the first question, the crisis in Saigon still drags on, but the outcome will surely be bad. Whether there is more shooting or a lame compromise, the prevailing condition of nongovernment in southern Indochina is bound to get worse, not better. That means that the already heavy odds in favor of the Communists are being substantially increased.

If southern Indochina falls to the Communists, even the local consequences will be bitter indeed. We shall have an advance taste of them, no doubt, at the impending discussions with the French about the Indochinese future.

The French will ask, for example, a question we must answer: What does the American Government propose to do with the 700,000 tragic refugees from the Communist north, for whom the United States has a direct moral responsibility? Are these poor people to be left where they are, to swim for it or die, after being exploited as a kind of ghastly public-relations stunt by the authorities in Washington?

It is already high time to think about this problem, and about the many French problems, such as the 50,000 or so French citizens and passport holders in south Vietnam. Thinking of them may lead to some very unpalatable results, such as an eventual French request for American ground troops. But these essentially local problems fade into insignificance, when compared to the wider consequences of the new Communist victory that now seems to loom ahead.

These wider consequences of the loss of southern Indochina will first be felt, of course, in south Asia. And all the evidence suggests, unfortunately, that the position in south Asia has worsened a lot since the pompous Bangkok conference that was supposed to draw so many uncrossable lines.

In Laos, chaos reigns; and the Communist-led Pathet Lao are creeping nearer and nearer to a place in what passes for the Laotian Government.

In Cambodia, the doughty little king is out, leaving confusion behind. And the Cambodian democratic party, the only party having links with the all-important villages, now seems to be successfully infiltrated by crypto-Communists.

The party machinery has lately been taken over by a group of young Cambodians returned from studies in France. The French Communists have long maintained a special trapping system for such colonial students and there are good reasons to believe that the new Cambodian democratic party leaders are among those who were trapped.

In Thailand, finally, there is now hard evidence that the Communists have full scale, classical liberated areas in the Betong salient and elsewhere along the Malayan border. These Communist areas in the far south will usefully support the No. 1 Siamese Communist stooge, Pridi Phanamayong, whose personal base is also in southern Siam. Meanwhile, in the northeast, across the border from Laos, the No. 2 stooge, Tieng Sirikohond, is also organizing on an extensive scale.

In short, Laos, Cambodia, and Thailand more than ever look like setups for the Communist walls-of-Jericho trick. By this trick, a country is made to fall by mere internal subversion and external threat, with no coarse border crossings to make the Manila pact inconveniently applicable. The fall of southern Indochina will be the first blast of the trumpets of the Communist Joshuas.

Laos and Cambodia are the keys to Thailand. Thailand is the key to Malaya, Indonesia, and Burma. Southeast Asia, in turn, is the key to India and Japan. And the loss of south Asia will surely produce grim repercussions further afield, in the Middle East, North Africa, and even Europe.

Such is the unending prospect of disaster that is beginning to open out. No one can be certain that these disasters will happen, since the future is never certain. But they are just about as foreseeable, let us say, as Hitler's progress was foreseeable after Munich, from the Sudeteniand to Prague to Danzig and to Poland. In other words, there are the best reasons to think that the progressive upset of the Asian balance of power has now reached exactly the stage that the same process reached in Europe post-Munich.

In these circumstances, it is no use saying that fighting for Quemoy and the Matsus is militarily illogical. The British guaranty to Poland was both militarily illogical and morally dubious. Britain could not contribute to Poland's defense and did not honor the guaranty, even in victory.

It is no use saying, either, that these dreary rocks in the Formosa Strait are poor pretext. We missed the best pretext to deal with the Asian problem in Korea and the next best at the time of Dien Bien Phu, just as the British missed five superior pretexts before taking a stand on Poland.

These arguments are not valid for the same reason that the arguments against the guaranty to Poland were not valid. Whatever its defects, the guaranty to Poland saved Britain on the naked edge of an abyss. It was Neville Chamberlain's last chance to take a stand. If he had waited even a little later, it would have been too late. All Europe would have been lost, and Britain would have had to beg for terms from Adolf Hitler.

In the present case, if all Asia is lost, we may not have to beg for terms. But if we do not beg, we shall surely have to fight a much worse war with infinitely heavier handicaps.

There are other good reasons, of course, for taking our stand on Quemoy and the Matsus. There is the strong possibility that Formosa itself can be lost on these little islands. There is the absolute certainty that the world Communist leadership will never again believe the American Government until the shooting actually starts. Why should they, if we once more repeat the Dien Bien Phu pattern of big talk followed by a quick backdown?

But those who oppose taking a stand on Quemoy and the Matsus must above all suggest practical means of holding south Asia or indicate how the free world is to survive after the loss of all of Asia. Otherwise their pleas for just one more backdown are like saying a man should wait to use his fists until his legs have been cut off, so that he can be quite sure his enemy really is his enemy.

The Sudeten German Case—Part 1

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, to further his desire to bring before the American people the truth concerning the expulsion of the Sudeten Germans, Dr. Walter Becher, member of the Bavarian Landtag, of Munich, Germany, has written the following article, which I wish to insert in the RECORD in six installments:

THE SUDETEN GERMAN CASE—TRUTH VERSUS PROPAGANDA

I

On March 25, 1954, page A2284 and following, the United States CONGRESSIONAL RECORD published a short outline of the Sudeten German case from my pen, picturing the Sudeten German history during many hundreds of years in the areas of Bohemia and Moravia-Silesia (western part of Czechoslovakia) as well as the expulsion of those 3.3 million Sudeten Germans who had lived there together with those 4.4 million Czechs for centuries, from Czechoslovakia in and after 1945 by the Communist-led Czechoslovak (Czech) Government of the National Front—the expulsion during which nearly 300,000 Sudeten Germans lost their lives as a result of starvation, tortures, rape, exposure, and other cruelties to which the National Front Government had incited.

On August 5, 1954, page A5796 and following, three of the top men of this Government of the National Front, who had functioned under the Communist Prime Ministers Fierlinger and Gottwald from 1945 to 1948—the same government which claims the deportation as its achievement—gave their reply to the Sudenten German case calling their re-

ply Propaganda versus Truth. They signed by their full former titles as Dr. Hubert Ripka, former member of the Czechoslovak Parliament and of the government, Dr. Peter Zenkl, former member of the Czechoslovak Parliament, mayor of the city of Prague, vice premier and chairman of the Czechoslovak National Socialist Party, Dr. Josef Lettrich, former chairman of the Slovak Democratic Party, president of the Slovak National Council (national assembly), member of the Czechoslovak Parliament.

The reply of these three National Front men, who fled in 1948—or as some put it, were sent—to the West and are now living in the United States, deserves to be read by the distinguished Members of Congress. It shows clearly the way in which it was possible to communize Czechoslovakia from within, while men as Ripka, Zenkl, and Lettrich were working and holding power there, and also reveals the form in which these men are now working in the West.

Since these men are leading members of the Council of Free Czechoslovakia and the official organ of thmt organization took over their statements, their reply represents also the opinion of the Council of Free Czechoslovakia, which is nothing but the continuation of the National Front Government in exile (without the full Communists who are governing Czechoslovakia), financed by the Free Europe Committee and the Crusade for Freedom.

Facts which can easily be verified

Ripka, Zenkl, and Lettrich declared most decidedly: "We shall answer Dr. Walter Becher's propaganda by facts which can easily be verified. First we shall point out the fallacy of his historical interpretation and then we shall proceed to show how the policies of the Sudeten Germans have led as a direct consequence to their transfer from Czechoslovakia to Germany."

The three men start with the history and with the Holy Roman Empire of the German Nation. They say: "The fact that the medieval Kingdom of Bohemia, like other non-German countries, had been a part of the Holy Roman Empire has been used by the pan-German imperialists of the modern age to lay claim to Bohemia (i. e. Czechoslovakia) [sic] as well as to Austria, Alsatia, and other countries. This pretense, conflicting sharply with historical facts, is indicative of the lust of pan-German expansionism."

When I read through my article published in the CONGRESSIONAL RECORD I find that I nowhere laid claim to the entire Czechoslovakia or to the entire Bohemia (being merely the western part of Czechoslovakia, not as Ripka puts it falsely). On the contrary, it is a matter of record that I asked for the right for self-determination not only for the Sudeten Germans, but also for the Czechs. I also never stated that the Holy Roman Empire was a nationalist state. But it was—the official full name—the Holy Roman Empire of the German Nation. Its kaisers were Germans. And it is also a matter of fact that the Bohemian kings, with the exception of a few, were of German blood. It is also a fact that the famous Bohemian king (whom the Czechs wrongly call a "Czech" king), Charles IV, of whom the Czechs are so proud and whom they call "Father of the County," was a German. Even before becoming part of the Roman Empire of the German Nation, Bohemia had dukes of German blood—the last Premyslides. These are the facts.

Ripka, Zenkl, and Lettrich continue: "We must protest against the one-sided interpretation of modern German nationalists, who in their conceited role of Kulturtraeger pretend that the Germans are solely responsible for the higher cultural level achieved by the Czechs. Bohemians (the Czechs) [sic] came under the influence of the Italians, the French and later the English, not only the Germans."

Ripka gives no example of the English, French, and Italian influence, nor of their proportion of strength to the German influence on the Czechs, neither does he mention that the aforementioned influences reached the Czechs just through the Germans.

In rereading my article, I find nowhere mentioning, indicating in general that the Germans were solely responsible for the higher cultural level achieved by the Czechs. On the contrary, I stressed the achievements of the Czechs during their coexistence with the Sudeten Germans. In general, I was guided by no will to prove that the Germans were better than the Czechs. But with regard to the fact that the Benes-Czechs systematically translated "Bohemians" falsely as "Czechs" and "Bohemia" falsely as "Czechia" (Czech territory), claiming her fully for themselves instead of claiming it for both Bohemian nations—that is the Czechs (7.4 million) and the Sudeten Germans (3.3 million)—and due to the fact that the Benes-Czechs expelled the Sudeten Germans from Bohemia and Moravia-Silesia, where they constituted one-third of the population, I felt it my duty to point out the reality about Bohemia-Moravia and the Sudeten Germans, and their real influence there, in their common homeland.

I stated facts: that, e. g., all towns in Bohemia and Moravia, with the exception of the Hussite (early-Communist) town Tabor, were founded by the Germans. Ripka wanted facts. Now, these are the facts.

I stated facts: that, e. g., all towns in the Czechoslovak industry (50 to 100 percent of individual branches) were in reality Sudeten German and that many Czechoslovak export products, known from 1918 to 1938 under the trade mark "Made in Czechoslovakia" were in reality Sudeten German products. Or: I also, stated that the "Bohemian" city and world-known spa of Carlsbad, to whose citizens I have the honor to belong, was a purely Sudeten German city.

Of course, I still failed to quote a number of other facts concerning history or recent times. For example, I did not say that the Prague University, founded on April 7, 1348, by Emperor Charles IV was the first German university with four faculties. It then incorporated four nations—the Bavarian, the Saxonian, the Polish, and the Bohemian. Three of them were German (the Polish were the Germans from Silesia) and one-half German, i. e., Bohemian, that means mixed German-Czech.

I failed also to quote, for instance, the list of artists and architects of the Baroque period, who built up Prague and the rest of the Bohemian cities, presenting the picture they all are showing now. A. Leithner, Christoph and Ignaz Dientzenhofer, Santin-Aichel, Ignaz Bayer, Peter Brandel, Reiner, Mathias Braun, Hartmann, B. Neumann, F. Dietz, Fischer von Erlach, Lukas von Hildebrandt, Anton Zimmer, J. M. Lassler, Ferd. Max Brokoff, Johann Brokoff—all these were Germans. Franz M. Kanka, Jakob Blaschejowsky and Skreta were Czechs. In addition, there were about 6 Italian and 1 French architects.

And so on. These are the facts and there are even more of them.

In fact, during the entire history, the Benes-Czechs have always tried to nationalize the Sudeten German history in the same way as they did in 1945 with the Sudeten German property.

The Hussite period

Ripka, Zenkl, and Lettrich then proceeded to proclaim: "Dr. Becher's enmity toward the Czechs stands out most glaringly whenever he mentions the Hussite period."

I fully and absolutely resent and reject and slightest accusation of enmity toward the Czechs. In my first article I expressly used the word Benes-Czechs. I have deep esteem for the real Czechs, the majority of Czechs, persecuted in the same way by Gottwald, Ripka, Zapotocky, Zenkl, and Lettrich, as my own people were persecuted. Actually, the Czechs are so strongly intermingled with the Sudeten Germans, that nearly one-third of the Czechs have German family names. Curiously enough, the names of Zenkl and Lettrich, too, are German names.

It seems, indeed, necessary for Ripka to defend the Hussite period in order to defend his own activities which were so parallel to it. Our stand against Hussitism has nothing to do with religion or the priest Hus. It was the political followers of Jan Hus—Zizka and the others—who robbed, murdered, and expelled many Sudeten Germans and the better-off Czechs in the 15th century. The same did Ripka and his followers in 1945 and after. It was the same primitive Communist greediness for the property of others during Zizka's and Ripka's time. As to the way in which Communist measures are defended by Ripka and Zenkl and Lettrich, please let me quote their own words from the CONGRESSIONAL RECORD of August 5, 1954: "In the Hussite period, the great majority of Germans opposed religious and social reformation as sought by the Czechs and also the Slovaks, in the last war, Hitler, supported by the great majority of Germans, especially the Sudeten Germans, tried to destroy the democracy, the modern form of social reform, as advanced and defended by the Czechs and Slovaks."

Here is what Ripka, Zenkl, and Lettrich reached in 1945: Prohibition of all Czech and Slovak political parties of the center and the right (constituting the majority of the Prague Parliament before the war), expropriation and nationalization of industry and trade by various decrees, establishment of people's courts against all reactionaries, abolishment of the freedom of press and free speech, establishment of the national committees as the local Soviets (Soviet committees) and of the rigid national front under Communist leadership, deportation and murders committed on Sudeten Germans and Hungarians, and imprisonment or execution of the Czech leaders of the Czech Agrarian, Artisan, and National Democratic Parties. (See Special Report No. 8 of December 31, 1954 (Communist Takeover and Occupation of Czechoslovakia) of the Select Committee on Communist Aggression of the House of Representatives under the chairmanship of Representative Charles J. Kersten, pp. 13 and 15.)

This is the "democracy, the modern form of social reform, as advanced and defended by the Czechs," which Ripka, Benes, Lettrich, Zapotocky, Gottwald, and Zenkl carried out from 1945 to 1948.

False propaganda operating with flagrant distortions of facts and downright falsehoods

These are the words of Ripka, Zenkl, and Lettrich concerning my presentation of our case. They are hard words. They, however, seem to represent well the anger of men who, until now, have held a full monopoly in informing the West and America about Czechoslovakia. Yet in their reply these men failed to prove any single distortion. On the contrary, they volunteered a series of downright falsehoods themselves.

Ripka stated that the regions of Bohemia and Moravia-Silesia, known as the Sudetenland, were settled by newcomers not earlier than in the 17th and 18th century, after the Battle of the White Mountain. The truth could easily be proved and presented in uor Sudeten German Atlas, Munich, 1953, showing the fact that those regions previously uninhabited in which the Czechs had not resided before, are known as already settled by the Sudeten Germans during the 12th

and 13th century under the Premyslides, long before the Hussite Wars. If, in the following centuries, more land within the Sudeten German area was cultivated and occupied, then it is also true that more territory was cultivated and occupied by the Czechs within the Czech territory, in inner Bohemia and Moravia. As far as the taking over of territory is concerned, the truth is that the Czechs have pushed, out of the central position, the Sudeten Germans from their land, in the course of history, among other things Czechizing all the towns and cities in inner Bohemia and Moravia up to the final infamous Agrarian Reform of October 15, 1919, by which about one-third of the Sudeten German territory in the Sudetenland was given to the Czechs, and to the full expropriation and expulsion of the Sudeten Germans in 1945.

What may be called a flagrant distortion of facts is also the interpretation of the Battle of the White Mountain, as given by Ripka. He is presenting nothing but the nationalist interpretation of the Pan-Slav historians who maintain that the Battle of the White Mountain was a battle between Germans and Czechs, in which the Czechs were defeated. In reality, the Battle of the White Mountain was the battle between Catholics and Protestants, just as the Thirty Years War, which took place on the entire territory of the German Empire. The leaders of both parties were Germans: the leader of the Catholic League was Duke Maximilian of Bayern (Bavaria), the leader of the Protestant Union was Kurfuerst Duke Friedrich V von der Pfalz (Palatine).

Indeed, in the battle of the White Mountain, the military commander of the Bohemian (falsely "Czech") Protestants was a German, Duke Christian von Anhalt, while the commanders of the allegedly German Catholics were no Germans at all—they were Count Tilly, a Belgian, Count Boucquoy, a Spaniard. The Catholics won, and the first of the defeated Bohemian Protestants to be executed after the battle of the White Mountain, was the German Count Schlick. During the following years, German and Czech Protestants in Bohemia were persecuted alike and German as well as Czech Catholics had the same advantages. The same happened in other countries, e. g., in Austria, where the Protestants were also persecuted by Duke Ferdinand of Tyrol.

As soon as the Protestants of Bohemia assumed the Catholic religion, the persecutions were brought to a standstill. Today the majority of Czechs are Catholics. And, as a matter of fact, Catholic Czech historians, as Josef Pekar, do not see in the period after the White Mountain battle a "black" period—as do the Ripka-Hussites and the Communists. On the contrary, the former rather consider as a black period the time of Hussite communism.

The Sudeten German Case—Part 2

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, the second installment of the article by Dr. Walter Becher, member of the Bavarian Landtag, of Munich, Germany, follows:

II

It is also an unchangeable fact that the ideas of the romantic enlightened nationalism, preached by the German Johann Gottlieb Herder called forth the awakening of Czech nationalism; Herder was the real father of Czech nationalism, which, of course, later assumed the Pan-Slav direction.

The Hapsburg Empire was centralized, but in Bohemia and Moravia-Silesia, both the German and the Czech language were used. In 1784 Emperor Josef II, residing in Vienna, decreed that the German language be the official language in all countries of the empire, including also Belgium, Italy, etc. This was only part of his other centralization measures which, however, called forth a strong opposition and could not be upheld for a long time. As far as the language problem is concerned, in 1880 an order by Stremayer and later by Badeni decreed that both languages, Czech and German, became the official languages in Bohemia and Moravia-Silesia. However, during all the time the Czechs had their representatives, their deputies, in Vienna and were not hindered to use their language, to build up their institutions, schools, etc. There was, of course, no suppression of the Czech language and absolutely no such rude suppression of use of their own language as during the Hussite period and as Ripka practiced it in 1945 and after, when German speaking was forbidden in the streets and when the Germans had to wear white badges in the Sudetenland.

In any case, I did not object to the right of the Czechs to disrupt the Hapsburg Empire and to seek full self-determination.

There was no privileged Sudeten German "Herrenvolk," as Ripka stated. It is true, however, that at times certain Czechs had inferiority complexes and projected their worse stand in life-standard and lower working energy as caused by the viciousness of those who were richer—of both the Sudeten Germans and the richer Czechs. This has been, however, the general sign of the proletarian Communist and collectivist world philosophy since ever and is known among other nations, too. It ends by taking property from the rich, by communizing it, as Benes and Ripka did to the Sudeten German property, as well as to the property of the Czech upper and middle classes after 1945. This inferiority complex was sufficiently proved by the Ripkamen in the same way as by the Bolshevists in Russia.

This is the general collectivist dogma, unfortunately preached by Ripka even today, when Ripka is teaching at American universities, and also spread through America by means of the publications of the Council of Free Czechoslovakia. It seems quite possible that the time may come when Ripka will start to preach also in America that the property of the "privileged" American classes, of the master classes, should be taken away from these and collectivized, in the same spirit as he did in Czechoslovakia and as it is being manifested behind the Iron Curtain by the Communists day by day.

In contrast to this behavior of the Zizka- and Ripka-Czechs, the Sudeten Germans, when expelled and robbed of their property and driven to Germany, started their new life with bare hands, not demanding the property of others, but working hard in private enterprise, thus building up many of their former factories and workshops in a free competition economy, even though it has been so immeasurably hard. The same philosophy was manifested by most of the non-Ripka Czech refugees and by nearly all the Slovaks who fled from their communized country from 1945 to 1948 until today.

Why were the Sudeten Germans not given the right for self-determination in 1918?

Austria-Hungary was allegedly dismembered on the basis of the right for self-determination for her nations. But the very same right for self-determination was not given, in 1918, to the Sudeten Germans, the Hungarians, and Slovaks—who together constituted 50 percent of the inhabitants of the then created Czechoslovakia, and who had to remain as second-class nations in the new, constructed country.

The very same Czechs who were radical democrats before 1918, promptly changed into imperialists. Those who maintained that the economic advantages and intermingled nationalities of Austria-Hungary do not justify the centralization role of Vienna, suddenly felt that the idea of Czechoslovakia justified the Czech imperialism over the majority of inhabitants of Czechoslovakia. Here is what Ripka said in the CONGRESSIONAL RECORD, in order to explain why the Sudeten Germans were given no right for self-determination in 1918: "At the Paris Conference the Allies, after a thorough study by experts—Mr. Allen Dulles was one of them—realized that Bohemia and Moravia form an integral part and organic whole which cannot be disrupted according to nationalities, inasmuch as these are so very intermingled. Therefore the Allies sanctioned the old historic boundaries between the Czech [sic] state and Germany, boundaries which have existed uninterruptedly even since ancient times."

I had said in my article that Benes presented to the experts of the Paris Conference deliberately falsified maps, reducing areas of Sudeten German settlement in Bohemia and Moravia-Silesia—again a historic fact which Ripka cannot refute. We possess these falsified maps and reproduced them on page 250 of our Documents on the Expulsion of the Sudeten Germans.

Why the Sudeten Germans were not permitted to secede from the Czech regions and why—moreover—they were not given a federative status of equal partners in Czechoslovakia, but had to remain as a mere subjected minority in the Czech state, can be understood, as I had pointed out, from the unchangeable reality that after 1918 Czechoslovakia was established as a wall against defeated Germany—the wall of France and England and, since 1935 when Genes so eagerly sought and obtained an alliance with Soviet Russia, also the wall of the eastern Communist motherland.

They admitted: Czechoslovakia was no other Switzerland

The following is what Ripka, Zenkl, and Lettrich said: "Dr. Becher repeats the accusation that the promise given the Allies by Masaryk and Benes in 1918 that Czechoslovakia would be a state after the manner of Switzerland were not carried out; he likewise repeats the well-known charges of German propaganda that Czechoslovakia treated the Germans as second-class citizens, only as a minority. Had it been possible to preserve peace in Europe for 50 or 60 years after World War I, Czechoslovakia, as to the nationalities, would undoubtedly have become a state such as Switzerland. Masaryk, Benes, and other Czechoslovak leaders in political life tried faithfully to achieve this goal.

Ripka admits what I had stated before: Czechoslovakia was never a second Switzerland, though Masaryk and Benes had promised to the Allies at Paris to establish such a body politic in 1918—not in 60 years. The constitution of the Republic—again a historic fact—was made by the Czechs alone, no Sudeten German was invited to take part in elaborating it. During all the years before Hitler came to power in Germany, Benes rejected all efforts of the Sudeten Germans to achieve equal rights as nationality in their territory. After Hitler came to power in Germany, Benes rejected this goal even more decisively. Neither in good, nor in bad, was he willing to give the Sudeten Germans their rights. Had Czechoslovakia lasted for 50 or 60 years, or even for 200 years, the Sudeten Germans would have had to remain always subjects to the anti-German Czech state nationality, in the same way as the Slovaks, the Hungarians, and the Ruthenians.

Ripka's, Zenkl's, and Lettrich's records—the records of three Czechoslovak Democrats

Ripka, Zenkl, and Lettrich further declared in the CONGRESSIONAL RECORD of August 5, 1954, against my article: "It is not necessary to defend against the charges of alleged chauvinistic communism such men as Benes, Ripka, and others of the Masaryk school of thought, who tried to live with the Germans in friendship in the period between the two World Wars and who have always openly rejected not only communism but Marxism as well."

In reality, the alleged open rejection of communism and Marxism by Benes, Ripka, Zenkel, and Lettrich looked exactly as follows:

Upon the strong urging of Ripka, the Czechoslovak exile Government in London under President Benes concluded in 1943 a Czechoslovak-Soviet friendship treaty in Moscow. In 1944–45, Benes and his exile government returned to Czechoslovakia via Moscow and declared at Kosice on April 4, 1945, the so-called Kosice program, by which a Government of the National Front, involving only Communist and pro-Communist parties, was established under the lead of Prime Minister Communist Fierlinger and later of Gottwald. All Czech parties of the center and the right, as well as all Slovak parties whih, before World War II, had constituted the majority of Czech and Slovak deputies in the Prague Parliament, were dissolved, the parties of the National Front got new, Communist-chosen leaders. Freedom of election, of speech, press were abolished. The press of the National Front only was permitted, people's courts were established in order to punish all traitors and reactionaries, the industry forecfully nationalized and collectivized, local Soviets established under the name of National Committees, and the Sudeten Germans and Hungarians expropriated and expelled. Dr. Hubert Ripka became Minister of Foreign Trade, Dr. Peter Zenkl, Deputy Prime Minister to the Communist Prime Ministers Fierlinger and Gottwald, and Dr. Josef Lettrich became the leader of a new, artificial Slovak Democratic Party as well as the leader of the National Front in Slovakia.

III

The case of Dr. Hubert Ripka

(The quotations given in this chapter are available.)

The story of Dr. Hubert Ripka is a simple one. Member of Benes' National Socialist Party, he was a journalist before World War II. In 1935 he conducted a group of Czech newsmen in the Soviet Union. Up to 1938 he was assistant editor of the magazine Praha-Moskva, devoted to Czechoslovak-Soviet friendship.

In 1939 Ripka went to Paris where he became a spokesman of the former President Benes. His personal secretary was the known Communist Mrs. Hilda Matouskova. One of his chief assistants was the Communist agent Otto Katz-Suchy, alias Andre Simon. Having joined Benes in London in 1940, Ripka became Minister of Information of the Czechoslovak Government in exile. He often spoke over the EBC, the Czechoslovak section of which was headed by the Slovak Communist Vavro Hajdu, another member being the Communist spy Otto Biheler, later expelled from the United States.

On November 7, 1942, Ripka said over BBC:

"The Russian revolution not only increased the strength of the Russian Soviet state, but also raised to greater heights than ever before the standard of civilization, culture, and living of the wide masses of the Soviet peoples. * * *

"Bolshevism is a supernational ideal, an eternal ideal, a human ideal, an ideal which has kindled the minds of the noblest of men from the time of Plato and through the Christian era, through the French Revolution and until today. * * * Just as the French Revolution strove to realize the ideal of freedom, so did the Russian revolution try to realize the ideal of equality."

In London, Ripka was also Deputy Foreign Minister and under Jan Masaryk, who ran the Ministry with a notoriously loose hand, Ripka—in reality—managed his Ministry. As to the Czechoslovak-Soviet Treaty of December 14, 1944, he said over BBC: "The Czechoslovak-Soviety Treaty is the foundation of our country's external security and is a fundamental contribution to the unification of national forces * * * Thanks to the treaty, Czechoslovakia's interests are receiving effective support."

In his book East and West, London 1944, Ripka wrote: "The Bolshevism of Lenin and Stalin represents a creative synthesis of specifically Russian and certain Western elements" (p. 13). "We the Czechoslovaks make no secret of our satisfaction that Soviet Russia is beginning to participate in European and world politics as a strong world power" (p. 58). On the past policies in 1939–41, Ripka wrote in the same book: "Since, in the new situation, it was impossible to collaborate officially with the Soviet Union, we * * * did nothing which might prejudice or prevent the renewal of cooperation at the earliest possible moment; I need only recall how strongly our attitude contrasted with that of many others during the Soviet-Finnish war. Moreover, even in that period, there was no interruption of the personal contacts and exchanges of information between ourselves and important Soviet representatives in London, Paris, Washington and elsewhere" (p. 34).

In his recent book Czechoslovakia Enslaved, London, 1950, Ripka admits authorship of the plan to expel the Sudeten Germans: "I myself * * * had proposed a detailed plan for the transfer of the Germans" (p. 26). The details were worked out in London by a secret section of Ripka's foreign office, run by Wolfgang von Putlitz, friend of the vanished British diplomats Burgess and McLean as well as of Dr. Otto John who during World War II lived in London. Putlitz later turned up as political adviser in the East German Communist regime.

Ripka's signatures are on the Kosice Statute and on the decrees concerning nationalization and retribution. Under the latter decree any appeal concerning the decision of a people's court was impossible. A death sentence when pronounced was to be executed within 2 hours. As an act of grace, 1 additional hour could be granted.

The New York Times of April 15, 1945, reports: "London—Dr. Hubert Ripka, Czechoslovakia Minister of Foreign Trade, told a farewell press conference here today that he did not consider the Western Allies' apprehensions that his country might become a vassal of the Soviet Union were grounded. He said it was natural that Czechoslovakia should seek her security primarily in friendship with the Soviet Union."

In his book, Cskoslovensko v nove Evrope, London 1945, page 87, Ripka wrote: "All anti-Soviet elements must necessarily be eliminated from our schools, educational institutions, and literature."

One of Ripka's first transactions as Minister of Foreign Trade was to turn over to the Soviet Union, free of charge, the uranium mines of Joachimsthal (Jachymov) in the Sudetenland, now one of the principal sources from which the Soviets are extracting atomic material to bomb the United States.

In the bulletin of the Czechoslovak Chamber of Commerce, London, 1947, Ripka wrote: "Closer trade relations with the Soviet Union were not dictated by the Communist Party. The strengthening of these relations was in the interest of the Czechoslovak economy and part of our own policy. Alliance with the Soviet Union has been the most important factor in this country's foreign policy."

In 1948, after the Communist take-over, Ripka started his flight to the West in the company of two ministers of the National Front, both Catholic priests. All of them were surprised by the Communist police near Rakovnik in Bohemia. The Communist police arrested the two priests but allowed Ripka to flee.

After arriving at Paris, Ripka organized the "Benes' Czechoslovak Foreign Institute." This institute issued a directive summarizing its poliitcal aims: "The transfer of the means of production into the hands of the workers is the only way leading to the increase of well-being and prosperity among the largest classes." The Institute has operating groups and their members have to remain unknown. The organizatorial directive explains: 'The Czechoslovak Foreign Institute is to create a group within groups. The anonymity of its members is to constitute its great strength, because it is not possible to defeat an invisible power." A group of members of the Institute lived in Switzerland, where they sold ball bearings, cadmium, and other strategic materials to the states in the Soviet orbit.

The list of Communists and agents with whom Ripka has been associated now in exile is a long one and includes names such as Bohumil Lausman, Frantisek Kubal, Bohumil Cerny, Vladimir Bruza and Milos Vanek.

In the book Czechoslovakia Enslaved, London, 1950, Ripka advocates the policy of coexistence in the following terms: "Today more than ever I persist in believing that a free and independent Czechoslovakia cannot exist except in a balanced Europe in which the Western Powers and Russia are trying to live on good terms. Even the events of February 1948 have not been able to shake this conviction, which remains the keystone of my whole conception of our foreign policy" (p. 74). "We are not naive enough to believe that our country can be governed without the Communists" (p. 183).

In the United States Ripka became Foreign Secretary of the Council of Free Czechoslovakia. In 1953, the Senate Subcommittee on Internal Security investigated Ripka; and his American employers, the Free Europe Committee, dropped him from this position. He remained, however, member of the Plenum and the first ideologist of the "Counsil." He is also professor with the New School of Social Reserch in New York, teaching his ideas to the American youth.

The Sudeten German Case—Part 3

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, the third installment of the article by Walter Becher, member of the Bavarian Landtag, of Munich, Germany, follows:

The case of Dr. Petr Zenkl

(The quotations given in this chapter are available.)

A parallel case is that of Dr. Petr Zenkl, Member of Benes' National Socalist Party, before World War II mayor of Prague, during World War II as pro-Communist in a concen-

tration camp, after the war Deputy Prime Minister of the National Front under the Communist Prime Minister Fierlinger and Gottwald. It was on Zenkl's initiative that the Communist Party, the Social Democratic and Benes' Socialist Parties of the National Front formed, on June 25, 1945, the National Bloc of the Working People or the Socialist Bloc, working in accord with respect to the fourth party of the National Front, the People's Party (this party, too, had been deprived of its former leaders and was led by pro-Communist men installed by the Communist Party, even though some leaders were Catholic priests).

In July 1947, after under his presidency the Czechoslovak Government had rejected the Marshall plan for Czechoslovakia, Zenkl declared: "Never shall we forget the huge help, offered to Czechoslovakia by the Soviet people, its army and personally, Comrade Stalin. The socialist ideas have opened also to our nation the gate to better future. With the feeling of sincere love and faithfulness toward the Soviets, it is necessary to immediately start building socialism in Czechoslovakia and thus prepare for future." On November 14, 1945, Dr. Peter Zenkl uttered in the Provisional National Assembly at Prague: "The great Marshal Stalin had said on the 6th of November 1943 concerning the aims of this war * * * the war is ended. It will be necessary to win the peace in the spirit of this clear declaration of Stalin. The gratitude to the liberators is not the privilege of one class or one party of our people [thunderous applause of the parliament]—this gratitude is a permanent ornament to the whole of our people which happily lived in order to see the fulfillment of the great dream of its forefathers, of a free and powerful Slavism."

At the same session of the Provisional National Assembly at Prague Zenkl also declared: "It is obvious that these policies (of the national front, the Kosice program) do not arise from emotions only, but they also result from rational thinking. * * * It is self-evident that the feelings of Slav solidarity, the deep gratitude and admiration for the Soviet Union, for the heroism of the Red Army and for the great achievements of the Soviet Union, are sincerely shared by the entire Czechoslovak people, irrespective of their political or other differences. It would be a mistake and would not agree with the truth, if somebody would maintain that this is not a common standpoint of our people." "All Czechs and Slovaks should agree that cooperation with the Soviet Union is essential to our town and to the national interests. Never without the Soviet Union, never against the Soviet Union, but always with her, side by side" (p. 20 of the shorthand record).

Dr. Peter Zenkl, in "Svobodne Slovo" of January 1, 1946: "We are a God-chosen generation, to which it was granted to fulfill a unique historic task: to rid our homeland of the Germans, of this otherwise eternal danger for peace, for our land and for Europe * * * What was carried out and established by laws, that is the embarking on a road which the nation has chosen and on which the evolution will go. On this road there is no return, even if someone would wish it. But we, of course, do not wish it. We began an enormous task, which has to succeed, we all are responsible for it, facing future generations * * *."

On May 7, 1946, at a session of the Provisional National Assembly in Prague, Dr. Peter Zenkl said: "The faithfulness to the alliance with the U. S. S. R. and the brotherly love for the peoples of great Russia are for us, Czechs and Slovaks, sincere ties which are valid for our whole nation. Therein lies the symbol and duty for all those who lead or want to lead the policies of this nation. The feeling of a faithful duty with regard to Czechoslovakia's alliance with the U. S. S. R. is given by our position in the world and in Europe as well as by the spontaneous will of the Czechoslovak people who has to be considered as the only carrier of the executive power in Czechoslovakia and next to whom nobody can be taken into consideration" (p. 6 of shorthand report).

In a letter of November 23, 1946, Dr. Zenkl wrote: "Gottwald is the chairman of the Communist Party. He organized it and gave the best years of his life to it, he fought for its program and was put in jail for it. * * * I wish him that his political party, after 10 years of opposition and persecution would play the leading role in the reconstruction of our state, the leading role which our people would confirm at the elections * * * and that it should always be the actual creative element of every Czechoslovak government."

After his flight to the West in 1948, Zenkl became president of the executive committee of the Council of Free Czechoslovakia. A friend of Dr. Zenkl in exile was the Communist spy Bohumil Cerny who went back to Czechoslovakia and is at present the chief of the Communist intelligence service at Brno. Cerny lived, in 1948 and 1949, in Germany and was known as a representative of Dr. Zenkl, organizing the committees of the Czech National Socialist Party. For this and other services he was paid by the Council of Free Czechoslovakia.

Zenkl was investigated in 1953 by the Senate Internal Security Subcommittee and dropped from his position as president of the council to a mere member of the plenum, but remained an important person behind the 2 or 3 weak National Socialist frontmen who now figure by name on the list of the executive committee of the council.

IV

The Case of Dr. Josef Lettrich

(The quotations given in this chapter are available)

The case of Dr. Josef Lettrich is quite similar to that of Dr. Zenkl. During World War II in freedom in Slovakia, he began a close cooperation with the Communists in Slovakia on Christmas 1943 and in 1944 coorganized the Communist Putsch at Banska Bystrica with its mass graves. In the National Front government between 1945 and 1948 he became chairman of the artificial Slovak Democratic Party. He is responsible for the suppression of all Slovak political parties with the exception of the Communists, and for the persecution of the Slovak people who in their majority are anti-Communist. He was head of the National Front regime for Slovakia.

He calls himself a Slovak, but in reality has no right to speak for the Slovaks. He sold the autonomy to the Prague Communist government by means of the agreement of June 27, 1946, for the Slovaks proved to be much more anti-Communist than the Czechs in the 1946 election and thus, following the Communist wish, had to be subordinated to the Czech pro-Communist majority. This was stated by the special report No. 8 of the Kersten committee of December 31, 1954, page 20. The report said:

"By this agreement, signed by J. Lettrich, chairman of the Democratic Party, Slovakia lost her legislative and executive autonomy."

Cas, the official daily of the Slovak Democratic Party, reported on January 21, 1948: "In the very heart of Moscow and the Soviet Union the founder of the Soviet State enjoys eternal sleep. He was the founder of a new, liberated, and joyful life for the suppressed nations. Soviet science preserved his image for future generations, so that at any time people could look into the face of the man, to whom they are indebted by deep gratitude for their happiness."

Cas, on November 7, 1947: "It is the unfalsified, unselfish, and pure feeling of friendship and sympathy that we have for this great, for us so intimate and neighborly a country. It is the pure joy about the success and the progress of the U. S. S. R., it is the unbreakable hope that Slavism, in its new form, will safeguard itself. * * * From our soul we greet the jubileeing U. S. S. R. * * * We wish that she keep on prospering, flourishing and growing mighty into her own greatness, but also to the welfare of all mankind."

Cas, Bratislava, June 19, 1954, issued on page 1 a speech of Dr. Josef Lettrich: "Already in the underground movement, during the resistance fight, the revolutionary leaders in Slovakia agreed that they would follow the democratic political order, but that, however, we will, within this democratic order, create only two political parties: the Democratic Party and the Communist Party, a party for the democratic citizens' elements and a party for the working class. These two parties are now governing together, and since they are governing together, they are respsonsible for Slovakia's fate." (Please not here what Dr. Lettrich understands under democratic order. The same Dr. Lettrich used the word "democratic" also several times in his recent congressional insertion.)

"It was decided that the Czechoslovak Republic will be a national state of Czechs and Slovaks. We will not tolerate minorities of such nations which have been undermining the foundations of the state and its democratic regime. Therefore, the Hungarians and the Germans must leave our country. In the next days, the President of the Republic [Benes] will issue a decree by which all Germans and Hungarians will be deprived of their citizenship. They will go there where their heart is drawing them."

Dr. Lettrich in Cas, on June 3, 1945: "Were we not to find a final solution of this problem of Hungarians and Germans, we would have to look forward to the future with misgivings. * * * It must be our aim to drive, without mercy, these people from our land."

Again in Cas, June 19, 1945: "We will not permit that religious organizations interfere in the political life; that the religion will be used as a means to cover political aims."

Why did Dr. Lettrich and company suppress all political parties except those pro-Communist? Here is his own explanation, given on June 19, 1945, in Cas: "We have not restored the old political parties because we consider their programs outmoded." Or in his speech on October 30, 1945, in the Provisional National Assembly: "Political parties which have outlived themselves, which are politically unacceptable or blamed, may not be revived in our country nor renewed in any form."

Again in Cas, June 19, 1945: "We fought purposefully for the resurrection of the Czechoslovak Republic. It has been clear to us that the Czechoslovak Republic must have a people's democratic regime and that she will have to avoid the political errors and mistakes of the past. In our Republic only the will of the people will decide."

Lettrich fought not only the Sudeten Germans and Hungarians but all anti-Communists. In Cas, No. 130, 1946: "Diverging forces shall be jailed. Diverging forces are today either eradicated or liquidated. Today only the Communists and members of other political parties (of the National Front) bear the responsibility for determining which forces shall control Slovakia and in which direction Slovakia shall go."

Dr. Lettrich equally persecuted the anti-Communist Ukrainians who in 1947 fled from Russia to the West via Slovakia. His hatred against all anti-Communists was unconditional. At a manifestation of the Democratic Party in Bratislava, November 16, 1947, he said: "It is with joy and satisfaction that we Democrats take cognizance of the fact that our security organs have saved us not only from the danger of the Bandera hordes but also from that of an antistate plot. We are fully aware of their difficult tasks and responsible work and we wish to

be of assistance to them in this meritorious undertaking."

On January 25, 1948, 1 month before the Communist takeover, Dr. Lettrich said at the session of the Democratic Party at Bratislava: "The alliance with the U. S. S. R. is the starting point of our new foreign policy and of our security system. It represents a mighty bulwark against a future possible danger from the part of German imperialism. In the spirit of these principles, the Democratic Party was acting stanchly at all forums. It put all its weight behind this conception. This orientation is to be considered as the invariable device for our future political life."

Lettrich foresaw the future evolution of people's democracies. In Cas, No. 262, 1946: "The national committees which have been created as a self-governing entity by our people's democracy after the liberation and reconstruction of our state, as well as their various organs, are the culmination of a stage of democratic evolution in our existence."

Lettrich had already once been sent to the United States of America by the Communists; in January 1947 he made a propaganda trip to the United States, assuring the American Czechs and Slovaks that there is real democracy and freedom in Czechoslovakia. At a conference in January 1947, ending his American trip, he said: "It has to be declared that, to a large degree, the success of my trip to the United States of America was only made possible by Slovak Communists, mainly the functionaries of the Slovak Workers Society."

In Cas, No. 153, Bratislava, 1947: "All our political parties (of the Natinoal Front) absolutely decline the smearing and lying campaign of certain foreign newspapers tending to create the impression that some forcible changes in the present Czechoslovak political regime are being prepared. Democratic Czechoslovakia solves and will continue to solve her own problems and difficulties by proper individual Czechoslovak methods and by cooperation with the parties of the National Front. It shall never happen that Czechoslovakia, proud of her independence, becomes a stage for international intrigues whatsoever, nor that she enters foreign disruptive entanglements with circles reactionary to her own interests. The parties of the National Front call upon all the citizens of our land not to allow themselves to be stirred up by false and fictitious "information" from abroad." (Here again we find talk about 'democratic' Czechoslovakia and 'reactionaries').

When the Communists were in full prepration of their February 1948 takeover, they had the full support and protection of Dr. Lettrich, see Declaration in the name of the Democratic Party, 1947: "It is our own interest to have this web of plotting torn to shreds." (These words concern an alleged plot against the Communists, which, they maintained, had been organized against them). In "Cas," on January 10, 1948: "The members of the National Security Corps (the Communist police) are given full recognition by the leaders of the Democratic Party for their arduous and responsible work."

Again in the Declaration, in the name of the Democratic Party, on June 10, 1948, 1½ months before the Communists took over: "The leaders of the Democratic Party wish to state that they will give full support to the Commissioner of the Interior in all matters pertaining to the obstruction of antistate activities whatsoever. • • • We emphasize that we are in accord with a thorough purge • • • of antistate elements."

When Lettrich came to the United States of America for the second time, in 1949, he became vice president of the executive committee of the Council of Free Czechoslovakia. When investigated by the Senate Internal Security Subcommittee, Lettrich was dropped by his employers from the vice presidency, but remained member of the committee, probably because there are so very few Slovaks who are willing to act as Slovak frontmen for the otherwise Czech council.

The Sudeten German Case—Part 4

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, the fourth instalment of the article by Walter Becher, member of the Bavarian Landtag, of Munich, Germany, follows:

The present work of the Czechoslovak "Democrats" in the West

The activities of the ministers of the National Front led to the full communization of Czechoslovakia. After the full Communist takev-over in Czechoslovakia in February 1948, the same men were guarded in their homes, but curiously enough one after the other succeeded in escaping to the West. Only two Catholic priests were arrested when trying to flee. The other National Fronters were not hindered.

After they had arrived in America, Ripka, Zenkl, and Lettrich were picked up by the Free Europe Committee and installed in positions of leadership in the Council of Free Czechoslovakia and Radio Free Europe. These institutions are today fully dominated by their followers and Ripka, Zenkl, and Lettrich are still the most important persons there, while, since 1953, when the Senate Internal Security Subcommittee made its investigations, other well-paid persons are acting as front-men for them—Stefan Osusky, Jan Papanek, Juraj Slavik, Arnost Heydrich, Vaclav Hlavaty, Hodza, Fusek, Nemec, Rasin, and others.

Other such allegedly unpolitical organizations as the Czech Czechoslovak National Council in America, the American Fund for Czechoslovak Refugees, Inc., the National Union of Czechoslovak Students in Exile, and the Sokol are fully infiltrated and dominated by Ripka men.

The Czechoslovak Democrats are today a much tougher case than the Lattimores and Jessups. They reckon with the fact that Czechoslovakia is far from America and that the Americans do not know the real facts. They never admit any guilt or fault and are thus still holding the first line in the battle against anticommunism. They even call their activities between 1945 and 1948 in the following terms (congressional insertion on August 5, 1954): "The Czechoslovak Democrats fought communism the day the war ended and they were increasingly successful in the struggle."

They do not repent one single iota of their former activities, they continue to preach their crypto-Communist philosophy by means of Radio Free Europe and thus paralyze completely any anti-Communist spiritual resistance in the East.

Senator WILLIAM E. JENNER wrote to the spokesman of the Sudeten German Landsmannschaft, Dr. Rudolf Lodgman, on Whitsunday 1954: "The Communists also needed non-Russian allies whose pro-Communist nationals could be sent to Western Europe and the United States, to infiltrate our anti-Communist agencies here and abroad and reduce American psychological warfare to impotence."

The Czechoslovak National Fronters fulfill completely this task by fighting all real anti-Communist Czechs and Slovaks, by occupying all positions, by preventing all real anti-Communists from any work, excluding all these from any cooperation in the allegedly anti-Communist agencies. They are working now in the same sense as they had worked in Czechoslovakia before.

V

The Sudeten Germans during World War II

In their elaborate of August 5, 1954, Ripka, Zenkl, and Lettrich uttered several words about the nazism of the Sudeten Germans during World War II and they mentioned the names of Konrad Henlein and Karl Hermann Frank.

The fact is that during World War II, the Sudetenland and the Czech parts of Bohemia and Moravia-Silesia were separated by state borders from each other and that the population of the Sudetenland had nothing to do with the Czechs. Henlein was head of a part of the Sudetenland. It is also a fact that in inner Bohemia and Moravia the National Socialist regime was headed by Germans from Germany as Reichs protectors. This regime suppressed the Communist and pro-Communist parts of the Czech nation. Frank was a second man in this regime, but the Benes men, in their antipathy against everything Sudeten German and in their belief that it would be politically expedient they shifted all their hatred against him.

The fact is that in and after 1945 Ripka, Benes, and Gottwald liquidated by means of their People's Courts, in mock trials, not only all the German functionaries in Czech Bohemia and Moravia, but also in the Sudetenland, to which they most eagerly forged their way and which they reoccupied and resubjected. And they did not only liquidate the Nazis, but a few hundreds of thousands of innocent Sudeten Germans, too. As to the other Sudeten Germans, they were robbed of all property and driven out of the Sudetenland and out Czechoslovakia.

In any case, Frank and Henlein and with them many more are dead. But Ripka, Zenkl, and Lettrich who committed far greater crimes than the so-called Nazis and who, moreover, brought communism to Czechoslovakia, are not dead and not punished. Ripka, Zenkl, and Lettrich are still in full power today, upholding their genocide on the Sudeten Germans and their communization measures in Ccechslovakia, financed by private American institutions and teaching their morale at American universities.

Attacks on Dr. Rudolf Lodgman

Since 1918, the Czechs became accustomed to consider Czechoslovakia as a sacred thing and each effort of the Sudeten Germans, the Slovaks, and the Hungarians to reach their right for self-determination as a fight against democracy, as Nazism, high treason, and crime. There has never been a tougher imperialism than that of the Benes-Czechs.

Ripka, Zenkl, and Lettrich also declared in August 1954: "Such German nationalists as Dr. R. von Lodgman, the present leader of the Sudeten Germans in Germany, never reconciled themselves to the Republic of Czechoslovakia."

Dr. Rudolf Lodgman von Auen is today the spokesman and president of the Sudeten German Landsmannschaft. He was the man who tried to make out of Austria-Hungary a federation of nations. He was the man who tried to establish an independent Sudetenland in 1918, which effort was broken by arms by the Czechs. He remained in opposition to the Czech regime during the first Czechoslovak Republic and also against the German regime during World War II. He was expelled—like all the other Sudeten Germans—after 1945. When the expellee organizations were founded in Germany, he became the head of the Sudeten Germans as well as the first president of all German ex-

pellee unions. He and two cochairmen of the Association for the Protection of Sudeten German Interests, Hans Shütz and Richard Reitzner, both members of the Federal Bundestag at Bonn, signed an agreement in 1950 with the Czech National Committee in London formulating the right for self-determination for both the Czech and Sudeten Germans. Dr. Lodgman has always been a strong adherent of freedom and the right for self-determination for every nation, never wavering in his attitude; he remained true to his principles under and during all regimes in his country.

Attacks on Wenzel Jaksh

In the chapter the Transfer—A Direct Result of Sudeten German Policy, Ripka says: "The Sudeten German policy of avid servitude to pan-German imperialism, exposed ever since 1848 and flagrantly supported and carried out in the Nazi era, inevitably brought on their transfer to Germany after World War II.

"Unfortunately, even many Sudeten German Democrats, for instance Wenzel Jaksch, who until Munich had stood on the side of the Czechoslovak Democrats in brave opposition to Henlein, switched during the war in London to the pan-German policy of expansion and domination. When the British Government revoked the Munich agreement in 1942 as no longer binding, Jaksch went so far as to protest against the British decision in an attempt to save for the Sudeten Germans the gains seized by Hitler in 1938–39. This would have meant total subjugation of the Czechs and Slovaks. In the case of Jaksch and other Socialists and Democrats, pan-German nationalism eventually drowned out their democratic ideas.

"In view of these conditions, through the fault of the Sudeten Germans, there was no longer any reason to believe in any possible peaceful coexistence between Germans and Czechs and Slovaks in Czechslovakia. No other alternative remained but the drastic transfer. Since the organic entity of Czech [sic] lands must not be upset, it remained to separate the Germans from the Czechs by removing them to Germany."

So far Ripka, Zenkl and Lettrich. The fact that Wenzel Jaksch and Richard Reitzner, both now members of the German Federal Bundestag, who spent war in London in exile, have nevertheless adhered to the right for self-determination for their people, wanting that the Sudeten Germans could live free and not under the Czech rule in the future, this fact is called by Ripka—in his jargon—"During the war in London, they switched to the Pan-German policy of expansion and domination and Pan-German nationalism eventually drowned out their democratic ideals." Their adherence, moreover, to the right for self-determination was, according to Ripka, Zenkl and Lettrich, the reason for "removing" the Sudeten Germans from Czechoslovakia "since the organic entity of Czech [sic] lands must not be upset."

Ripka says: aspiring, rapacious and aggressive pan-Germanism

While the expelled Sudeten German people, whom Ripka, Zenkl and Lettrich drove out from their centuries-old homeland with nothing but bare hands, are clinging to their right for their country and the return to it, if once communism should be defeated, Ripka calls it:

"In reality, the Sudeten Germans are not basing their plans on the justice of the American people; rather they are hoping that Americans * * * will help them realize German ambitions entertained under Hitler."

While I have made my position clear on the Sudeten German wish for the right for self-determination for all nations in my Congressional insertion of March 25, 1954, here is what Ripka, Zenkl and Lettrich called it: "The Sudeten Germans * * * in reality * * * are addicted more than ever to aspiring, rapacious, and aggressive pan-Germanism."

The same opinions can be heard from Radio Moscow and Radio Prague.

Ripka says: The West was the first to agree to the transfer

Ripka's thesis is that the British and United States Governments first reached an agreement with Benes on the deportation of the Sudeten Germans and that the Soviet Union hesitated and gave its approval only when it became known that America had already approved the idea of the German transfer.

On page 17 of the Documents on the Expulsion of the Sudeten Germans Dr. Wilhelm Turnwald pictures the way in which the expulsion was agreed upon: "Dr. Benes showed himself not very particular about the means he used. In a conference with President Roosevelt on May 12, 1943, he mentioned that the Russians would agree to the transfer of the Sudeten Germans. Seventeen days later, May 29, Dr. Ripka explained to the Soviet Ambassador Bogomolow in London that the Americans had already agreed to the transfer and that in these circumstances the Czech Government in exile expected the official Russian consent. On June 6, Dr. Ripka telephoned Dr. Benes, who was in the United States, that the Russian consent just arrived—the same consent with which Dr. Benes had operated in his conversation with President Roosevelt on May 12."

There is still the fact that the transfer of the Eastern Germans decided by the Potsdam agreement and the entire transfer of the Communist border to the west was the aim of international communism. In addition, Dr. Benes and Dr. Ripka, in their blind hatred against the Sudeten Germans acted as mediators between the Eastern and Western partners and were trying to get the agreement from both sides by maintaining that the opposite side had already agreed and had asked for the deportation at a time when this was not so. They lied to both, the United States as well as the Soviets. The friendly protection for their plans by international communism safely covered those lies.

Ripka declares that the Soviet Government hesitated since it wanted to use the Sudeten Germans against the liberal and democratic Czechs. The government of the national front which had communized Czechoslovakia from within was established only by Communists and the so-called liberals. The nonliberal, conservative Czechs were excluded from it, because they were anti-Communists. For the same reason, the Sudeten Germans and Hungarians were expelled. The Volga-Germans, the Baltic nations and all those other nations which have been expelled and deported in recent history by the Soviets, were deported because they were hard anti-Communists, not because they were liberal. Had the Sudeten Germans been liberal in Ripka's sense of the word, they would not have been expelled. They would have become members of the government like Ripka himself.

The Kersten committee in contradiction to liberals Ripka, Zenkl, and Lettrich

The Select Committee on Communist Aggression of the House of Representatives under the chairmanship of Representative CHARLES J. KERSTEN stated in its special report No. 8 of December 31, 1954 (Communist takeover and occupation of Czechoslovakia):

"Fateful for the people (especially in Bohemia and Moravia) (i. e. for the Czechs and not the Slovaks—author's remark) was the fact that they were misinformed by many fellow traveling intellectuals by means of newspapers, books, and through all the media of communication as to the real nature of communism, cleverly described for years even prior to World War II as undergoing an evolution toward a democratic, humanitarian ideology" (p. 18).

"It should be pointed out that the Communist advance in Czechoslovakia was greatly facilitated by the behavior of the non-Communist parties and their leaders.

"The signing of the Soviet-Czechslovak agreement on December 12, 1943, and especially the proclamation of the Kosic program of April 5, 1945, opened the door for an unobstructed drive on the part of the Communists to seize full power in the country (p. 17).

Ripka says that the Czechs were no less hard working and no less dedicated to free enterprise than the Germans. This statement is true for the decent part of the Czechs, for whom to speak Ripka has no right whatsoever. On the one hand, it is a fact that in 1946, under Ripka's rule, there were 40 percent Communists among the Czechs and, together with the Marxist Czech Social Democrats, there were 56 percent Marxists among the Czech people and, with Ripka's and Benes' Party, 80 percent Socialists. On the other hand, it is also the truth that the Sudeten Germans showed the following figures in the elections: In 1929, 31 percent Socialists (Social Democrats), in 1935, 16 percent Socialists (out of 66 Sudeten German Deputies in the Czechoslovak Parliament in Prague there were 11 Socialists—Social Democrats). In addition to it, there was absolutely no parallel, no relation, no similarity between the Sudeten German Social Democrats (who rather acted like the Social Democrats in Switzerland, Sweden, and the other northern countries) and the Marxist pro-Moscow Czech Socialists and Social Democrats. Before 1938 the Sudeten Germans had only 4 percent elected Communists (also elected by Czech votes) and from 1938 to 1945 no Communists and Marxists whatsoever. Today they can be considered as, may be, the strongest anti-Communists in Germany at all.

Disregarding and distorting these facts, Ripka says: "Had the Sudeten Germans remained in Czechoslovakia, in all likelihood, the Communist Party would have found strong support among the Sudeten Germans."

In fact, the expulsion of the Sudeten Germans was carried out at a time when only and exclusively communization measures were executed in Czechoslovakia by the promoters of communism, including Ripka. Ripka's pushing of the expulsion was only a part of his overall activities on behalf of communism.

It was the Communist agent Wolfgang Putlitz who, in Ripka's office in London, elaborated the details of the deportation of the Sudeten Germans during World War II. It was Josef Stalin, who in an interview given to the Prague Communist daily Rude Pravo, in September 1945, said: "Get rid of the Germans and expel them."

And it was the Communist Zdenek Fierlinger, at that time Czechoslovak Prime Minister, who said on November 8, 1945, in a speech at Prague: "We redress the defeat at the White Mountain (again this false interpretation common to Ripka and the Communists) by a state act, by the expulsion of all Germans from our country; this happened with the consent of our Government. We never would have been able to purge our country from the ill weeds, were there not the prominent assistance of the brotherly Soviet Union and the great Generalissimo Stalin."

Although Ripka was Minister of the National Front government which carried out the expulsion, the Prime Minister of this government was a Communist. There are plenty of press clippings of Czechoslovak Communist papers in our possession which prove that its main promoters were the Czechoslovak Communists, who bought most

of the adherents by distributing and collectivizing the Sudeten German property. They were, of course, most eagerly followed by the politicians and papers of the Benes' party. The kind of promoting the deportation of the Sudeten Germans was analogical to other communization efforts: Communists like Zapotocky and Gottwald led, but were closely followed by men such as Ripka, Benes, Zenkl, and Lettrich.

Ripka's objection that 3.3 million Sudeten Germans could not have prevented the communization of Czechoslovakia when 18 million Eastern Germans did not prevent the communization of the Soviet Zone of Germany is invalid. In the Soviet Zone there have been Russian Armies, but Czechoslovakia was the only country, besides Russia herself, which has been communized from within. There has been no Red Army in Czechoslovakia since the end of 1945.

Besides this, I did not state that merely the expulsion of the Sudeten Germans caused the communization of Czechoslovakia. The expulsion was only a part—probably the most important one—of the communization measures. Another part, e. g., was the full suppression of all anti-Communists among the Czech Nation itself, the abolishment of all Czech and Slovak Parties of the center and the right and the abolishment of freedom of press, also executed by Ripka, Zenkl, and Lettrich. The pro-Communist activities of these men were without any interruption. They did a full job.

They did not suppress the anti-Communist Sudeten Germans alone. They suppressed also all anti-Communist Czechs. Or would Ripka—analogically—say today: "Had we not forbidden the Agrarian, the Artisan and National Democratic Parties, the Communists would have in all likelihood found strong support among them"?

The Sudeten German Case—Part 5

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, the fifth installment of the article by Walter Becher, member of the Bavarian Landtag, of Munich, Germany, follows:

VI

Ripka's false logic

The above-quoted opinions of Ripka, Zenkl and Lettrich represent fine examples of false logic.

The Communists and crypto-Communists have a logic which normal men consider a perverted one. We cannot discern in every individual case, whether they deliberately pervert the truth or whether they are doing so unconsciously, simply thinking in a perverted way. Both ways are inborn to them. But whether consciously lying or unconsciously thinking in a perverted way, they—in any case—do always help the cause of communism.

Ripka, above all, has a false logic. It is also this logic, by means of which he calls the collaboration of Benes and himself with the Communists as follows (CONGRESSIONAL RECORD insertion): "Finally it must be underlined that President Benes and the Czechoslovak democratic parties never stopped fighting the Communists until the day of the brutal liquidation of Czechoslovak democracy in February 1948."

The kind of fight against the Communists by the National Front—Ripka calls it Czechoslovak democratic parties—was already pictured. After all, the Czechoslovak democracy, or better people's democracy was brutally liquidated in 1948 in the following way, namely that President Benes himself signed the new Gottwald government and remained president of a fully Communist Czechoslovakia. This was only the last step of this communizator of Czechoslovakia.

Ripka understands under anti-communism a full cooperation with the Communists in all measures and acts of policy, but quarreling with them for Government positions. If prohibition of political parties of the center and the right, if nationalization and expropriation of the industry and trade, if establishment of people's courts, abolishment of freedom of press and word, if establishment of the national committees and the people's democracy, if suppression, killing and deportation of all anti-Communists, if cooperation with the Communists and the U. S. S. R. and praise for them, well, if all this is anti-communism, than Ripka was an anti-Communist. He remained until today. Even today he is teaching and advocating this kind of anti-communism.

When Ripka says: "Czechoslovakia was Communist not because of the Sudeten German transfer but because she, together with the other countries of East Central Europe, had been placed in the Soviet sphere" then I can add: The placing of Czechoslovakia in the Soviet sphere was effected by the fact that this country was placed under the rule of Soviet agents, such as Ripka, Zenkl, Lettrich and Benes in 1945.

The two opinions

In any case there are two viewpoints, two testimonies on the expulsion of the Sudeten Germans.

Communist collaborators Hubert Ripka, Petr Zenkl and Josef Lettrich maintain that the expulsion of the Sudeten Germans did not further the communization of Czechoslovakia. This is the first viewpoint.

The second is that of United States Senator WILLIAM E. JENNER, who, on the occasion of the Sudeten German Day in Munich, Whitsunday 1954, on which 500,000 Sudeten German expellees took part, wrote to Dr. Rudolf Lodgman von Auen, the spokesman of the Sudeten German Landsmannschaft, extending his greetings:

"Why did the Soviet leaders know that you must be driven from your homes, if the Soviet design for the post-war world was to prevail? The Soviet leaders knew that you belonged among those who opposed communism completely and clearly, with the full energies of your minds and your hearts.

"The Communists are not afraid of people with lukewarm ideas about goodness and freedom or welfare. People with lukewarm ideas are putty in their hands. How clever the Communists are to encourage and make use of the soft-headed, while they fight incessantly to destroy those who hold an unbreakable conviction of devotion to what is right.

"The Soviet leaders set up their schemes for the post-war world long before the war in Europe was ended. They needed to push the Soviet borders as far westward as possible. They needed to set up weak or docile or confused governments in a wide area about their own borders.

"One precept guided all their tactics—kill or drive out the hard core of anti-Communists in Central Europe and we shall have no trouble taking over the rest. The brutal determination with which after the war the Communist leaders insisted refugees from the Soviet Union must be sent back as deserters, was cut from the same cloth as the expulsion of the Sudeten Germans. They know if they could drive out the men of firm principle, the soft-headed and the ambitious would do their work for them.

"You were driven from your homes, but your spirit was not quenched. Even in exile, you formed your own fighting organization. You made yourself a force for anticommunism even when you had no homeland. And you helped all Europe and the United States by your brave refusal to permit Communist agents and their hirelings to get a foothold among the refugees."

The Potsdam agreement and the decent deportation of the Sudeten Germans

Here are Ripka's, Lettrich's, and Zenkl's words:

"Following the decision of the Potsdam Conference on the German transfer from Czechoslovakia, Poland, and Hungary, the transfer of the Sudeten Germans was carried out in an orderly manner. When the transfer was completed, the American occupational headquarters sent the Czechoslovak Government a note acknowledging Czechoslovakia's strict observance of regulations and decency."

During this orderly and decent deportation from their homeland about 300,000 Sudeten Germans lost their lives.

The losses

The number of losses of the Sudeten Germans which they suffered by the deportation can be substantiated by extensive and exact material we have prepared. They amount to nearly 300,000 dead, not counting those tortured, raped, and beaten. The Sudeten German property stolen by the National Front is estimated at $19.44 billion. Our Documents on the Expulsion of the Sudeten Germans, Munich 1953, are already today available as part of evidence.

On the other hand, the losses among the Czech Communists during World War II and the economic losses, given by Ripka, are unprovable. There has been no expropriation of millions of Czechs or their forceful transfer—things 3.3 million Sudeten Germans had to undergo. The losses of the Czechoslovak industry, e. g., were the results of war under the same conditions as in entire Germany and entire Europe. They were, of course, caused mostly by the unbelievably plundering Red Army at the end of war, which afflicted all German, Czech, and Slovak property. The hirelings of Moscow, such as Ripka, Zenkl, and Lettrich, can naturally never attribute these losses to their idol, the Red Army, and they never and nowhere mentioned it.

Without the Red Army, the Czech parts of Bohemia, being in the geographical center of Germany, would have been almost completely saved from economic losses caused by the war. As a matter of fact, Bohemia and Moravia were a kind of storing place for the Germany Army and a great quantity of supplies stored there fell, in 1945, into Czech and Russian hands.

It happens that the amateur author of the false numbers given by Ripka, Zenkl, and Lettrich is one Radomir Luza. Luza's father, General Luza, did not die in the hands of the Nazis for the cause of liberty as Ripka states. He was a partisan leader, one of those who, in civilian clothes, shot their enemies in the back, as was being done by Communist partisans also in Korea, Malaya, and elsewhere. General Luza and two comrades were in a country inn near Yglau in Bohemia, where three Czech—not German—gendarmes entered the building. Luza and the other men, believing being recognized, drew their pistols and attacked the gendarmes. The gendarmes did the same and in self-defense shot General Luza dead. Several days later, at night, the young Luza and a gang of Communist partisans surrounded the Czech gendarmerie station, took all the Czech gendarmes present, supporters of families, to the cellar and, without any hearing, shot them dead. It hap-

pened that the men who really shot Luza's father were on leave and not among those liquidated. Those killed were all innocent. This case is sufficiently known in Czechoslovakia.

Radomir Luza was wrong when he collectively liquidated Czech gendarmes, in the same way as in putting up false numbers. As to his person, Luza was never a good mathematician, but a member of the Czech Social Democratic Party and a personal and political friend of Blazej Vilim, former secretary general of that party, who signed the "Marxist block," binding the Czech Social Democrats to an especially close cooperation with the Communist Party in September 1947, a few months before the Communist takeover, and a friend of the Communist agent, Bohumil Lausmann (first in exile), like Luza and working for Radio Free Europe, now back in Prague), chairman of Luza's party before and in 1948.

VII

Ripka's, Zenkl's, and Lettrich's attacks on the Slovaks

Ripka, Zenkl, and Lettrich declared in their CONGRESSIONAL RECORD insertion of August 5, 1954:

"The Sudeten Germans took an active part in preparing and carrying out the occupation of Czechoslovakia in March 1939 not only in the Czech (sic) lands but also in Slovakia (where they exerted such great pressure that the Nazis succeeded in bringing about Slovakia's secession."

The Kersten report of the House of Representatives stated on December 31, 1954:

"Even though the Slovak state was largely the result of a tense international situation, it nevertheless corresponded to the aspirations of the Slovak people for freedom and the principle of self-determination and self-government." (P. 12.)

On August 5, 1954, Ripka, Zenkl, and Lettrich asked: "Who are these very able allies of the Sudeten Germans? The freedom-loving Slovak people Dr. Becher has in mind are the former Slovak collaborators with the Nazis who served them blindly during the war and link their fate today not to a German democracy but to radical German nationalists."

Here are the facts: On May 30, 1918, the first President of the then created Czechoslovak Republic, Thomas G. Masaryk, signed the so-called Pittsburgh agreement in the United States of America with the Slovak League of America—the top organization of Americans of Slovak descent in the United States of America. In this way, on the basis of this Czecho-Slovak agreement, the first Czechoslovakia was created. At that time, the American Slovaks were obviously able allies of Masaryk and Benes.

When, however, the Slovaks learned that they were treated as a mere minority in Czechoslovakia, when they noted that the Pittsburgh agreement was never kept and that the Czechs wanted to keep the Slovaks under their centralized rule, when the Slovaks and the Slovak League of America started to ask for a free Slovak state and especially when the Slovaks started to reveal the Communist background of the Benes Czechs, then they suddenly became the Slovak collaborators with the Nazis for the very same Czechs with whom they once had founded the Czechoslovak Republic.

It is true that once the Slovaks wished to have a common state with the Czechs, but it is equally true that, after their experiences with Benes, Ripka, Gottwald, and Zapotocky, the absolute majority of the Slovak people, at home and in exile, rejected fully and compromiselessly such a political solution. It is also the truth that the Slovaks have shown an absolutely different behavior toward communism than the Czechs, educated by Benes and Ripka. In 1946, when there were 56 percent of Marxist and 80 percent of Socialist votes among the Czechs, there were only 30 percent of it among the Slovaks.

Ripka, Zenkl, and Lettrich recognize as democratic Slovaks merely the small Slovak minority who have favored communism and Czechoslovakism and who hate all other Slovaks including their former partners with whose agreement they once had established Czechoslovakia.

On August 5, 1954, in the CONGRESSIONAL RECORD, a group of Communist collaborators and political adventurers, such as Ripka, Zenkl, and Lettrich, slandered the Slovak League of America, an organization of American citizens who have fought in World War II for America and have donated several ships to the United States merchant marine. The son of Mr. Philip Hrobak, the president of the league, has fought in Korea and is still there.

But the American Slovaks and the Slovak exiles in the West organized in two big exile organizations, the Slovak National Council in Exile and the Slovak Liberation Committee speak for themselves.

On May 21, 1953, Representative ALVIN M. BENTLEY, of Michigan, inserted in the CONGRESSIONAL RECORD a memorandum of the 33d congress of the Slovak League of America. This memorandum says among other things:

"As Americans we sincerely believe that every nation, large or small, had the inherent God-given right to freedom and independence, the right to its own nationhood and statehood. We believe, too, that liberty cannot be exercised by proxy and that all nations are entitled to a voice in the determination of their own destinies. We knew then, just as we know now, that Dr. Benes * * * could never have returned to Czechoslovakia again as President, if he had not betrayed the peoples of that hapless country to the Stalin men of Moscow.

"In 1948, after the so-called Communist putsch in Czechoslovakia, we strongly protested to the administration of the American Government against the admission into the United States of former members of the Communist-dominated national front government of Czechoslovakia who had collaborated with the Communists in government and with the Kremlin until February 1948. We still insist that these so-called Czechoslovaks, now organized in the United States of America as the Council of Free Czechslovakia, are in a large measure responsible for the present terrible plight of the Czech and the Slovak nations. They have, in fact, compromised the good name of America, as well as the prestige of the Czechs and the Slovaks, the majority of whom are anti-Communist. The Slovaks were through with the Czechoslovak political monstrosity in 1939 and want no more of it; they are not willing to be subservient to and exploited by the Czechs and their Communist allies."

Hon. Edward J. Bonin inserted in the United States CONGRESSIONAL RECORD of September 15, 1954, two statements of Mr. Philip A. Hrobak, the president of the Slovak League of America. Mr. Hrobak said: "By an agreement that Edward Benes concluded with Klement Gottwald at the beginning of 1945 in Moscow, four political parties of Slovakia were suppressed: the Slovak People's Party, the Agrarian Party, the Slovak National Party and the Artisan Party. They had 33 deputies—19, 12, 1, 1, respectively—that is the majority of the 56 deputies that Slovakia had in the Prague Parliament before World War II. The principal leaders of the Slovak Democratic Party, created only in 1945, approved this undemocratic decision. In spite of this fact those politicians who have mostly joined the Council of Free Czechoslovakia, are considered as speakers for Slovakia, while the conservative forces constituting a great majority of the Slovak emigration are without any representation in the Free Europe Committee. These Slovak refugees can hardly understand why the leftwing of the Slovak political emigration should enjoy a greater favor of the American agencies than its more conservative and decidedly more anti-Communist center."

Representative DANIEL J. FLOOD, of Pennsylvania, inserted in the United States CONGRESSIONAL RECORD on May 1, 1951, a memorandum of the executive committee of the Slovak League of America: "The Slovak nation has had its fill of the political system represented by Czechoslovakia and, presently, by the Czech National Socialists, other Czech groups, and the so-called Czechoslovaks in exile. The Slovak nation has had enough of Zenkl and Papanek, Ripka, and Lettrich and their ilk, who reminds it so much of Gottwald and his followers. They are the so-styled Czechoslovaks, the pseudo-democrats, who have used and abused—and are still using and abusing—American democracy for their own interests and are comprising the good name of the United States. We strongly urge the resolution of the Czechoslovak question for once and for all time. American interests and the interests of the democratic world at large are ill-served by supporting bankrupt Czech politicians and former Red collaborators who propagate the fiction of a united Czechoslovak nation."

Representative WALTER M. MUMMA, of Pennsylvania, inserted in the United States CONGRESSIONAL RECORD, on June 2, 1954, a speech by Mr. Philip A. Hrobak before the National Conference of Americans of Slovak Descent in the Washington Hotel, held on May 24, 1954, at which 5 United States Senators and 26 United States Representatives took part. Mr. Hrobak said: "We were mistaken, badly mistaken. We did not see the job through; Czechoslovakia was not setup as a federation. It soon became evidence that the Prague government, headed by T. G. Masaryk and Dr. Edward Benes, did not regard the Slovaks as equal partners, but only as a colony to be exploited by the Czechs. The Slovaks soon realized that Czechoslovakia simply meant * * * to be placed under the Czech despot, who also sought to destroy them eventually as a nation." Mr. Hrobak then spoke about the imprisonment of the Slovak leader Monsignor Hlinka by the Czech Government and said: "The Slovaks, however, outlived the tyranny of the past and today are determined to outlive the present scourge of Czecho-Communist terror and violence and to continue in their march to complete political freedom and independence."

"And in the struggle against communism, the Slovaks want to be united with all free nations and not especially with and only with the Czech nation. They want it clearly understood, that they are not fighting communism for the sake of a free or any other kind of Czechoslovakia. They are definitively through with the political monstrosity known as Czechoslovakia in 1939, when the assembly of autonomous Slovakia declared the independence of the Slovak nation." These are words, as I may again underline, of the same Slovak League of America which once formed, in 1918, the first Czechoslovakia with Masaryk and Benes.

On the expulsion of the Sudeten Germans, Mr. Hrobak said: "The Slovaks do not want or request the Czechs to represent them in any field of human endeavor, whether cultural, political, or spiritual. And, of course, the Slovaks do not want to be credited with the criminal acts committed by the Communist-dominated National Front Government of Dr. Edward Benes and Clement Gottwald. The Slovak nation had nothing to do with the criminal expulsion of Germans and Magyars from Czechoslovakia, or the brutal persecution and supression of religion and of all anti-Communist opposition in that hapless country. For the betrayal of Czechoslovakia—the Czechs and the Slovak na-

tions—to the Communists and the Soviet Union, the Slovaks give full credit to Edward Benes and his Socialist followers, who consistently promoted pro-Soviet policy. Slovak political, cultural, and religious leaders did not betray the Czechs, but the Benez Czechs betrayed not only the Slovaks, but the entire Czech nation as well.

"Today, in America and elsewhere, the Benez Czechs and their Slovak hirelings—the apostles of Czechoslovak democracy—are organized in various Czech and Czechoslovak organizations, the American Fund for Czechoslovak Refugees, Inc., and the Council of Free Czechoslovakia among them, which profess to be organizations of anti-Communist, democratic exiles from Czechoslovakia. In fact, however, they are controlled by the Benez Czechs, the Czech National Socialists, and former members of the Communist-dominated National Front Government of Dr. Edward Benes and Clement Gottwald, which collaborated closely with the Soviet Union and outlawed all anti-Socialist and anti-Communist parties in Czechoslovakia in 1945. These National Fronters who claim they control the employees of Radio Free Europe and the Voice of America, never did and never will represent the political will of the Slovak nation, and therefore have no authority to speak for the Slovaks anywhere. Furthermore, they do not represent the anti-Socialistic and anti-Communistic Czechs. They should be recognized for what they really were in their homeland—promoters of the pro-Soviet policy of the Czech Socialists and Communists. And they should be treated accordingly. Under their leadership, the so-called Czechoslovak democracy had practically no trouble at all in converting to a people's democracy after World War II. Americans of Slovak descent consider it their sacred duty to unmask and embarass all such pseudodemocratic elements and to disarm them completely, because the enemies of Slovak freedom and independence are, in fact, the enemies of the American democratic way of life itself."

The Sudeten German Case—Part 6

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. BURDICK. Mr. Speaker, the sixth installment of the article by Walter Becher, member of the Bavarian Landtag of Munich, Germany, follows:

VIII

Ripka's, Zenkl's, and Lettrich's affronts to their own people, to the Czechs

The enmity toward the decent men even among their own nation manifests itself clearly in what Ripka, Zenkl, and Lettrich said further on about those Czechs whom I did call the Sudeten German allies. They said: "The decent anti-Communist Czech politicians are a handful of adventurers, Fascists and deracines, who hope to be given high positions in Czechoslovakia for services now rendered, although the Czech people barely know them."

The Sudeten German Association signed an agreement, in 1950, with the Czech General of the Army, Lev Prchala, chairman of the Czech National Committee in London. Before World War II Prchala was supreme commander of the Czechoslovak armies in eastern Czechoslovakia. Before the beginning of World War II, he went with his army to Poland and placed his soldiers at the disposal of the Polish Government to fight against the German and the Soviet armies. When Poland was defeated, he escaped to England and spent World War II in London. In London there was also the Benes exile government. General Prchala opposed strongly Benes' pro-Soviet policies in exile and especially the Soviet-Czechoslovak alliance treaty Benes, under Ripka's urging, had signed in 1943 in Moscow.

When in 1945 Benes returned to Czechoslovakia via Moscow, General Prchala did not return to his country and remained in London, rejecting the policies of Dr. Benes and any cooperation with the Communists. His line has never changed: he opposed both nazism and communism and the expulsion of the Sudeten Germans. There is no other Czech who has this political record and there is no other Czech who would be more known in Czechoslovakia.

Another prominent Czech politician opposing the Council of Free Czechoslovakia is Dr. Helena Kozeluhova-Prochazkova. She is the niece of the Czech writer Karel Capek and wife of the former National Front Minister Dr. Adolf Prochazka (who is now a member of the executive committee of the Council of Free Czechoslovakia). Separated from her husband with whom she had disagreed politically already in Czechoslovakia, she is now living in Germany. Dr. Kozeluhova was a member of the Czechoslovak Parliament in Prague and a nationally known journalist, columnist of the big daily of the People's Party. Because of her brave anti-Communist stand—after personal attempts of the Communist Prime Minister Gottwald to win her over for a softer stand had failed—she was expelled in 1946 from the Parliament. Later the National Front forbade her to write in any paper in Czechoslovakia and the Communists spent about 3 million crowns to supervise her. Only the fact that she was the wife of a government-member saved her from full liquidation.

When both, Dr. Prochazha and Dr. Kozeluhova-Prochazkova were flying to the West in 1948, Dr. Prochazka was not hindered by the Communist border guard to pass, while his wife was arrested. She outwitted, however, the Communist police and escaped too. In 1954 she worked for Radio Free Europe in Munich, but the Ripka-men there forbade her to write political programs—in the same way as Ripka and the Communists had done it in Czechoslovakia before. When in summer 1954 she appeared voluntarily before the members of the Kersten committee in Munich and testified about and against Ripka, Zenkl, and Lettrich, Radio Free Europe fired her from any further cooperation.

Dr. Kozeluhova—called Helenka by the broad masses of the Czech people—is a symbol of anticommunism among the Czech people in the east. She alone dared to be anti-Communist under the National Front regime and even in Radio Free Europe.

Another man with a great Czech name—maybe the greatest Czech name at all—opposing the Council of Free Czechoslovakia, is Dr. h. c. Jan A. Bata, now in Brazil and the United States of America, who in 1945 was falsely accused and sentenced in absentia by Ripka, Zenkl, and Lettrich and the Communists, so that they could steal (nationalize) his huge shoe factories in Zlin and elsewhere.

A common future line seems to be possible between Sudeten Germans and all those Czech political parties which were forbidden by Benes, Ripka, and the Communists in 1945, that is the Republican Agrarian Party, the Artisan Party, the National Democratic Party, and the Christian Democrats which together used to represent the majority of the Czech nation in the Parliament before World War II. The leaders of these parties were either executed or imprisoned in 1945 by the Communists, by Ripka, Zenkl, and Lettrich, but many members are nevertheless in exile. The paid fronting for the Council of Free Czechoslovakia is being done only by a few of them—mostly because of existence reasons—who are, however, not recognized as leaders by their own parties. Most of the members of these parties are real anti-Communists and some of them were already attacked by Dr. Zenkl as McCarthyites.

At a time when all support of private political societies in the United States of America is given to men like Ripka, Zenkl, and Lettrich, these anti-Commuist Czechs have to lead a hard fight for their existence and, while the National Fronters live in luxury, they lack the most primitive means for political activities and for life itself. And yet they represent the real Czechs, the majority of Czechs, and they are the real hope for their nation and for all those neighbors who want to cooperate with the Czech people in the future.

Another example of the famous logic of Czechoslovak Democrats

It is difficult to live together with men of abnormal logic, and the more difficult to live under their rule. And yet this was exactly the fate of the Sudeten German people who had to live under the rule of the Benes men in Czechoslovakia. The famous logic of these men, which caused them to call themselves anti-Communists, while they were helping communism, and Democrats, while they were semi-Communists or worse, manifests itself clearly in the chapter: Removing the German Minority a Precondition for Friendly Relations Between Germany and Czechoslovakia.

Ripka, Zenkl, and Lettrich said there: "For the very reason that we, the Czechoslovak Democrats, earnestly desire friendly relations with our neighbor, the German Reich, we are firmly convinced * * * that such cooperation calls for, as a fundamental prerequisite, the removal of friction caused in the past by the presence of a strong German minority in Czechoslovakia.

"We believe the moving out of the Sudeten Germans from Czechoslovakia to Germany was the only practical, fair solution of the centuries-old problem. It was the only way how to save the Czech and Slovak nations and how to achieve friendly coexistence with Germany."

This logic, as I may point out, is shared neither by the Sudeten German people nor by the German Federal Government.

In this statement, however, the real character of these men is also clearly shown, who so softly spoke about another Switzerland in 50 or 60 years. Here they bluntly say that they believe that the moving out of the Sudeten Germans from Czechoslovakia, the deportation causing the death of hundreds of thousands, was the only practical, fair solution of the centuries-old problem.

Europe needs no Czechoslovakia, but freedom and self-determination for every nation

In the name of Czechoslovakia, in 1918, the Sudeten Germans, the Hungarians, the Slovaks and the Ruthenians were held subjugated to the Czech state nation. Again in 1945 the Slovaks were subjugated anew by the Czech Communist regime, and the Sudeten Germans and the Hungarians were expelled and killed. (There was only one exception to the idea of Czechoslovakia: the Subcarpathian Ruthenia was traded over to the Soviet Union. However, Benes and Ripka made this exception only because it served the Soviet policy, just as the entire old and new Czechoslovakia had served U. S. S. R. policies.)

Ripka, Zenkl and Lettrich dare to declare today: "They (the Sudeten Germans) know fully well that could they but return to their Sudetenland, with the help of the Americans, they could seize powerful key positions enabling them to wreck the reestab-

lishment of Czechoslovakia. Upon their return to their homeland they would immediately demand annexation to the Reich and, together with the Hungarian nationalities, would provoke the secession of Slovakia from Bohemia and, it goes without saying, of Subcarpathian Ruthenia."

Czechoslovakia is no sacred thing. Since 1935 a bastion of Soviet Russia, and since 1945–48 a Communist country herself, was she only sacred to those who loved communism or hated Germany. The only sacred things are freedom and self-determination for all nations, the Slovaks, the Sudeten Germans, the Hungarians, the Ruthenians and also the Czech people. By granting support to Sudeten German Pan-Germanism—as Ripka calls the striving of the Sudeten Germans, Slovaks and Hungarians for their self-determination—America would not undermine the anti-Communist resistance of Czechs and Slovaks. On the contrary, by supporting the right for self-determination, America could encourage the Slovak people, win the Hungarians and the Germans and also the decent half of the Czech nation itself.

The situation is as the president of the Slovaka League formulated it: "The recognition of the inherent and God-given right of the Slovak nation to freedom and independence and will give aid and comfort and hope to the oppressed millions behind the Iron Curtain in Slovakia and added initiative to thousands of her patriotic sons in exile." The same is true about the Hungarians, the Sudeten Germans and of most of the Czechs who thus would finally find their way back to their better side of character.

IX

The Czechoslovak "Democrats"—Mass murderers and Communists

While it has been usual for repenting Communists (who changed their mind) to reject their past deeds and to join those who have always fought communism, in order to support them in their fight, it is the true present characteristic of Zenkl, Ripka, and Lettrich that they fully uphold and protect and excuse their entire work done in the national front between 1945 and 1948. Let me make it clear: They are still considering as just and right not only the expulsion of the Sudeten Germans, but also all other pro-Communist activities, without any exception, they had developed in Czechoslovakia before 1948. Most probably, they are being encouraged to do so by those who use and finance them now and are being used and financed (while the other Czechs are excluded) because they are acting that way.

Among other things, they fully adhere to the genocide against the Sudeten Germans. They are nonrepenting mass murderers.

In their own terms they call their adherence to the genocide and to their communization measures in Czechoslovakia as follows: "Czechoslovak democracy remained steadfast notwithstanding and fought for the ideals of the western democracies to the very last moment. It has never given up these basic political ideas" (August 5, 1954).

On August 5, 1954, they gave to the free world a clear picture of what these basic political ideas and the praised and propagated Czechoslovak democracy consisted. Before 1938, they called it Czechoslovak democracy. In 1945 till 1948 they called it Czechoslovak democracy and Czechoslovak people's democracy. Now in the west, they prefer to call it simply, once more, Czechoslovak democracy. But it has remained the same.

Hatred against every anti-Communist among their own people, hatred against the Slovaks, the Hungarians, and the Sudeten German people on the one side, and blind, dull, unintelligent subservience to the intenational Communist conspiracy on the other.

We are grateful to the honorable gentleman from Arizona who inserted the statements of Ripka, Zenkl, and Lettrich on August 5, 1954, in the United States CONGRESSIONAL RECORD. We are grateful that they could express themselves in their own terms and that it was shown what kind of men had deported the Sudeten Germans from Czechoslovakia and misused the word "democracy" and deceived the American people for 40 years, and what kind of men are now members of the Council of Free Czechoslovakia.

The two programs

It seems, however, that the monopoly the Benes Czechs have held in informing America on Czechoslovakia will be broken and that the white-black picturing of the Benes Czechs as the fighters for democracy and the Sudeten Germans in Bohemia and Moravia as villains will successively be recognized as falsification possible only because Benes men have been supported by the great majority of the opinion-molding machine in the United States as well as by rich private institutions there. Thanks to it, the Benes-Ripka men have upheld a false picture for decades.

And yet it must be finally recognized that there have been two interpretations of history in Bohemia and Moravia and, analogically, that there must be 2 programs for the future, 2 programs quite opposite to each other.

The one program presented by the Communist collaborators Ripka, Zenkl, and Lettrich calls for the upholding of Czechoslovakia, of the Czech rule over the Slovaks, the perpetuation of the expulsion of the Sudeten Germans and Hungarians, of the socialization and the full or partial abolition of political freedom by the National Front and the Communists, even after an eventual removal of the direct Communist rule over Czechoslovakia. A program, at the best, calling for the substitution of full communism by half communism, but in reality—since half communism can never defeat communism—calling for an eternal rule of communism in the East.

The other program is a program which, indeed, is common to the Slovaks, the Hungarians, the Sudeten Germans and also to many Czechs: the program which says that nothing can be upheld which the Communist National Front had committed, that all Communist wrongdoings must be abolished, that property must be returned to its Czech and Slovak proprietors and that the Sudeten Germans and the Hungarians must get the right to return as well as to be given back their possessions; that freedom and justice, private property, and free enterprise must be reestablished in this country communized by Gottwald, Ripka, Zenkl, and Lettrich. A program which says that freedom and the right for self-determination must be applied to all nations and also to all nations of former Czechovakia, regardless of whether these nations will remain in a federation or whether the Czech imperialist state, known as Czechoslovakia, will disrupt fully.

In the months and years ahead, the struggle between these two programs will have to be fought. There is no possibility for either the Czechoslovak democrats on the one hand, nor for the Sudeten Germans, Slovaks, Hungarians, and decent Czechs on the other, to enforce their program. In view of the present international situation as well as of the future one, the final judge will be the American people. The final word in this struggle, the decision which program will win, will lay in the hands of the Congress of the United States.

DR. WALTER BECHER,
Member of the Bavarian Landtag, Munich.
MUNICH, GERMANY, *April 5, 1955.*

Senate Haste Makes Waste

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Los Angeles Times under date of April 22, 1953.

The editorial points out the haste with which the Upper Colorado Basin bill was handled and the estimated cost of the project as outlined:

SENATE HASTE MAKES WASTE

Approval by a 58-23 vote in the United States Senate of an upper Colorado River project initially calling for an appropriation of $1,600,000,000 and threatening the country's taxpayers eventually with a cost of $4 billion, was obtained by logrolling methods and in such haste as to prevent serious consideration of its merits and demerits.

MORE TIME IN HOUSE

Fortunately consideration by the House of Representatives not only will allow more time in which to receive competent testimony on the project, but will afford opportunity for opponents of the wasteful adventure to alert the country to its dangers.

In view of known engineering doubts concerning certain aspects of the project, including the unlikelihood of a safe foundation for a proposed dam in Echo Park in the Dinosaur National Monument, the inclusion of this questionable feature of the project was an affront both to conservationists who oppose it as a needless destruction of natural beauty and to those who object to it on sound engineering and economic grounds.

MEASURE OPPOSED

The haste with which the bill was rushed through the Senate undoubtedly is explained by the project backers' determination to get it as far along as possible before a pending report on the entire undertaking by the Hoover Commission can be completed and submitted to Congress.

The Commission's tentative findings are understood to be strongly unfavorable to the reclamation program, as set forth in the Senate-approved measure. Inasmuch as the Hoover group is an official instrument of Congress duly authorized to study the problem and submit recommendations, only a successful stampede of the House Membership can prevent consideration of the experts' conclusions before the House acts.

Both of California's Senators opposed the measure, viewing it in its present scope as a definite menace to California's rights in the waters of the Colorado, and also presenting their objections to its costly and wasteful potentials.

Senator KUCHEL gave a particularly sound and detailed analysis of the measure in his discussion of its numerous ambiguities and inconsistencies. He made plain that his attitude was not based on any selfish California standpoint but arose solely from opposition to what he considered an unworkable and indefensible experiment.

Senator KNOWLAND took direct cognizance of the propaganda line by some upper basin spokesmen in which they would have it appear that California is against any development of the Colorado River which does not represent specific benefits for this State.

"It is a gross libel or slander," said KNOWLAND, "to say that the people of California want what does not belong to them." He stressed California's desire to receive only

a share of the river's water guaranteed under the Colorado compact.

FANTASTIC COSTS

A more deliberate assessment of the overall objectionable features of the project will bring into focus, among other factors, that a general endorsement given by President Eisenhower to upper basin development does not apply to the measure hurried through the Senate.

Further enlightenment—denied in the Senate—on the ultimate cost of the project also will be possible, including the fantastic fact that the cost of providing water to irrigate acreage not required for productive use in the foreseeable future will be more than 10 times the cost of the land.

It may be unfortunate that California's vital interest in sound development of the Colorado River and in equitable distribution of its waters may give rise to some doubts as to the State's disinterested motives in this instance, but valid objections to the project under discussion are so closely attached to questions of national welfare as to make unnecessary any approach from a purely local viewpoint.

Furthermore, regardless of legislation which Congress may immediately enact, the basic water rights of the upper and lower basin States are now in process of determination by the United States Supreme Court.

Until the Court acts, the pro and con arguments of all concerned are largely in the category of preliminary discussion.

The Fight on Communism by the University of North Carolina

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foe of Communism," published in the Hickory (N. C.) Daily Record of April 20, 1955. The editorial comments upon the very fine and constructive program for Americanism which has been initiated by the University of North Carolina.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOE OF COMMUNISM

KARL E. MUNDT United States Senator from South Dakota, in an article in the May issue of Coronet Magazine, pays the University of North Carolina a deserved compliment.

Senator MUNDT says that the most dangerous enemy of communism is American youth, after they learn the truth about this foreign ideology.

Among the foremost institutions of higher learning that Senator MUNDT lists as having pioneered in the fight on communism is the University of North Carolina.

In this connection, the South Dakotan says in 1951 40 civic-minded Tar Heel teachers, geographically distributed over the State, were chosen. University President Gordon Gray provided free instruction, dormitory facilities, and $25 to each teacher who attended the week-long sessions where the late Dr. Clyde Erwin, then State superintendent of public instruction, and other anti-Communists, analyzed fundamental issues involved in the conflict between the American and Russian ways of life.

After a week in the workshop, the teachers returned to their communities to lead in the struggle against communism. They continued their own studies that they might become more effective in teaching others the facts about communism.

The university's opposition to communism has extended far beyond the workshop. Drs. L. O. Kattsoff, E. M. Adams and W. H. Poteat traveled throughout this State, lecturing to groups. Dr. Kattsoff prepared a booklet, newspaper articles and radio talks on the subject. The University's Communications Center recorded the talks, which were broadcast and rebroadcast until millions of people have obtained fundamental facts with which to combat Red ideology.

The Superiority of Individual Farm Ownership and Operation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. HUMPHREY. Mr. President, there are no more solid foes of communism in America than our family farmers, who take justifiable pride in the achievements of American agriculture under the pattern of individual farm ownership and operation—the family-farm pattern so traditional to this country. Effective opposition to Communist infiltration into agriculture has been carried on by the National Farmers Union, through its support for family-owned and family-operated farms. Many of us interested in agriculture have long felt that our family-type farm pattern is one of the Nation's powerful bulwarks against communism. We are justly proud of the great record of American agriculture, as contrasted with the collapse of Russian agriculture, where opportunity for individual family ownership and operation is denied.

Mr. James G. Patton, president of the National Farmers Union, who has effectively fought communism by proving the traditional American family-farm pattern is far superior, has written me a letter on this subject, calling my attention to a significant article from the Febuary issue of Harpers magazine. It is entitled "Marx Was a City Boy, or, Why Communism May Fail," and calls attention to trouble in the Soviet through failing to understand farmers.

Mr. President, I ask unanimous consent to have Mr. Patton's letter and the attached article from Harpers printed in the Appendix of the RECORD. I commend them to the consideration of my colleagues.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

NATIONAL FARMERS UNION,
Denver, Colo., April 11, 1955.

Hon. HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.

DEAR MR. HUMPHREY: For more than a half century National Farmers Union has had as its basic purpose the preservation and maintenance of the family-type farm.

We are convinced that this pattern of agriculture is one of this Nation's strongest bulwarks against communism, as well as being the backbone of our democracy.

The enclosed article by W. W. Rostow brilliantly points out the Achilles heel of Communist agricultural programs. The reluctance of the leaders of Russia and China to recognize the fact that family farming is basic to human society is leading to internal unrest and revolt.

This important error made by the Soviet emphasizes to me that we redouble our efforts to shape a domestic policy in America that will encourage and protect our traditional pattern of agriculture, and that we should encourage land reforms based on family-farm principles throughout the free world.

Because of the vital importance of this subject, I am taking the liberty of inviting your personal attention to Mr. Rostow's article.

Sincerely,

JAMES G. PATTON, *President.*

MARX WAS A CITY BOY OR, WHY COMMUNISM MAY FAIL

(By W. W. Rostow)

The men in the Kremlin have never liked—or understood—the farmer. A distinguished student of the Soviet explains why the resulting blunders, by Russia and her satellites, might prove fatal to their power.

I am, by profession, an economist and economic historian. The bulk of my academic life has been taken up with studying the world's economic development during the 19th century. I have just ended 3 years' work on the Soviet Union and Communist China. The task there was not to study Communist economies but to discern, if possible, the shape and prospects for change in the whole societies now dominated from Moscow and Peking: their politics, social life, foreign policy, and their economies.

The title of this article reflects perhaps the most important single idea about communism which I have acquired during these 3 years of study.

I believe that Marx failed to understand the farmer. From that misunderstanding has flowed a century of Communist theory and practice. And, more important, from Communist theory and practice has arisen a set of problems whose solution or failure of solution may well wreck the international Communist movement—or force profound and wholesome change upon it.

Perhaps the most dangerous enemy of communism is the stoic, passive peasant in Eastern Germany, Poland, the Soviet Union itself, China, and Northern Vietnam. He will certainly not revolt on his own under present circumstances; but even a police state cannot make him increase his output on the scale Communist plans require.

The passive figure of the peasant, trapped in totalitarianism, is joined as a potentially mortal enemy of communism by the farmer in the free world—notably in the underdeveloped areas and perhaps most notably, at the moment, by the awakening Indian peasant.

This, in any case, is my theme. I should like to develop it by tracing out how communism has come to tangle at cross purposes with the peasant; the consequences of this generally quiet struggle; the problems which it creates for the Communist leadership; and the opportunities it opens to the Free World.

The story begins with Marx himself. There is an excellent book by David Mitrany called Marx Against the Peasant. Mr. Mitrany's book examines the trouble communism had from the beginning with agriculture and the farmer. Marx's theory of history—though couched in the heavy and pretentious style of Germanic scholarship—is essentially a simple one. He believed that by an inevitable series of class struggles, bourgeois capitalism had conquered feudalism; and that the urban working class,

created by industrial capitalism, would inevitably inherit power and authority when capitalism had dug its grave.

This theory represented Marx's reading of British history as he looked backward and forward from the middle of the nineteenth century. As he wrote he could see in England a decline of the political power of agriculture and an increasing dependence of Britain on imported rather than home-produced food. This—plus the fact that he was a bookish city fellow—led him to dispose of the farmer, in his theory and his prescriptions for the future, in a highly casual way. For example, the Communist Manifesto of 1848, in making its recommendations for the future, simply had this to say about agriculture:

"The establishment of industrial armies, especially for agriculture. Combination of agriculture with manufacturing industries; gradual abolition of distinction between town and country, by a more equable distribution of the population over the country."

In short, Marx's notion was that history would make of the farmer simply an industrial worker of one sort or another; and he could embrace the farmer ultimately in the same formula he mechanically applied to the industrial working class. The farmer, with his passionate desire to own his own piece of land and to till it in his own interest, annoyed Marx. As a theorist of history, Marx found the farmer out of place; and there is a note of human irritation and annoyance in Marx's treatment of him. Marx allowed no special place for him and for agriculture in his major writing.

One can dispose of such matters with ease—in theory. But the practical politics of Marxism, from the very beginning, ran into trouble with the peasant of Central and Eastern Europe. Before the revolution in Russia of 1917, Marxist politicians had the greatest difficulty in gaining any significant base of support among the peasants. The real discontents of European peasants, focused on land reform and redistribution, were expressed through peasant parties which grew up in the 50 years or so before the First World War. These parties were generally non-Marxist and, often, anti-Marxist. Except for a brief flirtation with the notion that the Russian village organization—the mir—could be built into a Socialist state, Marxist ideas did not harmonize naturally with the impulses of the European peasant. Brushing the peasant aside as a kind of miscast rural industrial worker, Marxism abandoned him to other leaders.

TWO PRACTICAL POLITICIANS

Now comes a monumental irony of modern history. Without the peasant's unsatisfied desire to own his land, there would not have been a Russian revolution in 1917 and, almost certainly, the Bolsheviks would not have triumphed in the Communist phase of that revolution in November 1917. Not Marxism or socialism or communism, but the peasant's great longing for land was the most powerful single engine of the Russian upheaval of 1917.

In 1917 Lenin perceived this fact. He was thoroughly prepared to junk or alter Marxist theory in the interests of the immediate struggle for power. As a practical politician, he managed to harness a good deal of the discontent which had infected the peasant-born Russian armies; and he used this non-Marxist—almost anti-Marxist—motive to seize power.

Lenin's 1917 slogans were: Land, bread, and peace. Despite 70 years of Marxism, in the showdown Lenin raised the peasant's desire for land the most effective political force to which he could appeal.

In China the peasant was even more important to Communist victory than he was in Russia. At first, the Chinese Communists sought to achieve power by mobilizing strength in the cities. They organized the industrial workers and infiltrated union organizations in the approved manner. It took a whole series of defeats, starting in 1927, to disabuse them of this strategy.

The emergence of Mao-tse Tung between 1927 and 1935 developed directly from his two perceptions: (1) That the desire of the poor peasant for a bit of land which he could call his own was a powerful political force; and (2) that if he associated the Communist movement with that force, he had a chance to build an effective military establishment in the countryside, with which he might ultimately seize power. This strategy was regarded for some time in Moscow as unorthodox.

From a western point of view, however, there is nothing inconsistent with communism about it. Lenin in his own way was equally flexible in his Marxism. The underlying truth is, of course, that long before 1917 and long before 1949, when communism was victorious in China, communism had ceased to be a philosophy of history and an ideological movement in the western sense. It had become primarily a tactical conspiracy, by a self-appointed elite, for the pursuit and maintenance of power. As such, it was prepared to make its slogans fit its power requirements. Lenin, Stalin, and Mao all did this when occasion demanded.

We are confronted, then, with a first-class irony of modern history. Marxist theory had—and has—no sympathy or interest in the desires of the farmer. Nevertheless, Communist tacticians in both Russia and China achieved power in large part by harnessing to their purposes the peasant's aspiration for his own land.

What happened to the peasant once the Communists took over? In Russia, Lenin found himself by 1921 in a position of crisis. The cities were not receiving their normal supply of food from the peasants, and famine stalked the land. Under the impact of wartime Communism, industry had fallen to about 20 percent of prewar output. Perhaps most important, Lenin faced serious opposition within the ranks of his party. There were many in the Communist rank and file who had helped make the revolution of November 1917 but were angry and distressed in 1920 and 1921 to see emerge a bureaucratic dictatorship rather than the humanistic regime for which they had fought. In this period of crisis, Lenin ruthlessly crushed his political opponents, but appeased the peasants—for the moment. He launched a new economic policy one of whose aims was to induce the peasant to produce again for the urban market.

Between 1921 and 1929 the Russian peasant was basically free. He operated the land he had gained in the revolutionary year of 1917 for his own benefit and that of his family. He sold his grain on an open market, paying a fixed tax in grain which he generally judged to be fair. The more able and vigorous peasants acquired land and grew relatively well-to-do; and Russian agriculture, sustained by individual incentive, revived.

MIRACLE BY BRUTE FORCE

With the launching of the first 5-year plan in 1929 all this changed. Stalin had triumphed as the sole successor to Lenin after 4 years of bitter infighting within the Communist Party. With his personal authority assured he turned to the problem of building a heavy industry in Russia and fastening an effective political control over the country. Whatever Stalin's economic reasons for the collectivization of agriculture may have been, there is no doubt that one of its primary purposes was to guarantee political and social control of the Russian peasantry. From a Communist perspective the Russian peasantry enjoyed an unnatural and dangerous freedom in the 1920's.

The result was, of course, the brutal rapid collectivization during which, on Stalin's testimony to Churchill, 10 million Russians died. More than that, there was a 20 percent fall in agricultural output. And as Khrushchev revealed in September 1953 Soviet farm production has never really recovered from the blow of collectivization.

How could Russia achieve its extraordinary industrial and military growth since 1929 with stagnant or even declining agricultural production? It could do so because Stalin launched industrialization at a peculiar moment in Russian history. The Russia which the Communist inherited was normally a grain-exporting nation. Before World War I Russian grain exports were as high as 10 million tons, and even in the midst of the first 5-year plan Stalin could wring 5 million tons of grain exports a year from the Russian soil and—at the cost of some starvation—from its peasants. The Soviet leadership has chosen to eat its way through its natural grain exports since 1929. And it has converted Russia into a country which may import more farm produce than it exports.

A second factor made Stalin's policy workable. Despite its relative poverty, by Western European and American standards, the Russian standard of food consumption as of 1928 could be compressed and reduced without actually causing chronic starvation. This is another margin which the Russian Communists exploited.

Third, Russia began in 1929 with a sufficient industrial capacity to avoid the need for an expanding foreign trade during its first 5-year plan. It could produce a high proportion of what it needed for industrialization from its own plants. A decline in agricultural exports in Russia did not, therefore, make industrialization impossible.

For 25 years, then, Russia has been able to afford an unproductive and enslaved agriculture. Now, however, history is beginning to catch up with Stalin's ruthless decisions of 1929. The population in Russia has continued to rise and people have moved into cities. It is clear to Moscow's planners that the smoldering, unproductive peasantry is a serious and costly problem. No issue since Stalin's death has used up as much Soviet newsprint as the agricultural problem. It does not threaten immediate crisis in Russia; but it is evident that the leaders in Moscow no longer feel the same complacency that Stalin did about the consequences of collectivized agriculture.

Much the same is true of Communist-dominated Eastern Europe. There, too, Communist collectivization policies, although somewhat less drastic than Stalin's, have broken the link between the peasant's effort and his return; and agricultural output is sagging. There, too, in the post-Stalin period the newspapers are filled with stories of agricultural shortage and low productivity.

It is symptomatic of the agricultural decline in Russia and Eastern Europe that, after breaking from Moscow in 1948, Tito almost immediately began to backtrack on collectivization. There is every evidence that Tito learned rapidly that a system which does not appeal to the peasant's self-interest is a costly totalitarian luxury.
